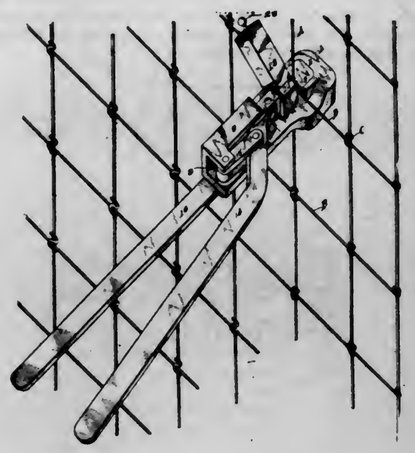
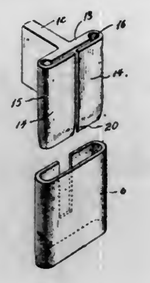
A valve spring compressor comprising a pair of pivoted arms pivotally connected together at one of their ends, said arms being provided with outwardly extending spaced reinforcing flanges, the ends of said arms terminating in horizontally disposed portions, between which portion a valve cage having a valve spring may be disposed, a shaft extending through one of said arms between its flanges, said shaft being threaded through a rectangular shaped nut disposed between the flanges of the other arm, said flanges engaging the opposite sides of the nut and holding it against rotation, a coiled spring surrounding said shaft and normally forcing the arms apart, and a crank carried by said shaft whereby the same may be rotated for adjusting the arms in relation to each other.



1,451,716. GAS BURNER. GEORGE E. SHARPE, Steubenville, Ohio. Filed Feb. 15, 1922. Serial No. 536,775. 4 Claims. (Cl. 158—104.)

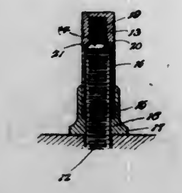
1. A gas burner comprising a trough, a cover secured upon the trough and provided with burner tips, the trough being provided with an inlet port in its bottom, a baffle disposed within the trough over the inlet port

and resting on the side walls of the trough, and means carried by the cover for retaining the baffle in place.



1,451,717. HAND TOOL. HENRY G. SOMMER, Peoria, Ill., assignor, by mesne assignments, to Keystone Steel & Wire Company, Peoria, Ill., a Corporation of Illinois. Filed May 26, 1921. Serial No. 472,694. 12 Claims. (Cl. 140—55.)

1. In a tool of the character described, in combination, a die, a staple magazine movable toward and from the die and adapted to co-act with the latter to clamp strand and stay wire therebetween, plunger means to evict the staples from said magazine, and force them about the intersections of such strand and stay wires, and manually operable means for actuating said plunger means.

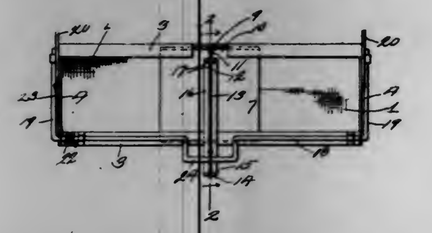


1,451,718. ADJUSTABLE ATTACHMENT FOR REMOVABLE BRIDGEWORK. ISIDORE STERN, New York, N. Y. Filed Sept. 15, 1921. Serial No. 500,766. 10 Claims. (Cl. 32—12.)

1. A denture attachment for use in connection with removable bridge work of the type having a socket to receive the attachment and hold a bridge in position, comprising a shank by which the attachment is anchored to the bridge, a head made on the bridge and fitting into the socket, said head comprising a substantially rectangular plate, a wing integrally formed on two opposite edges of the plate to provide a pair of wings having adjacent edges approximately meeting in the center of the plate, and the aforesaid wings being constructed of metal pieces comparatively thinner than the aforesaid plate and being uniform in thickness in order that the wings may be

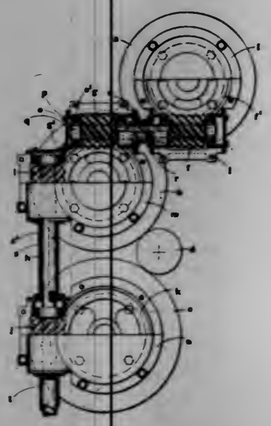
readily bent outwardly to increase the over-all thickness of the head to effect a close fitting connection with the socket.

1,451,719. DUST CAP FOR TIRE VALVES. THOMAS JEFFERSON STEPHENS, Spokane, Wash. Filed Dec. 21, 1921. Serial No. 523,985. 1 Claim. (Cl. 152—12.)



In a dust cap for tire valves, the combination with a valve casing provided at its upper end with a reduced nipple and formed at the base of said nipple with a beveled shoulder, of mating telescopic cap sections one providing a nut threaded upon said casing and the other snugly fitting in said nut next to the casing and having the wall thereof thickened at its upper end to provide a reduced internal axial socket having threaded engagement with said nipple, the thickened portion of said wall being cut away at the mouth of said socket to define an internal beveled shoulder, and a gasket resting upon the latter shoulder to overlie said first mentioned shoulder, the latter section being adjustable upon the nipple for binding the gasket between said shoulders forming a sealed joint between the latter section and the casing.

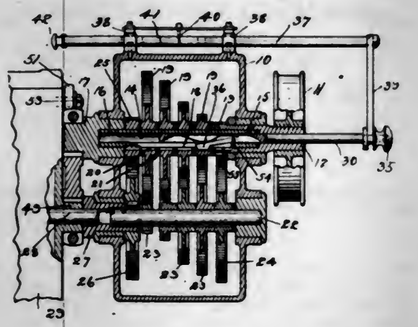
1,451,720. EXTERMINATOR TRAP. CHRISTIAN J. SWANK, Topeka, Kans. Filed Nov. 2, 1922. Serial No. 598,529. 3 Claims. (Cl. 43—61.)



1. A trap comprising an elongated casing having a chamber therein and entrances at the ends thereof, a rock shaft mounted in bearings on the upper side of the casing adjacent one side thereof, the ends of the shaft being provided with arms angularly disposed and beyond the ends of the casing, closures carried by said arms and positioned to register with the entrances when the arms move downwardly, ears carried by the ends of the casing and forming means for limiting the downward movement of the closures, spring means for normally forcing said arms downwardly, a crank carried by said shaft, a supporting bracket carried by the casing, a member pivoted on the supporting bracket and extending transversely of the casing and over the crank, spaced guide

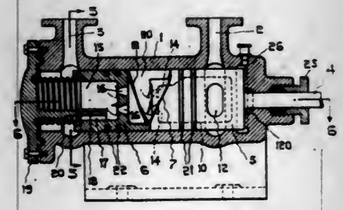
fingers between which the pivoted transverse member is disposel, a transversely pivoted platform disposed within the chamber of the casing, an upwardly extending arm carried by the platform and extending through the upper

side of the casing and an inwardly extending lug carried by the upwardly extending arm and adapted to engage over the free end of the transversely disposed pivoted member.



1,451,721. ROTARY PRINTING PRESS. ARTHUR TERRY, Hayes, England. Filed July 29, 1922. Serial No. 578,476. 2 Claims. (Cl. 101—216.)

1. A rotary printing press comprising an impression cylinder and a plate cylinder, a worm wheel on each cylinder, a plurality of shafts having worms thereon meshing with the worm wheel on the plate cylinder, a distributing drum having a worm wheel thereon, and a worm on each shaft meshing with the worm wheels on the distributing drum and impression cylinder respectively, the said worms and worm wheels having threads of such a pitch as to permit of reversed driving of the worm wheels from the worms in reducing the speed of the press or slowing down.

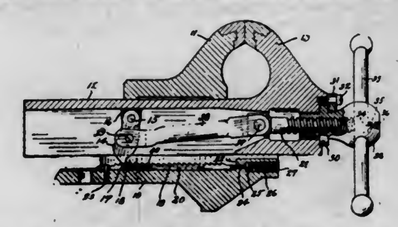


1,451,722. SPEED-CHANGING MECHANISM. FRANK A. VALENTINE, Apponaug, R. I., assignor to Henry L. Scott & Company, Providence, R. I., a Copartnership comprising Henry L. Scott and David C. Scott. Filed Apr. 27, 1920. Serial No. 376,904. 6 Claims. (Cl. 74—59.)

6. A speed-changing mechanism comprising a casing, a main and a jack-shaft in said casing, a pulley on said main shaft, main drive gears, a plurality of intermediate gears mounted on said shafts, means for engaging any of said sets of intermediate gears to vary the working speed of said drive gears, a power transmission shaft, an

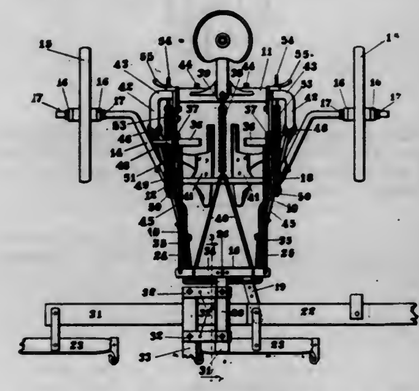
adjustable arm supporting said casing in the desired adjusted position about the axis of said transmission-shaft to tighten the belt on said pulley, and means for locking said arm in adjusted position.

1,451,723. COMPRESSOR. CARL W. VOLLMANN, Montreal, Quebec, Canada. Filed Apr. 28, 1921. Serial No. 465,349. 9 Claims. (Cl. 230—27.)



1. A compressor for air and other gaseous fluid consisting of a cylinder having intake and outlet ports near its opposite ends, and a cylinder head; such cylinder containing a chambered rotary member near one end and a chambered reciprocal compressive member near its opposite end, the chambered rotary member being adapted to receive air or other gaseous fluid from the intake port, valve controlled ports in one end of the chambered rotary member, the adjacent end of the compressive member having valve controlled ports, means whereby the rotation of the rotary member imparts axial reciprocal movement of the compressive member and means for preventing rotation of the reciprocal compressive member.

1,451,724. QUICK-ACTION VISE. PERCY H. D. WALKER, Meriden, and LEWIS L. TURNER, South Meriden, Conn., assignors to The Charles Parker Company, Meriden, Conn., a Corporation of Connecticut. Filed June 27, 1922. Serial No. 571,277. 8 Claims. (Cl. 81—30.)

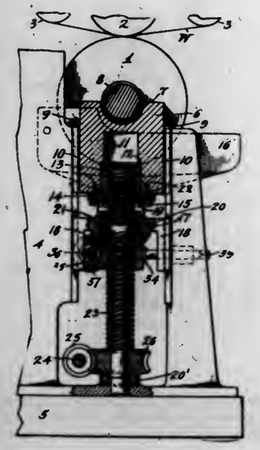


8. A vise comprising a body having a jaw, a slide guided in said body and provided with a jaw, a toothed rack carried by the body, a pawl pivoted to the slide and adapted to engage said rack, a rotatable head carried by

the slide, a longitudinally movable screw having threaded engagement with said head whereby rotation of the head

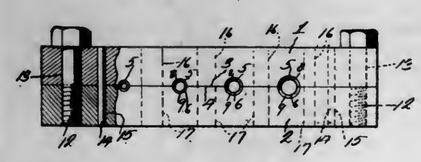
will move the screw longitudinally of its axis, a link pivoted to the screw and pawl, and means for rotating the head.

1,451,725. BEET PULLER. CHARLES E. WHITE, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed May 5, 1919. Serial No. 294,634. 9 Claims. (Cl. 55—106.)



1. In an agricultural implement, the combination of a wheel-supported frame, earth-engaging devices depending from the frame, a tongue pivotally connected with the front portion of the frame, means connected with the tongue and operable by the driver from his seat for applying lateral pressure to the pivotal connection of the tongue to divert the machine from a direct line of travel, and means connected with the tongue and frame normally tending to hold the frame against lateral turning.

6. In an agricultural implement, the combination of a wheel-supported frame, earth-engaging devices depending from the frame, a vertical pivot at the forward end of the frame, a tongue mounted on said pivot, a cross-bar fixedly connected with the tongue and movably mounted on said pivot, links extending rearwardly from opposite end portions of said cross bar, said cross-bar and links constituting means for the driver to apply lateral pressure to said pivot for causing a change in the direction of movement of the machine, and means connecting the said cross-bar and the frame and acting to normally hold the frame against lateral turning.

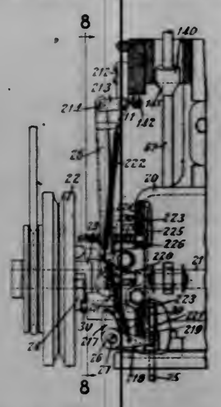


1,451,726. BEARING AND FOUNTAIN ADJUSTMENT FOR INTAGLIO MACHINES. ADOLPH M. ZUCKERMAN, New York, N. Y., assignor to R. Hoe and Co., New York, N. Y., a Corporation of New York. Filed Aug. 27, 1920. Serial No. 406,385. 5 Claims. (Cl. 101—153.)

1. In an intaglio printing machine the combination of a printing cylinder, movable bearings therefor, an ink fountain movable towards and from the cylinder, a pair of screw rods, supporting the bearings and fountain and threads of different pitch on the rods for causing simul-

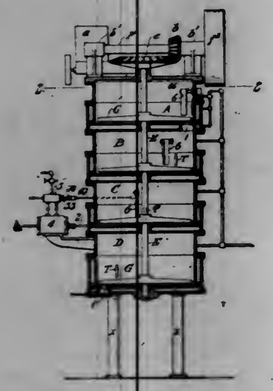
taneous movement of the bearings and fountain different distances to and from the cylinder when the rods are rotated.

1,451,727. TOOL. JAMES E. HARBURG, Denver, Colo., assignor to Yerrick Manufacturing Co., Denver, Colo. Filed Dec. 21, 1921. Serial No. 523,874. 1 Claim. (Cl. 153—79.)



A pipe holding device comprising a pair of parallel registering independent members having registering transversely disposed semi-circular grooves therein, the ends of said grooves being bevelled thereby allowing spreading of the end of a pipe when disposed between the members, bolts extending through the ends of said members and forming means whereby they may be securely clamped together and pins carried by one of said members and adapted to be received by apertures of the other member and forming means for guiding the members as they are moved together into registering engagement.

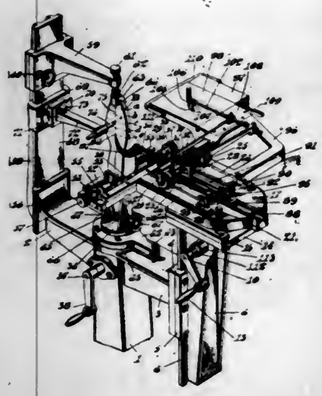
1,451,728. STOP MECHANISM. ARTHUR R. HAVENER, Wayland, Mass., assignor to American Lacing Hook Co., a Corporation of New Jersey. Original application filed Nov. 23, 1918, Serial No. 263,833. Divided and this application filed May 5, 1921. Serial No. 466,959. 5 Claims. (Cl. 192—139.)



1. A stop mechanism having, in combination, a rotary shaft, a clutch on said shaft, a spring actuated tripper adapted to engage said clutch and unlock the driving member thereof from said shaft, means to move said tripper out of engagement with said clutch comprising a manually operable actuating member and a connecting member adapted to be interposed between said actuating member and said tripper and means actuated by said shaft

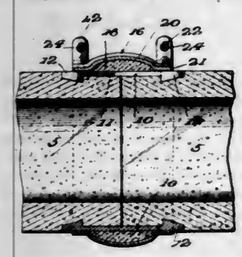
to automatically move said connecting member out from between said actuating member and said tripper whereby said tripper at the end of a predetermined plurality of rota-

tions of said shaft may be released and allowed to engage said clutch to unlock the driving member from the driven member of said clutch and stop said machine.



1,451,729. COOKER. NELSON B. HENRY, Atlanta, Ga., assignor to The Murray Company, Dallas, Tex., a Corporation of Texas. Filed Mar. 11, 1921. Serial No. 451,636. 3 Claims. (Cl. 87—6.)

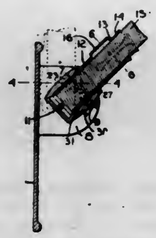
1. In a cooker for a vegetable mass, a multiplicity of superposed, jacketed cooking pans, each pan provided with an exit passage through the walls thereof; a sliding valve at the exit passage to vary the effective area thereof; motors to actuate each exit valve to vary without closing the valve, the effective area of the exit opening; in combination with means within each pan to actuate the mass in a circular path and means actuated by the movement of the mass to control the motor to vary the area of the exit openings as needed to maintain a predetermined quantity of mass in each pan.



1,451,730. METHOD OF AND MACHINE FOR MEASURING BODIES. JOHN J. HEYS, Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 31, 1916. Serial No. 117,910. 69 Claims. (Cl. 33—122.)

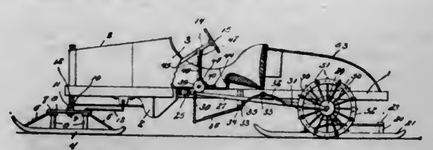
1. Improvement in methods of measuring the sectional area of a last, which consists in marking two points on the last, moving the tracer of a planimeter between the two points over one side of the last, returning the tracer carrying mechanism to initial position by a movement corresponding to a movement of the tracing point in a

straight line to initial position, then moving the tracer between the two points over the other side of the last, and returning the carrying mechanism to initial position as before.



1,451,731. PIPE JOINT. ROBERT W. HIGDON, Atlanta, Ga. Filed June 24, 1921. Serial No. 480,023. 6 Claims. (Cl. 72—23.)

1. The combination with a pair of pipe sections having their meeting ends formed with registering grooves, terminating in sockets of a greater depth than said grooves, of keys received in said grooves and having enlarged heads received in said sockets, the sides of said heads being engaged with the side walls of said sockets whereby to hold the ends of the sections in contact, and means surrounding said keys for holding the keys in position and for uniting said sections and consisting of an annular body of cement.



1,451,732. FISH-ROD HOLDER. GEORGE HIPWOOD, New York, N. Y., assignor to Francis C. Mayle, Niagara Falls, N. Y. Filed Feb. 10, 1921. Serial No. 444,031. 4 Claims. (Cl. 224—5.)

1. In a fish rod holder, the combination with a supporting plate and means to attach said plate to a person's body, of a socket member pivoted to said plate, a fish rod having a sleeve applied to the handle thereof, which sleeve

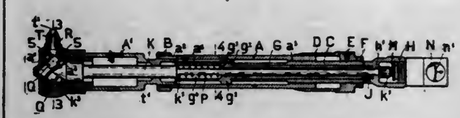
fits into said socket, and a locking latch pivoted to the plate and adapted to lock both the socket in adjusted position and the sleeve in the socket.

1,451,733. MOTOR SLEIGH. WILLIAM ALBERT HORROCKS, Wilton, Me. Filed May 28, 1921. Serial No. 473,524. 1 Claim. (Cl. 180—6.)

In a motor propelled sleigh, a frame having a motor and a body supported thereon, and rear runners carried thereby, uprights rising from the rear runners adjacent the rear end thereof, longitudinal bars supported by the uprights, a pair of downwardly rounded semi-elliptical springs having their upper ends pivotally secured to the frame and their lower ends pivotally secured to the longitudinal bars respectively, spring clips securing the springs intermediate of their ends to the frame, tractor wheels arranged between the rear runners in close relation to each other, an axle shaft for the wheels and being designed to project beyond the opposite sides of the wheels, hangers arranged on the projecting ends of the axle shaft, spring rods disposed longitudinally and having their rear ends secured to the hangers and being provided intermediate of their ends with a bearing eye, a transverse member having its ends secured to the frame, said bearing eyes being pivoted to the transverse member, a second transverse member connecting the free ends of the rods together slightly in advance of the center of the frame and said rods adjacent this connecting point inclined downwardly, drums rotatably mounted above the floor of the body, means for rotating the drums and chains connecting the second transverse member with the drums for the purpose specified.

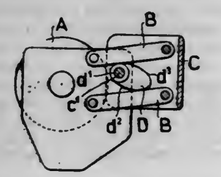
1,451,734. LEACHING OF COPPER ORES AND RECOVERY OF COPPER. JOSEPH IRVING, Bisbee, Ariz. Filed Jan. 29, 1920. Serial No. 354,855. 16 Claims. (Cl. 75—18.)

1. The process of extracting copper from cupriferous ores, compounds or products, which includes increasing the leaching power of a sulfuric acid ferric sulfate leach by contacting it with a pyritic mass and leaching the cupriferous ore, compound or product therewith.



1,451,735. OPHTHALMIC MOUNTING. FRANK N. KRAISSL, Chicago, Ill., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Nov. 21, 1918. Serial No. 263,550. 2 Claims. (Cl. 88—47.)

1. In a device of the character described, the combination with a split lens receiving frame, of means for connecting the ends of the frame, including end piece members having divergently disposed arms, and means on the arms for detachably interlocking with the ends of the

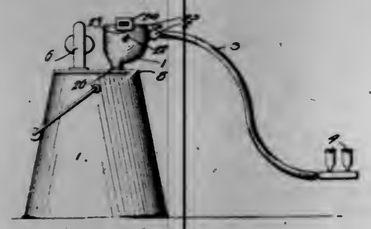


frames, said means being disposed in convergent relation whereby their grip on the frame is increased as the rim is placed under tension by tightening of the end pieces.

1,451,736. INTERNAL GAUGE. KARL LAUER, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Nov. 29, 1921. Serial No. 518,612. 2 Claims. (Cl. 33—178.)

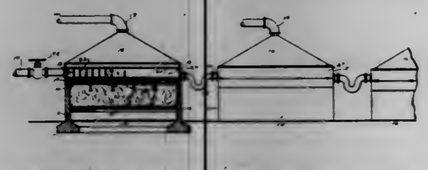
1. A calipering device comprising a supporting casing, a ball bearing race in said casing, a ball within said race and a conical actuator mounted in said casing with the axis of the contacting conical face of said actuator at an angle to the direction of movement of said ball, said ball bearing race being formed by two surfaces which form an angle with each other.

1,451,737. CASE-SHIFT MECHANISM. KARL AUGUST LEHMANN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Aug. 3, 1921. Serial No. 489,577. 4 Claims. (Cl. 197—73.)



1. In a case shift mechanism for typewriting machines, a platen, means pivotally connecting said platen to the frame of the typewriting machine and means for shifting the platen and limiting the movement of said platen, said means comprising a rolling lever positioned to constantly engage said connecting means, the hub of said rolling lever forming a stop for limiting the movement of said platen.

1,451,738. METER FOR MILKING APPARATUS. WILLIAM L. LEISGE, Atkinson, Nebr. Filed Jan. 24, 1921. Serial No. 439,404. 2 Claims. (Cl. 249—29.)

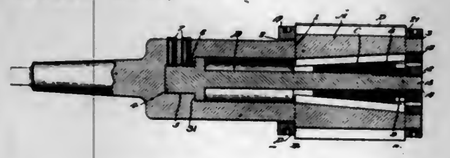


1. In combination with the milking apparatus of the class described, a meter comprising a casing having a cover normally held to its seat by the vacuum produced by the milking apparatus, twin cups pivotally supported within the casing, adjustable means for overbalancing the weight of the cups and the contents of the uppermost cup up to a predetermined weight, means for limiting the upward oscillating movement of the cups when the weight of

the milk in the uppermost cup causes it to discharge the milk and reverse its position, and means for discharging

the milk into whichever of the twin cups is uppermost, said means being connected with the valve tube of the milking apparatus.

1,451,739. APPARATUS FOR REFINING CRUDE OIL. JOHN MAYES, Wichita, Kans. Filed Sept. 13, 1920. Serial No. 409,962. 1 Claim. (Cl. 196—3.)

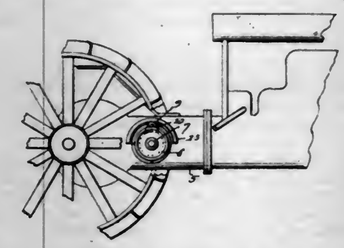


An apparatus for refining crude oils comprising a furnace having a firepot included within the walls thereof, a pan as a base of an enclosed evaporating chamber supported above said firepot and a pipe for gases leading therefrom; bar members slidably supported upon supporting elements in said chamber, a series of horizontally disposed U-shaped members carried by said bars, with their side elements contiguous one another and their ends contiguous one wall of said chamber; a hinged door at the opposite wall of said chamber, and a second series of U-shaped members, similarly arranged but in reversed position with their bases contiguous said door and whereby the end elements of each series register intermediate side elements of the opposite series to provide a tortuous passage in said chamber above the base of the pan; and an inlet pipe connecting to one end of said passage and an outlet pipe leading from the opposite end of said passage for the purposes substantially as specified.

1,451,740. HOLDER FOR COMPACTS. FRANK J. M. MILES, New York, N. Y., assignor to Cheramy, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 30, 1921. Serial No. 518,769. 3 Claims. (Cl. 132—82.)

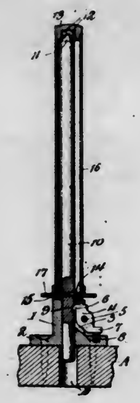
1. In combination, a container, a receptacle formed of resilient metal and having an outwardly turned flange at the top thereof, a compact compressed within said receptacle so as to be frictionally held therein and to expand it at the said flange to a slight degree, said flange being adapted to have a frictional hold upon the inner wall of said container when said receptacle containing the compact is forced within said container

1,451,741. EXPANDING REAMER. PAUL MILLER, Philadelphia, Pa., Filed May 15, 1922. Serial No. 561,029. 19 Claims. (Cl. 77—76.)



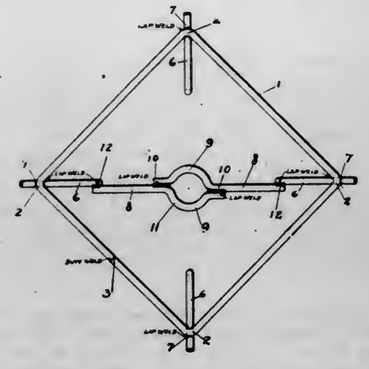
1. An expanding reamer including a body counterbored at one end, and the outer portion of the bore tapering, and the corresponding end of the body radially slotted, tool blades fitted in the slots and having tapered inner edges, a center guiding-bar secured axially within the bore of the body, a plurality of graduated cones slidably mounted upon the bar and presenting a smooth conical surface and means for forcing the cones along the length of the bar and against the inner edges of the blades whereby the blades are simultaneously adjusted radially with respect to the body of the tool.

1,451,742. EXPANDING REAMER. PAUL MILLER, Philadelphia, Pa. Filed Nov. 23, 1922. Serial No. 602,917. 6 Claims. (Cl. 77—76.)



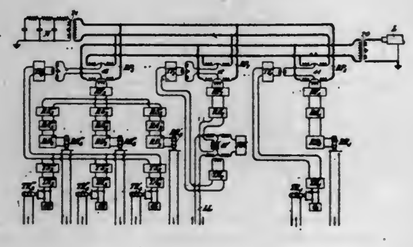
1. An expanding reamer including a body having a bore formed throughout its center, a portion of which is cylindrical, a center guiding rod having a cylindrical portion which fits and is held in the cylindrical portion of the bore, and provided with screw-threads at each end, radially adjustable blades, cones slidably mounted on the rod for engaging the inner edges of the blades, and simultaneously adjusting them uniformly throughout their length, a nut screwed on the threads of the rod for adjusting the cones, and a shank having a portion which fits one end of the bore of the body portion and provided with a screw-threaded socket which receives one of the threaded ends of the center guiding rod.

1,451,743. PULLEY-SHIELD DEVICE. FRED O'HARROW, Rockwell, Iowa. Filed Feb. 27, 1922. Serial No. 539,803. 2 Claims. (Cl. 180—1.)



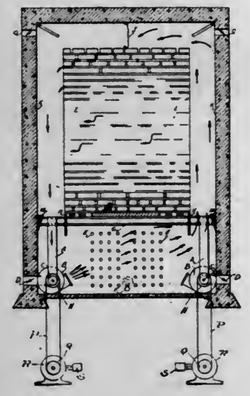
1. In a shield for tractor pulleys, a tractor having a gear casing, a plate applied to the gear casing, said plate having a raised portion forming a shoulder, a bracket having an apertured extension shaped to the contour of the gear casing and a foot, the edge of which engages the edge of the raised portion of the plate, the said bracket projecting over the pulley of the tractor, and a shield carried by the said bracket.

1,451,744. SPINDLE. CHARLES A. PROULX, Woonsocket, R. I. Filed Oct. 28, 1921. Serial No. 511,122. 2 Claims. (Cl. 118—65.)



1. In means for the purpose set forth, the combination of a frame, a support arranged on the frame, a spindle arranged in the frame and support, a dog mounted on the support, a detent formed on the spindle to receive the pawl of the dog, a spring for placing the dog under tension, a casing surrounding the spindle, a collar secured to the lower end of the casing, a cap interiorly machined and arranged on the casing and anti-friction means arranged in the cap and bearing on the spindle.

1,451,745. REEL. JOHN SOMMER, Peoria, Ill., assignor to Keystone Steel & Wire Company, Bartonville, Ill., a Corporation of Illinois. Filed Jan. 19, 1922. Serial No. 530,345. 4 Claims. (Cl. 242—77.)

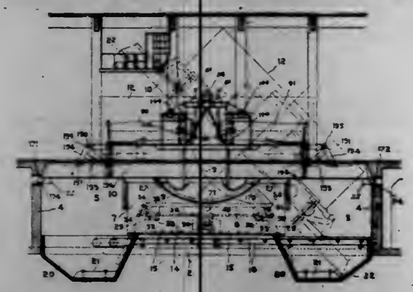


1. A wire reel including rectangular shaped end members, a plurality of horizontally disposed and parallel arranged rods connecting said end members, said rods having angular ends intersecting the corners of said end members at or adjacent the ends of said rods, and spindle receiving ends for said reel comprising overlapping rods formed with matching spindle seats, their outer ends connected with certain opposite parallel rods.

1,451,746. MULTIPLEX SELECTING CIRCUITS. MORTON SULTZER, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 23, 1921. Serial No. 524,484. 5 Claims. (Cl. 179—15.)

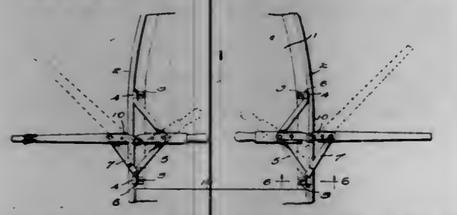
1. In a signaling system, a main line circuit, a balancing network, a plurality of bridged paths interconnecting said main line and network, a transmitting channel and a receiving channel associated with each bridged path, each transmitting and receiving channel including a filter.

1,451,747. REVERSING BLOWER KILN. HARRY D. TIEMANN and ROLF THELEN, Madison, Wis. Filed Jan. 24, 1921. Serial No. 439,672. 1 Claim. (Cl. 34—46.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



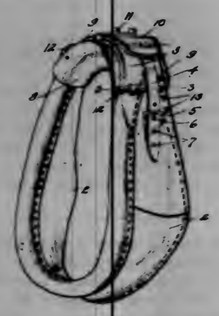
In a dry kiln, two series of blowers placed near the base of the kiln and respectively at opposite sides thereof, two shafts on which said series are respectively mounted for rotation, discharge ducts for said blowers, the ducts of each series respectively being adapted to discharge the drying medium upwardly against the opposite side of the kiln, and means for rotating said shafts whereby they may be driven alternately to cause a reversal of the circulation of the drying medium in said kiln.

1,451,748. APPARATUS FOR LOADING AND UNLOADING RAILWAY CARS. HENRY H. VAUGHAN and EDWARD CORNELIUS GAINES, Montreal, Quebec, Canada. Filed June 1, 1920. Serial No. 385,525. 11 Claims. (Cl. 214—47.)



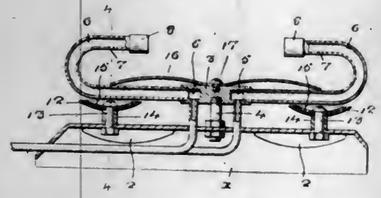
1. The combination with a fixed horizontal supporting means, a tiltable member resting upon said means and

tiltable thereon of power means and means including differential mechanism connecting the power means to



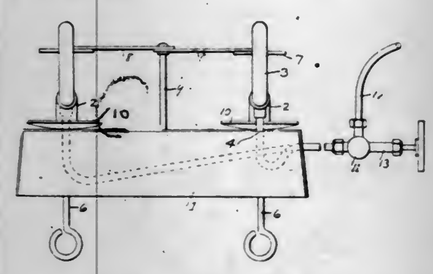
the opposite ends of the member for the purpose of tilting the same.

1,451,749. OAR. ALTON J. WILTROUT, Warsaw, Ind. Filed Apr. 6, 1922. Serial No. 550,159. 2 Claims. (Cl. 9—25.)



1. In a device of the character described, a pair of posts adapted to be secured to the side of a bolt and spaced from each other, the upper ends of said posts being provided with eyes, a substantially V-shaped supporting member, said member being provided with offset, rounded ends adapted to be received in said eyes to permit movement of said supporting member in a vertical plane, an auxiliary supporting member carried by said V-shaped supporting member and extending in the opposite direction, and an oar formed of two sections hinged to each other, one of said sections being pivotally mounted on each of said supporting members.

1,451,750. HORSE COLLAR. JOHN HOWARD WOODWARD, Columbus, Ohio, assignor to The J. H. & F. A. Sells Company, Columbus, Ohio, a Corporation of Ohio. Filed Aug. 15, 1921. Serial No. 492,422. 1 Claim. (Cl. 54—19.)

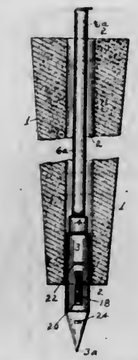


In a horse collar, a substantially yieldable body formed to include integral shoulder pads having separable overlapping neck ends at least one of the said neck ends being provided with a plurality of openings, an adjustable connection between said ends, a neck pad arranged within said collar to bridge said ends, said pad being adjustable to maintain a true central position upon said collar irrespective of relative adjustment between said neck ends, and a securing strap carried by said pad and arranged to pass selectively through one of plurality of openings, whereby the fixed positions of adjustment of said neck pad may be maintained.

1,451,751. BURNER. HENRY ZIEBOLD, Sr., Woodlawn, Ohio. Filed July 25, 1921. Serial No. 487,406. 2 Claims. (Cl. 158—66.)

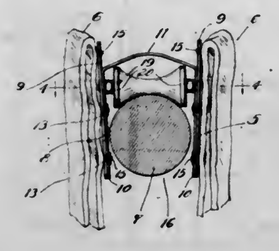
1. An oil burner comprising a base, a member supported on said base in vertically spaced relation thereto and presenting spaced oppositely disposed sockets, a fuel supply pipe leading to each socket, a burner pipe connected with each socket and presenting horizontally disposed upper and lower elements, the former of which has a jet-opening, a priming cup mounted on the base beneath the lower element of each burner pipe and in line with the jet-opening of the upper element, and a deflector plate mounted on the said socket member and having lateral extensions overlying the said lower elements of the burner pipes and presenting drip-deflecting portions inclined with respect to the said priming cups over which they partly extend.

1,451,752. BURNER. HENRY ZIEBOLD, Sr., Lockland, Ohio. Filed Apr. 1, 1922. Serial No. 548,664. 3 Claims. (Cl. 158—63.)



1. A burner of the class described comprising a base, a coupling carried thereby and having a jet opening therein, a tube of loop shape and having its ends connected with the coupling, one end of the tube being closed, means for feeding fuel into the tube adjacent the closed end and a valve for controlling the jet opening.

1,451,753. HYDRAULIC PILING. HARVEY ABRAMES, Norfolk, Va. Filed Oct. 20, 1921. Serial No. 509,058. 1 Claim. (Cl. 61—80.)

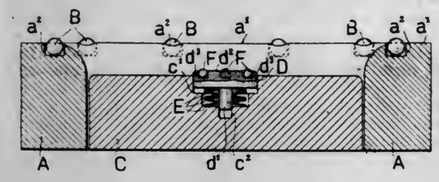


In a device of the class described, the combination with a pile having a longitudinal bore therethrough, of

a cylinder in said bore having a closed point thereon provided with jet orifices, a valve in said cylinder, means extending through the periphery of said cylinder and con-

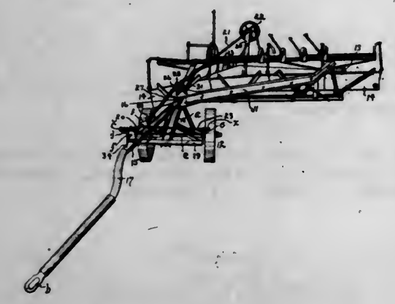
trolled by said bore for opening said valve, a spring for closing said valve, and means for suspending said cylinder in said bore.

1,451,754. DRAPERY HANGER. GLENN U. ANGEVINE, Chicago, Ill., assignor to Glenn U. Angevine and August H. Schallock, Copartners doing business as the G. U. Angevine Company, Chicago, Ill. Filed May 7, 1921. Serial No. 467,777. 3 Claims. (Cl. 156—21.)



1. A hanger of the character described comprising a frame having a pair of straight laterally spaced legs which incline inwardly toward each other toward the bottom adapted to admit freely between them the supporting rod for said hanger, a single anti-friction bearing roller having the periphery thereof conformed to the contour of said rod to roll thereon, a straight pin for said roller extending across the hanger between said legs and secured thereto to constitute a rigid brace for said frame, and spacers on said pin for spacing said roller relatively to said frame, said frame comprising a substantially U-shaped brace fastened on the inside of the lower portion of said legs by a plurality of eyelets adapted to receive drapery securing means and having its arched portion extending across said frame over said roller and serving as a dust-guard therefor.

1,451,755. METHOD OF PRODUCING A PROTECTIVE COATING ON OBJECTS OF MAGNESIUM OR MAGNESIUM ALLOYS. CHRISTIAN BERGH BACKER, Bergen, Norway. Filed Dec. 16, 1921. Serial No. 522,941. 5 Claims. (Cl. 148—6.)

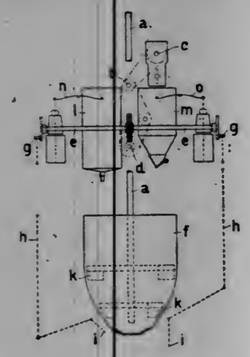


1. Method of producing a coating upon objects and materials of magnesium and magnesium alloys which comprises heating of the objects in the presence of water at a temperature of above 100° C.

1,451,756. SWAGING PRESS. KARL BÖHLE, Essen-on-the-Ruhr, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Dec. 6, 1920. Serial No. 428,646. 5 Claims. (Cl. 113—49.)

1. In a press of the class described an annular die member, a die block surrounded by said annular die member and movable relatively thereto in axial direction and antifriction means resiliently mounted on said die block, said antifriction means normally extending beyond the front face of the die block for supporting the work to be acted upon before the pressing operation and adapted to be displaced by the work behind the front face of the die block during the pressing operation.

1,451,757. STEERING MEANS FOR DRAWN VEHICLES. BICK R. BONNEY, Omaha, Nebr., assignor to Stroud and Company, Omaha, Nebr., a Corporation. Filed Jan. 31, 1921. Serial No. 441,210. 2 Claims. (Cl. 280—33.10.)



1. In steering means for a vehicle to be drawn by a tractor, a truck connected with and having a reach extending forwardly thereof, a yoke stationary with the reach and having upwardly projecting arms, resiliently mounted slide-bars carried by said arms, a tubular tongue having apertures and connected with the vehicle, a revoluble spool having bearings on the tongue, strands connecting the spools with the slide-bars, and a tongue-extension having a curved part provided with apertures and adapted to be rotated in the tongue to dispose its apertures in register with selected apertures of the tongue to elevate or lower the outer end of said tongue-extension for a connection with the tractor, and a keeper for engaging in said apertures.

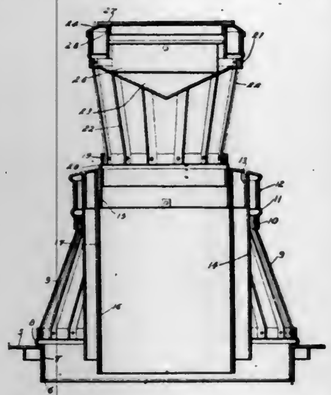
1,451,758. MANUFACTURE OF DRY-BATTERY CANS. FRANK G. BREYER and WILLIAM H. FINKELDEY, Palmerton, Pa., assignors to The New Jersey Zinc Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 12, 1922. Serial No. 528,865. 6 Claims. (Cl. 204—38.)

1. The improvement in the manufacture of zinc cans for dry batteries which comprises washing the zinc ma-

terial composing the battery can and thereby cleaning the surface thereof to the extent necessary for securing substantially uniform corrosion of the zinc in the normal action of the battery.

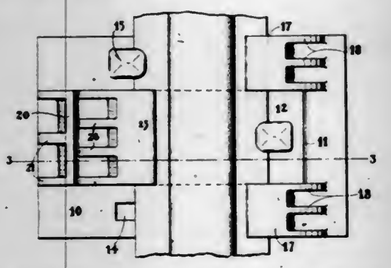
1,451,759. AUTOMATIC WEIGHING APPARATUS FOR LOOSE MATERIALS. GUSTAV A. BRUHN, Harburg-on-the-Elbe, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Dec. 3, 1920. Serial No. 428,114. 4 Claims. (Cl. 249—22.)

1. An automatic weighing apparatus for fluent substances, including liquids, comprising a driving mechanism, a plurality of weighing receptacles, means for controlling the charging and discharging of such receptacles, means for temporarily connecting said driving mechanism to said charging and discharging controlling means, and mechanism operated by the movement of such receptacles when filled and empty for controlling the said connecting means.



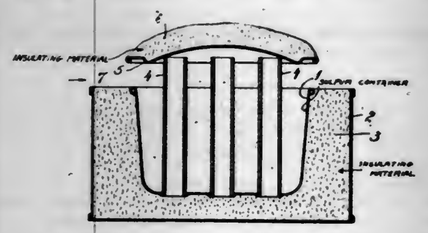
1,451,760. SAFETY CHICK BOX. DAVID HIRAM BUCKS, La Fayette, Ohio. Filed July 6, 1922. Serial No. 573,066. 2 Claims. (Cl. 119—19.)

1. 1 shipping box of the class described comprising an inner section and an outer section, the inner section being supported in spaced relation with the outer section to provide a passageway around the inner section, said inner section having openings to provide communication between the inner section and passageway, a tubular member in the inner section and extending through the bottom thereof, partitioning members within the inner section and dividing the same into compartments, means for closing the openings in the bottom of the inner section, and a cover for the tubular member.



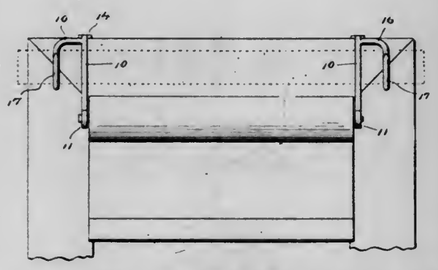
1,451,761. REGISTER. GUSTAV A. BROE, Edgar, Nebr. Filed Apr. 29, 1921. Serial No. 465,564. 1 Claim. (Cl. 98—50.)

In a register, a lower section, a cover for the lower section, a depending flange forming a part of the cover, a cylindrical member positioned over the depending flange, a base section, a collar, arms connecting the base section and collar, said collar being positioned within the cover, a tubular member positioned within the cylindrical member and spaced from the walls thereof, and an upper



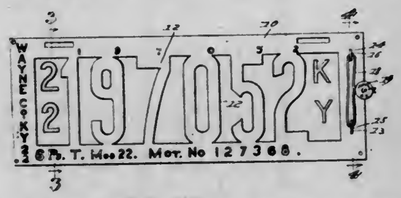
section positioned within the cover and including a plurality of spaced arms.

1,451,762. ANTICREEPER TIE PLATE. BENJAMIN L. CLEVELAND, Chattanooga, Tenn., assignor of one-fourth to S. C. Hutcheson, one-fourth to G. F. Meehan, and one-fourth to F. M. Robbins, all of Chattanooga, Tenn. Filed Nov. 29, 1922. Serial No. 603,983. 3 Claims. (Cl. 238—304.)



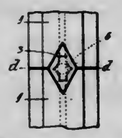
2. An anticreeper tie plate consisting of two flat bottomed rail supporting members provided with cooperating inclined faces each of said members having a rail flange engaging jaw, the jaw of one of said members extending upwardly to engage and support the head of the rail.

1,451,763. BURNING SULPHUR. HAROLD S. DAVIS, Pittsburgh, Pa., assignor to Texas Gulf Sulfur Company, Bay City, Tex., a Corporation of Texas. Filed Nov. 2, 1921. Serial No. 512,393. 5 Claims. (Cl. 23—1.)



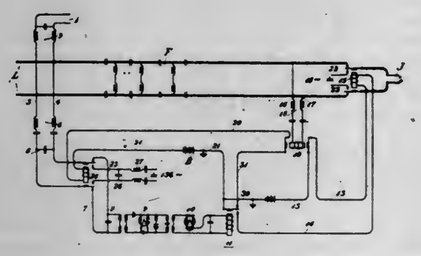
1. The improvement in the burning of sulphur which comprises conducting heat from burning sulphur into the mass of sulphur to be burned through paths of good heat conductivity extending throughout the depth of said mass of sulphur.

1,451,764. BRACKET. SEWARD J. DICK, Clymer, Pa. Filed June 27, 1921. Serial No. 480,713. 1 Claim. (Cl. 156—24.)



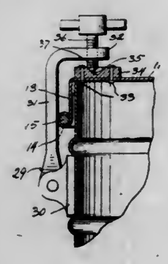
A device of the character described formed of a single piece of shaped metal and consisting of a main shank, a shade roller engaging arm extending outwardly at a right angle from the bottom of the shank, an inwardly extending right angled arm provided at the upper end of the main shank and disposed at an opposite direction to the shade roller engaging arm penetrating prongs formed upon said inwardly extending arm, a laterally disposed arm extending from the juncture of the main shank and the right angled arm and terminating in a hook shaped pole supporting bracket permitting flush engagement with the window casing to its point of curvature, and extending substantially parallel to and above said shade engaging bracket.

1,451,765. LICENSE PLATE. CHESTER C. DOTY, Danville, and CULLOM WATTERSON COFFEY, Monticello, Ky. Filed June 2, 1922. Serial No. 565,328. 2 Claims. (Cl. 40—63.)



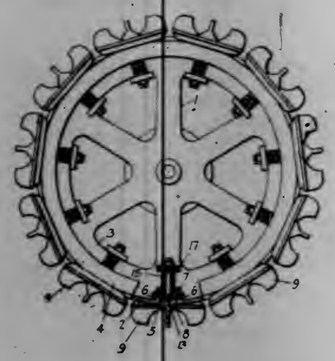
1. A license plate comprising a frame having integral numbers, the plate being cut away to produce the numbers with clearances therebetween, an annual plate back of the first mentioned plate having indicia exposed through the openings produced in forming the numbers, and an element back of the frame for holding the said annual plate, including means for holding the element and plate in assembled relation to each other.

1,451,766. RAIL JOINT. LEANDER EKBERG, Vasteras, Sweden. Filed Jan. 11, 1921. Serial No. 436,418. 4 Claims. (Cl. 238—229.)



4. The combination with the abutting ends of a pair of rails, of a joining member countersunk into said rails and having its greatest width bridging the joint between the ends of the rails, a depending portion carried by said member and extending between the abutting ends of the rails, a nut threaded on the lower end of said depending portion and adapted to bear against the under-surface of said rails, and means for locking said nut against rotation on said depending member.

1,451,767. COMPOSITE RINGER FOR MULTIPLEX-TRANSMISSION SYSTEMS. LLOYD ESPENSCHIED, Hollis, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 27, 1919. Serial No. 326,738. 4 Claims. (Cl. 179—4.)

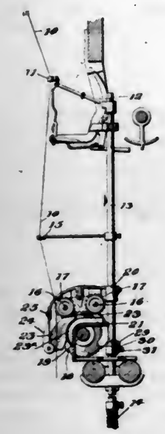


1. A transmission line arranged for the multiplex transmission of currents for purposes of telephoning, telegraphing, and signaling, a composite ringer device including a relatively high frequency circuit and a relatively low frequency circuit, said circuits being associated with said transmission line, and selective arrangements for said telephone currents and said telegraph currents, said selective arrangements for said telephone currents being associated with said transmission line on the terminal side thereof with respect to said relatively high frequency circuit of said composite ringer, and said selective arrangements for said telegraph currents being included in a bridge across said transmission line.

1,451,768. CONTAINER. JAMES M. FALLS, Louisville, Ky. Filed June 28, 1922. Serial No. 571,418. 4 Claims. (Cl. 220—55.)

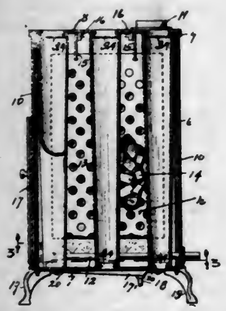
1. The combination with a container and a pivoted closure for the container having a depending flange formed at its lower end with a reinforcing rib, of an arm pivoted to the container and having an angular portion overhanging the closure, and coacting means carried by the closure and the angular portion of said arm for forcing the arm inwardly to tension the same against said reinforcing rib and force the rib inwardly toward the container.

1,451,769. TRACTOR WHEEL. KENT S. GINGERICK, Urbana, Ohio, assignor to Rial T. Parrish, Dayton, Ohio. Filed May 1, 1922. Serial No. 557,524. 2 Claims. (Cl. 305—13.)



1. In a device of the type described, the combination with a rim having a plurality of holes in its periphery, of a traction member having a pair of lug portions adapted to enter each hole for oscillation therein, an inwardly projecting element pivotally secured at its lower end between said lugs, a spring-support mounted on said rim over each hole, a coil spring encircling said element and bearing against said support, and a cap on the inner end of said element to receive the inner end of said spring.

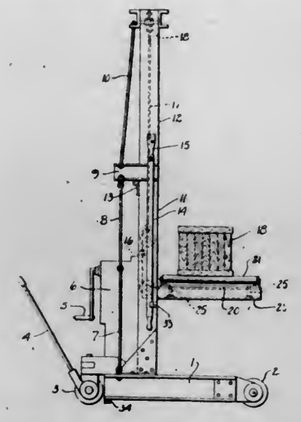
1,451,770. BULL AND CALF WHEEL. HU MARVIN HARRIS, Chattanooga, Tenn., assignor to Lucey Manufacturing Corporation, New York, N. Y., a Corporation of Tennessee. Filed Aug. 31, 1921. Serial No. 497,172. 6 Claims. (Cl. 64—17.)



5. A hub for wheels of the types described comprising a plurality of radially disposed sockets each having an open side and a radially disposed web in each of said sockets, said webs being spaced from the side walls of the sockets and extending at right angles to the open sides of the sockets.

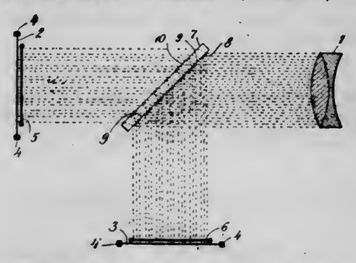
1,451,771. ATTACHMENT FOR THREAD DOUBLING AND TWISTING MACHINES. MARTIN F. HAAS, Wilkes-Barre, Pa. Filed Apr. 18, 1922. Serial No. 554,830. 6 Claims. (Cl. 117—21.)

1. The combination with a thread doubling and twisting machine having feed roll gears and a drive gear of a spring-actuated shield adapted to enclose said drive gear when said gears are disengaged.



1,451,772. OIL HEATER. THOMAS F. HATTON, Indianapolis, Ind. Filed Sept. 18, 1922. Serial No. 589,020. 3 Claims. (Cl. 126—93.)

1. In an oil heater, a body comprising a top, bottom, and side, said bottom having a plurality of openings and said top having an equal number of openings, and tubes connecting each opening in the bottom with a corresponding opening in the top, said tubes being of increasing area in cross section from top to bottom, a source of heat on or near the bottom, a basket above the source of heat containing a material to store heat, said source of heat and basket being surrounded by said tubes.

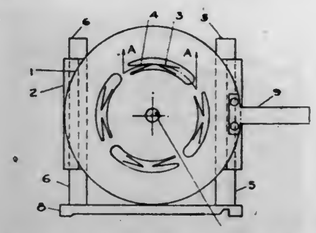


1,451,773. PORTABLE ELEVATOR. ETHAN N. HESCOCK, Westfield, N. J., assignor to New Jersey Foundry and Machine Company, a Corporation of New Jersey. Filed Mar. 6, 1922. Serial No. 541,553. 2 Claims. (Cl. 187—9.)

1. A new article of manufacture for a portable elevator comprising a reversible platform, one surface of the platform being smooth to receive bags and bundles or similar soft containers, and the other surface provided with rollers

to cooperate with boxes, barrels and similar hard containers and permit their more ready handling.

1,451,774. TWO-COLOR PHOTOGRAPHY. JOHN KNIGHT HOLBROOK, New York, N. Y., and MARSHALL DE FRANCISCO, Jersey City Heights, N. J., assignors to D. S. Plumb, East Orange, N. J. Filed June 22, 1921. Serial No. 479,641. 7 Claims. (Cl. 88—1.)



1. A camera for use in two-color photography, comprising a lens, means for supporting two films at right angles to one another, a color screen in front of each film and a light splitting medium arranged at an angle of about 45° to the incoming light, said medium being provided with silvered portions and clear portions, with the silvered portions on the front thereof toward the incoming light, the silvered portions being of such a shape and size with respect to the clear portions and with respect to the thickness of the glass of the said medium as to prevent the lateral projection of rays reflected from the back of said medium.

1,451,775. TOOTHBRUSH. SYLVESTER B. HUSCH, New York, and GEORGE S. HUSCH, Brooklyn, N. Y. Filed May 11, 1917. Serial No. 167,883. 9 Claims. (Cl. 15—194.)

1. The combination with a tube divided into sections longitudinally by scoring, of a plurality of brush sections arranged within the tube, one behind the other, with their bristles substantially parallel with the tube, and partitions in said tube disposed between the brush sections.

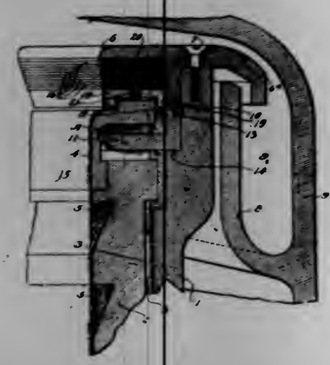
1,451,776. MEAT-SLICING MACHINE. GRANTHAM JAQUETTE, Philadelphia, Pa. Filed Nov. 21, 1921. Serial No. 516,855. 1 Claim. (Cl. 17—14.)

In combination a meat slicing machine having a reciprocating carriage, a meat table thereon and means for holding short ends of meat comprising a plate provided with openings with teeth thereon projecting from wall of said openings at an angle to the surface of said plate, and a plate having teeth thereon which protrude therefrom at an angle and extend through the aforesaid openings in the first mentioned plate and cooperate with the teeth on said first mentioned plate to draw the meat firmly against the first mentioned plate, the teeth on both said plates being integral with the plates and formed of the substance thereof.

1,451,777. DEVICE FOR READILY FASTENING TOGETHER LOOSE LEAVES OF PAPER. GERHARD JOBST, Wilmersdorf, Germany. Filed Nov. 5, 1919. Serial No. 335,977. 4 Claims. (Cl. 24—66.)

1. A binder for a sheaf of loose sheets of paper, which sheets are provided with a marginal fold overlying a part of the main body of the sheets, the binder comprising portions in serial arrangement to each other and which are normally located in different planes, one of the portions being adapted for insertion between the inner surface of the fold and the opposing surface of the main body of the sheets, while other portions in serial arrangement with said first named portion are adapted to engage the outer surface of the marginal fold and the outer surface of said main body of the sheaf of sheets respectively.

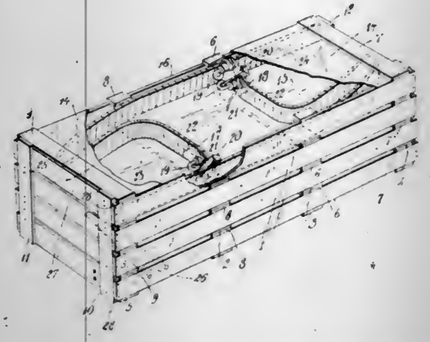
1,451,778. DISPLAY WINDOW. CLAUDE W. KRESS, New York, N. Y. Filed Apr. 17, 1922. Serial No. 553,945. 6 Claims. (Cl. 20—40.)



1. A display window comprising two adjacent glass sides, a partition connecting the two extremities of the

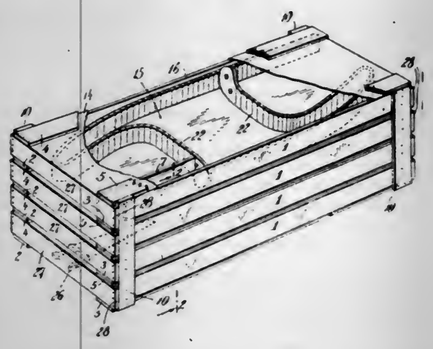
glass sides, a floor and a plurality of steps ascending from said floor towards the central portion of the partition, the

contour of each step more nearly approaching a straight line than that of the step beneath it.



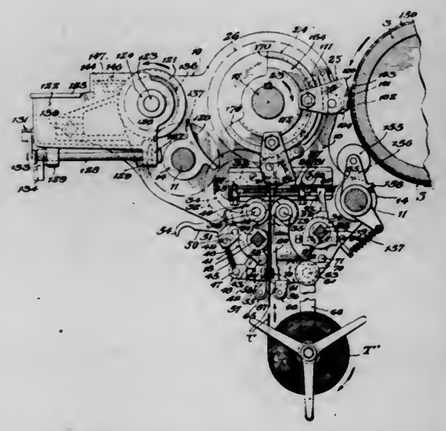
1,451,779. CENTRIFUGAL SEPARATOR. RALPH E. LAPHAM, Oakland, Calif. Filed Dec. 24, 1921. Serial No. 524,677. 21 Claims. (Cl. 83—67.)

1. In a separating machine having a mercury circuit, filtering means interposed in a portion of the circuit and including a metallic filtering body through which the mercury flows in an amalgamated engagement.



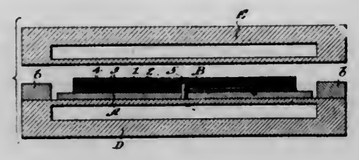
1,451,780. SEPARABLE MULTIPLE UNIT BUMPER PACKAGE. GEORGE ALBERT LYON, Philadelphia, Pa. Filed Oct. 31, 1919. Serial No. 334,671. 6 Claims. (Cl. 206—46.)

1. The separable multiple unit package for automobile bumpers or the like, comprising a plurality of vertically piled units each comprising wooden end pieces and cooperating side pieces secured thereto and having ends projecting therefrom, each unit containing the disconnected parts of an automobile bumper comprising resilient strip members wrapped with paper and having the impact receiving members adjacent said sides and having the ends of the transversely extending connected attaching members arranged adjacent the other impact receiving member and having the hook bolts and bushings loosely bolted through the apertures in said attaching members and having the clamping devices loosely arranged on said attaching members between said hook bolts, paper board covers on the top and bottom faces of said unit and transverse wood retainer strips secured outside of said covers at each end



of said unit to cooperate with and retain the ends of said impact receiving members, and also arranged intermediate said ends in substantial alignment with said attaching members and separable wood strip connectors nailed to said units within the angle formed by said projecting ends of said sides and the adjacent faces of said ends to form a multiple unit package in which the units mutually reenforce and protect each other.

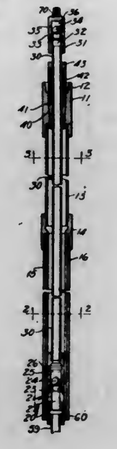
1,451,781. BUMPER PACKAGE. GEORGE ALBERT LYON, Philadelphia, Pa. Filed May 21, 1921. Serial No. 471,374. 4 Claims. (Cl. 206—46.)



1. The separable multiple unit package for automobile bumpers or the like, comprising a plurality of vertically piled units each comprising wooden sides and cooperating ends secured thereto and having ends projecting therefrom, each unit containing the disconnected parts of an automobile bumper comprising resilient strip members adjacent said sides and having the end of each transversely extending connected attaching member arranged adjacent the other impact receiving member, paper board covers on the top and bottom faces of said unit and wooden retainer strips secured outside of said covers at each side of said unit and nailed to said sides to cooperate with and retain the ends of said impact receiving members and attaching members, an inner wooden partition member extending between one of said attaching members and the box end and nailed to the adjacent retainer strips to form an inner wooden compartment within said unit to contain attaching devices and separable wood strip connectors nailed to said units within the angle formed by the projecting ends of said box ends to form a multiple unit package in which the units mutually reenforce and protect each other.

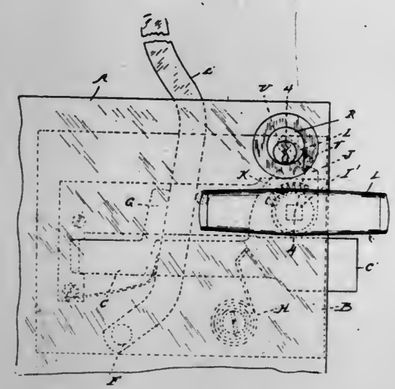
1,451,782. STAY OR TAB APPLYING MACHINE. CHARLES H. NITSCH and WILLIAM A. WEIGHTMAN, Logan, Philadelphia, and WILLIAM H. STREEPER, Frankford, Philadelphia, Pa., assignors to Stokes & Smith Company, Summerdale, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 1, 1922. Serial No. 540,290. 80 Claims. (Cl. 93—54.)

1. In tabbing mechanism, an operative unit comprising a tab strip feed means, a strip retarder operated in conjunction with the feed means, a cutter, and means for grasping, advancing, gumming and applying severed tabs.



1,451,783. MOLDED SOUND-REPRODUCTION ARTICLE. EMIL E. NOVOTNY, Logan, Philadelphia, Pa., assignor to John Stogdell Stokes, Philadelphia, Pa. Filed Jan. 21, 1921. Serial No. 438,926. 3 Claims. (Cl. 154—43.)

1. A sound record having a grooved sound reproducing face formed from a welded layer of synthetic resin.



1,451,784. OIL-WELL PUMP. ALBERT A. OLSEN, Ranger, Tex. Filed Dec. 6, 1921. Serial No. 520,255. 12 Claims. (Cl. 103—179.)

1. A fluid pump for use with a well casing comprising a casing, a pump barrel, a plunger operating in the pump barrel, valve mechanism permitting the flow of the fluid in one direction, and means cooperating with the plunger

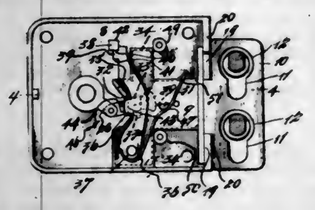
to positively prevent contact of abrasive in the fluid pumped with any points of frictional engagement of the plunger and barrel.

1,451,785. VEHICLE DOOR LOCK. LLOYD R. RHEIN, Detroit, Mich., assignor to C. R. Wilson Body Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 19, 1920. Serial No. 404,574. 2 Claims. (Cl. 70—29.)

1. In a vehicle door lock, the combination with a bolt and means normally projecting the same, of interior means for retracting the bolt, exterior means for retracting the bolt, including a cam engageable with the bolt and provided with a locking shoulder, a locking member movable both rotatively and rectilinearly into or out of engagement with said locking shoulder, means located interiorly of the door for rectilinearly actuating said locking member into engagement with said locking shoulder, and key operable means located exteriorly of the door and rotatively actuating said locking member out of such engagement.

1,451,786. PROCESS FOR THE PURIFICATION OF COMMERCIAL PHOSPHORIC ACID BY CRYSTALLIZATION. WILLIAM H. ROSS, CHARLES B. DURGIN, and RUSSELL M. JONES, Washington, D. C., dedicated, by mesne assignments, to the people of the United States. Filed Apr. 19, 1922. Serial No. 555,602. 11 Claims. (Cl. 23—1.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A process for the purification of phosphoric acid which consists in evaporating the acid at a temperature below 150° C. to a specific gravity of 1.85 $\frac{20°}{20°}$ C., or above, then cooling the same to a temperature below 40° C., then inoculating the same with a crystal of phosphoric acid, then centrifuging the resulting crystalline mass to effect a separation of the crystals from the mother liquor, then melting the said crystals at a temperature above 40° C., then adding water to the said melted crystals to bring same to a specific gravity of 1.85 $\frac{20°}{20°}$ C., or above, cooling below 40° C., subsequently inoculating said melted crystals with a crystal of phosphoric acid, centrifuging and repeating as desired.



1,451,787. COIN-OPERATED VENDING MACHINE. EDWARD SCHULTZ, Maywood, Ill., assignor, by mesne assignments, to Mrs. E. A. Laughery, Chicago, Ill. Filed Dec. 26, 1919. Serial No. 347,350. 9 Claims. (Cl. 194—2.)

8. In a machine of the kind described having a movable carriage together with means connected therewith for imparting movements thereto, the combination of coin mechanism including a plurality of chutes each for coins of a different denomination, locking means arranged normally to permit only a limited movement of the carriage, and means for retracting the locking means operable by initial movement of the carriage only when a selected combination of coins has been received within these chutes, associated with other means adapted to effect a desired modification of the coin combination requisite for retraction of the locking mechanism, substantially as described.

1,451,788. LOCK. MORRIS SHEINMAN, New York, N. Y., assignor to Wilson Bohannan, Inc., Brooklyn, N. Y., a Corporation of New York. Filed June 30, 1921. Serial No. 481,542. 16 Claims. (Cl. 70—46.)

6. In a lock mechanism, a casing, a bolt slidably mounted within the casing, a latch carried by the bolt to hold same in locked or unlocked position, a key operated cam arranged to first release the latch and thereafter to operate the bolt, a knob operated arm, means actuated by the arm to first release the latch and thereafter to operate the bolt, a plate pivotally connected at one end to said arm and engaging means carried by the bolt located adjacent

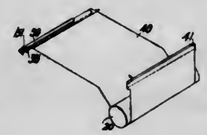
said plate, arranged to engage said plate when said arm has been moved to a predetermined extent, and means carried by the plate to release the latch before said bolt and plate become engaged.

1,451,789. STROPPING MACHINE. CLARENCE E. SMITH, Peoria, Ill. Filed July 3, 1919. Serial No. 308,416. 7 Claims. (Cl. 51—140.)

6. A stropping machine including in its construction a closed casing, a member pivotally mounted therein, a rocking part mounted in the member capable of holding a razor-blade, a frame operatively connected to the same and adapted for movement to rock the latter, a stropping part mounted on the frame adapted for movement perpendicularly to the axis of movement of the part, and means extending outside the casing by which to swing said member.

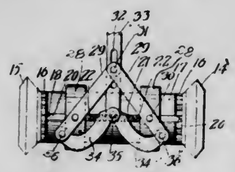
1,451,790. BLADE HOLDER FOR STROPPING MACHINES. CLARENCE E. SMITH, Peoria, Ill. Filed Aug. 25, 1919. Serial No. 319,799. 4 Claims. (Cl. 51—218.)

2. In combination, a U-shaped member, an inverted trough-like member lying between the extremities thereof journaled at one end in one of said extremities, a disc-like member fixed at the other end and journaled in the other extremity of the U-shaped member, that end of the member to which the disk-like member is affixed having an opening therein coextensive with the diameter of said disc-like member, the latter being of two parts spaced in the same plane with the trough of said trough-like member, and a second trough-like member slidably engaging the first said trough-like member and adapted to be withdrawn between the separated disc portions.



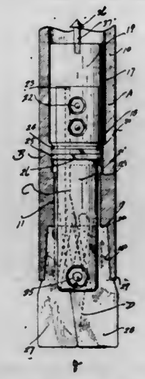
1,451,791. MANIFOLDING PACK AND HOLDER. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 18, 1920. Serial No. 411,181. 10 Claims. (Cl. 282—29.)

7. A holder for a transfer-sheet pack to facilitate manifolding in a typewriting machine, comprising a holding portion, a forward extension to enable the holder to remain under the control of the platen and feed-rolls when the holding portion is moved to the rear thereof, said forward extension lying to the rear of the pack to avoid interference with typing, a rearward extension of sufficient length to extend between the platen and the feed-



rolls when the holding portion is moved to the front of the platen, and a front flap extending from the holding portion to receive the rear end of a worksheet to facilitate the front insertion thereof at the outside of said pack.

1,451,792. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 22, 1920. Serial No. 412,013. 8 Claims. (Cl. 197—126.)



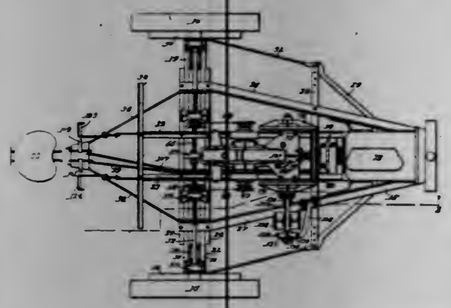
1. A typewriter, a platen, type for printing on a plurality of webs on one side of the platen, a carbon sheet back of the first web, a slide to which the carbon sheet is attached, said slide also having attached thereto a guide sheet in front of the outermost web, said guide sheet being limited to extend only over part of the carbon sheet leaving the rest free to coact with a loose sheet and carbon sheet guided to position on said web by said guide.

1,451,793. REVERSIBLE DRIVING GEAR. WINFIELD D. SMITH, Newark, N. J. Filed May 17, 1920. Serial No. 381,831. 5 Claims. (Cl. 74—54.)

1. A reversible gear for converting oscillatory into rotary motion, comprising an oscillating driving shaft having a fixed gear wheel thereon, a driven shaft having loose spaced gear wheels meshing with opposite sides of the gear wheel of the driving shaft, a spacing member fast on the driven shaft between the spaced gears, sets of pawls of opposite pitch on the spacing member, and a lever mechanism for selectively actuating the pawls to throw one set into engagement with the spaced gears, and the other set out of such engagement.

1,451,794. DRILL. JOHN C. STOKES, Shreveport, La. Filed May 10, 1920. Serial No. 380,371. 11 Claims. (Cl. 255—78.)

1. In a drill apparatus, a tool holder, a bit carrier slidably associated therewith having a pair of annular grooves, resilient split rings mounted in said grooves and arranged to frictionally engage the inner surface of the tool holder so as to prevent the seeping of water, mud and the like between the tool holder and bit carrier.



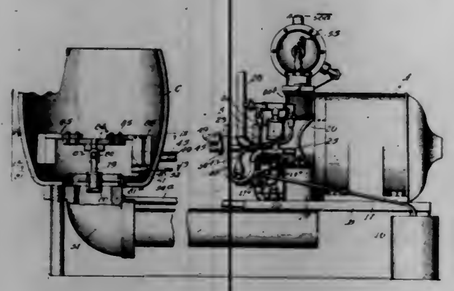
1,451,795. DIRECTION SIGNAL FOR AUTOMOBILES. CHARLES THOMPSON, Hamilton, Ontario, Canada. Filed Mar. 20, 1922. Serial No. 545,271. 1 Claim. (Cl. 116—51.)

In a direction signal device for automobiles the combination with the cowl portion of the automobile and a pair of signal lamps located one at each side thereof, of bearing brackets carried by the cowl, depending journal portions carried by each lamp and extending downwardly through said brackets, rearwardly extending arms fixedly carried by the lower ends of the journal portions below the bearing brackets, a bell crank lever, an operating handle connected to one arm of the bell crank, distance links pivotally connected at one end to the rearwardly extending arms, the other ends of the distance links pivotally connected to the second arm of the bell crank, the bell crank lever being pivotally suspended from the under side of the cowl and adapted to be oscillated by the operating handle for reciprocating the distance links and oscillating the lamps simultaneously in either direction, and directional indicating means carried by each side of the lamps, the lamps normally disposed longitudinally of the automobile and adapted to extend laterally beyond the automobile when in the swung positions.

1,451,796. TRACTOR. LEWIS E. WATERMAN, HARRY R. TRAPHAGEN, and HOWARD L. WATERMAN, Rockford, Ill., assignors to Emerson-Brantingham Company, Rockford, Ill., a Corporation of Illinois. Filed June 9, 1919. Serial No. 302,695. 9 Claims. (Cl. 180—17.)

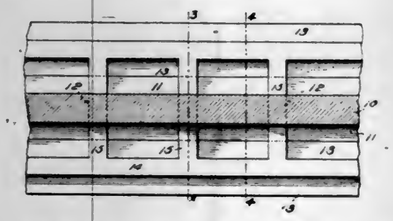
1. In a tractor, the combination of a main frame, a pair of traction wheels, a frame section connecting each

traction wheel with the main frame and adjustable laterally thereon, a jack shaft mounted upon and adjustable laterally with each frame section for driving its respective traction wheel, a motor and transmission



mechanism mounted on the main frame, the transmission mechanism including a differential, each driven member of which has a chain driving connection with one of the jack shafts, and a brake for retarding rotation of each driven member of the differential.

1,451,797. VIBRATOR LEVER FOR LOOMS. WILLIAM M. WATTIE, Worcester, Mass., assignor to Crompton & Knowles Loom Works, a Corporation of Massachusetts. Filed Oct. 20, 1921. Serial No. 509,128. 5 Claims. (Cl. 139—79.)

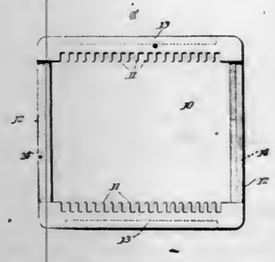


1. In a loom, having a vibrator gear, in combination, a vibrator lever, a block detachably secured to said lever, and bearing and stop projections fixed on said block, said bearing projection supporting said gear and said stop projection limiting angular movement thereof.

1,451,798. LIQUID-FUEL-ATOMIZING DEVICE. WALTER W. WILLIAMS, Bloomington, Ill. Filed Oct. 8, 1920. Serial No. 415,501. 19 Claims. (Cl. 158—36.)

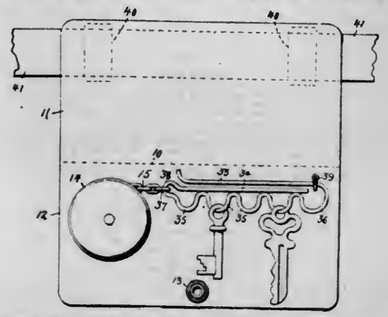
1. The combination with an electric motor, of a rotary pressure pump, an oil feed pump, a burner, a fuel tube connecting said pressure pump and burner, an air inlet means, priming mechanism, and electric switch mechanism for automatically starting and stopping said electric motor.

1,451,799. METHOD OF AND MEANS FOR REENFORCING WALL FOUNDATIONS. JAMES ALGERNON YOUNGBLOOD, Dallas, Tex. Filed Apr. 24, 1920. Serial No. 376,283. 9 Claims. (Cl. 61—51.)



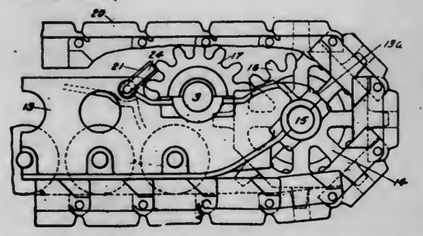
1. The method of reenforcing old walls which consists in cutting a hole in the original wall above the footings thereof, excavating a trench at one side of but no deeper than the original wall foundations, constructing a reenforcing structure in said trench, and uniting said structure to said wall by means of a beam integral with said structure interlocked with the wall and passing through said hole, said beam providing means whereby a part of the weight of the original wall is transferred to the reenforcing structure.

1,451,800. FLEXIBLE CONDUIT. RAYMOND C. AGNER, Burlington, Wis. Filed June 9, 1921. Serial No. 476,304. 1 Claim. (Cl. 285—92.)



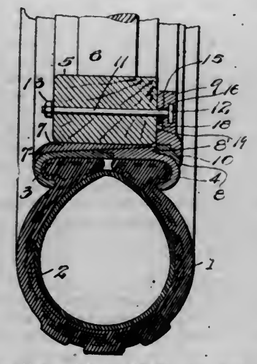
In a device of the class described, a conduit comprising sections connected by ball and socket joints; cores in the sections and having cooperating passages; a casing about the sections; and a filler interposed between the casing and the sections, the filler being resilient, and the casing being flexible.

1,451,801. PROCESS FOR HANDLING, DRYING, AND FORMING PASTED BATTERY PLATES. CHESTER M. ANGELL, Chicago, Ill., assignor to Vesta Battery Corporation, Chicago, Ill., a Corporation of Illinois. Filed Apr. 1, 1922. Serial No. 548,785. 4 Claims. (Cl. 204—29.)



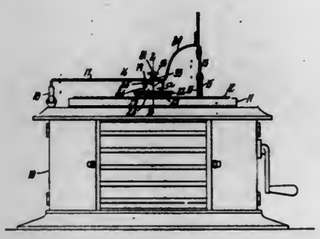
1. In a process of manufacturing storage battery plates, the steps following the pasting operation which consist in assembling a plurality of pasted plates in fixed spaced parallel relation, drying the plates in that relation and subjecting the plates in that relation to the action of an electric current and an electrolyte.

1,451,802. KEY HOLDER. LESLIE G. ANDREWS and RAYMOND R. THEIS, Lincoln, Nebr. Filed Dec. 28, 1921. Serial No. 525,415. 1 Claim. (Cl. 59—96.)



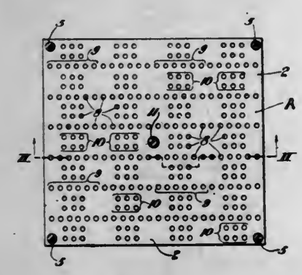
A key holder bent from a section of wire into three portions, two portions in parallel relation, and the third portion further bent into a plurality of spaced loops closed by the adjacent parallel member, the loops adapted to engage the eye portions of the keys and holding them in separated position.

1,451,803. LOCKING DEVICE FOR POWER SHOVELS AND THE LIKE. EDWIN J. ARMSTRONG, Erie, Pa., assignor of one-half to Arthur C. Vicary, Erie, Pa. Filed Aug. 29, 1921. Serial No. 496,474. 6 Claims. (Cl. 188—30.)



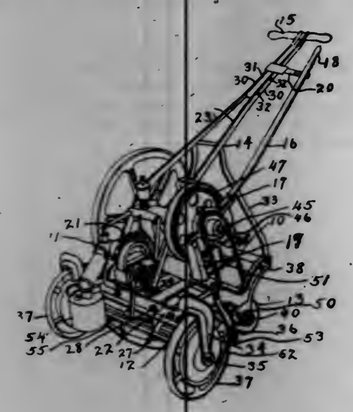
1. In a locking device for power shovels and the like, the combination of a frame; a driving axle on the frame; a driving wheel; and a releasable lock locking the wheel and preventing a rearward movement of the wheel.

1,451,804. LUG RING. AUGUST T. J. BAHR, Detroit, Mich., assignor of one-half to Claire Benton Kline, Dormont, Pa. Filed Oct. 12, 1922. Serial No. 593,936. 1 Claim. (Cl. 301—11.)



The combination with a wheel rim and felly and a plurality of bolts in said felly having projecting T-heads, a retaining ring engaging said rim and cam faces on said T-heads, of a lug ring having complementary T-slots and cam faces therein for co-action with said heads when the ring is turned, spring pressed latches carried by said lug ring to engage said bolts, and means for releasing said latches.

1,451,805. DANCING TOY FIGURE. WALTER H. BALCKE, Winchester, Mass., assignor to National Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Feb. 14, 1921. Serial No. 444,637. 12 Claims. (Cl. 46—40.)

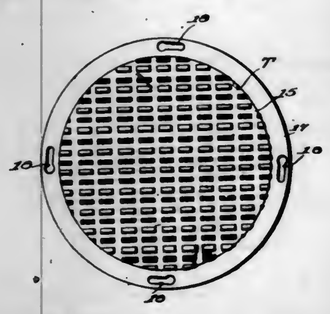


1. In combination, a phonograph embodying a casing, a dancing toy figure, a support on which said figure is mounted, a base resting on said casing to which said support is attached and a rotary member engaging said support intermediate the figure and base and adapted to impart a vertical movement thereto, whereby a dancing motion may be imparted to said figure.

1,451,806. DENTAL TOOL HOLDER. JOSEPH E. BALDRIDGE, Avalon, Pa. Filed May 26, 1922. Serial No. 563,927. 3 Claims. (Cl. 32—10.)

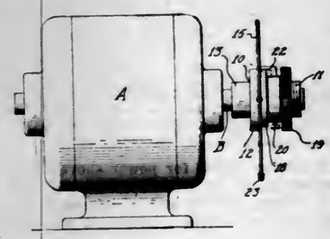
2. A sterilizable dental tool holder comprising in combination, a block composed of three parallel plates spaced one above the other, the two uppermost plates being provided with a plurality of alined apertures, and the lowermost plate being unapertured to form a stop for the tools, some of the apertures in said two uppermost plates being arranged in single row groups for the reception of new and unused tools, and the remaining apertures being arranged in double row groups alongside of each of said single row groups, said double row groups being adapted to receive the used tools from said single row groups, a centrally arranged handle extending upwardly from the top plate, and a cover member adapted to fit over said block and provided with a suitable aperture through which said handle projects when said cover member is in place.

1,451,807. TRACTOR LAWN MOWER. WILLIAM HALL BALDWIN, Middletown, Conn. Filed Nov. 12, 1919. Serial No. 337,385. 3 Claims. (Cl. 56—26.)



1. A tractor lawn mower combination comprising a frame, an engine supported by the said frame, a pair of lawn mower driving wheels supporting the front end portion of the said frame, a tractor roll supporting the rear end portion of the said frame, means for operatively connecting the two end portions of the said roll with the said frame, and the said means being provided with adjusting devices that are adapted to permit of adjusting the vertical relation of the said two end portions of the roll relatively to the frame, whereby the parts can be adjusted so that the part of the roll and the parts of the driving wheels that contact with the ground will be substantially in a common plane.

1,451,808. COMBINED SPARK INTENSIFIER AND DETECTOR FOR INTERNAL-COMBUSTION ENGINES. CHARLES HENRY BEDINGFIELD, Maple, Ontario, Canada, assignor to Frederick Campbell Russell Ansley, St. Catharines, Ontario, Canada. Filed Oct. 28, 1920. Serial No. 420,211. 4 Claims. (Cl. 175—183.)



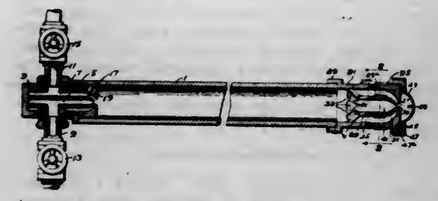
1. In a combined spark intensifier and detector for internal-combustion engines, the combination with the spark plug and the secondary cable, of spaced apart upper, intermediate and lower plates of insulating material, a fixed plate of conducting material situated between the lower and intermediate insulating plates, said conducting plate engaging the terminal of the spark plug, a movable conducting plate, means for adjusting the gap between the movable conducting plate and the fixed conducting plate, and means for connecting the movable conducting plate to the secondary cable.

1,451,809. DENTAL TOOL. GEORGE GRANT BELL, Ashland, Ky. Filed Nov. 6, 1920. Serial No. 422,856. 3 Claims. (Cl. 125—5.)

1. A tool of the character described comprising, a supporting wheel including a felly offset with respect to the hub of the wheel, an annular lip formed on the periphery of said felly, lugs fixed within the felly, a disc fitted within said lip and having slots formed therein, said slots having enlarged ends to permit the insertion of said lugs into said slots, and teeth formed on and extending laterally from said disc.

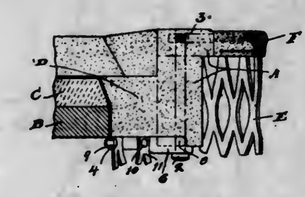
1,451,810. COLOR-MIXING DEVICE. LYDA SUE BOWER, Covington, Ga. Filed Oct. 29, 1921. Serial No. 511,516. 2 Claims. (Cl. 88—14.)

1. A color device of the character described comprising an elongated sleeve member adapted to be clamped upon the shaft of a motor or other driven device, said sleeve member being formed with an outwardly extending flange and being threaded from said flange to its outer end, a plurality of selectively usable disk members each having a central hole engageable upon the threaded portion of the sleeve and being provided with a cut-out portion extending from the outer edge to the hole, said disk members being colored with the colors of the solar spectrum, a nut member threaded upon said sleeve and engageable with the outermost disk member to hold all of the disk members in clamping engagement with one another against said flange for preventing relative rotation of the disk members, and a plurality of spring clips engageable upon the peripheries of said disk members for the purpose specified.



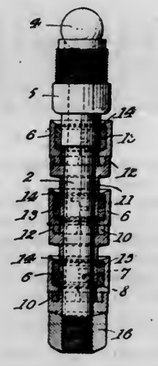
1,451,811. BURNER. FRANCIS H. BROWN, Glenolden, Pa., assignor to Petroleum Heat and Power Company, Boston, Mass., a Corporation of Delaware. Filed Apr. 16, 1920. Serial No. 374,396. 6 Claims. (Cl. 158—75.)

1. A burner, comprising, in combination, a gun, a charging device for introducing oil and atomising fluid to the gun, and having provision to cause the fluid to atomize the oil, and a device for producing a secondary atomization of the oil spaced a substantial distrance from the position of the first atomization and



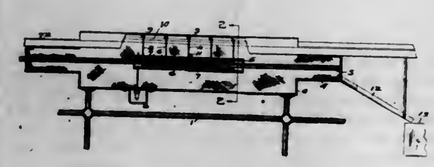
having a pair of passages contracted to present adjacent orifices, one for concentrating the stream delivered thereby against the stream delivered by the other.

1,451,812. BURNER. FRANCIS H. BROWN, Glenolden, Pa., assignor to Petroleum Heat and Power Company, Boston, Mass., a Corporation of Delaware. Filed Apr. 26, 1920. Serial No. 376,747. 4 Claims. (Cl. 158—75.)



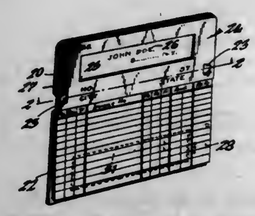
1. A burner comprising, in combination, a body having a delivery tip provided with an orifice, means for conducting the oil and atomizing fluid to the body and for atomizing the oil as it is delivered to the body, and a secondary atomizing means located within the body between the first atomizing means and said tip and comprising a pair of adjustable nozzles one within the other.

1,451,813. INSIDE POCKET IRON. HOWARD CHAPMAN BRUBACKER, Rodney, Ontario, Canada. Filed Mar. 24, 1922. Serial No. 546,399. 2 Claims. (Cl. 46—12.)



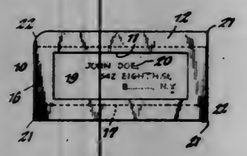
1. As a new article of manufacture, an inside pocket iron comprising a portion adapted to support the inside of a pocket and to be located below the underside of the frame of the table, and terminating at each end in an apertured horizontal plate adapted to be faced up against the underside of said table frame, and further terminating at each end in a shoulder each extending down to the upper surface of its associated plate and adapted to be faced up against the end of the rails of said frame at the usual openings therein.

1,451,814. PUMP PACKING. JOHN J. CULLINAN, Bradford, Pa. Filed Mar. 11, 1922. Serial No. 543,048. 25 Claims. (Cl. 103—225.)



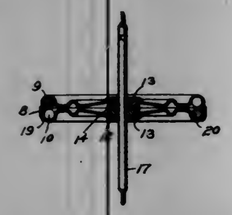
1. A packing for pump pistons comprising segments, means for retaining said segments about a piston, said segments being supported upon said retaining means intermediate the height of the segments.

1,451,815. RAPID DECORATING FIRING FURNACE OR KILN. RANSOM W. DAVENPORT, Detroit, Mich., assignor to Jeffery-Dewitt Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 27, 1920. Serial No. 433,328. 15 Claims. (Cl. 263—6.)



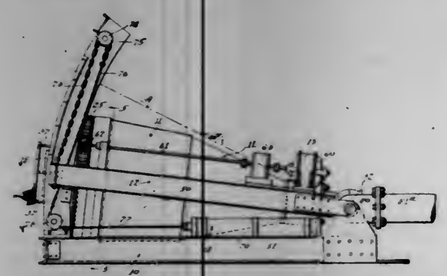
1. In a furnace for heat treating bodies, a tubular member for containing bodies, means for heating the central portion of the wall of the tubular member, a plunger for moving the bodies through the tubular member, and means for directing a chemical reagent through the tubular member.

1,451,816. STENCIL. GUY J. EVANS, Buffalo, N. Y. Filed Nov. 20, 1920. Serial No. 425,359. 7 Claims. (Cl. 101—127.)



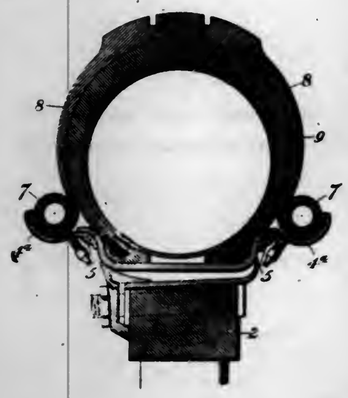
2. A stencil comprising a frame provided at opposite ends with locking lips, and a stencil sheet provided at its opposite ends with openings which receive said lips.

1,451,817. STENCIL. GUY J. EVANS, Buffalo, N. Y. Filed Nov. 20, 1920. Serial No. 425,360. 4 Claims. (Cl. 101—127.)



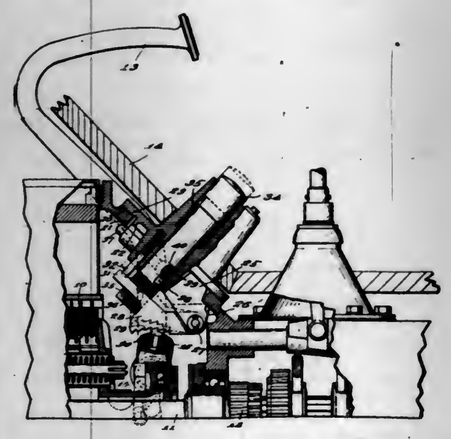
1. A stencil comprising a frame having a printing opening, a stencil sheet secured to one side of said frame and extending over the opening therein, and flanges arranged on the longitudinal edges of the frame and secured to that side of the stencil sheet opposite to that on which the latter is engaged by said frame, the space between the opposing flanges being unobstructed throughout the length of the same.

1,451,818. GYROSCOPIC TOP AND METHOD OF MAKING SAME. JOHN C. FORSTER, Pittsburgh, Pa. Filed July 15, 1922. Serial No. 575,186. 3 Claims. (Cl. 74—6.)



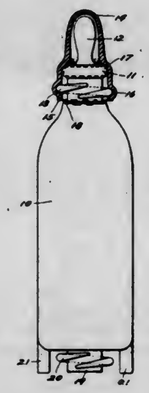
3. A rotor for gyroscopic tops comprising two complementary disks having their peripheral edges arranged in overlapping relation, a spindle passing through the center of said disks, a spacer surrounding said spindle between said disks and forming a backing against which the disks are forced, so as to cause the metal surrounding the spindle to rigidly grip the spindle.

1,451,819. CONCRETE-MIXING MACHINE. HAROLD K. FOX, Fresno, and GEORGE J. FISHER, Big Creek, Calif. Filed Mar. 27, 1922. Serial No. 547,115. 11 Claims. (Cl. 83—13.)



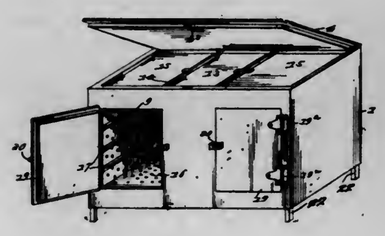
1. In a machine of the character described, a maxing mechanism adapted to be tilted to discharge material mixed by it, a stationary ejector adapted to handle material mixed by the mixing mechanism, and a flexible connection between the mixing mechanism and the ejector.

1,451,820. TIRE TREAD. HARRY M. FRY, Johnstown, Pa. Filed Mar. 6, 1922. Serial No. 541,501. 4 Claims. (Cl. 152—17.)



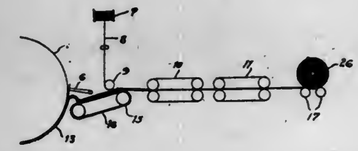
4. The combination with a tire carrying rim and a pneumatic tire carried thereby, of a protecting tread for the tire, said rim being provided at its edges with annular sections curved outwardly away from the tire carried thereby; annular outwardly curved detachable extensions secured to said outwardly turned annular sections of the rim; and independent pneumatic tubes for cooperating with said detachable extensions to hold the protecting tread on the tire.

1,451,821. AUTOMOBILE LOCK. HARRY J. GARCEAU, Muncie, Ind., assignor to Warner Gear Company, Muncie, Ind., a Corporation of Indiana. Filed Aug. 1, 1919. Serial No. 314,651. 17 Claims. (Cl. 70—128.)



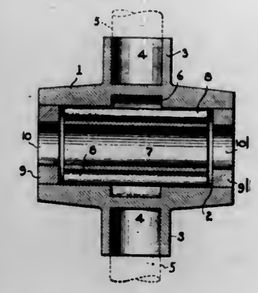
5. In combination with an automobile clutch, a pawl which when in one position co-operates with said clutch to hold it in released position, a plunger controlling said pawl and having two positions in which it respectively permits the pawl to move to locking position and withdraws it from locking position, and locking mechanism for holding said plunger in its first position.

1,451,822. NURSING BOTTLE. ROBERT J. HAGERTY, Philadelphia, Pa., assignor of one-half to Frank H. Hebron and one-half to Thomas C. Kelly, both of Philadelphia, Pa. Filed Apr. 27, 1921. Serial No. 464,830. 11 Claims. (Cl. 215—11.)



1. In an article of the character stated a bottle having a neck formed with an external screw-thread and with a bead, a nipple the lower end of which engages over said bead and a nipple closure of rigid material comprising an imperforate dome and a skirt formed with an internal screw-thread arranged to engage the screw-thread of said neck said closure being provided with an internal shoulder at the juncture of said dome and skirt for impinging upon that portion of the nipple expanded over said bead whereby the bottle contents may be hermetically sealed.

1,451,823. PORTABLE REFRIGERATOR. ISAAC M. HAMPTON, JOSEPH T. DECKER, and LOUIS J. DECKER, Hartford, Ill. Filed Apr. 18, 1922. Serial No. 555,432. 2 Claims. (Cl. 62—80.)

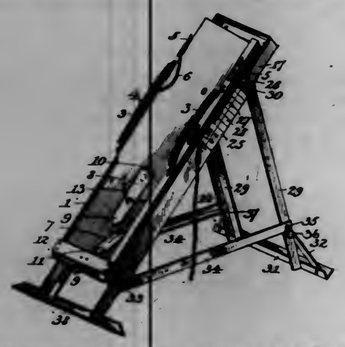


1. A portable refrigerator, comprising a casing provided with upper and lower compartments at each end and having a central compartment, an ice container arranged in the central compartment the full height of the casing, ice containers in the upper compartments, article containers in the lower compartments, corrugated supports forming the bottoms of the upper end compartments to spacedly support the upper ice containers above the article containers to allow the cold air to descend more readily from the ice containers upon said article containers, corrugated plates resting upon the bottom of the casing, one under each article container and one under the central ice container for spacing said containers above the bottom of the casing, the adjacent ends of the plates at the bottom of the casing having upstanding flanges to separate the ice and article containers to permit of circulation of cold air between them and to prevent displacement of said containers, the sides, bottoms and tops of the article containers being perforated, which together with the corrugations of the plates at the bottom permit of the circulation of cold air.

1,451,824. APPARATUS FOR MAKING ASBESTOS YARN. JOHN ALLEN HEANY, New Haven, Conn., assignor to Rockbestos Products Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 17, 1921. Serial No. 523,124. 5 Claims. (Cl. 19—145.)

1. In an apparatus for making reinforced yarn, a rub motion device for applying fibrous material to a reinforcing filament, a guide roller for directing the filament between the rubbing surfaces of the rub motion device, and means for receiving the fibrous material and bringing it into engagement with the reinforcing filament between the guide roller and the inlet portion of the rub motion device.

1,451,825. ROLLER BEARING. HENRY J. HEIDER, Carroll, Iowa. Filed Oct. 6, 1921. Serial No. 505,842. 1 Claim. (Cl. 64—39.)

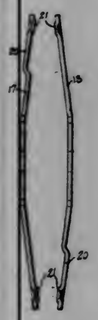


A roller bearing comprising a hub having a longitudinal bore forming a raceway, a bearing sleeve of smaller diameter than the bore of the hub, and shorter than the length thereof and loosely mounted within the same, a series of rollers substantially coextensive in length with the sleeve and surrounding the same and adapted to bear against the wall of the bore, and annular retaining washers frictionally held in the ends of the bore in spaced relation to the ends of the inner sleeve and the ends of the rollers to retain the latter within the hub when the hub is removed from its axle, each washer having a central bore of greater diameter than the bore of the sleeve, but less than the external diameter of said sleeve whereby displacement of the sleeve from the hub is prevented.

1,451,826. DEVICE FOR WEIGHING ANIMALS AND FOR INDICATING DOSAGE. WILLIAM N. HOBBS, Kensington, Kans. Filed Mar. 25, 1919. Serial No. 284,914. 27 Claims. (Cl. 119—103.)

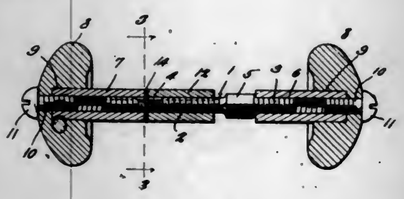
1. In a device for the purpose described, an inclinable support for an animal to hold the animal in an inclined position, said support having upholding and weighing

means to maintain it free and yieldable to the weight of the animal to predetermined extents, and means associated



with the support and operable thereby to indicate on a scale the dosage for the animal being weighed corresponding to the weight of the animal.

1,451,827. RESILIENT WHEEL. OTA O. HOBSON, Vinton, Iowa. Filed Dec. 5, 1921. Serial No. 520,907. 1 Claim. (Cl. 152—28.)

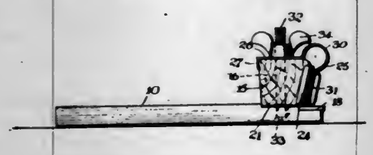


A resilient wheel, comprising a hub element, a felly element, a plurality of spokes therebetween, each spoke consisting of juxtaposed relatively lengthwise slidable laminæ connected rigidly at one end to one of said elements and connected loosely at the other end to the other end of said elements, and an anti-friction roller mounted rotatably and between each pair of adjacent spokes at their loose ends and contacting with both of them.

1,451,828. DOBBY LEVER. ELBRIDGE R. HOLMES, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 27, 1921. Serial No. 510,842. 3 Claims. (Cl. 139—79.)

1. A loom dobby lever comprising two strips of resilient sheet metal having end bearing portions for dobby hooks, said strips being secured together under spring tension at points relatively remote from said end bearing portions, said bearing portions being in firm contact under spring tension but yieldingly separable for the attachment of a dobby hook thereto.

1,451,829. SPINDLE. WILLIAM B. HUBBARD, Smithboro, Ill. Filed Dec. 1, 1921. Serial No. 519,184. 1 Claim. (Cl. 292—358.)

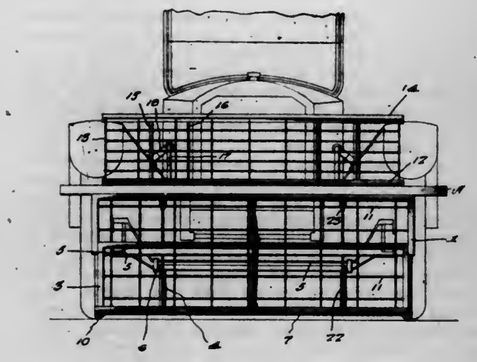


A knob spindle comprising a main member having an intermediate polygonal shoulder, and supplied with threaded ends; a sleeve threaded on one of said ends; a knob carrier threaded on said end; a washer interposed between the sleeve and the knob carrier; interengaging elements on the washer and on said end of the main member, coacting to hold the washer in place for sliding movement longitudinally of the main member but against rotation thereon; and a knob carrier threaded on the other end of the main member and engaged with the polygonal shoulder.

1,451,830. AERIAL TRAIN. WAYNE ELLIOT IKERMAN, Long Beach, Miss., assignor of forty one-hundredths to Bernhard Reinike and five one-hundredths to Frederick Ikerman, both of Long Beach, Miss. Filed July 8, 1920, Serial No. 394,635. Renewed Oct. 12, 1922. Serial No. 594,200. 7 Claims. (Cl. 244—14.)

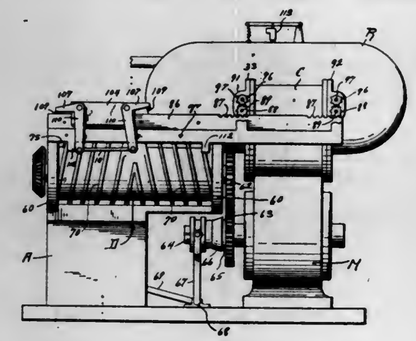
1. An aeroplane train comprising a plurality of collinear coaches, means rigidly connecting the coaches together in spaced relation, propelling means for and arranged between certain of the coaches, and outwardly extending wings carried by the coaches and arranged in spaced relation to each other.

1,451,831. SHARPENING DEVICE. ROBERT URB IRWIN, Oshawa, Ontario, Canada. Filed Mar. 23, 1921. Serial No. 454,714. 2 Claims. (Cl. 76—88.)



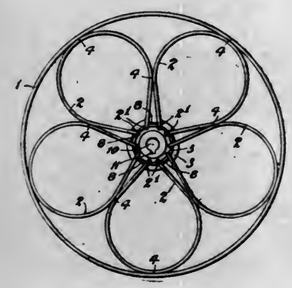
1. In a sharpening device of the character described, a bed plate, a compound clamp block and holder arranged on said bed plate and having an inclined face, an abrading element underlying said block and held thereby, a stationary guide including a base engaged by the block and having an inclined guide plate lying flush against the inclined face of the block, a tensioning device including a body portion supported upon the top of the block, an inclined tension plate and a bowed spring portion connecting said body portion and said tension plate, and releasable means for securing the block, guide and tensioning device in assembly.

1,451,832. MANIPULATING STICK FOR CLAMPS, SWITCHES, ETC., IN ELECTRIC DISTRIBUTING SYSTEMS. TOMLINSON FORT JOHNSON, Jr., Atlanta, Ga. Filed July 6, 1921. Serial No. 482,751. 4 Claims. (Cl. 81—3.)



1. A manipulating means for handling electrical devices, comprising a stick, means at one end thereof for engaging such devices, such stick having a transverse bore at the other end, a rod having one end bent at an angle, said bent end being permanently and snugly held in the bore of said stick ad having a stiff pivotal connection therewith, whereby the rod is permitted only a turning movement on said bent end from a position at an angle to the stick to a position in parallelism therewith.

1,451,833. ACCIDENT-PROOF AUTOMOBILE FENDER. JOHN KAURICH, Milwaukee, Wis. Filed Aug. 25, 1922. Serial No. 584,362. 2 Claims. (Cl. 293—45.)

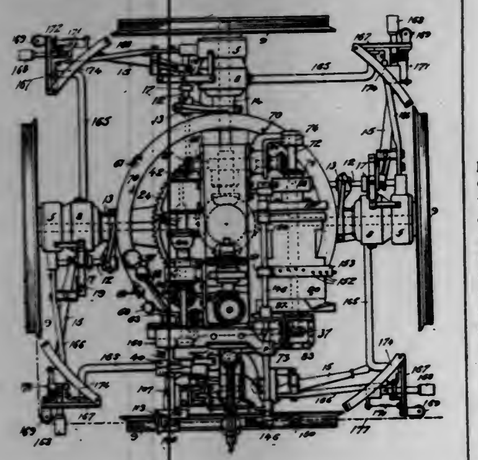


1. A fender for motor vehicles comprising a pick-up frame, a member to which said frame is hingedly connected, a frame hinged to said member, a bar connected with the axle and hinged to the last mentioned frame, a member connected with the bumper, a netting connected with the said member and with the member to which the pick-up frame is connected and means for adjusting the pick-up frame in relation to the road surface from a point adjacent the driver's seat.

1,451,834. AIR COMPRESSOR. WILLIAM J. KREIMER, St. Louis, Mo. Filed July 14, 1920. Serial No. 396,313. 2 Claims. (Cl. 230—27.)

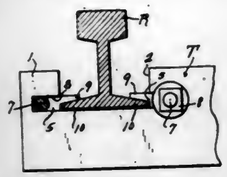
1. A device of the character described including a compressor comprising a cylinder, a piston mounted therein for rectilinear movement, a rod engaged with the piston and extending exteriorly of the cylinder, a head carried by the extended portion of the rod and travelling in a substantially fixed path of travel, a lever pivotally supported substantially midway its length by the head, a cylindrical member rotatably supported adjacent the head, said member being provided in its periphery with spiral channels disposed in opposite directions from substantially the center thereof, the merging portions of said channels being raised to provide a lifting cam, one end portion of the lever being engaged within a spiral groove when the opposite end portion is positioned free, the cam coacting to reverse the position of the lever, and means for rotating the rotary member.

1,451,835. REEL. LAURENCE S. LACHMAN and EDWARD FULDA, New York, N. Y. Filed July 12, 1920. Serial No. 395,453. 15 Claims. (Cl. 242—70.)



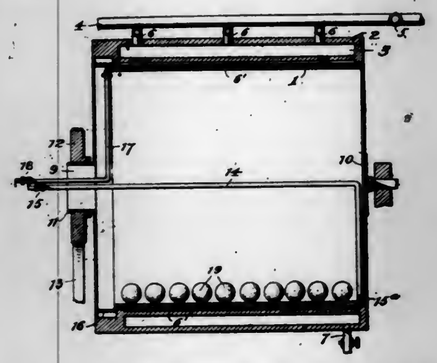
8. In a metal reel, two side members each comprising a peripheral wire ring, a hub plate and wire elements joining the peripheral ring and the hub plate and each having free ends welded to the hub plate, the wire elements being welded to each other and to the peripheral ring and the free ends of adjoining elements being spread apart at the place of union with the side plates, a sheet metal hub barrel intersecting said wire elements and locking tongues projecting through the space between said spread apart ends and turned over against the outer surface of the hub plates.

1,451,836. RACKET FOR TENNIS AND SIMILAR GAMES. WILLIAM A. LARNED, Summit, N. J., assignor to The Dayton Steel Racquet Company, Dayton, Ohio, a Corporation of Ohio. Filed Aug. 2, 1921. Serial No. 489,255. 3 Claims. (Cl. 46—24.)



1. A racket of the type described, comprising a tubular metal frame provided in its outside periphery with holes which bevel inwardly and in its inside periphery with holes which bevel inwardly, and a stringing that is strung through said holes.

1,451,837. BEAD-MAKING MACHINE. ROBERT MCCLENATHEN, Cuyahoga Falls, Ohio, assignor to Kelly Springfield Tire Co. Filed July 22, 1920. Serial No. 398,214. 13 Claims. (Cl. 154—9.)

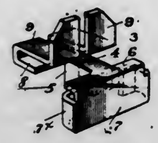


6. A machine of the character described, comprising: a multiple-spindle turret mounting having centrally disposed driving gear; horizontal drum spindles radiating from the mounting; stock-forming drums on the spindles; spindle driving means from a common source; means for simultaneously or selectively rotating the stock-forming drums; means for orbitally rotating the drum spindles and drums intermittently within predetermined radial limits; and means in synchronized relation with the orbital rotating means and the spindle rotating means whereby either may be in motion irrespective of the other, under automatic control.

1,451,838. RAIL FASTENER. CUGE L. MCCRAY, Norton, Va. Filed Aug. 17, 1922. Serial No. 582,493. 7 Claims. (Cl. 238—332.)

5. The combination with a channel tie provided with recesses to receive a rail, members received within the recesses engaging the opposite sides of the rail to hold the same in applied position, and means common to said members for moving the same into clamping action with the rails.

1,451,839. EVAPORATING APPARATUS. HOWARD S. MELLOTT, Morenci, Mich., assignor to By-Products Recovery Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 19, 1917. Serial No. 192,207. 11 Claims. (Cl. 127—9.)

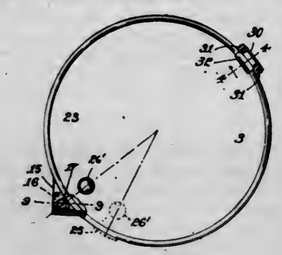


1. In an apparatus for evaporating milk and similar products, the combination of a substantially cylindrical container, means for introducing the material to be treated into contact with the peripheral surface of the container adjacent one end, means for permitting continuous discharge of the material from the peripheral surface adjacent the opposite end of the container, means for applying to the wall of the container a high degree of heat whereby to rapidly evaporate liquid constituents of the material, means for rapidly rotating the container at sufficient speed to cause the material to move circumferentially in continuous layer formation from its introduction at one end to its discharge at the opposite end of the container, the said container having a relatively large opening for the free and continuous discharge of the rapidly accumulating vapors from the central space formed by said layer formation, and independent means movable unrestrainedly for engaging the treating surface of the container and freeing the same from adhering particles without interrupting the movement of the material.

1,451,840. ARCH SUPPORT FOR MINES. RUDOLF NOVOTNY, Portage, Pa. Filed Jan. 30, 1922. Serial No. 532,930. 1 Claim. (Cl. 189—35.)

As a new article of manufacture, a rigid coupling for use in mine arch supports, formed of one piece of material and comprising a body bar, longitudinal flanges spaced apart and extending downwardly from said body bar at right angles thereto, an end flange reaching in opposite

directions from one end of the body bar, a flange depending from the said end flange throughout the length thereof and provided with end loops, and a T-head carried at

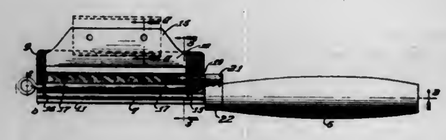


the opposite end of the body bar and having spaced arms reaching upwardly and longitudinally inward from the outer edge of the T-head and then upwardly.

1,451,841. FASHIONING INDICES AND METHOD OF KNITTING THE SAME. WILLIAM S. PARKER and JOSEPH JEFFERSON, Rockford, Ill., assignors to Burson Knitting Company, Rockford, Ill., a Corporation of Illinois. Filed June 17, 1921. Serial No. 478,342. 2 Claims. (Cl. 66—4.)

1. A seamless stocking fashioned by widening, having fashioning indices at each side of the line of widening, each fashioning index being located a uniform distance from said line of widening and composed of a structural variation in a plurality of successive courses in a given wale separated by a plurality of intermediate wales of plain, regular knitting.

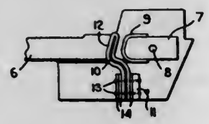
1,451,842. MAGAZINE FOR FILM MACHINES. REINHART W. PITTMAN, New York, N. Y. Filed Mar. 8, 1921. Serial No. 450,703. 3 Claims. (Cl. 242—71.)



3. A cylindrical film magazine having a slotted extension on its periphery, a cover with an annular channel arranged to engage the magazine rim to rotate thereon, a lug on the cover, said magazine having a shouldered portion arranged to receive said lug on the cover when turned, and a lever clamp on the opposite side of the magazine arranged to engage the cover channel portion to clamp the cover thereon.

1,451,843. MANUFACTURE OF RESINOUS CONDENSATION PRODUCTS. HERMANN PLAUSON, Hamburg, Germany. Filed Feb. 12, 1921. Serial No. 444,499. 9 Claims. (Cl. 260—5.)

6. Process for the preparation of synthetic resins consisting in condensing a phenol and formaldehyde with a polymerized vinyl compound in presence of an accelerator consisting of an organic oxide.

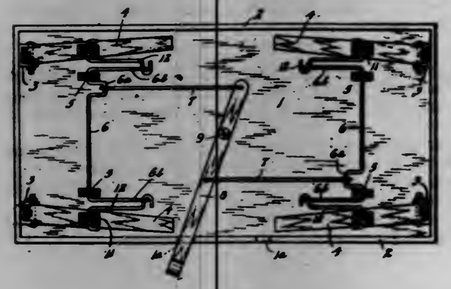


9. A synthetic resin being a condensation product of phenol, formaldehyde and a vinyl compound.

1,451,844. RAZOR STROPPER. JOHN H. PAYSON, Rockford, Ill. Filed Mar. 7, 1922. Serial No. 541,761. 3 Claims. (Cl. 51—153.)

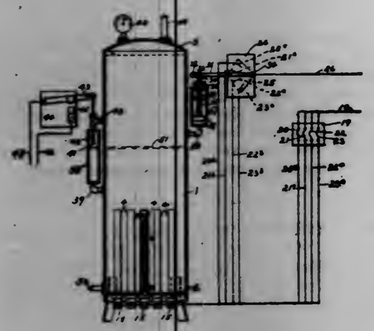
1. A razor blade stropper comprising a frame having two strop engaging sides in angular relation, a handle pivotally attached to said frame at the juncture of said sides, a blade holder pivotally mounted on said frame intermediate said sides and eccentric with respect to said frame pivot, and a pivotal connection directly between said blade holder and the handle at a greater radial distance from the frame pivot than said blade-holder pivot.

1,451,845. CUSHION STOP FOR PICKER STICKS. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 22, 1922. Serial No. 562,605. 6 Claims. (Cl. 139—22.)



1. In a loom having a lay, a bobbin chute depending from the lay, a picker stick and picker, the combination of a stop secured to the inner end of the bobbin chute, a resilient buffer secured at one end to the chute with its free end standing normally in front of and spaced from the stop, the said buffer acting to cushion the picker stick at the conclusion of the picking movement and in co-operation with the stop acting to limit the picking movement of the picker stick.

1,451,846. COLLAPSIBLE SUPPORTING DEVICE. CHARLES O. ROBINSON, Bismarck, N. Dak. Filed Mar. 8, 1922. Serial No. 541,985. 4 Claims. (Cl. 45—11.)

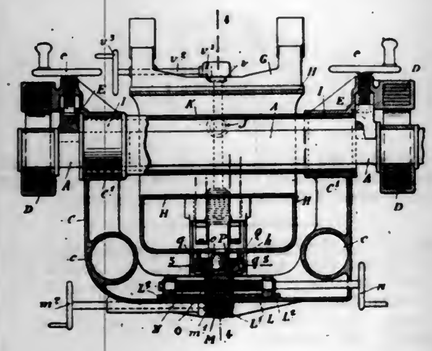


1. A supporting device having in combination a supporting member, a plurality of legs swingingly mounted thereon and attached beneath said member adjacent each end thereof, separate oscillating means mounted adjacent

corresponding pairs of said legs and in bearings on said supporting member and connected thereto adapted to

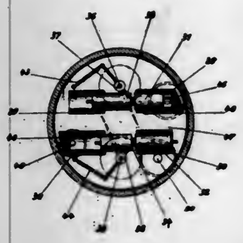
swing said legs to and from operative position, and means mounted between said means and connected thereto for actuating the same.

1,451,847. ELECTRICALLY HEATED AND CONTROLLED STEAM BOILER. WILLIAM H. ROWE, Jacksonville, Fla. Filed Feb. 10, 1922. Serial No. 535,442. 1 Claim. (Cl. 219—38.



In an electrically heated boiler; a plurality of electric heating elements inserted in tubes, secured to the underside of the boiler and projecting into it; a cylinder communicating by means of a pipe with the steam space in the boiler; a piston and a piston rod free to move in said cylinder; a lever connecting said piston rod with an electric controller; and the heating elements connected by wires to said controller.

1,451,848. WHEELED GUN CARRIAGE HAVING DIVERGIBLE TRAIL. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed June 9, 1921. Serial No. 476,302. 13 Claims. (Cl. 89—40.)



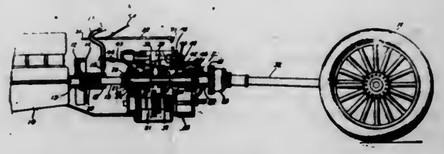
1. In a wheeled gun mounting provided with an axle, a carriage mounted on said axle and movable relative thereto, a gun mount pivotally supported by said carriage, a gun pedestal supported by said gun mount, gun elevating means carried by said gun mount means to turn said mount in a plane at right angles to said axle, together with means for turning the mount in a plane parallel to said axle.

13. A wheeled gun mounting comprising an axle, a carriage mounted on said axle, an elastic suspension between said axle and the carriage, means to render said suspension inoperative, a hollow member through which said axle passes, a gun mount movably supported by said hollow

member, means for rotating said mount transversely of said carriage, and means for rotating said mount longitudinally of said carriage.

1,451,849. DEVICE FOR INDICATING THE OIL CIRCULATION AND OIL PRESSURE. WALTER SCHWERDTFEGER, Unterturkheim, Germany, assignor to Daimler-Motoren-Gesellschaft, Unterturkheim, Germany. Filed Sept. 10, 1921. Serial No. 499,853. 8 Claims. (Cl. 184—6.)

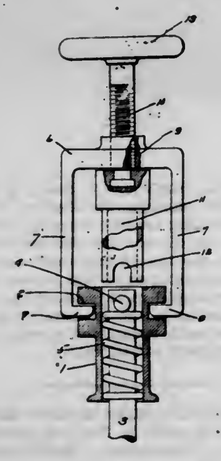
5. A device for indicating the oil circulation and oil pressure in the lubricating conduits of machines and engines, comprising, in combination, two pistons; cylinders containing said pistons; a casing containing said cylinders; a connection between the oil supply and one of the cylinders; a connection between the same cylinder and the space within the casing; a connection between this space and the other cylinder; a connection between said casing space and the lubricating conduit; a dial; two hands adapted to cooperate with said dial; spindles to which the said hands are affixed, protective disks attached to said spindles means for transmitting the motions of the said pistons to the said spindles; and springs so arranged as to be adapted to displace the pistons proportionately to any decrease in the force exerted by the oil, substantially as and for the purpose set forth.



1,451,850. MERCURIAL COMPOSITION. HUGH MCCURDY SPENCER, Newark, N. J., assignor, by mesne assignments, to Seydel Chemical Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 29, 1921. Serial No. 518,644. 5 Claims. (Cl. 167—7.)

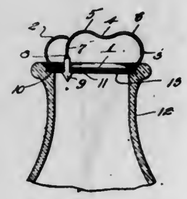
2. A mercurial composition for intravenous injection comprising mercury which is present entirely in the pure metallic state and a substantially soluble carbohydrate medium capable of holding the mercury in a dispersed

condition and capable on addition of water of forming a liquid assimilable by and isotonic normal blood.



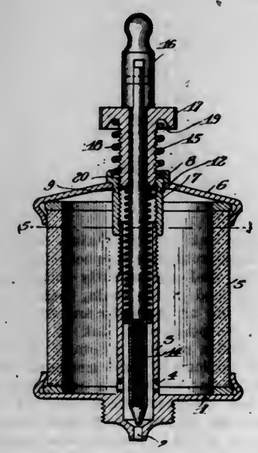
4. A mercurial composition comprising pure metallic mercury dispersed in gum acacia which composition when mixed with water in such proportion as to give a mixture containing more than about 5 mg. of dispersed mercury to each 100 c. c. of water yields a liquid isotonic with normal blood.

1,451,851. MOTOR-VEHICLE TRANSMISSION MECHANISM. JOHN A. STUMPENHORST, Wilkinsburg, Pa., assignor to Duplex Transmission Company, a Corporation of Delaware. Filed May 31, 1922. Serial No. 564,702. 10 Claims. (Cl. 74—58.)



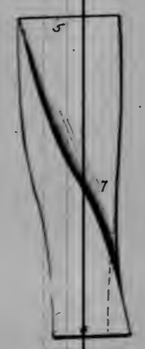
1. In a transmission mechanism, in combination, a driving member, a power transmitting and gear-wheel-supporting member comprising a short shaft having its outer end rotatably supported in said driving member, a driven portion in axial alinement with said short shaft and a jaw-clutch member intermediate said power transmitting member, an exteriorly splined hollow shaft rotatably mounted on said short shaft, change-speed gear wheels on said splined hollow shaft operatively and selectively associated with said driving member, a jaw-clutch member located on said splined hollow shaft and manually operable means for causing said last named jaw-clutch member to engage or be disengaged from said first named jaw-clutch member.

1,451,852. CLUTCH-SPRING REMOVER. NEAL VERDOORN, Sheldon, Iowa, assignor of one-half to Joseph Zylstra, Sheldon, Iowa. Filed Nov. 11, 1920. Serial No. 423,446. 4 Claims. (Cl. 29—87.1.)



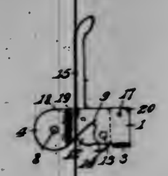
3. In a device of the class described, the combination of a substantially U-shaped frame provided with inwardly-extending outer ends, a bolt threaded upon said frame and having its inner end extending between portions thereof, and a swivel open at its outer end and mounted upon the inner end of the bolt between portions of the frame.

1,451,853. BOTTLE-DISK EXTRACTOR. REGINALD E. WIKE, Springfield, Ohio. Filed June 7, 1922. Serial No. 566,649. 2 Claims. (Cl. 65—47.)



1. A disk stopper extractor comprising a pair of resiliently connected upper and lower bars, a shank slidable through the lower bar and having a spur carried thereby, a thumb engaging rest carried by the lower bar for moving said bar vertically to disengage a disk stopper from the spur.

1,451,854. LUBRICATOR CUP. CHARLES F. WRAY, Rochester, N. Y., assignor to The National Brass Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 14, 1921. Serial No. 461,205. 6 Claims. (Cl. 184—82.)



3. In a lubricator cup, the combination with a central tubular support and surrounding side wall, of a cover seated on said side wall and provided with a non-circular opening, a supporting collar engaging said opening and having a non-circular exterior cross section corresponding with said opening to prevent relative turning of the cover and collar, a shoulder on the collar overlying the outer face of the cover, the collar having an annular recess adjacent to the inner face of the cover, yieldable means carried by the cover and engaging said recess to prevent separation of the collar, and cover, the collar having attachment with said tubular support, and valve mechanism carried by the collar.

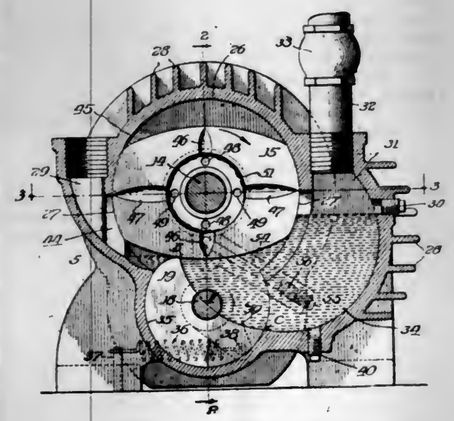
1,451,855. WEDGE. EDWARD WRIGHT, Hamilton, Ontario, Canada, assignor of one-half to Alexander MacMillan, Hamilton, Ontario, Canada. Filed Dec. 19, 1921. Serial No. 523,592. 1 Claim. (Cl. 254—104.)

A wedge of the character described having at one end a rectangular and elongated head and at its other end a cutting edge which lies substantially at right angles to the said head and a connecting body portion of spiral formation, having its side faces concaved.

1,451,856. CONNECTOR LINK FOR TIRE CHAINS. IRVIN G. YODER and JAMES C. FILBY, Washington, Pa. Filed Mar. 9, 1922. Serial No. 542,428. 3 Claims. (Cl. 24—69.)

1. A connector link for tire chains, comprising a pair of similarly shaped connector members disposed in spaced parallel relation and permanently connected at their rear ends to one end of the chain, each of said connector members having an upwardly and forwardly directed recess for the reception of a link of the opposite end of said chain, and a retainer pivotally mounted between the front end portions of said members, said retainer having a hook on its rear end for underlying the portion of the chain link which is received in said recesses and having a forwardly directed lever arm whereby it may be swung on its pivotal mounting for positioning said hook, the pivotal mounting for said retainer being located intermediate said hook and said lever arm.

1,451,857. SOLUTION OF DI-CHLORAMINE-T. FERDINAND H. YOUNG, Chicago, Ill., assignor to The Abbott Laboratories, Chicago, Ill., a Corporation of Illinois. Filed Dec. 31, 1919. Serial No. 348,666. 2 Claims. (Cl. 167—3.)

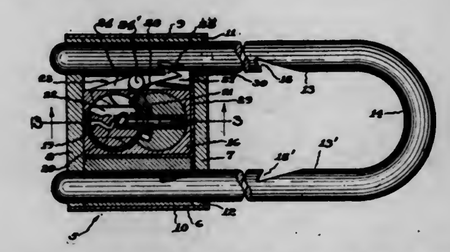


2. The improvement in the art of preparing an ultimate solution of dichloramine-T in chlorcosane, which consists in first dissolving the dichloramine-T in monochlor-benzene, and subsequently, when required for use, diluting a portion of the concentrated liquor with the required amount of chlorcosane.

1,451,858. CRADLE OR CREEPER FOR AUTOMOBILE WORK. WALTER C. ZENGERLE, Cleveland, Ohio, assignor to Franzengerle Company, Cleveland, Ohio, a Partnership composed of Walter C. Zengerle and Oscar Franzen. Filed Feb. 17, 1922. Serial No. 537,181. 6 Claims. (Cl. 280—61.5.)

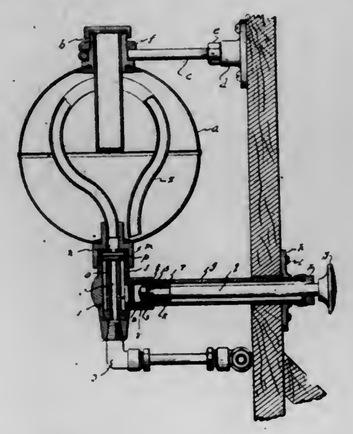
1. A cradle having a head rest supported at one end thereof and means connected with said head rest for preventing motion of the cradle, said means being brought into operation by downward pressure of the head upon said head rest.

1,451,859. ROTARY COMPRESSOR. MARTEN BALCKER, Chicago, Ill., assignor to John Nelson, Chicago, Ill. Filed Mar. 28, 1921. Serial No. 456,416. 9 Claims. (Cl. 230—30.)



1. A compressor, comprising a casing provided with inlet and delivery passages, an elliptical rotor in said casing, a pivoted sealing member engaging the lower portion of said rotor, an oil seal in which said sealing member and the lower portion of said rotor are submerged, and means for maintaining an oil seal between said casing and the end walls of said rotor, said sealing device having a portion exposed to the pressure of said oil seal whereby close contact is maintained between said sealing device and the periphery of said rotor.

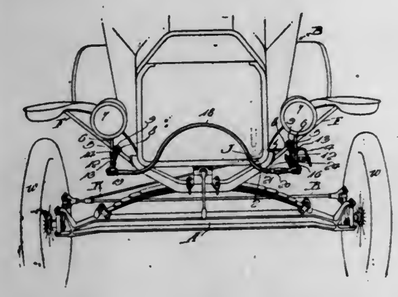
1,451,860. PADLOCK. FRANK ELLISON BEST, Seattle, Wash., assignor to Frank E. Best, Inc., Seattle, Wash., a Corporation of Washington. Filed Feb. 14, 1922. Serial No. 536,427. 1 Claim. (Cl. 70—108.)



In a padlock, the combination of the body, a shackle having parallel legs adapted to extend through holes provided therefor in said body, a core insertible in said body between the shackle legs, a tumbler engageable with either

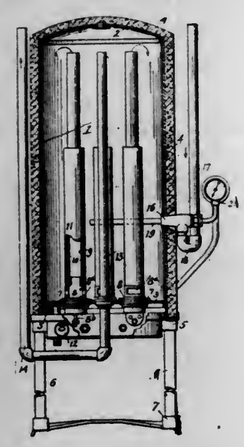
of said shackle legs selectively, a core provided within the body, key actuated locking mechanism provided in said core

for regulating said tumbler with respect to the shackle, and means for detachably securing the core within the housing.



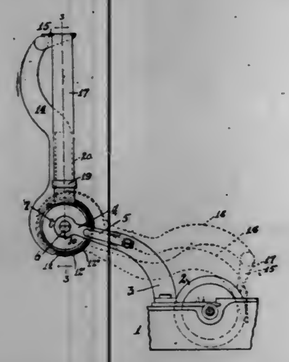
1,451,861. FORCE PUMP. EDGAR J. BLOOM, Tiffin, Ohio. Filed Feb. 1, 1922. Serial No. 533,476. 11 Claims. (Cl. 184—24.)

8. A pump, having in combination, a cylinder, a plunger reciprocating in the cylinder, a T-like fixture secured to the end of the cylinder and provided with a vertical tube therein having an opening above the cylinder connection with the T which opening forms the outlet opening, said vertical tube also being spaced from the walls of the bore of the T fixture to form a well, said fixture being provided with an opening above the opening in the tube to form an intake opening, and a disk-like valve operating between the two openings but serving to close the outlet opening and allow passage of fluid by the valve into the well and plunger chamber and serving on the pressure stroke of the plunger to close the intake opening and open the outlet opening, a reservoir located above the intake opening, and means for preventing leakage of fluid from the reservoir to the ultimate points of distribution except when the pump is in operation.



1,451,862. VEHICLE HEADLIGHT. KARL BYE and PHILIP WERLE, Butte, Mont. Filed Nov. 3, 1921. Serial No. 512,545. 1 Claim. (Cl. 240—62.)

A device of the class described comprising a substantially U-shaped bracket embodying a rearward extension adapted to be rigidly connected to a relatively stationary part of an automobile, the arms of this bracket being equipped at their free ends with bearing openings adapted to rotatably receive the standard of a headlight, a substantially L-shaped lever disposed beneath and having its long arm contacting said bracket, said long arm having one end extending beyond the corresponding end of the lever and being equipped intermediate its ends with an opening receiving the flat-faced portion of the standard of the headlight for imparting rotation to said standard



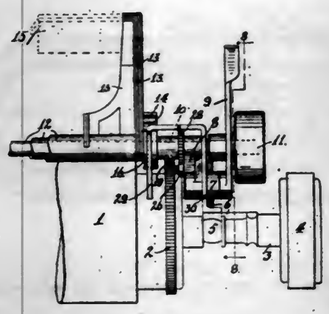
when the lever is operated, the depending short arm of said lever carrying a cylindrical rearward extension, an operating rod adapted to be connected at one end with a part of the automobile steering gear, the opposite end of said rod being bent laterally forward and disposed in spaced parallelism with said cylindrical extension, and a longitudinally extensible connection slidable on said extension and said laterally directed end of the rod.

1,451,863. LIQUID HEATER. WARREN F. CLARK, Warren, Pa., asignor to Automatic Electric Heater Company, Warren, Pa., a Corporation of Delaware. Filed Apr. 2, 1921. Serial No. 458,061. 2 Claims. (Cl. 219—38.)

1. In a liquid heating device a closed container, means for heating liquid within the container, means for conducting liquid from the container, means for supplying liquid into the container, a temperature responsive device having a portion which is mounted adjacent the means for feeding liquid into the container and directly affected by the cold liquid introduced into the container, and means whereby the temperature responsive device controls the functioning of the heating device.

1,451,864. MANIFOLDING ATTACHMENT FOR TYPEWRITERS. MALCOLM L. COSSITT, Alameda, Calif., assignor to Manifold Impressions Corporation, Carson City, Nev., a Corporation of Nevada. Filed June 20, 1922. Serial No. 569,612. 10 Claims. (Cl. 197—126.)

1. A manifolding attachment for typewriters comprising a chambered, rotatable member mounted on the platen carriage of the machine, parallel with the platen; an arm carried at each end of said chambered member; and a manifolding member housed within said chambered member and adapted to be drawn out therefrom for association, in successive lengths, with said arms.



1,451,865. MANIFOLDING ATTACHMENT FOR TYPEWRITERS. MALCOLM L. COSSITT, Alameda, Calif., assignor to Manifold Impressions Corporation, Carson City, Nev., a Corporation of Nevada. Filed June 21, 1922. Serial No. 569,801. 5 Claims. (Cl. 197—126.)

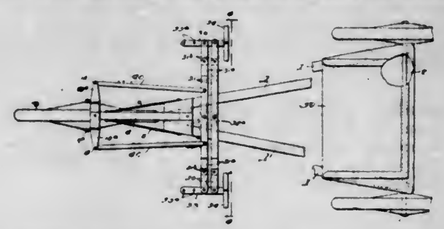
1. A manifold attachment for typewriters comprising a rotative member mounted on the platen carriage of the machine parallel with the platen; an arm carried by said member at one end; a member fitted upon the other end of said rotative member; an arm carried by said fitted member; and a manifolding member carried by said fitted meber and adapted to be drawn therefrom in successive lengths for engagement by and between said opposing arms.

1,451,866. MANIFOLDING ATTACHMENT FOR TYPEWRITERS. MALCOLM L. COSSITT, Alameda, Calif., assignor to Manifold Impressions Corporation, Carson City, Nev., a Corporation of Nevada. Filed June 28, 1922. Serial No. 571,462. 4 Claims. (Cl. 197—126.)

1. A manifolding attachment for typewriters comprising a plurality of independently rotatable nested members mounted on the platen carriage of the machine parallel with the platen; an arm carried at each end of each of said members; a manifolding member carried by and between each pair of arms; a rotatable shaft lying in the axis of movement of said nested members; a spring carried by and spirally coiled about said shaft in a plane at

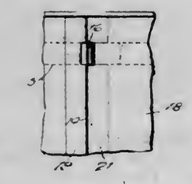
an angle to its axis, said spring having a pick-up lug on the free extremity; and studs on the arms lying in the path of rotation of the pick-up lug.

1,451,867. VEHICLE WHEEL. CONRAD DAHL, Chicago, Ill., assignor to Donald M. Carter, trustee, Chicago, Ill. Filed Aug. 3, 1921. Serial No. 489,432. 3 Claims. (Cl. 301—64.)



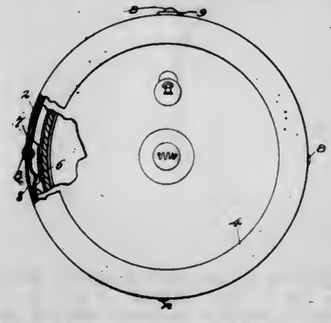
2. A vehicle wheel comprising two web members which are dished metal stampings centrally apertured and having each an interior hollow boss about said central aperture, said stampings being secured together at their peripheries with their said dished sides and hollow bosses facing each other, whereby their central areas are spaced apart along the axis; exterior ball race members fixed in said hollow bosses respectively; and an axle member having rigidly mounted upon it interior ball race members, counterpart to and facing the exterior ball race members mounted in said bosses; said interior ball race members being spaced apart along the axis relatively to the spacing apart of said hollow bosses for accommodating between them and the exterior race members the balls seated in said races without binding pressure or lost motion.

1,451,868. OCCUPANT-STEERED VEHICLE. CONRAD DAHL, Chicago, Ill., assignor to Donald M. Carter, trustee, Chicago, Ill. Filed Nov. 25, 1921. Serial No. 517,443. 7 Claims. (Cl. 208—114.)



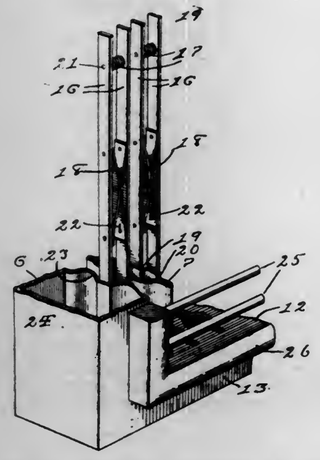
1. An occupant-steered vehicle, comprising in combination with rear drive-and-carrying wheels and a front steering wheel, a frame structure consisting of a main frame having the journal bearings for the driving and

steering wheel, and a steering frame for the steering wheel, the main frame having a steering head through which the steering frame is pivoted for steering movement, a foot-operated steering lever pivoted on the main frame behind the steering wheel, the steering frame being



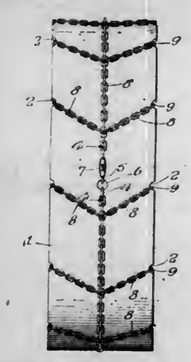
extended laterally at the top to form outwardly-projecting steering arms, and links connecting the opposite ends of the foot-operated levers respectively, with the opposite ends of the steering head arms, the pivot of the foot lever and all the pivots of the links being parallel to the pivot bearing of the steering frame in the steering head.

1,451,869. KEY-OPENING CAN. DANIEL B. DE LAND, Fairport, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 31, 1921. Serial No. 526,300. 6 Claims. (Cl. 220—54.)



1. A container, comprising a body provided with a soldered side seam, a tearing strip extending about said body and having a tongue extending from said seam, and a lithographed area on the container body beneath said tongue at a point where the same is subjected to the soldering action upon said side seam.

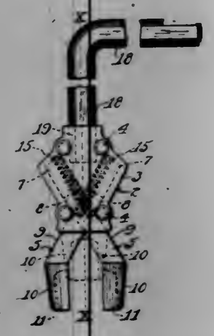
1,451,870. LOCK FOR LAMP DOORS. EDWARD W. DRIEMEYER, Cincinnati, Ohio, assignor to The K-D Lamp Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 25, 1920. Serial No. 368,688. 1 Claim. (Cl. 292—308.)



A lock for lamp closures comprising the combination with a body having a flange provided with slots angularly disposed with reference to the front edge of said flange, grooves between the front edge of said flange and the ends of the slots nearest said edge, and a closure having a flange arranged to fit around the outer circumference of the body flange, of lock pins in the closure flange, the inner ends of said pins being arranged to pass through said grooves into slots and to draw said closure against the front edge of said body flange upon rotation of the former upon the latter, external heads on said lock pins, and a spring clip on the body of said lamp, said clip having a perforation arranged to engage one of said heads when the closure is rotated so that the pins are in the extreme ends of the slots away from said grooves, to secure the closure against rotation.

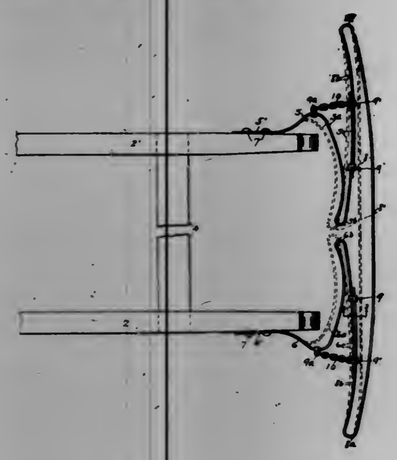
1,451,871. AUTOMOBILE RADIATOR. LEWIS D. FOWLER, Oklahoma, Okla. Filed Dec. 16, 1921. Serial No. 522,765. 6 Claims. (Cl. 257—125.)

1. In a radiator, a plurality of tubular sections elongated transversely each with a longitudinal groove in each of its side walls, bearing strips disposed in said grooves, and springs between said strips.



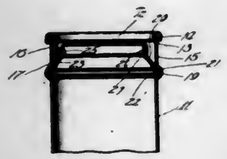
1,451,872. TRACTOR-WHEEL CHAIN. JAMES C. FRENCH, Chicago, Ill., assignor, by mesne assignments, to F. C. Austin Machinery Company, a Corporation of Illinois. Filed Mar. 18, 1918. Serial No. 223,006. 1 Claim. (Cl. 301—42.)

The combination of a traction wheel having a flat tread, with notches in the side edges of said tread, and



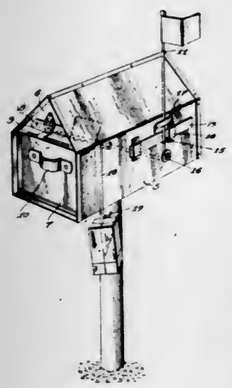
an opening in the tread between the side edges thereof, a circumferential chain section extending around the tread, in position to protrude from the tread and enter the ground hooks on the opposite ends of said chain section to engage said opening, means to tighten the chain section circumferentially of the wheel, laterally extending chain sections secured at intervals to the circumferential chain section, and hooks on the ends of said laterally extending chain sections to engage said notches.

1,451,873. ADJUSTABLE SOCKET WRENCH. ISRAEL C. GELLMAN, Chicago, Ill. Filed Feb. 4, 1922. Serial No. 534,014. 15 Claims. (Cl. 81—112.)



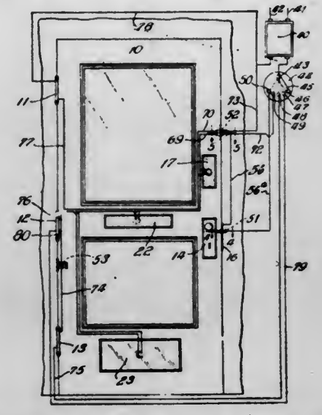
1. In a wrench of the class described, a head member intersecting having grooves therein and independent separably movable jaw members mounted on the head member and independently movable in the grooves.

1,451,874. AUTOMOBILE BUFFER. HIRAM S. GUTSELL, Ithaca, N. Y. Filed June 15, 1922. Serial No. 568,555. 4 Claims. (Cl. 293—55.)



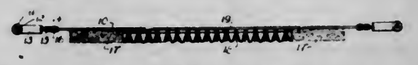
4. In a buffer for vehicles, the combination with the spaced chassis members of the vehicle running gear, of a folded buffer member rigidly supported by each of said chassis members, said buffer members being bent inwardly towards the longitudinal center of the vehicle and then bent outwardly for forming similar arms, a main buffer member disposed across the front of the vehicle, said member being folded upon itself and its inner portion overlapping and engaging the arms of the other buffer members, and a plurality of clamps for rigidly connecting the corresponding arms of the said springs.

1,451,875. VACUUM HINGE-COVER CONTAINER. John M. Hothersall, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 7, 1922. Serial No. 550,307. 8 Claims. (Cl. 220—53.)



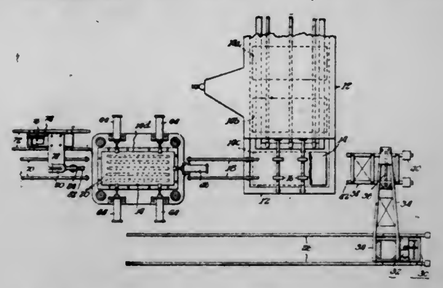
1. A container for tobacco and the like, comprising an hermetically sealed box provided with a tearing strip near one end thereof, and an internal secondary top part engaging said box beneath said tearing strip and provided with a hinge cover.

1,451,876. RURAL MAIL BOX. JOHN R. JEWETT, Jr., Wood River, Nebr. Filed June 13, 1921. Serial No. 476,971. 6 Claims. (Cl. 232—35.)



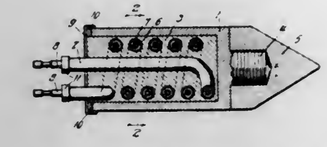
1. A rural mail box comprising a casing, a door hinged thereto, a flag to signal deposits of mail in the box pivoted to the casing, a connection between the door and flag to lower the flag when the door is opened, including a rod pivoted to the door, and a slide connected with the rod and adapted to engage the flag.

1,451,877. ADVERTISING DEVICE. JOHN E. KOEHLER and RAYMOND PAUL, Chicago, Ill. Filed Feb. 6, 1922. Serial No. 534,440. 15 Claims. (Cl. 40—52.)



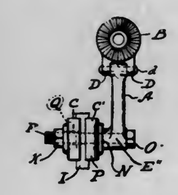
1. The combination of a door, a latch for said door, a sign on said door, and means controlled by said latch for illuminating said sign intermittently.

1,451,878. BATH DEVICE. GEORGE J. KOLLAR, Whiting, Ind. Filed Oct. 19, 1921. Serial No. 508,706. 1 Claim. (Cl. 15—222.)



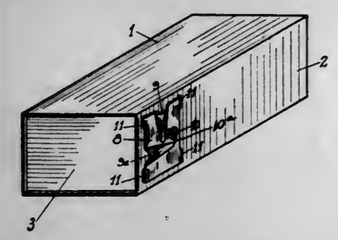
In a bath device, a flexible backing, a bristle brush secured to one side of said backing and sponges secured to the same side of said backing at opposite ends of said bristle brush whereby said sponges and brush are adapted to alternately act upon the same surface when the device is moved back and forth.

1,451,879. MECHANISM FOR STAMPING LARGE HOT METAL SHEETS. WILLIAM A. LACKE, Chicago, Ill. Filed May 23, 1921. Serial No. 471,708. 11 Claims. (Cl. 214—1.)



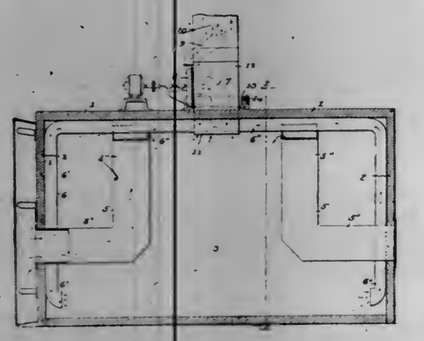
1. In mechanism of the class described, in combination with a track along which a sheet is to be moved, another track parallel to the first track, a car adapted to travel along the second track, a truss carried by the car extending over across the first track, means supported by the truss adapted to engage a sheet on the first track whereby movement of the car on the second track propels the sheet on the first track, and a pivotal mounting for the sheet engaging means, permitting it to tilt in a vertical plane to follow vertical movement of a sheet being moved.

1,451,880. ELECTRIC HEATING APPLIANCE. EDWIN N. LIGHTFOOT, New York, N. Y., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 28, 1921. Serial No. 448,501. 15 Claims. (Cl. 219—64.)



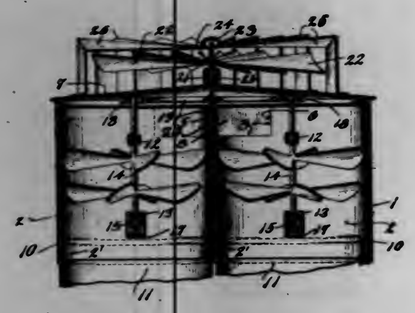
1. An electric heating appliance having, in combination, a non-corrodible, rust-resisting casing, a high heat-conducting metal core within the casing, and an electric heater embedded in the core and provided with a tubular metal jacket enclosing an insulated resistor.

1,451,881. ADJUSTABLE SUPPORTING BRACKET. JOSEPH B. MCMULLEN, Catonsville, Md. Filed May 14, 1921. Serial No. 469,737. 3 Claims. (Cl. 296—95.)



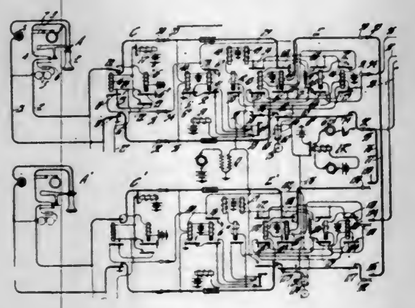
1. A bracket comprising an arm, a member pivotally attached thereto at one end, a bolt cooperating with its other end, and clamps coacting with said bolt to clamp said arm to a fixed support and simultaneously lock said arms to said clamps in any desired position.

1,451,882. MATCH BOX. DAVID B. MCDONALD, Davenport, Iowa. Filed Dec. 4, 1920, Serial No. 428,262. Renewed May 24, 1922. Serial No. 563,388. 5 Claims. (Cl. 206—20.)



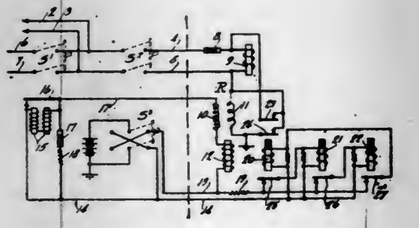
1. In combination with a match box having a match-box case, the match-box case having a hole in one of its sides; the hole having a downwardly pointed off-set; a match-box case having a match breaking device outwardly secured by suitable means to one of its sides; said match breaking device having a hole provided with a downwardly pointed off-set in its surface stationed adjacent one of its sides conformable to the hole in the box case, multiple corrugate means in the side and end of said match breaking device, clamp lug means for securing said match breaking device to the box case; perforations suitably conformable to the clamp lugs of said match breaking device, provided in the side of said box case, all for the purposes specified.

1,451,883. MEANS FOR VENTILATING DRYING OVENS. ARTHUR MAEHLER, Chicago, Ill. Filed July 19, 1922. Serial No. 576,056. 5 Claims. (Cl. 34—19.)



1. In an oven of the type described, the combination of a closed oven casing, heating means arranged in said casing, an inlet duct for introducing air into the upper portion of the interior of said casing, an outlet duct adapted to take air from the lower portion of the interior of said casing, an exhaust fan having its intake connected with said outlet duct, a hollow stack closed at its lower end, a pipe arranged within the lower end of said stack and connected with the outlet of the fan, a duct connected to said stack at one end and at the other end to the upper portion of the interior of the casing, and a damper arranged in said duct.

1,451,884. VENTILATOR. THORBY I. MOEN, Beloit, Wis. Filed Apr. 17, 1922. Serial No. 553,943. 6 Claims. (Cl. 98—9.)



1. A ventilator comprising a housing closed at its upper end having side openings adjacent its upper end, inner casings in the housing terminating short of the upper and lower ends of the housing, the lower portions of the casings being reduced to provide abutment shoulders, a partition extending transversely through the housing above the casings and dividing the upper portion of the housing into end compartments, each having a side opening, conduit pipes extending into the housing and fitting upon the reduced lower ends of the casings, rotary fans in the casings having shafts extending up through the end compartments, and wind operated driving means for imparting rotary movement to the fan shafts.

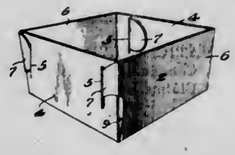
1,451,885. PRIVATE-BRANCH-EXCHANGE SYSTEM. MARTIN L. NELSON, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed July 9, 1917, Serial No. 179,327. Renewed Nov. 17, 1921. Serial No. 515,972. 37 Claims. (Cl. 179—18.)

1. In a telephone system, a pair of connected terminals common to the exchange, means whereby a calling subscriber can obtain a connection with the first of said terminals, other terminals multiplied to said first terminals, and means for making said terminals busy when said calling subscriber obtains connection with said first terminal, signaling means associated with said first terminals for signaling a called subscriber, and means whereby the called subscriber can obtain a connection with the second of said terminals while said other terminals are busy, whereby the said calling and called subscribers may be telephonically connected.

1,451,886. SIGNALING APPARATUS FOR TELEPHONE SYSTEMS. MARTIN L. NELSON, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed June 13, 1921. Serial No. 477,266. 3 Claims. (Cl. 179—51.)

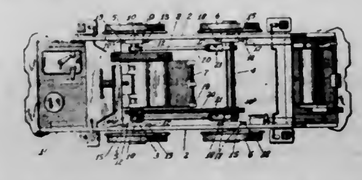
1. In a signaling system, a common signaling conductor, a transformer having a secondary winding in series with said conductor, a local circuit including a buzzer and a primary winding of said transformer, a series of relays and circuit connections for energizing said relays alternately, and contacts on one of said relays for short circuiting said secondary winding.

1,451,887. HOT-AIR CONDUIT. JOSEPH NOVAK, Cleveland, Ohio, assignor to The Henry Furnace and Foundry Company, Cleveland, Ohio. Filed Aug. 10, 1920. Serial No. 402,584. 5 Claims. (Cl. 137—75.)



1. In a coupling for conduit sections, a conduit section having its under and overlapping marginal edges

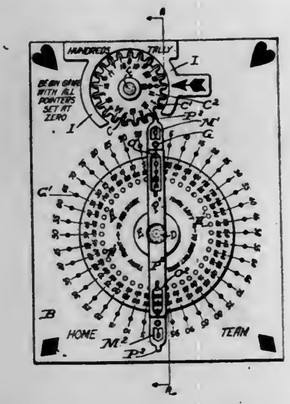
provided with struck out tongue and recess members, respectively, to receive and interlock with similar mem-



bers of adjacent conduit sections, said recess members being provided with inner tongue guides.

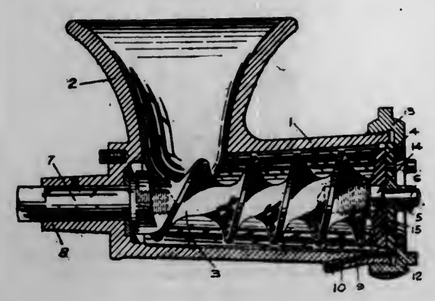
1,451,888. PAPER OR CARDBOARD BERRY BASKET. JOHN S. PARKER, Earlville, N. Y. Filed June 6, 1921. Serial No. 475,348. 1 Claim. (Cl. 229—35.)

A berry basket composed of a bottom, slotted ends, sides with tongues engaging said slotted ends and cut away portions in said sides and adjacent to said tongues, said cut away portions being cut so as to form curved openings which slope towards each other for the greater portion of their distance and then separate and turn towards the tongues so that ample ventilating openings are provided.



1,451,889. LOCOMOTIVE. THOMAS E. PRAY, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 31, 1922. Serial No. 578,576. 7 Claims. (Cl. 105—102.)

2. In a locomotive, a frame, a pair of axles operatively connected by a chain, a spacing device adapted to maintain said axles at a substantially uniform distance from each other, spring suspension means interposed between said axles and said frame, driving means connected with one of said axles, and guide means for one of said axles permitting vertical movement thereof respective to said frame, the other of sai daxles being free to move in a limited arc with said first named axle as a center.

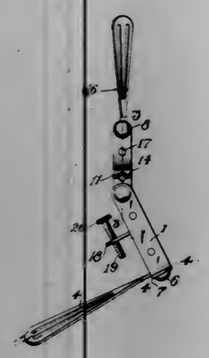


1,451,890. CALCULATING DEVICE. MARSHALL ANGLE PUASSL, West Haven, Conn. Filed Nov. 10, 1921. Serial No. 514,200. 6 Claims. (Cl. 235—74.)

1. In a calculating device of the class described, the combination of a base, a resilient pointer pivoted thereon and provided with a carrying tooth, the outer end of said pointer having frictional contact with said base, and said base bearing a graduated series of numerals concentric with the pivot of the pointer, and which run from zero through progressive multiples of a factor one graduation from the zero, and a rotatable, toothed, totalizing-wheel mounted on said base in position to permit the tooth of said pointer to engage its teeth, said wheel bearing a graduated series of numerals set opposite its teeth and which run, in the same direction as the numerals on the

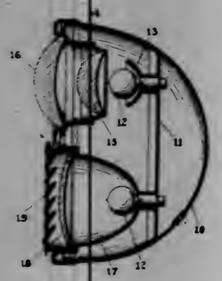
base, from 1 up through progressive multiples thereof, said base having a stationary indicator for said totalizing wheel.

1,451,891. MEAT CHOPPER AND METHOD OF MAKING SAME. THOMAS F. RATAICZAK, Troy, Ohio, assignor to The Hobart Manufacturing Company, Troy, Ohio, a Corporation of Ohio. Filed Feb. 20, 1922. Serial No. 537,777. 4 Claims. (Cl. 29—148.)



1. In a meat chopper, a stud for the feeding and cutting devices, comprising a hard and tough metal portion for the journal bearing and knife mounting parts, and a comparatively soft metal portion for securing the stud to the feeding device.

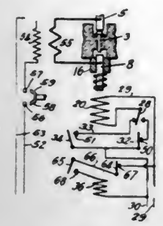
1,451,892. ARTICULATOR. GEORGE W. REIMCHE, Moorhead, Minn. Filed Feb. 11, 1922. Serial No. 535,836. 3 Claims. (Cl. 32—1.)



1. In a device of the class described, the combination of a standard, an arm having its rear end pivotally connected with the upper end portion of said standard, for vertical swinging movement, said arm being in a vertical plane and provided intermediate its length with a bent portion and an opening in said bent portion, said arm being provided at its outer end with a socket, a clamp plate provided at its inner end with an angularly-disposed extension extending through the opening of the arm, said clamp plate being provided at its outer end with a socket registering with the socket on the arm, an upper plate provided at its inner end with a ball, for fitting between the sockets,

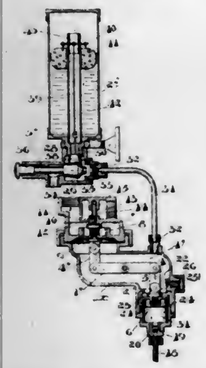
and mounting the plate for universal movement, a set screw extending through the clamp plate and the arm and

clamping the sockets upon the ball, means carried by the standard for controlling downward swinging movement of the arm, and a lower plate secured to the standard.



1,451,893. HEADLIGHT. WALTER D'ARCY RYAN, Schenectady, N. Y. Filed Dec. 17, 1921, Serial No. 523,034. Renewed Feb. 28, 1923. 2 Claims. (Cl. 240—41.)

1. A headlight composed of a two unit combination, the first unit having a light source, a gathering lens mounted in spaced relationship to the light source, and a second lens for projecting the light, received from the first lens, into the roadway, at a predetermined distance from the vehicle, mounted in spaced relation to the first lens, the second unit having a light source, surrounded by a reflector, and shutters mounted in relation thereto, to receive the light rays from the source and the reflector, and deflect them downwardly in close proximity to the vehicle, to light the roadway directly in front, and to sides of the vehicle, the light from the two units fusing to form, in combination, means which provides a continuously and smoothly lighted field in advance of the vehicle, substantially as shown and described.

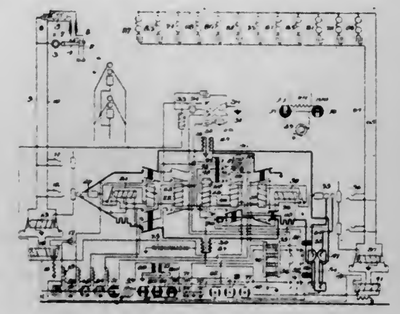


1,451,894. ELECTRIC RIVETING MACHINE AND PROCESS. ALBERT B. KYPINSKI, Laurelton, N. Y., assignor to Thomas E. Murray, Long Island, N. Y. Filed Jan. 26, 1921. Serial No. 439,920. 19 Claims. (Cl. 219—2.)

1. An electric riveting apparatus including in combination means for supporting the parts to be riveted in assembled position from below with the rivet extending below said parts and with one electrode engaging the upper end of the rivet and holding the same down and making a direct electric connection therewith, and with the other

electrode out of engagement with the rivet and adapted to be moved up against it to complete the circuit through it and to upset it.

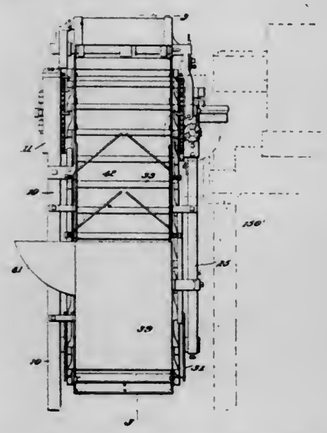
1,451,895. AUTOMATIC VALVE. JAMES SANDILANDS, Toronto, Ontario, Canada. Filed Aug. 9, 1921. Serial No. 491,031. 12 Claims. (Cl. 137—153.)



1. In an automatic valve, the combination of a main chamber; an inlet chamber communicating by means of an opening with the main chamber; a member movable in the inlet chamber adapted to close said opening; a second movable member exposed to the pressure of fluid within the main chamber; means connecting the movable members whereby their movements are necessarily simultaneous and in opposite directions; a by-pass having a restricted opening into the main chamber and two ports into the inlet chamber, the first adjacent the opening between the chambers and the second remote therefrom, the first movable member being adapted to close the first port substantially simultaneously with the opening between the two chambers and to close the second port when moved to uncover the first port; means for venting the pressure in the main chamber; and a valve controllable by the movement of the second movable member.

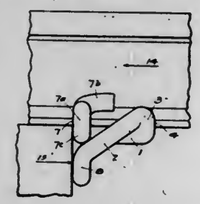
1,451,896. TELEPHONY. HUBERT S. TURNER, San Diego, Calif. Filed Feb. 27, 1915. Serial No. 11,046. 28 Claims. (Cl. 179—58.)

1. A telephone exchange system, including telephone lines extending from sub-stations to an exchange having a line relay and a visual line signal at said exchange for each of said lines, a source of variable current, a resistance, an operating circuit for each such line signal including said resistance, said circuit including means controlled by the line relay individual thereto, to impress thereon variable current from said source, and a circuit including said resistance and a winding of the corresponding



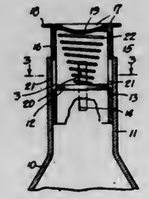
line relay whereby a variable current due to said resistance will traverse said line relay to actuate the same and at the same time sound an audible signal in the telephone receiver at the calling sub-station provided, however, that said line signal has first been energized.

3. A telephone exchange system, including telephone lines extending from sub-stations to an exchange having link connectors for connecting said sub-stations and comprising normally open talking and operating strand circuits individual to the respective link connectors, two relays for each of said link connectors operated respectively when said link connector is connected to a calling and a called line, automatic means comprising said relays to close said strand circuits when establishing a connection between said sub-stations, said strand circuits being opened during an established connection by means comprising said relays and under the control of apparatus at connected sub-stations.



20. A telephone exchange system, including telephone lines extending from substations to an exchange, link connectors to connect said sub-stations, biased calling signal apparatus at said sub-stations connected through condensers to the two limbs of said lines, in combination with means for producing an alternating current having succeeding alternations of different strength to operate said apparatus.

1,451,897. FEEDING MACHINE. ANDREW F. STERNAD, Chicago, Ill. Filed Oct. 25, 1921. Serial No. 510,281. 40 Claims. (Cl. 130—33.)

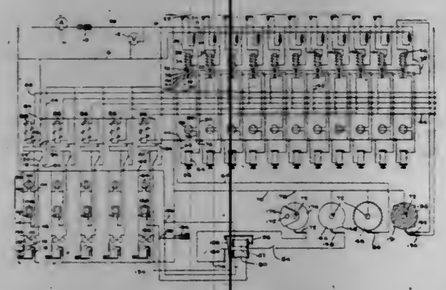


1. The combination with a machine for cutting green corn from the ear, of means for automatically feeding the ears of corn to the cutting machine, said means comprising a hopper adapted to contain the ears of corn in bulk, a traveling conveyor adapted to remove automatically and singly ears from the hopper, and means to prevent the conveyor from permanently removing from the hopper more than a single ear at a time, whereby the ears are arranged on the conveyor singly in succession and are delivered to the cutting machine in this order.

1,451,898. ANTICREEPER FOR RAILWAY RAILS. WILLIAM S. WESTON, Dallas, Tex. Filed July 3, 1922. Serial No. 572,476. 5 Claims. (Cl. 238—330.)

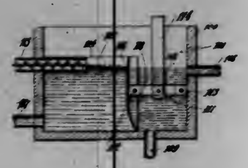
1. A V-shaped anti-creeper for railway rails, comprising a transverse member having shoulder seats adapted to grip the opposite rail base edges with a lever grip, and a longitudinal member having at its free end a tie-abutting portion terminating in a flange embracing jaw seat; said jaw seat being adapted to be rocked on one base edge transversely to the rail base flange in the process of installing the device and to hold the said shoulder seats in operative position after installation.

1,451,899. DISPENSING RECEPTACLE. JAMES J. COOGAN, New York, N. Y. Filed Sept. 24, 1921. Serial No. 502,908. 3 Claims. (Cl. 215—74.)



1. In a dispensing receptacle, the combination of a neck having a smooth straight interior surface, an abutment fixed within the neck and extending across the same, the main portion of the abutment being spaced from the neck but held in fixed position by tongues, and a cap having a straight barrel slidable within the neck in the space between the neck and the main portion of the abutment and having a closed outer end, said barrel being provided with openings through which said tongues project, and the neck and barrel being provided with openings adapted to register in one position of the cap for the delivery of the material.

1,451,900. ELECTRICAL SIGNALING AND RECORDING SYSTEM. JOHN M. DIEGEL, Minneapolis, Minn. Filed Dec. 6, 1920. Serial No. 428,700. 6 Claims. (Cl. 234—37.5.)

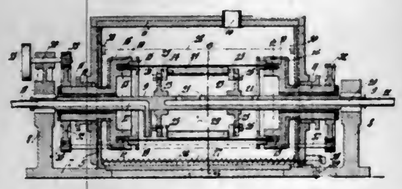


1. An electrical signalling and recording system comprising a source of electricity, a circuit controller in the circuit of said source, and operable by a watchman, a shaft adapted to be rotated by clock-work mechanism, an hour-wheel secured to said shaft, a fractional wheel secured to said shaft, means associated with said clock-

work mechanism for feeding a record tape, means associated with said hour-wheel and with said fractional wheel, whereby a record will be made on said tape when

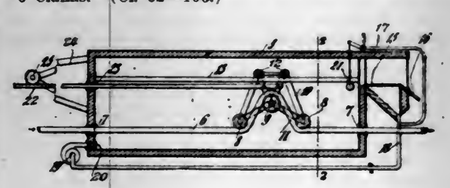
a watchman is delinquent in operating said controller, and means which automatically prevents operation of said last-mentioned means when the watchman is not delinquent.

1,451,901. APPARATUS FOR TRANSFERRING HEAT. CROSBY FIELD, Yonkers, N. Y., assignor to Chemical Machinery Corporation, New York, N. Y. Filed July 30, 1918, Serial No. 247,465. Renewed May 2, 1922. Serial No. 558,040. 15 Claims. (Cl. 62—172.)



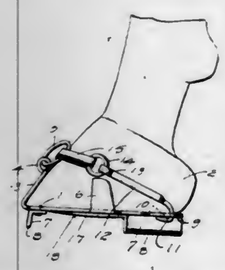
1. In a heat transference apparatus, heat transfer means adapted by its capacity of heat transference to convert a fluid into solid form, and constituting a collector of the solidified material, said means being constructed whereby its normal conformation may be temporarily altered to effect the dislodgment or separation of the solid material from the heat transfer means.

1,451,902. METHOD OF SEPARATING A BRITTLE PRODUCT FROM A BASE. CROSBY FIELD, New York, N. Y., assignor to Chemical Machinery Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 29, 1920. Serial No. 377,464. 2 Claims. (Cl. 62—172.)



1. The herein described method which consists in producing a continuous layer of a brittle product upon an imperforate, nonmetallic normally stationary flexible base and then applying a positive pressure to said base to flex the same and separate the brittle product therefrom in the form of flakes.

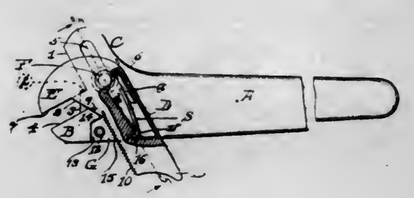
1,451,903. HEAT-TRANSFERRING APPARATUS. CROSBY FIELD, Yonkers, N. Y., assignor to Chemical Machinery Corporation, New York, N. Y., a Corporation of New York. Filed May 16, 1921, Serial No. 469,797. Renewed Dec. 20, 1922. 6 Claims. (Cl. 62—105.)



1. In a heat transference apparatus, a tank adapted to contain a fluid, a cylinder rotatably mounted in said tank in contact with the fluid therein, means for circulating a heat transfer medium through said cylinder to thereby convert the fluid in contact with the cylinder wall into solid form, said cylinder wall consituting a collector of the solid deposit, and means within the cylinder for imparting an undulating movement to the wall thereof to break up the solid deposit on the outer surface of said wall and thereby facilitate its easy removal.

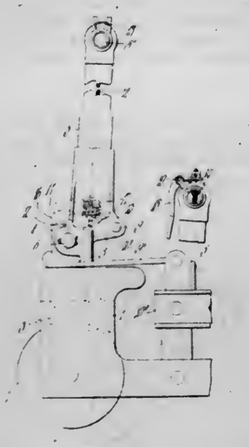
1,451,904. HEAT-TRANSFERRING APPARATUS. CROSBY FIELD, Yonkers, N. Y., assignor to Chemical Machinery Corporation, New York, N. Y., a Corporation of New York. Filed May 16, 1921. Serial No. 469,798. 6 Claims. (Cl. 62—106.)

1. In a heat transferring apparatus, a hollow nonrotatable heat transferring member adapted to contain a heat transferring medium, means for contacting the material to be treated with said member, and means for progressively flexing said member throughout its length to thereby effect a separation of the solidified material from the surfaces of said member.



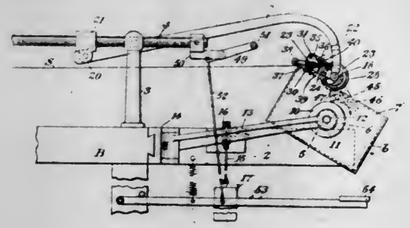
1,451,905. HORSESHOE. HERMAN A. FREY, Champaign, Ill. Filed Jan. 5, 1921, Serial No. 435,177. Renewed July 13, 1922. Serial No. 574,782. 7 Claims. (Cl. 168—22.)

3. A horseshoe including a tread member having a front lip, side members inclining towards the lip and



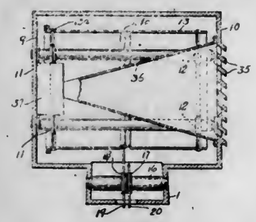
adjustably secured to the sides of said tread member adjacent the latter's rear edge, and an attaching means slidably secured to the forward ends of said side members and to the lip.

1,451,906. WRENCH. ISRAEL C. GELLMAN, Chicago, Ill. Filed Aug. 5, 1921. Serial No. 490,036. 7 Claims. (Cl. 81—138.)



1. An adjustable wrench comprising a shank provided at one end with a fixed jaw member and a relatively thin slotted lug, the longitudinal axis of the slot and the forward marginal face of the lug being at right angles to the gripping face of said fixed jaw member, a jaw member movably secured to the slotted lug and provided with a relatively thin movable member integral therewith, complemental engaging surfaces on the fixed jaw and on the edge of the movable member, means for bringing said surfaces into interlocking engagement, and means for securing the two thin members together while permitting relative movement between them.

1,451,907. HOLDING LATCH FOR TRUCK STEERING HANDLES. RICHARD T. GIFFORD, Springfield, Mass., assignor to Edward N. White, J. Lewis Wyckoff, and James M. Eaton, trustees, all of Holyoke, Mass. Filed Sept. 19, 1921. Serial No. 501,626. 7 Claims. (Cl. 280—46.)

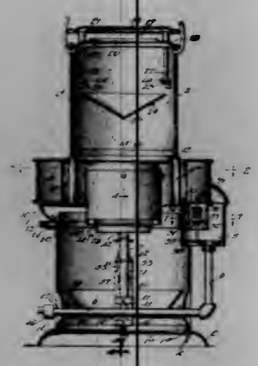


1. In a truck in combination, a front wheel swiveled support, a steering handle pivoted to said support for up-and-down movement, a stop for limiting in one direction the movement of said handle beyond its vertical position, a latch and coacting member one located on said handle and one located on said swivelled support for holding said handle against movement beyond its vertical position in the other direction.

1,451,908. BOX-COVERING MACHINE. FRANK E. HATCH, Rutherford, N. J. Filed July 16, 1920. Serial No. 396,823. 23 Claims. (Cl. 93—54.)

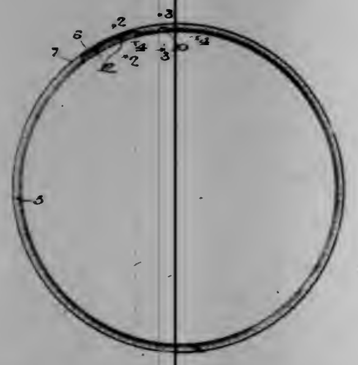
1. In a box covering machine, the combination with means for wrapping a gummed paper strip around the sides of a box, of mechanism for turning over one of the side edges of said strip and attaching it to the bottom edges of the box which mechanism includes means effective to form a flat beveled or mitered fold in said strip edge at each corner of the box bottom.

1,451,909. AUTOMOBILE SIGNAL DEVICE. CHARLES HERMANN, Brooklyn, N. Y. Filed Dec. 22, 1921. Serial No. 524,199. 5 Claims. (Cl. 116—43.)



1. An automobile signalling and indicating device, which comprises a casing to be mounted on the body of the automobile and having an exhibiting opening, a hollow rotatable signal character drum mounted within the casing, an audible signal disposed in the casing within the signal drum, and a horn connected thereto, said casing having an aperture in one face thereof to which one end of said horn is connected.

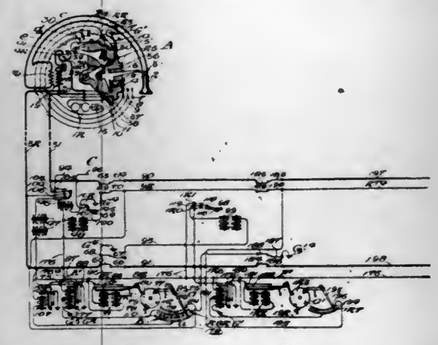
1,451,910. PORTABLE OIL HEATER. RUDOLPH HOFFMAN, Kankakee, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a Corporation of New York. Filed Nov. 4, 1918. Serial No. 260,966. 1 Claim. (Cl. 126—96.)



A portable oil heater having a base, a drum movably mounted upon the base, an oil reservoir carried by the base, an oil well at one side of the base having a pipe depending therefrom and extending into the base, a burner having an annular burner bowl mounted in the base and having a connection with the pipe in the lower portion of the base permitting of relative up and down movement between the burner and the well, means providing com-

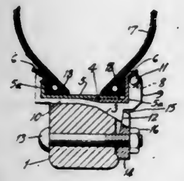
munication between the reservoir and said well whereby to maintain a constant oil level in the well, and means

operable from a point exteriorly of the base for effecting relative up and down movement between the burner bowl and said oil level.



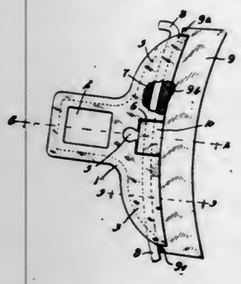
1,451,911. BICYCLE RIM. NELS JOHNSON, Racine, Wis. Continuation of application Serial No. 515,618, filed Nov. 16, 1921. This application filed Oct. 30, 1922. Serial No. 598,001. 1 Claim. (Cl. 152—20.)

An aluminum rim for bicycle tires, the inner side of which is substantially V-shaped in cross-section and the outer side curved in cross-section to form a tire-receiving groove, the deepest portion of the section being in a plane passing through the apex of the V, said rim having a centrically disposed valve opening and a reinforcing boss projecting from the diverging inner sides of the rim section, the rim having spoke openings arranged in staggered relation in the thicker part of the rim section.



1,451,912. TELEPHONE TRUNKING SYSTEM. ALEXANDER E. KEITH, Hinsdale, Ill., assignor, by mesne assignments, to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed May 21, 1907, Serial No. 374,864. Renewed May 20, 1918. Serial No. 235,694. 147 Claims. (Cl. 179—18.)

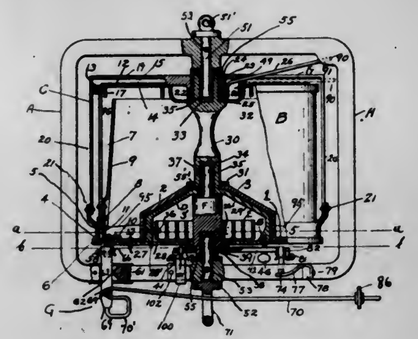
12. A telephone exchange system comprising subscribers' lines divided into a plurality of groups, a plurality of first-selectors less in number than the subscribers' lines, and suitable means for extending connection from the



first-selectors to the called subscribers' lines, each of said first-selectors being common to all of the subscribers' lines in all of said groups.

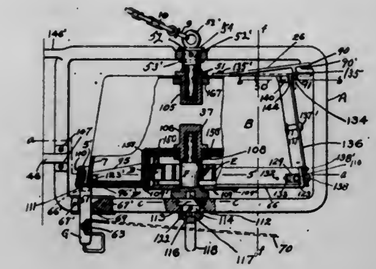
1,451,913. VEHICLE WHEEL. EVERT KOKKO, Duluth, Minn. Filed Mar. 12, 1921. Serial No. 451,763. 3 Claims. (Cl. 301—11.)

1. In a vehicle wheel, a felly having one bevelled edge, a rim, rim yokes pivotally carried by said rim and adapted for disposal upon the said felly, said rim yokes being adapted to snugly span the rim, heels integral with said rim yokes for engagement with the bevelled portions of said felly, and adjustable means carried by said felly for engaging said heels and binding them securely to the felly.



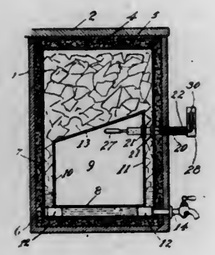
1,451,914. BRAKE HEAD AND SHOE FOR RAILWAY CARS. OLE KONGSRUD, Minneapolis, Minn. Filed Jan. 13, 1922. Serial No. 528,972. 7 Claims. (Cl. 18—242.)

5. A device of the class described comprising, a brake head having a recess extending transversely thereinto from its shoe contacting surface, said surface extending at each side of said recesses and longitudinally through-



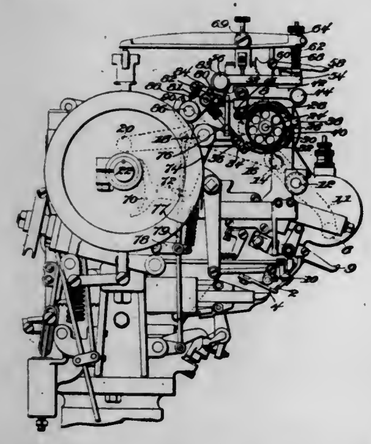
out the length of said head, a shoe having a tongue projecting into recess and contacting said head throughout said surface, and a key passing through said head and tongue for connecting said head and shoe.

1,451,915. AUTOMATIC FIRE EXTINGUISHER. CLARENCE LADD-DAVIS, Brooklyn, N. Y., assignor to himself and James A. Taylor, joint trustees, Brooklyn, N. Y. Refiling of application Serial No. 756,687, filed Mar. 25, 1913. This application filed July 28, 1919. Serial No. 313,926. 42 Claims. (Cl. 169—29.)



1. In a device of the class described, a receptacle adapted to contain a fire-extinguishing fluent fluidal material; and mechanical power-means for simultaneously giving a plurality of material expelling motions to the receptacle.

1,451,916. AUTOMATIC FIRE EXTINGUISHER FOR DISTRIBUTING AQUEOUS-LIKE FLUENT MATERIAL. CLARENCE LADD-DAVIS, Brooklyn, N. Y., assignor to himself and James A. Taylor, joint trustees, Brooklyn, N. Y. Refiling of application Serial No. 756,688, filed Mar. 25, 1913. This application filed July 28, 1919. Serial No. 313,927. 35 Claims. (Cl. 169—29.)

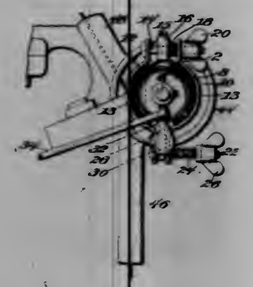


1. In a device of the class described a receptacle adapted to contain a fire-extinguishing liquid aqueous-like fluent material provided with an outlet formed in and extending thru the peripheral wall thereof thru which the liquid may be expelled; and mechanical positive power means for simultaneously giving a plurality of liquid expelling motions to the receptacle.

1,451,917. REFRIGERATOR. EMANUEL M. MEYER, Cincinnati, Ohio, assignor to Langdon-Meyer Laboratories, Cincinnati, Ohio, a Partnership composed of Fletcher Langdon and Emanuel M. Meyer. Filed Dec. 8, 1922. Serial No. 605,714. 7 Claims. (Cl. 62—68.)

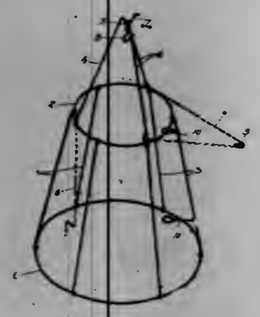
1. A refrigerator adapted to operate on ice as the sole refrigerant, comprising a box and a compartment within said box and spaced away therefrom, and means in connection with said compartment and box to set up a thermo-siphon action of melted ice.

1,451,918. TENSION DEVICE. WILLIAM C. MEYER, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 13, 1920. Serial No. 373,502. 5 Claims. (Cl. 112—59.)



1. A sewing machine having, in combination, stitch forming devices, a tension wheel, a brake for retarding the rotation of the tension wheel, a main shaft from which said devices are operated, means for releasing the brake upon the reversal of the direction of rotation of the main shaft, a latch for holding the brake in released condition upon starting the machine, and means for releasing the latch.

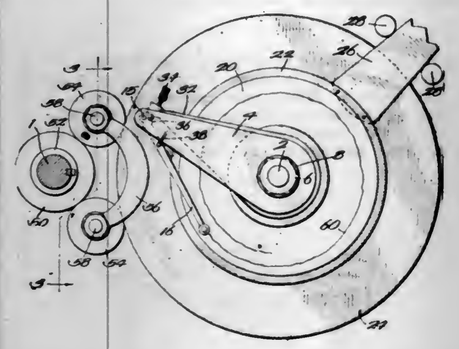
1,451,919. TENSION DEVICE. WILLIAM C. MEYER, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 13, 1920. Serial No. 373,503. 8 Claims. (Cl. 112—59.)



1. A tension device for sewing machines, having in combination, a tension wheel, a brake for the tension wheel comprising a brake wheel, a pair of brake shoes

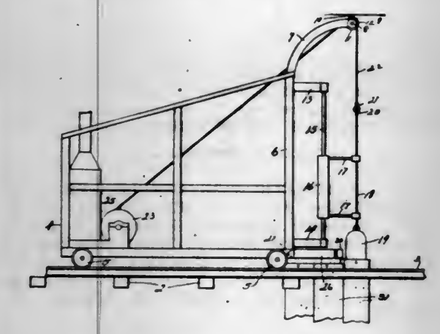
for engagement with the periphery of the brake wheel, means for pressing the brake shoes against the brake wheel, and means for supporting the brake shoes having

provision for adjusting independently the brake shoes to compensate for wear and to locate the brake shoes properly with relation to the brake wheel.



1,451,920. LANTERN SUPPORT. BUELL W. NUTT, Cleveland, Ohio, assignor to The Safety Equipment Service Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 2, 1921. Serial No. 466,270. 3 Claims. (Cl. 240—52.)

1. In a lantern support the combination of a wire frame of truncated conical shape adapted to receive a lantern, a screen cover for said frame, a V-shaped member pivotally attached to the upper portion of said frame and adapted to normally hang against the frame side, said V-member having a loop at its apex, a straight member pivotally attached to said frame opposite said V-member and normally hanging against said frame, said straight member having a recurved upper end adapted to be sprung into such loop in said V-member to form said two members into a rigid tripod above said frame, a hook attached to said loop and adapted to receive the lantern handle to support the lantern within said frame but above the bottom thereof.

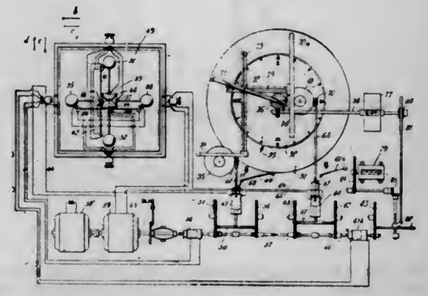


1,451,921. MECHANISM FOR TESTING GEAR-CUTTING MACHINES. CARL G. OLSON, Chicago, Ill., assignor to Illinois Tool Works, Chicago, Ill., a Corporation of Illinois. Filed June 12, 1922. Serial No. 567,525. 6 Claims. (Cl. 234—1.)

1. Mechanism for testing the angular velocities of two rotating elements comprising a driving disc rigidly connected to one of the elements to be tested, a driven disc, separated from the driving disc, an intermediate disc for transmitting motion from the driving to the driven disc, means for urging the intermediate disc into the throat

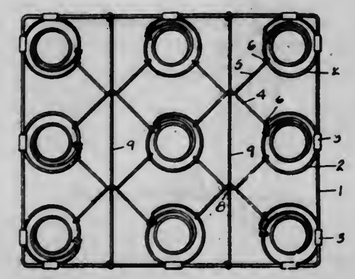
between the driving and driven discs, and indicating mechanism under the joint control of the driven disc and the other element to be tested.

1,451,922. DUPLEX SHEET-PILE DRIVER. JOSEPH PERNA, Philadelphia, Pa. Filed Mar. 2, 1922. Serial No. 540,420. 3 Claims. (Cl. 61—74.)



1. A pile driver consisting of a frame, an axle fixed in said frame, two pulleys adjustably journalled on said axle, means to hold said pulleys in their adjusted positions, cables running over said pulleys, means for operating the cables, a hammer connected to an end of each cable, two pairs of brackets hinged to the frame, a vertical rod between each pair of brackets and fixed thereto, a barrel slidably mounted upon each of said rods, and arms carried by each barrel through which passes a component part of each hammer.

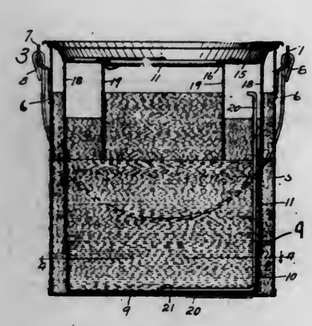
1,451,923. VELOCITY INDICATOR. WINSLOW S. PIERCE, Jr., Bayville, N. Y. Filed Sept. 10, 1919. Serial No. 322,949. 9 Claims. (Cl. 264—1.)



9. A velocity indicator comprising means for measuring changes in the horizontal component of an acceleration acting along the longitudinal axis of a moving object, means for measuring changes in the horizontal component of an acceleration acting laterally thereto, integrating mechanism adapted to obtain the resultant of said respective acceleration measures and to combine the resultant of the acceleration measures with the element of time, means for registering the integral product to

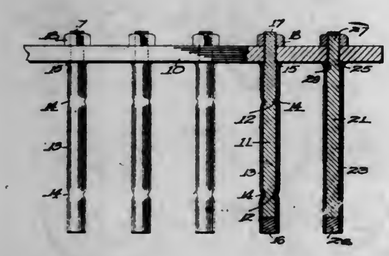
indicate velocity, a compass, a reference or lubber line therefor, and means for moving said reference line about the axis of the compass in accordance with changes in

lateral acceleration whereby the true course of the moving object is constantly indicated at the velocity registered.



1,451,924. SPRING STRUCTURE. HERMAN O. REIDENBACH, Detroit, Mich., assignor to L. A. Young Industries, Inc., Detroit, Mich. Filed May 5, 1922. Serial No. 558,607. 6 Claims. (Cl. 5—29.)

1. In a spring structure, the combination of a border frame, a plurality of springs, the outer springs being secured to said border frame, V-shaped tie members disposed in coacting pairs with their ends secured to adjacent springs, the bight of one member of each pair being hooked, the hook being engaged with the bight of the coacting member, cross wires disposed in the hooks of aligned tie members, and tie wires disposed through said hooks and transversely of said cross wires locking said tie members and said cross wires, the ends of said cross and tie wires being secured to said border frame.

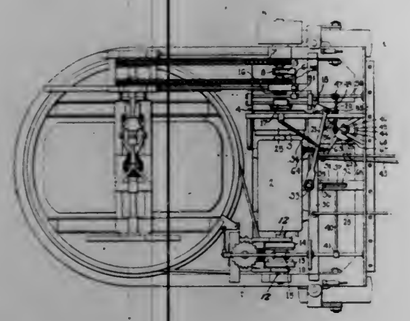


1,451,925. LIVE-BAIT BUCKET. WILLIAM J. RUFF, Quincy, Ill. Filed Aug. 17, 1922. Serial No. 582,532. 10 Claims. (Cl. 43—56.)

10. A bait bucket comprising a liquid container; a float disposed within said container; a bait cage attached to the bottom of the float; means in the container for indicating the proper water level thereof, and a pipe attached to the float and having its upper end approximately at the water level of the container when the float is in its

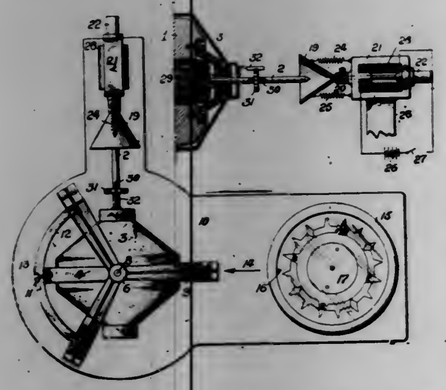
lowermost position, the bottom of said pipe having a vent opening therein adjacent the bottom of said bait bucket.

1,451,926. RAKE TOOTH FOR CARBONIZING ACID BOWLS. ALLAN C. SARGENT, Westford, Mass., assignor to C. G. Sargent's Sons Corporation, a Corporation of Massachusetts. Filed Mar. 13, 1920. Serial No. 365,674. 3 Claims. (Cl. 259—99.)



1. As an article of manufacture, a rake for use in a carbonizing bowl, comprising a tooth having a strong metallic core and a casing of a material not detrimentally affected by acid, said core having circumferential grooves on its surface and said casing being beaded into said grooves to hold it in position.

1,451,927. CONTROLLING MEANS FOR TRACTORS. RALPH J. STIMSON, Rogersville, Mich. Filed June 29, 1917. Serial No. 177,692. 33 Claims. (Cl. 180—26.)

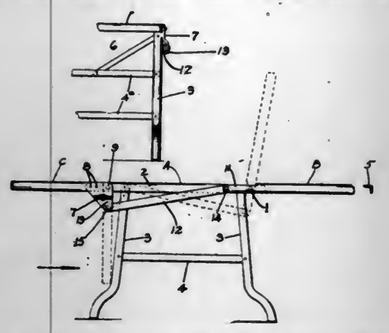


1. In a motor vehicle having a power plant, transmission mechanism, and a dirigible bearing wheel adapted to swing in either direction, means for swinging the wheel in either direction, means normally connecting the swinging means with the power plant, and a manually operable, angularly movable and bodily shiftable member having selective connections with the wheel swinging means and controlling the latter to swing the wheel in accordance with the position given the directing member, said member being operative to render the transmission mechanism temporarily inactive when the

member is bodily shifted, said transmission mechanism including a selective change speed mechanism, and means independent of the member, for rendering the selected

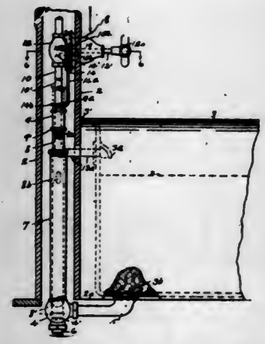
speed active, said latter means being operable at will in the presence of the bodily shifting movements of the member.

1,451,928. MAGNETIC GYROSCOPIC NAVIGATION DEVICE. HARRY L. TANNER, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Aug. 21, 1918. Serial No. 250,838. 4 Claims. (Cl. 33—204.)



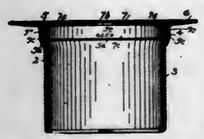
2. An instrument for use on shipboard in conjunction with the compass, said instrument comprising an azimuth gyroscope having its plane of rotation normally fore and aft of the ship, means controlled by said gyroscope for indicating change in heading of the ship and means for centralizing said gyroscope at will.

3. An instrument for use on shipboard, said instrument comprising an azimuth gyroscope having its plane of rotation normally fore and aft of the ship, means controlled by said gyroscope for indicating change in heading of the ship and electromagnetically controlled means for centralizing said gyroscope.



1,451,929. COUCH BED. EDWARD TURGEON, Minneapolis, Minn. Filed Mar. 23, 1921. Serial No. 455,531. 3 Claims. (Cl. 5—16.)

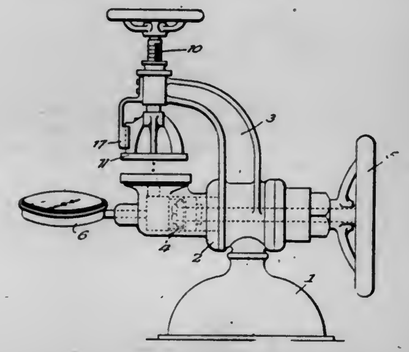
1. The combination, with a couch frame, of front and back sections pivoted thereon and adapted to be adjusted to a horizontal position on a level with said frame for use as a couch, or one section raised to a point above said frame to form a seat-back and the other section lowered below said frame, and links connecting said sections one



with the other, the connections of said links with said sections preventing the back section from being lowered until the front section is raised, and preventing the front section from being lowered until the back section is raised.

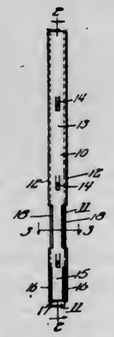
1,451,930. WASTE-OPERATING MECHANISM. ORVIS W. VALLIER, Watertown, N. Y., assignor to J. B. Wise Incorporated, Watertown, N. Y., a Corporation of New York. Filed Jan. 6, 1923. Serial No. 611,046. 7 Claims. (Cl. 4—24.)

4. In a waste operating mechanism, the combination with a waste stand-pipe and a plunger carried thereby, of a manually operable shaft adapted to be rocked towards the right or left for raising and lowering said plunger, a member eccentrically mounted on said shaft, a sleeve supporting said shaft and rotatable for adjusting the shaft, and a grapple loosely connected to said member and adjustably connected to the said plunger.



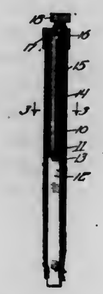
1,451,931. WASTE FITTING FOR SINKS. ORVIS W. VALLIER, Watertown, N. Y., assignor to J. B. Wise Incorporated, a Corporation of New York. Filed Feb. 7, 1923. Serial No. 617,490. 6 Claims. (Cl. 4—35.)

1. In a waste-fitting for sinks and the like, a bushing having a circular strainer socket in its top end, the said



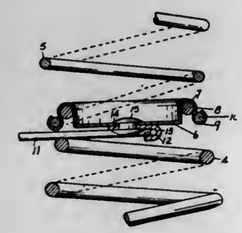
socket being funnel-shaped, and its sloping wall being formed with a circular row of bosses, which prevent the free gravitation of the strainer towards the bottom of the socket, and an inverted cup-shaped strainer having an unbroken depending flange that flares towards its free end adapted when the strainer is subjected to downward pressure to snap beneath said bosses for holding the strainer in place.

1,451,932. PAPER-TESTING MACHINE. JOHN W. WEBB, Chicago, Ill., assignor to The Container Club, Chicago, Ill., a Corporation of Delaware. Filed Dec. 19, 1921. Serial No. 523,308. 6 Claims. (Cl. 265—14.)



1. In a machine of the character described and having a means for creating and measuring liquid pressure and a diaphragm exposed to liquid pressure, material-holding means including a backing member formed with an elongated orifice opposite the field of pressure of said diaphragm.

1,451,933. ERASER HOLDER. HERMAN WEIG, Chicago, Ill. Filed Feb. 10, 1921. Serial No. 443,789. 1 Claim. (Cl. 120—36.)

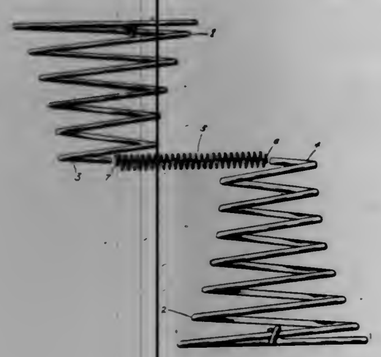


An eraser holder comprising a pair of tubular eraser receiving portions of substantially rectangular cross section, said tubular portions being spaced apart and disposed with their longitudinal axes in alignment, oppositely disposed webs formed integral with the adjacent ends of said tubular portions and connecting the same, each of said webs adapted to lie adjacent to one face of an eraser which is received by, and extends between, said tubular portions, and being of less width than the eraser, the walls of said tubular portions having projections struck therefrom for engaging the eraser and resisting displacement of the eraser in a direction toward the top of the tube, but permitting the eraser to be moved downwardly with comparative ease, the lower end of the tubular member being provided with spring members arranged to cooperate with the projections to prevent displacement of the eraser.

1,451,934. ERASER HOLDER. HERMAN WEIG, Chicago, Ill. Filed Feb. 10, 1921. Serial No. 443,790. 1 Claim. (Cl. 120—36.)

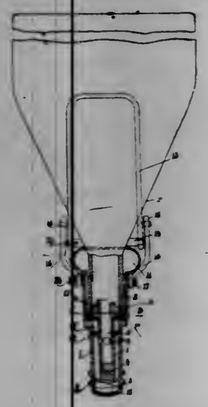
An eraser holder comprising a tubular member adapted to receive an eraser, spring means at one end to prevent accidental displacement of the eraser, a cap detachably secured to the tubular member at the other end of said tubular member, a pin rotatably mounted in the cap, a tubular plunger threaded upon the inner end of said pin, and a circular member disposed between the plunger and the eraser and adapted to be engaged by both the eraser and plunger, the axes of the pin and plunger being eccentric to the axis of the circular member, the longitudinal axes of said eraser pin and plunger lying within the walls of the tubular eraser holder.

1,451,935. SPRING-SEAT CONSTRUCTION. LEONARD A. YOUNG, Highland Park, Mich. Filed June 21, 1921. Serial No. 479,382. 3 Claims. (Cl. 5—29.)



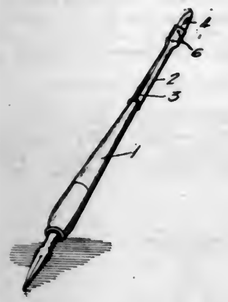
3. A spring seat structure comprising superimposed springs, connecting members therefor formed of sheet metal and having oppositely facing channels, the end coils of the springs being engaged in said channels.

1,451,936. METHOD OF FORMING COMPOUND SPRINGS. LEONARD A. YOUNG, Detroit, Mich. Filed Sept. 20, 1921. Serial No. 501,884. 4 Claims. (Cl. 29—173.)



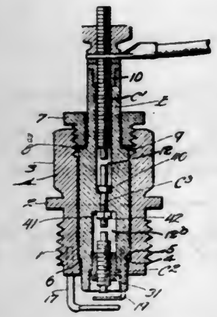
1. A method of forming compound spiral springs which consists in inserting the end coils of a pair of spring sec-

tions in the opposite ends of a hollow, resilient, substantially cylindrical connector and in rotating the sections



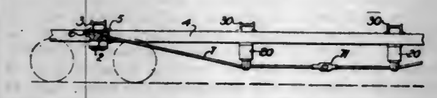
until the end turns are in superposed and axially aligned position, with the connector conformed to the curvature and pitch of the enclosed whorls.

1,451,937. DEVICE FOR THE PRESERVATION AND ASEPTIC DRAWING OFF OF LIQUIDS. JOSEPH ARNOLD, Ganshoren, near Brussels, Belgium. Filed Oct. 2, 1920. Serial No. 414,329. 7 Claims. (Cl. 215—73.)



1. In a device for the preservation and aseptic drawing off of liquid contained in bottles and other vessels, a single tube, a central member fixed in said tube and comprising two systems of conduits communicating with the interior of the device, the one for the passage of the liquid and the other for the passage of the air, the conduits for the liquid opening lower than those for the air, a closing member comprising a sleeve for closing and opening the two systems of conduits, and a joint in said sleeve preventing all communication between the groups of conduits at the time of filling.

1,451,938. STEEL ERASER. JOHN BERG, Pasadena, Calif. Filed Sept. 15, 1921. Serial No. 500,875. 4 Claims. (Cl. 120—39.)



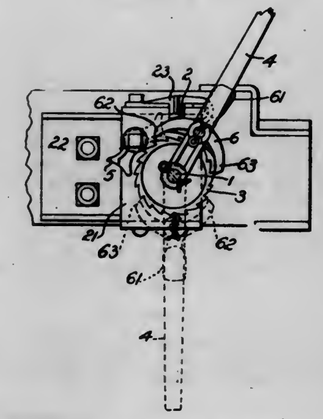
1. An eraser comprising an erasing blade, and a blank bent to form a hollow holder at one end, the opposite end of said blank being bent around and flattened against the shank of said blade.

1,451,939. SPARK PLUG. FRANCIS A. CARTER, Chicago, Ill. Filed Mar. 7, 1921. Serial No. 450,267. 1 Claim. (Cl. 123—169.)

A spark plug comprising a metal sleeve provided with an electrode, an insulator sleeve mounted in the metal sleeve, said insulator sleeve being provided with a pair of longitudinal recesses separated by an integral wall of the insulator sleeve, a central electrode mounted in the wall, means to adjust said electrode, end closures for said recess, threaded inner and outer electrodes mounted in said end closures and co-operating with said central electrode, and an electrode imbedded in the insulator sleeve and having its free end disposed between the inner electrode terminal and the electrode on the metal sleeve.

1,451,940. LOGGING CAR FOR SHORT LOGS. FREDERICK W. CHRISWELL, Seattle, Wash., assignor to Pacific Car and Foundry Company, Seattle, Wash., a Corporation of Washington. Filed Aug. 3, 1922. Serial No. 579,372. 12 Claims. (Cl. 105—160.)

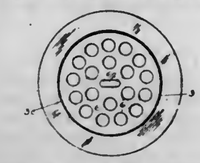
1. A logging car including a central longitudinal sill, transverse bolsters secured thereto adjacent each end, a



side sill at each side of the car, bunks extending transversely of the car intermediate said bolsters and supported at their ends upon said side sills, and means for supporting the ends of said side sills from the end bolsters.

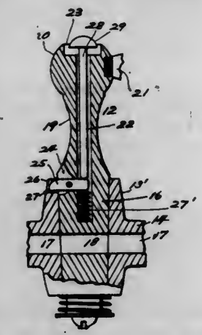
1,451,941. TOOTHBRUSH AND PASTE HOLDER. FREDERICK H. CLUM, Detroit, Mich., assignor of one-half to Joseph W. Donaldson, Detroit, Mich. Filed Nov. 8, 1920. Serial No. 422,447. 6 Claims. (Cl. 132—84.)

1. In a device of the character described, the combination of a brush block, a holder having a seat to receive the brush block and formed with a longitudinal channel opening through said seat at one end, means for forcing dental paste into the opposite end of said channel, and means for detachably holding said brush block seated upon its seat.



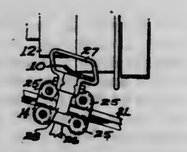
1,451,942. CAR BRAKE. ROY N. COATS, Renton, Wash., assignor to Pacific Car and Foundry Company, Seattle, Wash., a Corporation of Washington. Filed Aug. 10, 1922. Serial No. 580,840. 9 Claims. (Cl. 74—116.)

2. In a car brake operating means, in combination, a horizontal brake staff, a ratchet wheel secured thereon, a holding dog positioned at one side thereof, an operating handle pivoted concentrically with the ratchet wheel and when not in use hanging by gravity in vertical position, a weighted ratchet dog pivotally secured upon said handle, and adapted to be automatically engaged by gravity with the ratchet wheel when the handle is raised, and to be disengaged therefrom by gravity when the handle hangs in inoperative position, and a cam fixed above said ratchet wheel and engageable by the ratchet dog to release the latter upon raising the handle to an extreme upper position.



1,451,943. WASTE FITTING FOR SINKS. HARRY DE WALLACE, Syracuse, N. Y., assignor to J. B. Wise Incorporated, a Corporation of New York. Filed Feb. 7, 1923. Serial No. 617,529. 3 Claims. (Cl. 4—35.)

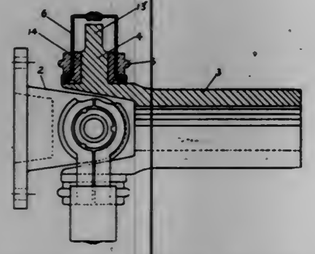
1. In a waste-fitting for sinks and the like, a bushing having an upwardly facing strainer socket, the wall of said socket being formed with an annular groove, and a strainer comprising a plane perforated disc and a depending annular flange, the strainer adapted to loosely fit said socket, and its depending flange being provided



with radial outwardly facing tents which are adapted to snap into said annular groove when the strainer is forced downwardly into said socket.

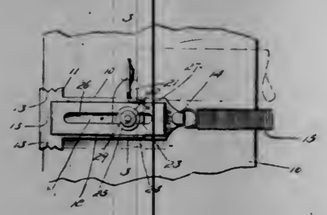
1,451,944. LOCKING DEVICE FOR GAS VALVES. JAMES J. DOONER, Norristown, Pa., assignor of one-half to John J. Farren, Philadelphia, Pa. Filed July 8, 1920. Serial No. 394,783. 1 Claim. (Cl. 251—165.)

In a device of the character described, the combination of a valve casing, the upper rim of which is recessed and provided with notches designating "on," or "off," and at least two intermediate positions, a plug for said casing having a vertically disposed passage extending from the top of said plug to a point in a plane well below the plane of said notches, the upper part of said passage being countersunk, a rectangular detent for engaging a selected notch to hold said plug against movement, said detent being pivoted to said casing so as to normally lie in the same horizontal plane with said notches, a spring located in said passage beneath said detent in a plane below said notches, and a push rod located in said passage the bottom of which rod freely rests upon said detent to tilt the detent around its pivot as the rod is depressed, said rod having a knob at its top which is accommodated by the countersunk portion of said passage when the rod is depressed the downward movement of said rod being limited by said countersunk portion.



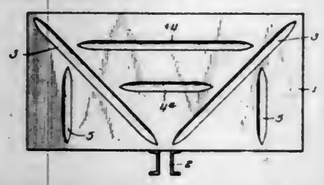
1,451,945. BELT SHIPPER. OSCAR F. EKLUND, Worcester, Mass. Filed Feb. 11, 1921. Serial No. 444,212. 5 Claims. (Cl. 64—4.)

1. A belt shipper having in combination a single guide bar of angular cross-section, a belt guiding member



entirely supported and slidable on said single bar, and grooved rolls disposed in pairs on said member and engaging opposite angles of said bar to support and angularly position said member.

1,451,946. UNIVERSAL JOINT. HARRY M. FUNNELL, Bloomfield, Conn. Filed Mar. 18, 1922. Serial No. 544,782. 6 Claims. (Cl. 64—91.)

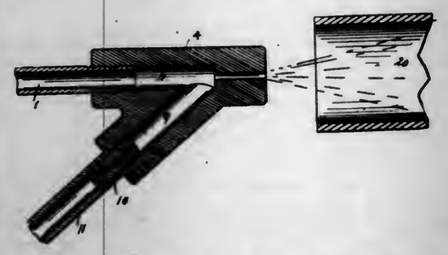


1. A universal joint comprising two forked members at approximately right angles to each other and the branches of which have external studs, a ring surrounding the forks and in which the studs are pivotally received to connect the forked members for universal movement, a series of hollow segmental lubricant receiving casing members surrounding the ring and the ends of which are contiguous, the casing member having openings and the studs having extensions extended into the respective casing members by way of the openings.

1,451,947. WINDOW-SHADE FIXTURE. NICHOLAS GUGLIUZZI, Ansonia, Conn. Filed Oct. 13, 1921. Serial No. 507,549. 3 Claims. (Cl. 156—23.)

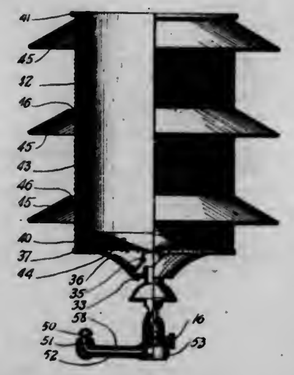
1. In a fixture of the class described, a bracket which consists of a base member having an arm portion and a head portion, the latter being of greater width than the former and having a foot portion at substantially a right angle to the arm portion, said arm portion being provided with an inwardly turned flange at its upper and lower edges, and a slot therethrough substantially parallel with its length; a guard plate secured to said arm portion with an open space therebetween and having a slot therethrough substantially opposite the slot in the arm portion of the base member; a shade arm having a foot plate thereon at substantially a right angle to that portion of said arm that supports the shade roller and projects down through said open space between the guard plate and base member, and provided with a flange at its lower end, the open space between said flange and the shade supporting portion of said arm being substantially the same width as that of said guard plate; and means projecting through said guard plate and shade arm for adjustably securing said shade arm in any of its adjusted positions relatively to said base member.

1,451,948. PLATE-METAL CAR END. HARRY S. HART, Chicago, Ill. Filed Jan. 8, 1921. Serial No. 435,793. 3 Claims. (Cl. 105—410.)



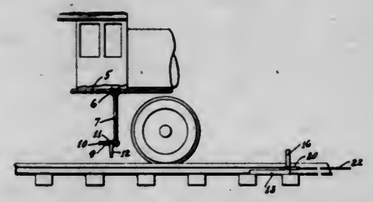
1. In a railway car, a center sill, an end wall, said end wall being a one-piece member provided with ribs to transmit to said center sill downward forces applied adjacent to the sides of a car, said ribs including diverging compression ribs extending from a point directly above said center sills to points at the upper corners of said end wall and a horizontal tension rib lying intermediate of, but terminating short of the upper ends of said diverging ribs.

1,451,949. GLOVE. WILLIAM E. HASELTINE, Ripon, Wis. Filed Feb. 13, 1922. Serial No. 536,158. 1 Claim. (Cl. 2—9.)



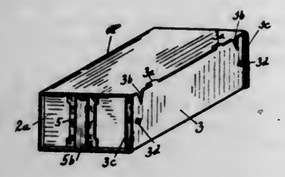
A glove comprising a hand part of leather and an elongated gauntlet part of knitted, flexible, elastic woolen material stitched to the wrist end of said hand part, said gauntlet part comprising a tube of double the length of the gauntlet part "fashioned" in knitting to provide distinctly narrow ends and a wider part intermediate said ends, said tube being turned upon itself to bring the narrow ends to coincide, thus providing a double thickness tube for the gauntlet, with a narrow wrist part and a wider part above the wrist.

1,451,950. NONPREHEATING OIL BURNER. CHRIS HESKETT, Indianapolis, Ind. Filed Sept. 23, 1920. Serial No. 412,233. 2 Claims. (Cl. 158—76.)



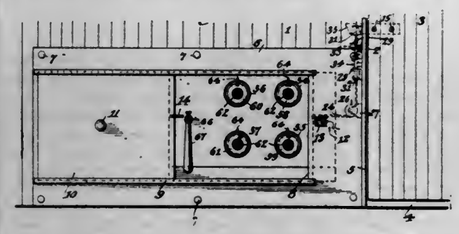
1. In an oil burner, a body-member having a gas passage the cross-sectional area of the major portion of which is more than twice that of its discharge end, a branch member from the body having a bore of approximately the same diameter as the major portion of the bore of the body-member and opening into said major bore near its reduced portion, a round plug in the outer end of the bore of the branch member having a bore of less cross-sectional area than that of the reduced portion of the body member, means for supplying air under pressure to the bore of the body member and oil under pressure to the bore of the branch, and a tube separated from the body member by an air-space through which the mixture issuing from the body-member is discharged.

1,451,951. COMBINED GAS HEAT AND LIGHT BURNER. JAMES MCCAULEY, New York, N. Y. Filed Oct. 9, 1922. Serial No. 593,415. 2 Claims. (Cl. 126—254.)



1. A heater comprising a perforate cylinder, a deflector spaced concentrically interjacent, a mixing chamber on which said cylinder is supported, said chamber having adjustable air inlets, a hollow support for said chamber leading from a gas supply pipe and having a lateral opening through its wall, a hollow arm rotatably mounted on said support, and a gas light tip carried at the end of said arm, the passage in said arm being registrable with the lateral opening in said support.

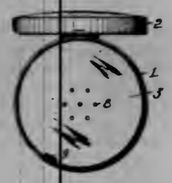
1,451,952. TRAIN STOP. JAMES MCFARLAND, Tiffin, Tex. Filed Aug. 17, 1921. Serial No. 492,974. 1 Claim. (Cl. 246—203.)



A train stop of the character described embodying a relatively broad base member, a pair of ears projecting from one end face of the base member closely adjacent the sides of the base member and extending beyond the top of the base member in spaced parallel relation to each other, a relatively broad trip lever adapted to be disposed upon the base member and between the projecting portions of the ears, that portion of the lever disposed between the ears being pivoted to said ears, means carried by said pivoted end portion for moving the lever into the path of a movable object, the extremity of said lever being substantially extended to one side to provide a stop adapted at times to engage the end face of the base between the ears, to prevent movement of the lever away from the base beyond a point substantially at right angles to the base.

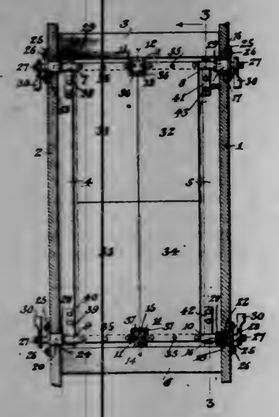
1,451,953. MATCH BOX. DAVID B. MACDONALD, Davenport, Iowa. Filed Dec. 4, 1920. Serial No. 428,263. 4 Claims. (Cl. 206—37.)

1. In a match box having an open ended match box case, a breaking device having off-set clasp means for securing it to the match box, tube means at each of its ends, sharp angulate notches in one of its edges capable of use in breaking a match, multiple diamond hole means linearly disposed in its surface the whole secured to said match box by said clasp means; another breaking device having lug clamp means for securing the same to the match box and a corrugation in its surface, secured to said match box by said lug clamp means inserted in holes provided in the said match box; another breaking device having off-set clasp and clamp lug means for securing the same to the match box, square holes formed in the clasp member of the breaking device, appositely arranged with other diamond hole means provided in the body of the breaking device and other diamond hole means provided in the end and side of said box, the breaking device formed conformably to a corner of said box, its body forming a triangular tube, erected upright in the corner of said box, clamp lug means provided on one side of the breaking device, said clamp lug means inserted in holes provided in the said match box, the off-set clasp means hooked over the end of said box; another breaking device composed of a loop having a pair of arm brace members extending at right angles from the loop, an eye member at the end of each arm the arm members and eyes suitable to unite with other suitable means in securing the loop to an end of the match box; angulate notch means in the edge of said match box, conformable to other like angulate notch means provided in a breaking device attached thereto; hole means provided in the sides and ends of the match box conformable to other like hole means provided in breaking devices attached to said box in such manner as to form a breaking device of such holes; other angulate hole means provided in the bottom of the match box arranged in its corners in apposition with the openings of breaking devices, all for the purposes specified.



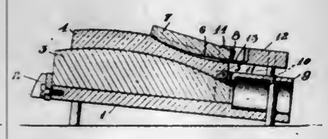
1,451,954. COMBINATION LOCK. JAMES O'KELLY, Oneonta, N. Y. Filed Oct. 28, 1922. Serial No. 597,546. 5 Claims. (Cl. 70—53.)

1. A combination lock comprising a plurality of toothed locking discs, each provided with a slot, means meshing with said disks for independently shifting them to cause the positioning of the slots in parallelism, a spring controlled locking bolt, a slidable member con-



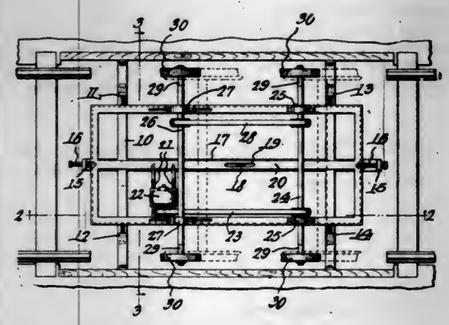
nected with said bolt and adapted to be shifted in the slots when arranged in parallelism, thereby providing for the moving of the bolt to released position, a flexible element connected to said slidable member, and means for winding said flexible element to shift the slidable member into the slots when positioned in parallelism thereby shifting the bolt to released position.

1,451,955. POWDER BOX. RALPH W. OLIVER, Toledo, Ohio. Filed May 19, 1922. Serial No. 561,880. 2 Claims. (Cl. 132—82.)



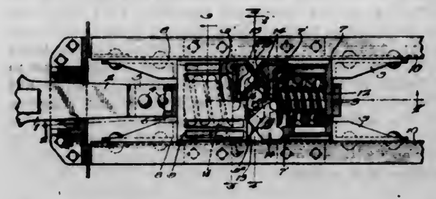
1. In a box of the class described, a flexible diaphragm removable therefrom and having centrally disposed perforations, a ring of felt-like material spacing the marginal edge portion of the diaphragm from the box bottom and compressible by pressure on the diaphragm to form a close joint between the diaphragm and bottom, the diaphragm, box bottom and ring cooperating to form a powder receiving chamber.

1,451,956. CAMERA ATTACHMENT. ARLIE PAYNE, Paragould, Ark. Filed Mar. 5, 1920. Serial No. 363,582. 3 Claims. (Cl. 95—36.)



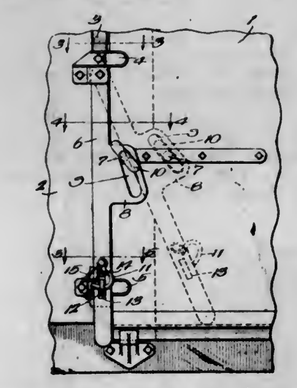
1. A multiplying attachment for cameras comprising an upper pair of lengthwise aligning shafts, one independently operable with respect to the other, a lower pair of lengthwise aligning shafts, one independently operable with respect to the other, each of said shafts consisting of a polygonal shaped body portion and inner and outer cylindrical terminals, an upper bearing member adapted to be secured to the upper end of the camera body and having mounted therein the opposed inner terminals of the upper pair of shafts, a lower bearing member adapted to be secured to the rear end of the camera body and having mounted therein the opposed inner terminals of the lower pair of shafts, a shutter secured to one of the sides of the body portion of each of said shafts and having one corner thereof cut away to provide a clearance for a bearing member, bearing elements adapted to be arranged in the sides of the camera body and each having an outer end terminal of a shaft journaled therein, flat holding springs adapted to be secured within the camera body and each bearing against the polygonal body portion of a shaft, and means connected to the outer terminals of said shaft for manually operating them.

1,451,957. APPARATUS FOR THE MANUFACTURE OF BIFOCAL LENS BLANKS. JOHN R. POWELL, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 27, 1922. Serial No. 539,475. 8 Claims. (Cl. 49—14.)



1. In an apparatus for fusing bifocal lens blanks comprising a support for the major lens blank and a support for the minor lens pivotally mounted thereon having its free edge extended over the edge of the major lens support.

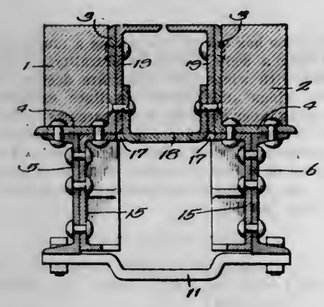
1,451,958. WHEEL GRINDING AND TRUING MACHINE. JOHN C. PRICE, Olcott, W. Va. Filed Sept. 14, 1922. Serial No. 588,210. 2 Claims. (Cl. 51—170.)



1. The combination with a car pit and two removable rail sections for receiving the car wheel, of a wheel truing and grinding machine including a supporting frame mounted within the pit and having transverse and longitudinal members, upturned lugs carried by said members of the frame, an adjusting screw mounted in each upturned member, a second frame resting upon the first frame and abutted by said adjusting screw whereby the second frame may be adjusted longitudinally and laterally relative to the first frame, two parallel shafts one of which is mounted adjustably relative to each other and carried transversely of the second frame, the ends of said shafts being disposed to project slightly below the traffic rails, abrasive wheels removably mounted upon the ends of said shafts and adapted when the traffic rails are removed to project thereabove to engage the wheels to be operated upon, transmission means between said shafts whereby both shafts may be operated in unison, and a prime mover suspended from the second frame and operatively connected to one of said shafts.

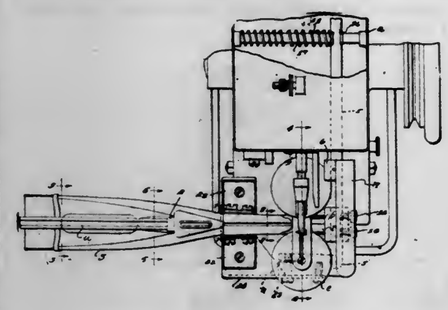
1,451,959. DRAFT GEAR. HERMAN C. PRIEBE, Blue Island, Ill. Filed Sept. 5, 1919. Serial No. 321,931. 2 Claims. (Cl. 213—47.)

1. A draft gear including a coupler; inner and outer followers actuated thereby and movable each toward the other; springs, one individual to each follower, for resisting the approach of the followers toward each other; and two rockers having opposed engaging faces, one rocker being individual to each follower and actuatable thereby, said rockers being interposed between and engaged by said springs to maintain the rockers in contact and resist follower effected movement thereof, each rocker being formed with a projection extending longitudinally of the gear one projection overlying the other, each projection upon each rocker engaging the body portion of the other rocker.



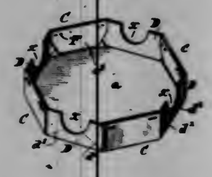
1,451,960. CAR DOOR. HERMAN C. PRIEBE, Blue Island, Ill. Filed Jan. 29, 1921. Serial No. 440,989. 4 Claims. (Cl. 268—6.)

1. The combination with a door mounted to move bodily substantially in its plane; of mechanism for forcing the bodily movement of the door comprising one element in the form of a lever that carries a cam member and an element constituting a cam member complemental to the aforesaid cam member, one of these elements being carried by the door and the other being mounted apart from the door upon one side thereof, the movement of the lever forcing movement of the door through the intermediation of the co-operating cam members, the cam member that is complemental to the cam member carried by the lever overhanging the latter cam member when the door is in closed position then to prevent separation of these cam members, the cam members being relatively formed to permit their separation and the subsequent independent movement of the lever when the door is sufficiently opened.



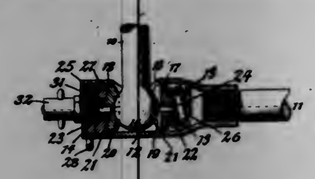
1,451,961. DRAFT GEAR. HERMAN C. PRIEBE, Blue Island, Ill. Filed Mar. 20, 1922. Serial No. 545,101. 7 Claims. (Cl. 213—51.)

1. A car structure including two longitudinal wooden center sills; two angle irons having inner upright sides and lower outwardly extending horizontal sides, each sill having an angle iron individual thereto and received in the angular seat formed by its angle iron; two draft arms in the form of longitudinal upright channel irons whose horizontal flanges extend outwardly, each angle iron having a draft arm individual thereto and below the same, the lower horizontal side of each angle iron being riveted to the top flange of its draft arm; two inner draft lugs having upright sides and inwardly extending top sides, each draft arm having a draft lug individual thereto, the upright side of each draft lug being riveted to the upright side of its draft arm; a bolster underlying the wooden center sills and extending transversely there-



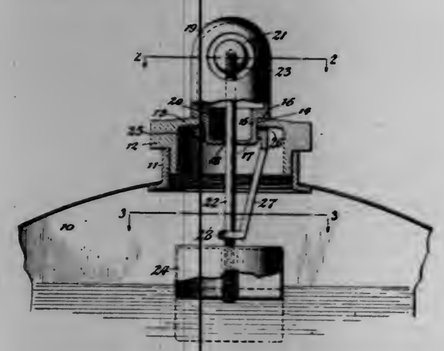
of; additional angle irons having upright sides against the upright sides of the first aforesaid angle iron and upper inwardly extending horizontal sides; a U-shaped member extending between the upright sides of the additional angle irons and having upwardly extending sides each riveted to the upright sides of both angle irons adjacent thereto, the inner side of the base of said U-shaped member engaging the outer upright face of said bolster, the top sides of the draft lugs themselves having inwardly extending lug formations that engage the outer side of the base of the U-shaped member; and a draft gear assembled with said draft arms and having a portion in abutting relation to the outer ends of said draft lugs.

1,451,962. MACHINE FOR STITCHING COVERS ON CORES. PAUL RISSMANN, Detroit, Mich., assignor to Fisher Body Corporation, Detroit, Mich., a Corporation of New York. Filed July 11, 1921. Serial No. 483,787. 14 Claims. (Cl. 112—2.)



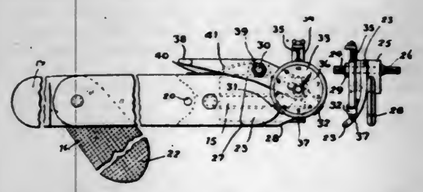
1. In a machine of the character specified, the combination of means for stitching, means for guiding and curling trimming material into a substantial tube, means for guiding a core within said trimming material tube, and a pair of lateral feed rolls and an under feed roll all concaved and fitting closely together for substantially surrounding and feeding the combined core and trimming tube past the stitching means.

1,451,963. BOX COVER. GEORGE E. SCRUBY, Birmingham, Ala., assignor, by direct and mesne assignments, to George B. Kelley, Birmingham, Ala. Filed June 27, 1921. Serial No. 480,608. 5 Claims. (Cl. 229—32.)



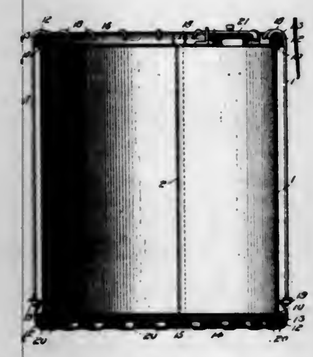
1. A blank for box covers comprising a single piece of material having a body portion, a plurality of side portions formed with wings and which are deeply recessed between the wings and creased on lines extending inwardly from the inner portions of the recesses to the inner ends of the wings, and other side portions intermediate those first mentioned, each side portion folding with the bottom portion on a fold line which is at an obtuse angle to the fold line on which the adjacent side portion folds with the bottom portion.

1,451,964. BALL JOINT. ALBERT B. SHULTZ, Buffalo, N. Y. Filed Sept. 28, 1921. Serial No. 503,790. 3 Claims. (Cl. 287—90.)



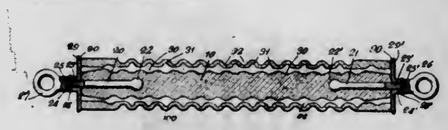
1. A ball joint comprising a tubular body, inner and outer bearing disks arranged on said body and each provided with a concave seat, and a distributing groove extending across said seat and a shank provided with a ball engaged on its opposite sides by the seats of said disks.

1,451,965. LIQUID-LEVEL GAUGE. ALBERT B. SHULTZ, Buffalo, N. Y. Filed May 3, 1922. Serial No. 558,094. 2 Claims. (Cl. 73—82.)



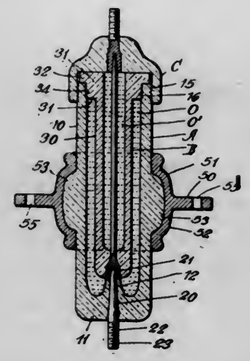
1. A liquid level gauge comprising a cap adapted to be mounted on the receptacle containing the liquid to be gaged and having an opening in its top, a nipple arranged in said opening and having a shoulder at its upper end and an internal perforated flange at its lower end, a hood arranged at the upper end of said nipple and having a sight opening, a vertically movable shifting rod guided in the perforation of said flange and provided at its upper end with an indicator head which is adapted to move vertically relative to said sight opening, a float mounted on the lower end of said rod and adapted to respond to variations in the height of the liquid in said receptacle, a screw nut arranged on the lower part of said nipple and engaging with the underside of the top of said cap, and a guide arm depending from said screw nut and provided at its lower end with an eye in which the lower part of said shifting rod is guided.

1,451,966. CUTTING TOOL. ROBERT F. SMALLWOOD, New York, N. Y. Filed May 1, 1920. Serial No. 378,063. 10 Claims. (Cl. 164—83.)



1. In a device of the character described, in combination, a cutting blade, a holder for said blade provided with a bearing point about which said holder and blade may be pivoted, and adjustable means forming a second bearing point for supporting said holder and for determining the extent to which said cutting is to extend below the plane of said two bearing points.

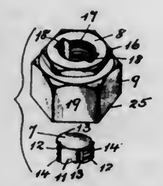
1,451,967. TANK. WILLIAM H. STARCLOUGH, Parkersburg, W. Va. Filed June 21, 1921. Serial No. 479,215. 17 Claims. (Cl. 220—5.)



15. A tank comprising a bottom having a marginal groove therein, a packing arranged in said groove, a top having a marginal groove therein, a side wall extending into said grooves and formed with a seam comprising interlocked folded portions, means for expanding said side wall to tighten the interlocked relation of said folded portions, and means for causing said side wall to be clamped between said top and the said packing, said last named means comprising a plurality of clamps engaging the exterior of said bottom, and strain rods respectively connected to said clamps and operating to draw said top and said bottom toward each other.

1,451,968. INSULATOR. LOUIS STEINBERGER, Brooklyn, N. Y. Filed July 25, 1918. Serial No. 246,650. 4 Claims. (Cl. 173—318.)

3. In a device of the kind described, a composite insulator consisting of a body of insulating material, the surface thereof having undulations therein, a tube of insulating heat resisting material surrounding said body, the surface of the inner walls of the tube also having undulations therein, an insulating cement comprising a layer of insulating material filling the space between the surface of the insulating body and the inner wall of the heat resisting tube, said cement operating to secure the inner insulating body and the outer tube to each other, the body and the tubular heat resisting cover being of the same length, stress distributors embedded in said body of insulating material and having threaded ends projecting beyond the ends of said body, and metallic discs rigidly secured to the connecting ends of said stress distributors, having suspension eyes integrally formed thereon.

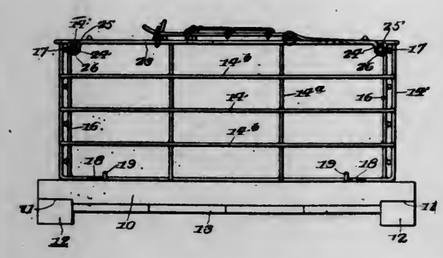


1,451,969. INSULATED CONNECTOR. LOUIS STEINBERGER, Brooklyn, N. Y. Filed May 23, 1919. Serial No. 299,212. 6 Claims. (Cl. 173—311.)

1. In a device of the class described, an insulator comprising nested and closed containers, one of said containers forming the closure for the other container, coacting conductors carried by said containers and a cap of insulating material forming the closure of the first mentioned container, said cap having a conductor molded therein arranged to engage the conductor carried by the innermost container.

1,451,970. TEMPORARY FASTENING. SAMUEL W. TAYLOR, Baltimore, Md., assignor to Constant J. Kryzanowsky, Ruxton, Md. Filed Feb. 3, 1920, Serial No. 355,974. Renewed Jan. 16, 1922. Serial No. 529,743. 7 Claims. (Cl. 85—1.)

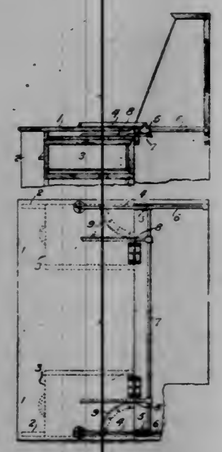
1. In a fastening device the combination with a bolt having a permanent head at one end of its body which latter also has a longitudinally-extending threaded portion and a longitudinally-extending smooth portion both of which portions extend from the end of the body toward the head, of a sleeve having an angular head at one end and its interior provided with longitudinal smooth and threaded portions, said sleeve having a continuous screw-thread around its exterior circumference, and a nut engaging the continuous threads on the exterior of the sleeve and movable on the latter.



1,451,971. COOKING GRILL. MICHELE TOCCHIO, Hammersmith, London, England. Filed Mar. 7, 1922. Serial No. 541,826. 1 Claim. (Cl. 53—5.)

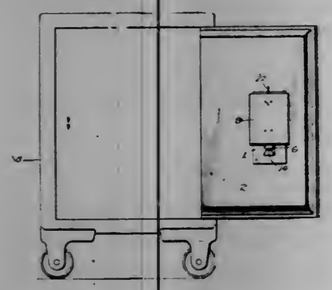
An appliance for a cooking grill, consisting of a corrugated metal piece having perforations, and provided with slides on the underside to receive a shutter adapted to close or open the holes.

1,451,972. FOLDING COOP. GEORGE W. VANDEVENDER, Mill Creek, W. Va., assignor of one-half to Adam S. Vandevender, Mingo, W. Va. Filed May 2, 1921. Serial No. 466,187. 1 Claim. (Cl. 220—6.)



A folding coop comprising a base, side and end walls hinged to the base and foldable thereon, each end of each side wall having vertical parallel bars, a removable cover having loops adjacent its corners depending below the upper portions of the side walls to receive fastening devices therethrough, and longitudinally extending bars on the upper ends of the end walls having their opposite ends projecting beyond the ends of the walls and resiliently held between the upper ends of the parallel bars of the side walls.

1,451,973. BUREAU. GEORGE CONRAD LUZ WEGUELIN, Chertsey, England. Filed Mar. 28, 1922. Serial No. 547,364. 2 Claims. (Cl. 45—6.)



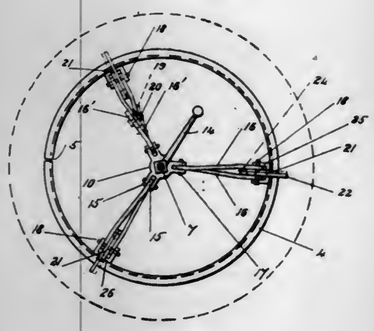
1. In a bureau, the combination with a flap, of two sets of drawers movably mounted below the flap, doors, one of which is fast to one set of drawers and the other of which is fast to the other set of drawers, and mecha-

nism connecting the flap to the doors such that the opening of the flap moves the doors to open position and the

drawers to accessible position, while the closing of the flap moves the drawers to a position in which they lie transversely front to front and closes the doors.

1,451,974. SAFE AND VAULT PROTECTOR. WALTER C. BECKWITH, Fostoria, Ohio. Filed Mar. 31, 1922. Serial No. 548,372. 2 Claims. (Cl. 109—6.)

1. Protective means for safes or the like comprising a base adapted to be secured to the interior of the safe, means on said base for holding in inverted position a receptacle containing an air poisoning agent, a stopper for said receptacle, a spring held trip plate slidably mounted on said base adapted to cause said stopper to be withdrawn when said trip plate is released and a chain mounted in the interior of the safe door for normally holding said trip in set position, said chain adapted to be severed to release said trip when the walls of said door are cut.

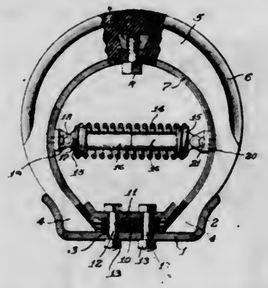


1,451,975. REENFORCING FABRIC FOR TIRES. THOMAS BRANSON, Philadelphia, Pa., assignor to Sibson & Stern, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 18, 1919. Serial No. 345,824. 9 Claims. (Cl. 66—4.)

2. A textile structure of the character described including, in combination, a series of cords extending longitudinally of the fabric; and a ground work comprising a number of interconnected binder threads each

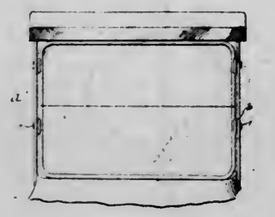
serving, by means of embracing loops, to tie two adjacent cords of the series together independently of adjacent binder threads connecting a pair of their adjoining cords.

1,451,976. WHEEL-RIM ADJUSTER. WILLIAM L. CHAMBERS, Eden, Utah. Filed July 19, 1922. Serial No. 575,976. 2 Claims. (Cl. 157—1.)



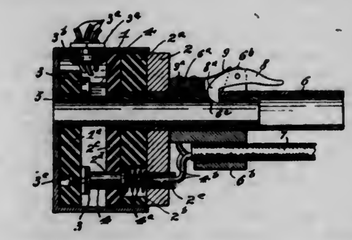
1. A wheel rim adjuster, comprising an operating screw, two crossheads operatively connected with the said screw, radial arms arranged in pairs and pivoted at their inner ends to the respective crossheads, grapples pivoted to the outer end portions of the said arms and adapted to engage with the flanges of a wheel rim, each grapple being pivoted directly to the pair of arms to which it pertains by a single pivot pin, and expanding brackets also pivoted to the said arms by the same pivot pins as the said brackets and adapted to bear on the inner surface of the wheel rim.

1,451,977. TIRE. WILLIAM E. CURTIS, Wyandotte, Mich. Filed Nov. 18, 1921. Serial No. 516,021. 1 Claim. (Cl. 152—8.)



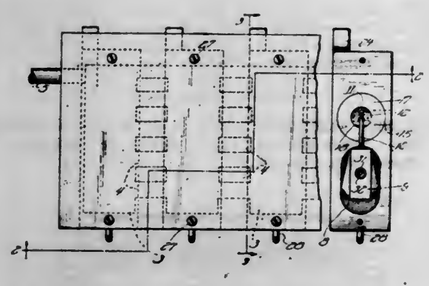
The combination of a rim and a tire, said tire including abutting, resilient units on said rim, a laminated bowed spring in each unit, said spring having its bowed portion connected to said unit and its ends overlapped

and connected to said rim, a coiled retractile spring in each unit having its ends loosely connected to opposed



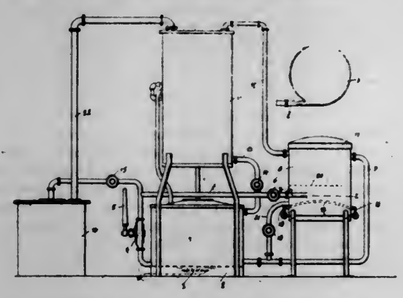
walls of said bowed spring, and a studded plate mounted on the overlapped ends of the bowed spring to connect said ends to said rim.

1,451,978. WINDSHIELD PIVOT. FRANK M. EDGAR and THOMAS P. ARCHER, Detroit, Mich., assignors to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 17, 1922. Serial No. 553,936. 7 Claims. (Cl. 296—92.)



1. In a windshield pivot, the combination of a clip in the form of a stamping that may be secured to the panel frame, and a trunnion in the form of a block having a reduced inner end which may be placed through an opening in the stamping and upset to secure the trunnion to the stamping.

1,451,979. ELECTRIC-CONDUCTOR COUPLING. THOMAS H. FENN, Cleveland, Ohio, assignor of one-half to Thomas Foulkes, Cleveland, Ohio. Filed May 17, 1921. Serial No. 470,377. 5 Claims. (Cl. 173—338.)



1. In an electric coupling for simultaneously connecting a plurality of electric terminals and contact elements, cylindrical shaped socket and head members carrying a plurality of electric terminals and relatively fixed and movable contact elements, and longitudinally extending eccentrically located guide members adapted to initially engage and slide over each other whereby said plug member must be brought with its contact elements in alignment with the contact elements of said socket member when inserted.

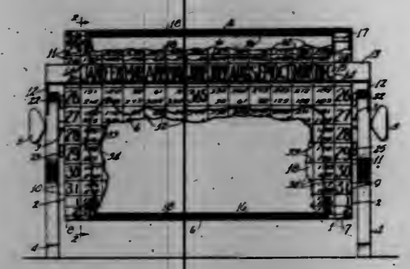
1,451,980. PNEUMATIC ACTION. ADOLPH P. GUSTAFSON, Chicago, Ill., assignor to M. Schulz Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 28, 1919. Serial No. 341,148. 16 Claims. (Cl. 84—53.)

1. In a pneumatic action, the combination of a windway member channelled to provide transverse partition walls forming pneumatic chambers and valve holding structures secured to said windway member and forming closures for said windway member chambers.

1,451,981. METAL SCOURING AND UNGREASING DEVICE. MAX HELLER, Berlin-Charlottenburg, Germany. Filed Sept. 14, 1920. Serial No. 410,328. 17 Claims. (Cl. 266—7.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A metal scouring and ungreasing device of the type described comprising in combination, a collector adapted to contain the scouring liquid; a closed scouring tank to receive the articles to be scoured; a condenser; means for heating the scouring liquid; means for conducting the liquid from the collector to the scouring tank, and vice versa; a pipe for conducting the vapours existing in the tank to the condenser; and a valve-controlled pipe connecting said condenser and collector.

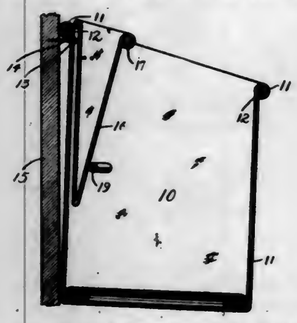
1,451,982. SPLIT HUB HEAD FOR CYLINDERS FOR SPINNING FRAMES, SPOOLERS, AND CYLINDERS OF LIKE NATURE. WINGO HERRON and JOSEPH H. JESTER, Augusta, Ga. Filed Mar. 7, 1922. Serial No. 541,654. 2 Claims. (Cl. 64—17.)



1. A cylinder unit of the character described comprising a shaft, two heads each having a hub extending laterally of one face thereof, said heads being adapted to be

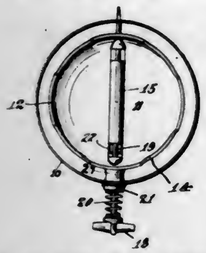
movably mounted on the shaft with the hubs in confronting relation, adjustable means carried by each hub for releasably securing it to the shaft, and a cylinder body spanning the heads and having openings through its

walls substantially in radial alinement with said adjustable hub securing means, said openings being adapted to permit of the insertion therethrough of a suitable tool for manipulating said adjustable securing means.



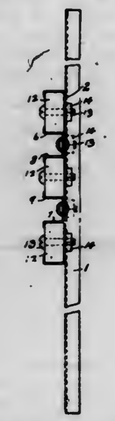
1,451,983. TIME INDICATOR. CARL W. JAEGER, Westby, Wis. Filed June 3, 1921. Serial No. 474,693. 1 Claim. (Cl. 235—86.)

A device of the character described comprising a cylinder formed with an annular transparent panel in its peripheral wall, said cylinder being provided with a series of characters on its periphery arranged in a row substantially parallel with an edge of the peripheral wall, means for supporting the cylinder for rotation about its axis, an indicator bar carried by said supporting means and disposed transversely to the periphery of the cylinder, said indicator bar having marked thereon a series of characters arranged in a row, a sheet having marked thereon a series of characters representing computed results related to the characters on the periphery of the cylinder and on the indicator bar and arranged in predetermined positions, a drum disposed within the cylinder, said sheet being secured at one end to the drum and being wound thereon, means engaging said sheet at its other end for unwinding it from the drum, and an inner cylindrical guide plate concentric with the first named cylinder and having a diameter less than that of the inner wall of the latter, said guide plate having a slot therein extending across its periphery through which the sheet may be projected and disposed between the peripbery of the latter and the inner wall of transparent panel so that the characters on the sheet are visible and occupy predetermined positions with respect to the first named characters and the second named characters.



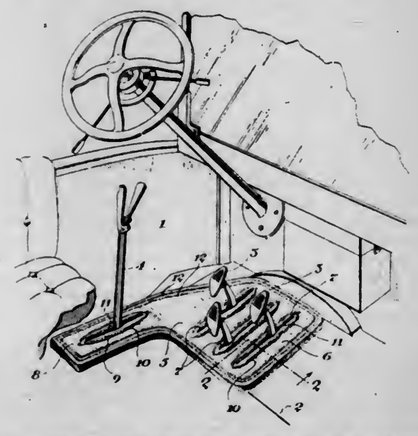
1,451,984. GLUE CONTAINER AND BRUSH HOLDER. FRANCIS R. JORDAN, Boone, Iowa. Filed May 23, 1921. Serial No. 471,803. 1 Claim. (Cl. 91—67.1.)

In a device of the class described a container having its upper end open and having its back wall of greater height than its front wall, the back wall being provided with openings near the upper edge thereof so that the container may be fastened to a support, a second container designed to be received in said first container, said second container having hook portions formed on its sides adapted to overlap the upper edge of the side walls of the first container, said second container being substantially V shaped in cross section, a rod received within said first container and secured to the end walls thereof, said rod being spaced from and parallel with



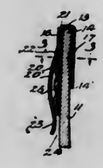
the back wall of said first container, the lower end of said second container being received in the space between the back wall of the first container and said rod for maintaining it in proper position as and for the purposes stated.

1,451,985. DAMPER. JOHN W. KELLER and REVILLO S. CONGAR, Lorimore, Iowa. Filed Feb. 3, 1919. Serial No. 274,795. 1 Claim. (Cl. 126—292.)



A damper for stove pipes, comprising a disc-shaped member having on one side a peripheral flange and having on the same side a smooth-faced rib, extending across the face of the disc, loops projecting from the opposite side of said damper, a spindle adapted to be received in said rib and said loops, the rib and one of said loops having oppositely disposed grooves, oppositely disposed lugs on the spindle adapted to be received in said grooves when the spindle is inserted in the damper, the said loop having a pair of oppositely disposed grooves arranged at right angles to the first grooves, said pair of grooves extending only part way through the loop, shoulders formed thereby in the inner ends of said pair of grooves, said pair of grooves being adapted to receive the lugs on the spindle, whereby said lugs will rest against said shoulders in said pair of grooves, and said spindle will be non-rotatably mounted in the damper, a boss formed on said damper at the point where the spindle enters the damper, said boss being adapted to rest against the inner surface of the stove pipe, a collar on said spindle, a handle on said spindle, and a spring received between said collar and said handle, said collar being adapted to rest against the outer surface of the stove pipe, said spring being adapted to hold said boss and said collar in frictional engagement with the stove pipe, whereby the damper may be held in any adjusted position, said flange being curved away from the disc 11, whereby when the damper is installed in the stove pipe, with the flange extending downwardly, the ascending gases may be given a downwardly whirling motion, said flange having notches terminating short of the body of said disc, whereby the gases may pass upwardly around the edges of the damper.

1,451,986. VARIABLE SIGN. ROBERT L. KILPATRICK, Hempstead, Tex. Filed May 3, 1921. Serial No. 466,543. 1 Claim. (Cl. 40—142.)

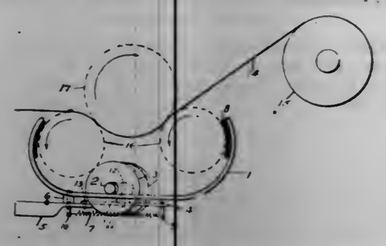


A variable sign including a support, a plate attached thereto whose upper and lower edges are turned outwardly at right angles to the plate, the edges of said out-turned portions being overturned into parallel relation with said plate, flanges secured to said plate and opposing and spaced from said respective outturned portions, said flanges standing at right angles to the plate and having their free edges overturned at right angles toward the corresponding overturned edges of said outstanding portions of said plate, thus forming upper and lower channels, outstanding flanges fastened to said plate and being spaced apart and spaced from said first mentioned flanges and having their free edges overturned toward each other forming an intermediate channel, sign carrying blocks fitted into the respective channels, each channel having end slots through said plate, end blocks between which the sign carrying blocks are located, end bolts fastened to the end blocks and passing through said slots and means for adjustably securing said bolts to said plate.

1,451,987. SLOT-CLOSURE MAT FOR AUTOMOBILES. ANDREW S. KINNEY, Redwood Falls, Minn. Filed July 13, 1922. Serial No. 574,832. 6 Claims. (Cl. 74—81.)

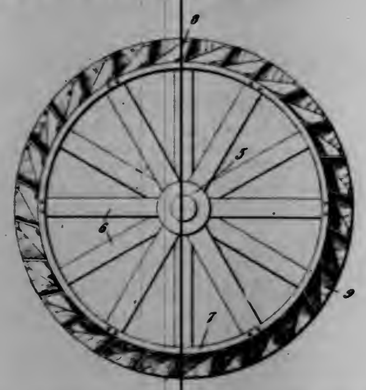
1. A device of the character described including a mat of felt-like material, said mat provided with a slot therein adapted to receive a control lever for automobiles, the walls of said slot meeting to form a seal, and the material forming said walls having a swelled or puffed formation.

1,451,988. SHOESTRING FASTENER. BERNAT M. KLEIN and SAMUEL WALD, New York, N. Y. Filed May 27, 1922. Serial No. 564,046. 1 Claim. (Cl. 24—121.)



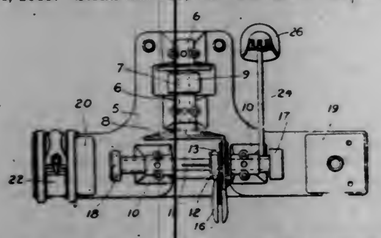
A shoe-lace holder comprising a substantially U-shaped member of resilient metal adapted to receive the edge of the foot opening of a shoe, integral prongs formed on the opposite side edges of one of the legs of said U-shaped member for engagement with the shoe upper to prevent rocking movement of the holder relative to the shoe upper, and a resilient clasp secured to said U-shaped members and adapted to receive the loops of the knot of the lace of the shoe, said clasp being open in the same direction as the U-shaped member.

1,451,989. FOLDING VENEER CONTAINER. WILLIAM E. LA BELLE, St. Paul, Minn., assignor of one-half to Theophilus Schadegg, Minneapolis, Minn. Filed July 3, 1920. Serial No. 393,928. 6 Claims. (Cl. 217—12.)



1. An article of manufacture comprising four flat rectangular members, reinforcing means at the top and bottom thereof, said members arranged side by side in substantially the same plane, flexible straps connecting the said means and members in spaced relation and extending across the intervening spaces therebetween, flexible straps attached to the outside edge of one end member and adapted to be secured to the outside edge of the other end member when said sides are folded to produce a square enclosure, and means on said members forming a groove and adapted to receive an end inclosing member when said members are folded to produce a square container.

1,451,990. ROLL CLEANER. FRANK LA CHAPELLE, Pittsfield, Mass. Filed Dec. 12, 1921. Serial No. 521,962. 3 Claims. (Cl. 19—139.)

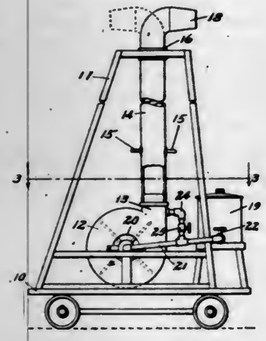


1. In a device of the class described the combination with a base, brushes attached to the base, contact wheels axially and pivotally mounted on the base, actuating levers pivotally connected to the base and to the contact wheel axle, a spring connected to said levers to control and actuate said levers and contact wheels.

1,451,991. DRIVE-WHEEL RIM. RALSTON T. LEE, Marietta, Ohio. Filed Feb. 14, 1922. Serial No. 536,475. 1 Claim. (Cl. 301—43.)

In a wheel construction, a hub, spokes radiating from the hub, a rim curved transversely to provide inclined surfaces, cleats having right angled flanges and disposed at angles with respect to the side edges of the rim, said cleats having their upper edges disposed in transverse planes above the apex of the rim.

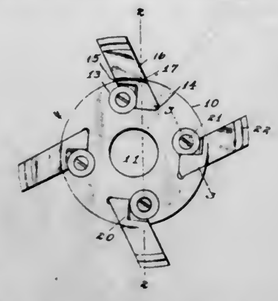
1,451,992. TEST BENCH. THOMAS L. LEE, Rochester, N. Y., assignor to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 24, 1919. Serial No. 340,366. 2 Claims. (Cl. 73—51.)



1. A test-bench comprising: a frame provided with two base-members, each adapted to support a dynamo-electric machine, and with two bearings for a drive-shaft; a horizontal drive-shaft rotatable in said bearings and with its ends located adjacent to but above said base-members; coupling-members on the ends of the drive-shaft; a friction-wheel carried by the drive-shaft, between said bearings, and rotatable with but slidable upon the drive-shaft; and a frictional power-member rotatable in contact with said friction-wheel.

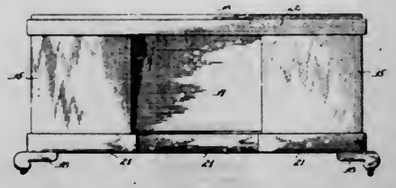
1,451,993. ROTARY TOOTHBRUSH. CHARLES McLELLAN, Sioux City, Iowa. Filed Dec. 27, 1920. Serial No. 433,289. 4 Claims. (Cl. 15—25.)

2. A rotary tooth brush comprising a flexible driving shaft, a longitudinally curved rigid sleeve surrounding the forward end of said shaft and imparting a permanent curved shape thereto, whereby to permit easy and effective insertion of this end of the brush into the mouth, a brush guard carried by and extending forwardly of the shaft and curved on a line in continuation of the shaft, and a brush connected to the forward end of the shaft beneath said guard.



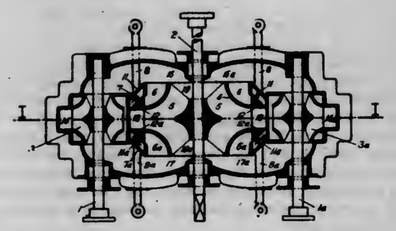
1,451,994. DEVICE FOR PREVENTING FROST IN ORCHARDS. DANIEL MACKENZIE, Pomona, Calif. Filed July 7, 1921. Serial No. 482,972. 5 Claims. (Cl. 126—59.5.)

1. A device for preventing frosts in orchards comprising a fan blower including a casing having a peripheral outlet and an opening in one side thereof at the axis of the casing, a burner arranged exteriorly of the casing and adjacent said opening, a distributing pipe connected to the outlet, a fuel supply tank in communication with the burner, and an air supply pipe communicating with the casing adjacent the outlet and connected between the burner and said tank.



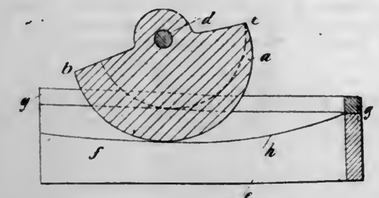
1,451,995. CUTTING DEVICE FOR WOODWORKING TOOLS. SERN MADSEN, Clinton, Iowa. Filed Dec. 11, 1922. Serial No. 606,280. 3 Claims. (Cl. 144—230.)

1. In a device of the class described, a cutter head adapted to rotate and provided with a series of slots parallel with its axis of rotation, a bit for each of said slots, each provided with oppositely arranged inclined faces, a rotatively mounted wedge device for each of said inclined faces, and means for drawing said wedge devices



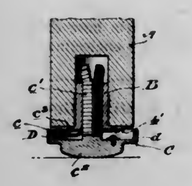
toward each other and longitudinally with the axis of said head member to lock the said bits in position, said bits being capable of adjustment axially.

1,451,996. COMBINED PIANO BENCH AND MUSIC CABINET. GEORGE H. MERKEL, Bluefield, W. Va. Filed June 6, 1922. Serial No. 566,258. 8 Claims. (Cl. 155—90.)



1. A combined piano-bench and music cabinet comprising spaced apart box-like end portions forming compartments, a rectangular top frame connecting said end portions, an adjustable seat section within the frame intermediate the upper ends of the compartments, and lids for the compartments hinged within the top frame above said compartments and normally forming portions of the seat of the bench.

1,451,997. HYDRAULIC MECHANISM FOR THE TRANSMISSION OF POWER. ANTHONY G. M. MICHELL, Melbourne, Victoria, Australia. Filed Jan. 5, 1921. Serial No. 435,168. 4 Claims. (Cl. 60—54.)



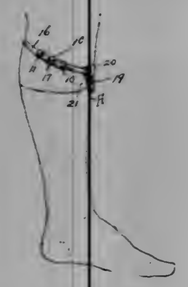
1. In hydraulic transmission gear of the type described, a turbine element comprising a rotor divided into separate axially adjacent compartments and an axially movable control gate adapted to admit the motive fluid alternatively either radially into one of said compartments of the rotor or to deflect it axially into another adjacent compartment for the purpose described.

1,451,998. PROCESS OF AND DEVICE FOR DRAWING BELLIED OBJECTS OF SHEET METAL. CURT NEUBAUER, Mecklenburg, Germany. Filed Sept. 17, 1921. Serial No. 501,417. 6 Claims. (Cl. 113—49.)

1. A process for drawing bellied sheet metal articles, consecutive sections of which, in the drawing direction, differ in shape from one another, comprising the steps of drawing a metal sheet between a rotary drawing tool and a synchronously-moved coacting counter-mould, while imparting to the sheet a progressive forward bodily movement in the direction of its length and relative to the axis of the drawing tool, so as cause said tool to act progressively upon the sheet from end to end thereof, and maintaining the distance between the tool axis and the plane of the mould constant during the entire movement of the sheet; substantially as described.

1,451,999. FURNITURE-LEVELING DEVICE. GEORGE R. PERRY, Washington, D. C. Filed Jan. 31, 1921. Serial No. 441,218. 8 Claims. (Cl. 46—13.)

1. A furniture leveler of the character described, comprising an interiorly threaded socket member, a member carrying a screw partially split at its free end inserted in said socket; said member being revoluble and having a roughened surface adapted to contact with the sole of the shoe of a person standing beside or sitting at a table or on an article to which the leveler is attached, and a spring for automatically engaging and holding said revoluble member stationary, said spring being releasable by pressure tending to rotate said revoluble member.



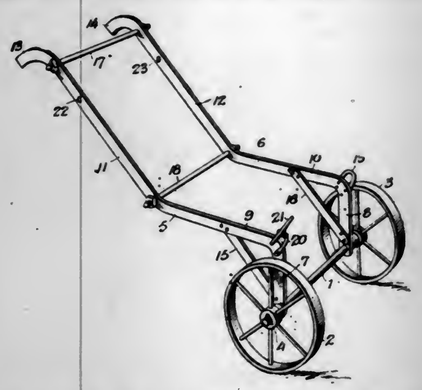
1,452,000. DISJOINTING DEVICE FOR AUTOMATIC PISTOLS. NICOLAS PIEPER, Liege, Belgium. Filed Feb. 7, 1921. Serial No. 443,154. 3 Claims. (Cl. 42—3.)

1. An automatic pistol comprising in combination a stock member having an undercut recess longitudinally

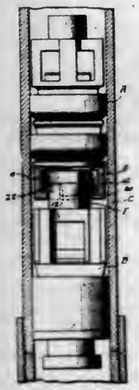
thereof and an enlarged opening at the rear end of the recess, a slide member having a shoulder slidable in the recess, a recovering spring normally holding the shoulder forward in the recess, and a normally inoperative latch on the stock member and behind said opening, said latch being adapted to be operated to restrain the spring in compressed position to permit the shoulder to be withdrawn from the recess through the opening.

1,452,001. GARTER. MITCHELL D. PRICE, Miami, Fla. Filed July 28, 1921. Serial No. 488,063. 4 Claims. (Cl. 241—6.)

1. A garter of the class described comprising a pad, a separate limb encircling member, guides carried by said pad and engaging said limb encircling member, means for adjustably securing the ends of said limb encircling member upon said pad and a hose engaging member slidably mounted on said limb encircling member.



1,452,002. SAFETY RAZOR. GUSTAF ADOLF REITER, San Diego, Calif. Filed Feb. 21, 1922. Serial No. 538,228. 2 Claims. (Cl. 30—12.)

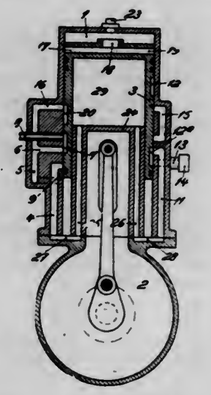


1. In a device of the class described, a blade retainer provided with a central threaded boss, a blade positioned on said blade retainer, a hollow internally threaded ball member engaging said threaded boss a hollow handle provided at one end with a bifurcated portion having an internal spherically shaped recess adapted to receive said ball member and provided at its other end with an internally threaded portion and a long friction screw adapted to engage said ball member with one end and provided near its other end with an externally threaded portion and an enlarged grip portion at said other end for locking said handle and said ball member relatively to each other.

1,452,003. IMPLEMENT SUPPORT AND CARRIAGE. DE SOTO E. RICHARDSON, Riverside, Wash. Filed Apr. 18, 1922. Serial No. 555,010. 3 Claims. (Cl. 280—49.)

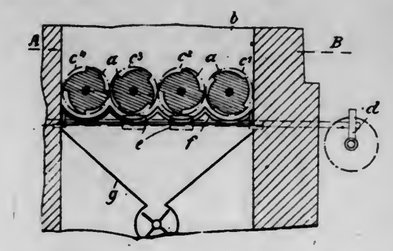
1. An implement support and carriage comprising an axle having carrying wheels mounted thereon, a pair of side supporting members connected with the axle adjacent its ends each formed to present vertical portions adjacent the axle with horizontal portions at the top thereof and inclined portions extending from the horizontal portions, said side members terminating in handles, and cross bars connected between the side members.

1,452,004. VALVE COUPLING FOR TUBULAR WELLS. CLINTON L. SAVIDGE, Callaway, Nebr. Filed Nov. 8, 1921. Serial No. 513,801. 1 Claim. (Cl. 103—180.)



The combination with an upper working valve, a lower standing valve, of means for permitting the detachable connection thereof including a depending sleeve carried by the upper operating valve, the sleeve having inwardly extending diametrically opposed guide slots formed in the walls thereof, and oppositely disposed circumferentially extending locking slots communicating with the upper ends of the guide slots, said sleeve also having formed therein downwardly extending locking notches at the terminals of the locking slots arranged in parallel relation to the guide slots, an upwardly extending hollow and internally threaded stud formed on the standing valve, radially extending lugs formed on the stud for engaging in said guide slots, the locking slots and notches, the side and end walls of the guard slots being inclined to provide a guide surface for said lugs.

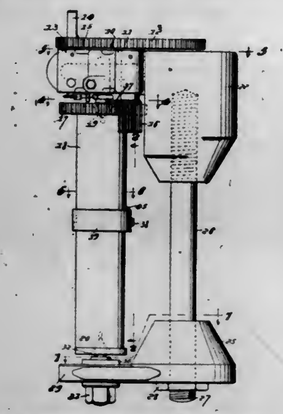
1,452,005. TWO-STROKE-CYCLE INTERNAL-COMBUSTION ENGINE. VICTOR SPUHLER, Zug, Switzerland. Filed Aug. 30, 1920. Serial No. 406,990. 2 Claims. (Cl. 123—74.)



1. An internal combustion engine comprising a cylinder open at one end and having exhaust ports, an air inlet and a mixture inlet at points intermediate its ends, and

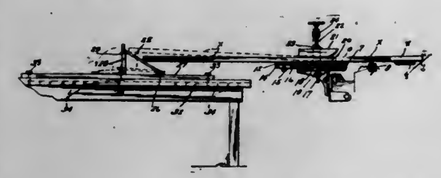
further provided with a bypass, a port leading to said bypass, a second bypass and passages, said passages communicating with the interior of said cylinder at points spaced from its ends, an inner cylinder in the first-named cylinder extending to and also open at the open end thereof and having longitudinal passages open at its closed end and respectively communicating with the passages of the first named cylinder, and a hollow cylindrical piston having a closed end arranged for movement between the heads of the said cylinders and a cylindrical wall arranged for movement in the annular space between the said cylinders, said piston having a transverse passage to communicate

with the bypass of the first named cylinder at the end of an outstroke, a port leading from said transverse passage to the interior of the first named cylinder, and also having chambers to communicate with said first named bypass and port of the first named cylinder, and a channel to communicate with the second bypass and one of the passages thereof at the end of an instroke, and said piston also having a channel to establish communication between the last named bypass and the last named passage of said first named cylinder at the end of an outstroke.



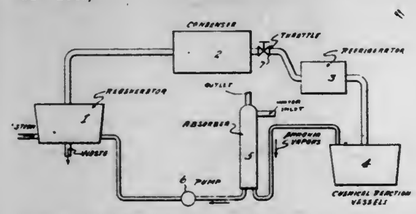
1,452,006. GRATE FOR SHAFT FURNACES. HARRY STEHMANN, Berlin-Hohenschonhausen, Germany. Filed Aug. 1, 1919. Serial No. 314,786. 7 Claims. (Cl. 222—3.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L. 1313.)

1. The combination with a kiln shaft, of a series of continuously rotating co-operating clinker-removing crushing rolls extending over the whole cross sectional area of the kiln, and supporting the kiln charge.



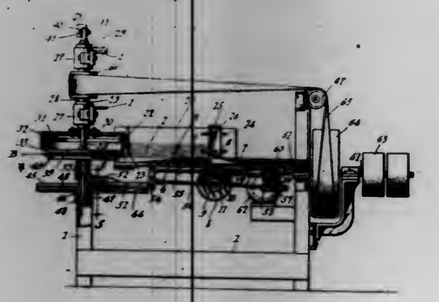
1,452,007. BORING MACHINE. EUGENE S. TOWNS, Austin, Tex. Filed July 19, 1921. Serial No. 485,837. 4 Claims. (Cl. 77—2.)

1. In a machine for boring cylinders, a pair of conical heads which are adapted to be positively connected and held in engagement with opposite ends of a cylinder, laterally extending members carried by the heads, laterally adjustable center pin carriers maintained by the laterally extending members of the heads, a tool mounting engaged



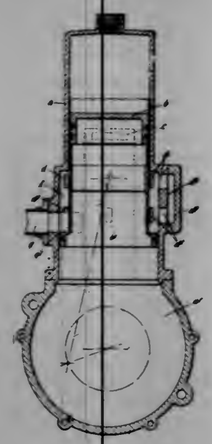
by pins which are supported by the pin carriers, and means for rotating the tool mounting associated with one of the heads.

1,452,008. ATTACHMENT FOR WOODWORKING MACHINES. STANLEY VOLKMAN, Minneapolis, Minn. Filed July 29, 1922. Serial No. 578,455. 14 Claims. (Cl. 144—137.)



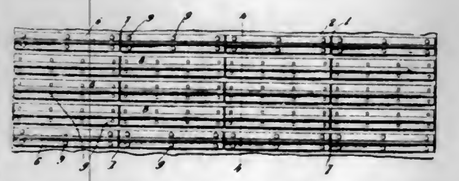
1. The combination with a cutter head, of a tilting table, and means arranged to be engaged by the work on the table to tilt the same and thereby feed a greater portion of the work to the cutter head and which means is thereafter rendered inoperative by the work in a predetermined position thereof.

1,452,009. PROCESS FOR UTILIZATION OF AMMONIA. JUSTIN F. WAIT, New York, N. Y. Filed May 25, 1920. Serial No. 384,097. 7 Claims. (Cl. 62—170.)



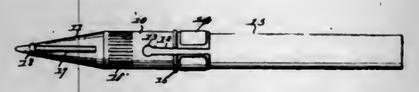
1. The process of utilizing ammonia resulting from a chemical reaction in which free ammonia is released at low pressure, comprising absorbing the ammonia released in water or suitable solvent, heating the solution formed and thus driving off ammonia vapors, cooling the vapors at high pressure thus formed under pressure sufficiently to liquefy the ammonia, passing the liquid ammonia into a system of lower pressure and allowing it to evaporate, thus causing a refrigerating effect, and subsequently using the ammonia in the chemical reaction.

1,452,010. MACHINE FOR MAKING BARREL HEADS. JOSEPH L. WALKER, Baton Rouge, La., assignor to The K-D Barrel & Hamper Co., Baton Rouge, La. Filed Dec. 19, 1922. Serial No. 607,827. 7 Claims. (Cl. 147—37.)



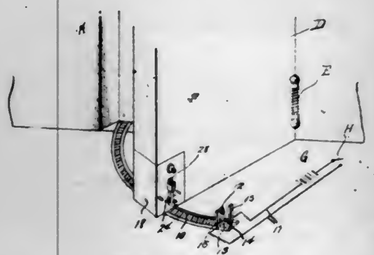
1. The combination with cutting means, of means for feeding a blank thereto including a slidable member, a lifting cam, means for sliding the cam back and forth, and means cooperating with the cam during the movement of the cam in one direction, for successively raising and releasing the slidable member, and, during the movement of the cam in the opposite direction, for leaving the slidable member undisturbed.

1,452,011. INTERNAL-COMBUSTION ENGINE. HAROLD EDWIN WATTON, Birmingham, England, assignor, by direct and mesne assignments, to Dunford & Elliott (Sheffield) Limited, Attercliffe, Sheffield, England. Filed Sept. 27, 1920. Serial No. 413,193. 2 Claims. (Cl. 123—73.)



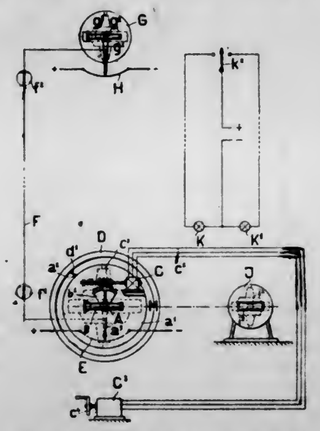
1. An internal combustion engine working on the two stroke principle, consisting in the combination of a stepped piston, a cylinder in which said piston works, an induction pipe communicating with a valveless inlet port situated in the wall of the cylinder in such position that the combustible charge is admitted to the crankcase while but not before the piston is completing its instroke, means external to the cylinder for leading the combustible charge from the crank case to the combustion space of the cylinder and means whereby the volume of the combustible charge which becomes trapped in the upper part of the annular space existing between the larger portion of the cylinder and the smaller diameter of the piston is transferred to the crank case as the piston is completing its instroke and during the admission of the combustible charge into the crank case through said valveless inlet port.

1,452,012. COAL TRIMMER. GEORGE FRANK WIESECKEL, Hagerstown, Md., assignor to Western Maryland Railway Company, a Corporation of Maryland and Pennsylvania. Filed Aug. 29, 1921. Serial No. 496,566. 4 Claims. (Cl. 198—199.)



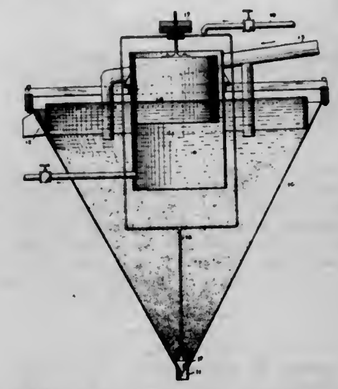
1. A belt for trimming coal having strips of armor arranged laterally thereof, said strips including a member of inverted T-shape, having a doubled upright portion separated at its base and capable of relative movement as the belt passes over a pulley.

1,452,013. COMBINED PENCIL SHARPENER AND GUARD. FRANK WILLIAMS, Hot Springs, S. Dak. Filed July 12, 1921. Serial No. 484,087. 1 Claim. (Cl. 120—87.)



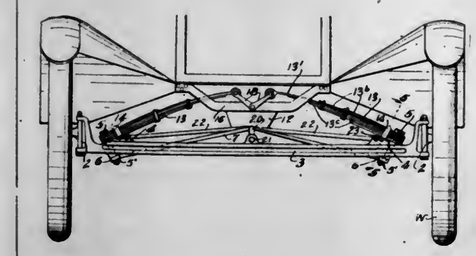
In a combined pencil sharpener and guard, a body having a cylindrical portion with a longitudinally extending slot at the inner end, the said body being tapered toward the outer end and provided with a longitudinally extending slot, the edge of the said slot being shaped to form a cutting blade, a tongue extending from the body on one side of the slot and projecting over the said slot at the outer end of the said body, and means for retaining the body on a pencil.

1,452,014. ELECTRIC LOCK AND DOOR-CONTROL DEVICE. CLINTON L. WOLFE, Brooklyn, and JOSEPH A. FAUROT, New York, N. Y. Filed July 1, 1921. Serial No. 481,764. 7 Claims. (Cl. 70—50.)



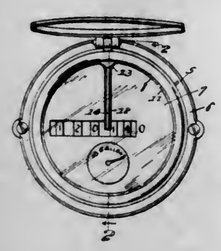
1. An arrangement of the class described for use in connection with a door comprising a casing secured to the door, a releasable hook member mounted upon said casing, means secured to the floor and adapted to engage the releasable hook member when the door is in open position, a pawl carrying member and pawl mounted within said casing, a ratchet secured to the floor and in position to be engaged by said pawl, electric means within said casing for releasing said hook member and said pawl and an electric circuit completed when said door is in open position for supplying current to said electric means.

1,452,015. FIRE-CONTROL APPARATUS ESPECIALLY FOR NAVAL GUNS. WALTHER AKEMANN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Oct. 14, 1920. Serial No. 417,040. 7 Claims. (Cl. 89—41.)



1. A fire control apparatus for naval guns comprising a main gyroscope, a target gyroscope, a sighting device stabilized by said target gyroscope, an auxiliary gyroscope adapted to maintain a determined direction in relation to the ground, electrical indicating means connecting said main gyroscope with said target gyroscope whereby the angular position of said two gyroscopes may be caused to coincide and means carried by said main gyroscope and said auxiliary gyroscope for determining the coincidence of said last two gyroscopes.

1,452,016. SLIME-PULP THICKENER. CHARLES ALLEN, El Paso, Tex. Filed June 9, 1917. Serial No. 173,785. 4 Claims. (Cl. 83—82.)



1. A thickener for slime pulp comprising a vessel having a bottom discharge orifice for quickly settling and heavy particles and a rim overflow for slowly settling and light particles, a valve to control said bottom discharge orifice, a float column in operative communication with that portion of the vessel where the said material accumulates, means for admitting fluid of fixed density into said column, and a float in said column operatively connected with the valve in the bottom discharge orifice, whereby an increase in density of such accumulated material—due to settling—will act to raise the column of fluid of fixed density and with it the float for the purpose of opening the valve to permit such accumulated material to be discharged.

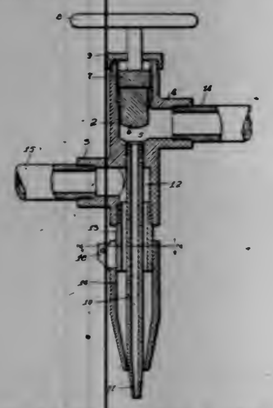
1,452,017. SPRING SUSPENSION FOR MOTOR VEHICLES, ETC. GEORGE P. ALLEN, Los Angeles, Calif. Filed Mar. 4, 1920. Serial No. 363,191. 3 Claims. (Cl. 267—36.)

1. A spring suspension for automobile bodies, comprising, in combination with an axle, laminated spring piles secured at butt ends of each to the axle ends and converging above the axle, and divergent shackles attached to the proximate ends of the springs and pivotally connected to the body frame on a common pivot.

1,452,018. CLEANER FOR METER-DIAL GUARDS. MALCOLM O. ALLEN, Newport, Tenn. Filed June 6, 1922. Serial No. 566,347. 5 Claims. (Cl. 235—1.)

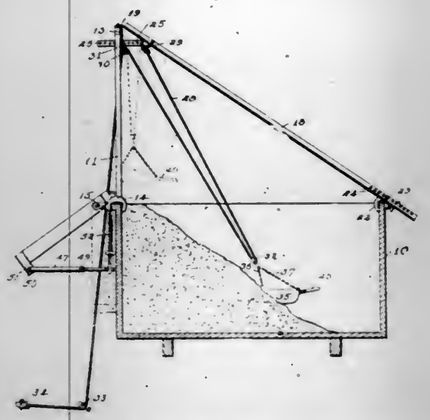
1. In a cleaner for meter dial guards, an element adapted to be secured in front of a meter dial, yieldable members thereon for engaging the dial guard in spaced relation to the dial, and a wiper interposed between the guard and dial against which the guard may be pressed and with relation to which it may be rotated for removing deposits from its inner surface.

1,452,019. TONGUE SWITCH AND MATE FOR RAILWAYS. JAMES H. ASSELIN, San Francisco, Calif. Filed Aug. 9, 1922. Serial No. 580,800. 10 Claims. (Cl. 246—442.)



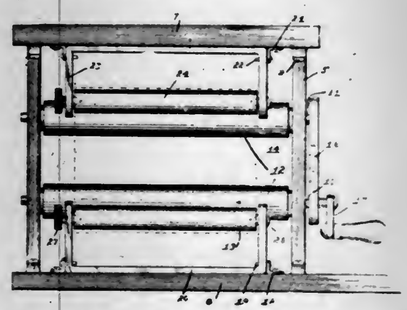
1. The combination with the straight and the curved rail of a switch one of the rails having a continuous ball portion, of a switch casting adapted to be secured to the

side of the rail, which carries the major portion of the traffic, and a switch tongue directly supported by said cast-



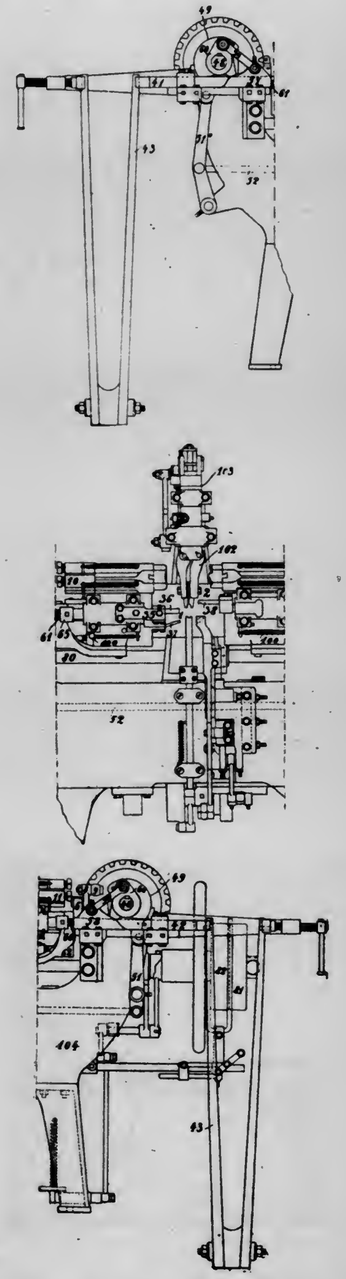
ing, the heel of said tongue aligning with the ball of the rail which carries the minimum portion of the traffic.

1,452,020. OIL BURNER. FRANK J. ATKINS, Davenport, Iowa. Filed June 24, 1919. Serial No. 306,326. 1 Claim. (Cl. 158,—76.)



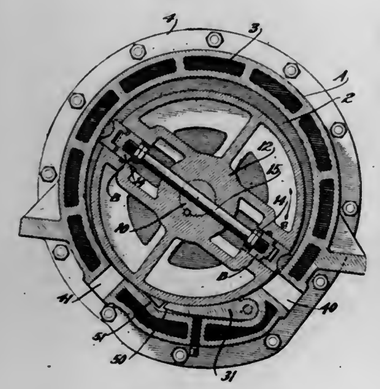
In a burner of the class described, a tubular main body provided with a pair of lateral extensions at opposite sides thereof communicating with its interior, said body having an enlarged chamber at its rear, a valve seated in said chamber, a cap threaded on the valved end of said body, an oil tube extending forwardly and threaded into the burner body and in communication with said chamber, said tube being contracted at its outer end to form a nozzle, said body having an enlarged chamber in front of the connection with the oil tube with the body, said chamber being cut off from communication with the first mentioned chamber and from the tube, a tubular connecting sleeve threaded into the front end of the second mentioned chamber and encircling the oil nozzle tube, the bore of said connecting member being a larger diameter than the tube providing a chamber communicating with the second mentioned chamber, and a tubular air nobble adjustably secured around and encircling the oil nozzle tube, said air nozzle being contracted at its front end adjacent the base or inner end of the contracted portion of the oil nozzle, the air nozzle being adjustably mounted on the sleeve connection whereby the outlet end of the air nozzle will at all times be positioned at the rear of the outer end of the oil nozzle.

1,452,021. UNLOADING DEVICE. GUY O. BAKER, Atlantic, Iowa. Filed Oct. 2[illegible], 1920. Serial No. 418,556. 6 Claims. (Cl. 214—44.)



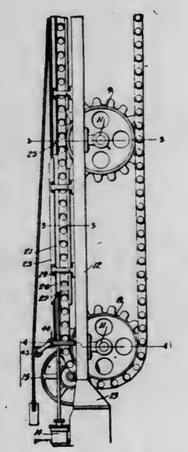
1. In a device of the class described, the combination of a container, an A-shaped frame detachably mounted vertically at one side of the container, a brace bar detachably secured to the apex of said A-frame on the opposite side of said container, a hitch bar, having a series of hitch openings, near the apex of said frame member, an outwardly extending chute detachably hooked to said A-frame, means for adjusting the angle of said chute, and means for folding the said chute to substantially a vertical position adjacent to the outside of said container.

1,452,022. STATION STOP DEVICE. WILLIAM FRANKLIN BARNARD, Marion, Ind. Filed May 1, 1922. Serial No. 557,768. 1 Claim. (Cl. 40—86.)



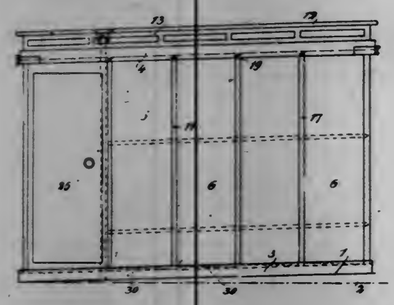
In a device of the class described, a housing comprising side bars, upper and lower walls having connection with the side bars at the ends of the side bars, a rear wall having connection with the upper and lower walls, rollers supported between the side bars, said rollers having shafts extending through the side bars, pulleys on the shafts, a belt moving over the pulleys and communicating motion from one pulley to the adjacent pulley, U-shaped frames, bracket members carried by the upper wall and lower wall, pivot pins supported by the bracket members and extending through the U-shaped frames to pivotally support the frames, rollers supported by the U-shaped frames and adapted to normally engage the first mentioned rollers, a web operating over the pivoted rollers, and coiled springs having connection with the U-shaped frames and having connection with the rear wall to hold the pivoted rollers into engagement with the first mentioned rollers.

1,452,023. DEVICE FOR WELDING CHAIN LINKS, RINGS, AND THE LIKE. FRIEDRICH WILHELM BINDEL, Hamburg, Germany. Filed Nov. 13, 1919. Serial No. 337,832. 10 Claims. (Cl. 59—31.)



1. A welding mechanism comprising rotary heads, a plurality of die sections movably mounted in said heads, means for longitudinally moving said sections towards a blank to be welded, and means to rotate the heads to successively move the dies into operative relation to the article to be welded.

1,452,024. ROTARY COMPRESSOR. HENRY A. CAMPBELL, Oakland, Calif. Filed Jan. 26, 1921. Serial No. 439,909. 25 Claims. (Cl. 230—30.)

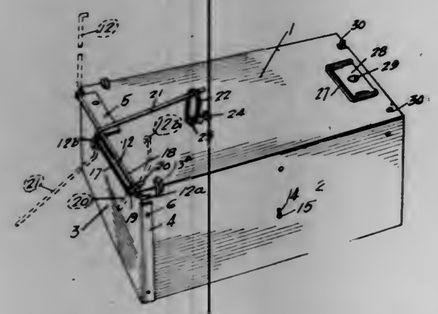


1. In a compressor of the character described a vane comprising a base section, a face section having end portions lying parallel with the ends of the base section, the ends of the face section being recessed, and an auxiliary extensible end section supported in the recess of each end of the face section.

1,452,025. TWO-STROKE DEEP-WELL POWER HEAD. HENRY A. CAMPBELL, Oakland, Calif. Filed Feb. 23, 1921. Serial No. 447,311. 13 Claims. (Cl. 103—200.)

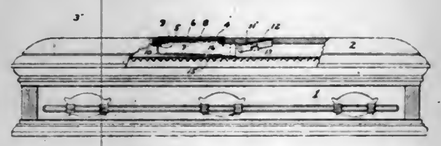
1. A pump power head drive for two stroke pumps comprising a cylinder, a pair of plungers mounted therein, means for imparting reciprocal motion thereto and a flexible means for accelerating the speed of the plungers when traveling in a downward direction.

1,452,026. SHIP'S CABIN. EMIL CASPARY, Berlin, Germany. Filed Dec. 8, 1921. Serial No. 520,976. 5 Claims. (Cl. 114—71.)



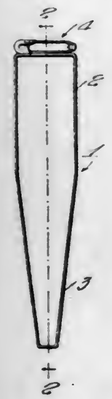
1. A portable ship's cabin comprising a grooved upper frame, a lower frame having a downwardly tapering groove panels fitted between said frames in said grooves and so arranged that one corner of each panel is wedged in the downwardly tapering groove in said lower frame whilst the other corner is loose therein and means for securing the vertical abutting edges of said panels together.

1,452,027. CATALYZER FOR THE SYNTHETIC MANUFACTURE OF AMMONIA AND PROCESS OF PRODUCING SAME. IVAR WALFRID CEDERBERG, Lidingo-Brevik, near Stockholm, Sweden, assignor to Norsk Hydro-Elektrisk Kvaelstofaktieselskab, Christiania, Norway. Filed Oct. 20, 1920. Serial No. 418,319. 7 Claims. (Cl. 23—28.)



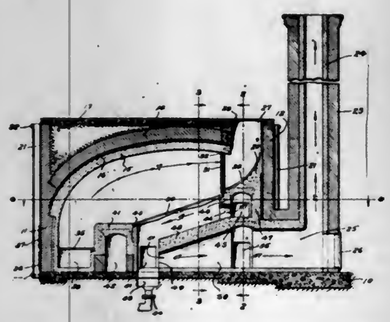
1. Process for the manufacture of ammonia which comprises heating a mixture of hydrogen and nitrogen in the presence of a catalyst, prepared by heating in a non-oxidizing atmosphere a complex cyanogen compound of iron and an alkali metal in which the atomic proportion of the alkali metal to the iron is less than two to one.

1,452,028. GOPHER TRAP. SIDNEY DAVIS, Lankershim, Calif. Filed Aug. 22, 1921. Serial No. 494,075. 5 Claims. (Cl. 43—91.)



1. A trap having a frame, body engaging members, means for holding said members in set position, adjustable means for releasing said members; said adjustable means comprising a trigger adapted to engage the first mentioned means, a slot in said frame and a plurality of notches in said slot for selectively receiving said trigger.

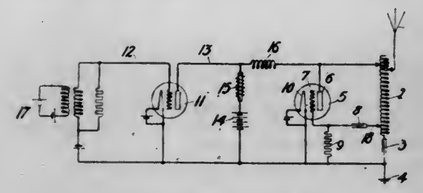
1,452,029. CONSTRUCTION OF COFFINS. SANFORD HOYT DEUEL, Oakland, Calif. Filed Sept. 30, 1922. Serial No. 591,630. 11 Claims. (Cl. 40—130.)



5. In a coffin, a lid, an opening therethrough with a light transmitting design therein, a lining secured to the lid, and a lamp positioned between said lining and said lid arranged to throw light through said design.

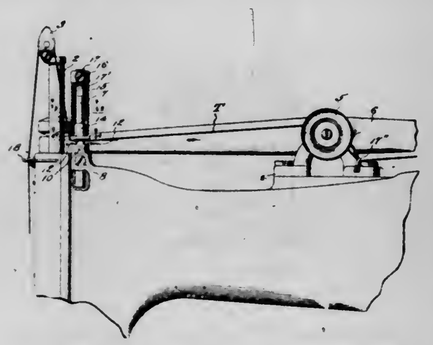
1,452,030. BODKIN. MARY CATHERINE RUPPEL DOLPHIN, Bloomfield, Nebr. Filed Sept. 15, 1921. Serial No. 500,810. 1 Claim. (Cl. 223—38.)

A bodkin comprising a body in the form of an elongated one piece wire loop having a relatively wide rear end and a tapered front end, and a safety pin connected to the first named end of the loop and extending transversely with respect to the latter.



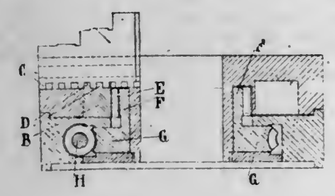
1,452,031. INCINERATOR. HENRY E. ELROD, Dallas, Tex. Filed Apr. 16, 1921. Serial No. 462,062. 6 Claims. (Cl 110—8.)

1. An incinerator of the class described comprising a combustion chamber having a base and front, back and



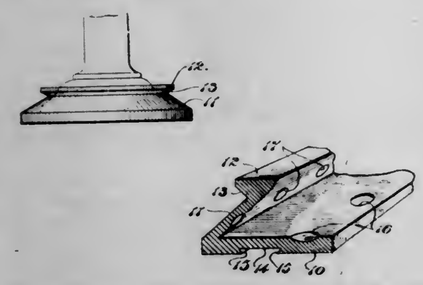
side walls rising from said base, an arch connecting said walls and extending from the front to the rear of said combustion chamber, said combustion chamber being provided with an opening whereby garbage may be introduced therein, fire grates disposed at the front of said combustion chamber, an inclined grate disposed centrally of said combustion chamber and adjacent said fire grates, an inclined table disposed beneath said inclined grate, a smoke stack and a passageway connecting said stack with said combustion chamber, said passageway extending over and under said table and thence to said smoke stack.

1,452,032. OSCILLATION GENERATOR FOR SIGNALING SYSTEMS. JOHN F. FARRINGTON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 30, 1918. Serial No. 231,603. 9 Claims. (Cl. 250—36.)



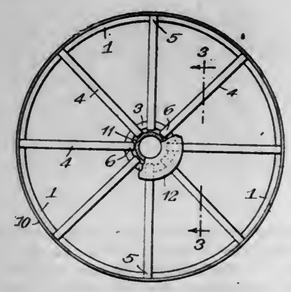
1. In combination, an antenna circuit including a capacity and an inductance, a vacuum tube for generating oscillations in said antenna circuit, an input circuit for said tube, said input circuit being connected across said capacity, and a variable connection to said inductance included in said input circuit for varying the input potential.

1,452,033. THREAD-CONTROLLING DEVICE. ALBERT F. FIFIELD, Newark, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Sept. 2, 1920. Serial No. 407,623. 6 Claims. (Cl. 112—218.)



1. In a sewing machine having stitch-forming mechanism including a needle, a tension device, a thread take-up, and a yieldable guide for the thread stronger than the tension device and located between the tension device and the needle, whereby said guide will be unyielding during normal operation of the machine but will yield and give up thread should an abnormal pull be applied to the thread.

1,452,034. CENTERING DEVICE. PAUL FORKARDT, Dusseldorf-Oberkassel, Germany. Filed May 31, 1921. Serial No. 473,720. 3 Claims. (Cl. 279—117.)



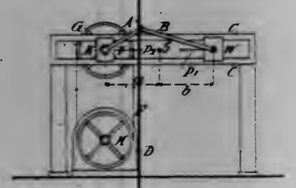
1. In a chuck comprising in combination, a plurality of pairs of crossed racks, the racks of each pair being in gear with one another, means for simultaneously moving one rack of each pair tangentially to a circle lying in the face of the chuck and means for guiding the other racks radially.

1,452,035. SILENCER. HAROLD A. FREEMAN, Los Angeles, Calif. Filed Feb. 1, 1922. Serial No. 533,335. 9 Claims. (Cl. 65—63.)

1. A combined silencer and cushion composed of rubber, the body of said combined silencer and cushion being substantially Z-shaped in cross section and having formed in the under surface of its base a continuous channel to provide anti-slippage shoulders.

1,452,036. WELDED STEEL WHEEL. EDWARD FULDA, New York, N. Y., assignor, by mesne assignments, to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Nov. 23, 1918. Serial No. 263,801. 1 Claim. (Cl. 301—66.)

A metal wheel comprising a rim of general cylindrical for presenting at the opposite ends of the cylinder an-



nular edges for side-welding of spokes crossing the same, a hub barrel consisting of a metal cylinder presenting at its opposite ends annular edges for side-welding of spokes thereto, and a plurality of wires or rods forming the spokes and located on each side of the rim and hub, said wires or rods being side welded to the edges of both the rim and the hub barrel, the spokes at the welds being flush with the plane of the edges of the part to which they are joined.

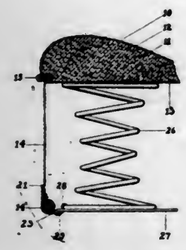
1,452,037. ASPHALT-CUTTING TOOL. WILLIAM J. GLEASNER, Kenmore, N. Y. Filed Sept. 15, 1920. Serial No. 410,536. 9 Claims. (Cl. 262—8.)

1. In a pneumatic asphalt cutter, a pneumatic hammer, a cutter at a point below the barrel engaging the barrel of the hammer, means carried by the casing of the hammer to prevent the cutter from entering the asphalt more than a given depth, means for retaining the cutter in the barrel, means carried by the cutter and cooperating with the barrel to limit the insertion of the cutter in the barrel, and means carried by the barrel and extending below the barrel overlying said limiting means to prevent detachment of the cutter.

1,452,038. MECHANISM FOR CONVERTING ROTARY INTO OSCILLATORY MOTION. RUDOLF GOLDSCHMIDT, Berlin, Germany, assignor to Det Tekniske Forsøgsaktieselskab, Ordrup, Charlottenlund, Denmark, a Company of Denmark. Filed May 27, 1921. Serial No. 473,033. 6 Claims. (Cl. 74—14.)

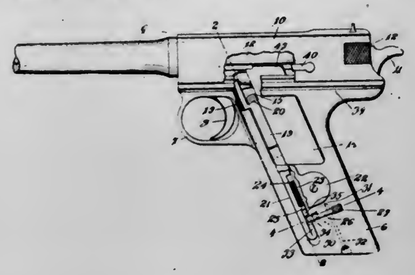
1. Reciprocatory mechanism comprising a slidable, reciprocatory, revoluble driving member, an inertia element adapted to be reciprocated by said revoluble member and crank mechanism whereby the inertia of the inertia element reacts with the revoluble driving member to reciprocate said member, means being provide for utilizing the motion developed for doing external work.

1,452,039. LEAKPROOF LIQUID CONTAINER. JAMES H. GRAVELL, Elkins Park, Pa. Filed Apr. 8, 1920. Serial No. 372,119. 8 Claims. (Cl. 217—8.)



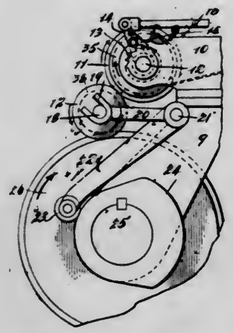
1. A container comprising a rigid casing having an opening, a lining of expansible liquid-tight material having a neck or mouth adapted to be supported in said opening and said lining being inflated by insertion of the contents therein and thereby conformed to the inner shape of the casing and supported thereby.

1,452,040. PAPER SHOT SHELL. JULIAN S. GRAVELY, Wytheville, Va., assignor to Winchester Repeating Arms Co., New Haven, Conn., a Corporation. Filed Aug. 14, 1922. Serial No. 581,896. 2 Claims. (Cl. 102—16.)



2. As a new article of manufacture, a tube for use in the manufacture of paper shot-shell blanks, the shot-shell tube consisting in a plurality of superimposed coils of paper containing a percentage of solidified latex of the rubber tree and having co-extensive coils of an adhesive interposed between and uniting them.

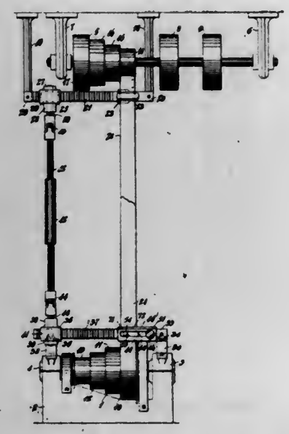
1,452,041. SEAT SPRING. CHARLES F. GREEN, Defiance, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Nov. 18, 1918. Serial No. 262,990. 5 Claims. (Cl. 155—180.)



1. In combination with a cushion and a depending skirt therefor, of a spring unit assembly including a plurality of springs and a transverse supporting band therefor, said spring unit enclosed by said skirt, a strip of continuous metal extending around the lower edge of said skirt and provided with inwardly extending means to clamp said strip to said skirt, said strip being also provided with inwardly extending ears having slots therein for receiving portions of said transverse bands of said spring unit, said bands being adapted to be crimped around and clamped to said supporting ears.

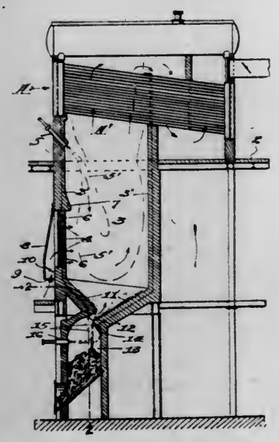
1,452,042. MAGAZINE CATCH AND RELEASE FOR FIREARMS. GRANT HAMMOND, New Haven, Conn., assignor of one-third to Alva C. Washburne, Pittsfield, Mass., and one-third to Frederick G. Crane, Dalton, Mass. Filed Feb. 28, 1918. Serial No. 219,590. 17 Claims. (Cl. 42—7.)

1. A firearm including a frame having a magazine chamber therein and supporting a breech bolt, a magazine to be removably located in said chamber, a power transmitting member normally inactive to move the magazine, means independent of the breech-bolt for imparting activity to said power transmitting member to move the magazine in said chamber and to prevent action of said activity imparting means until the breech-bolt is in its rearward position after the last cartridge has been fired and promptly after extraction of the last shell from the barrel.



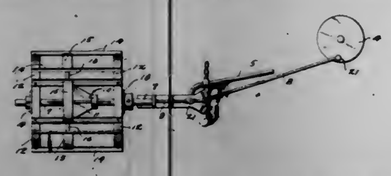
1,452,043. INKING MECHANISM. CHARLES W. HAROLD, Cleveland, Ohio, assignor to The Harris Automatic Press Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 27, 1919. Serial No. 300,093. 7 Claims. (Cl. 101—363.)

1. In an inking mechanism, an intermittently rotatable fountain roll, an independently rotatable inking drum, said roll and drum rotating at different speeds, a ductor roll movable alternately into contact with said fountain roll and inking drum, and independent coacting means carried by said fountain roll, said inking drum and said ductor roll and directly controlled by the relative position of the ductor roll for driving same from either the fountain roll or the inking drum.



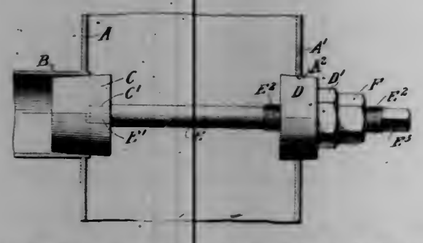
1,452,044. SHIFTER FOR BELTS ON CONE PULLEYS. GEORGE J. HAUSMAN and ALBERT J. JONES, Cincinnati, Ohio. Filed July 22, 1920. Serial No. 398,121. 15 Claims. (Cl. 64—4.)

1. In a bell-shifter, two belt-shifting members, means supporting said members and guiding said members in belt-shifting direction, elements operatively connected to the respective members, one element slidably overlapping the other in belt-shifting direction, one element having engaging means spaced apart in belt-shifting direction, and the other element having a projection between said



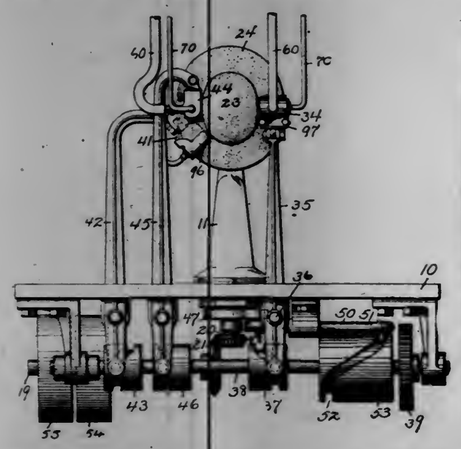
engaging means, a handle slidable on one of said elements in belt-shifting direction, and means whereby said handle may be non-slidably connected to either-one of said elements.

1,452,045. APPARATUS FOR FURNACE-SLAG DISPOSAL. CHARLES GILBERT HAWLEY, Chicago, Ill. Filed Jan. 15, 1921. Serial No. 437,615. 3 Claims. (Cl. 110—28.)



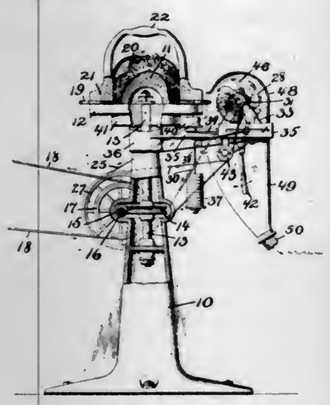
3. The improvements herein described comprising a combustion chamber wherein fuel ash is slagged, and having a slag drain hole in combination with separate heating means for heating the margins of the slag hole, substantially as and for the purpose specified.

1,452,046. COTTON-CHOPPING MACHINE. REEVES HENRY, Forney, Tex. Filed June 30, 1921. Serial No. 481,637. 4 Claims. (Cl. 97—22.)



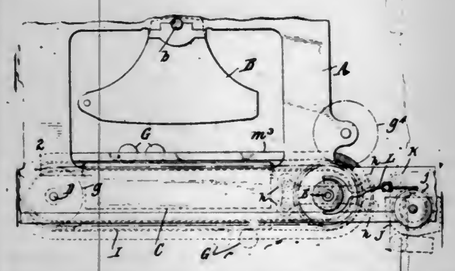
1. In a cotton chopping machine, a hollow slotted shaft, acting as guide for piston attached to a double flanged cross head.

1,452,047. SAFETY PLUG FOR WATER-TUBE BOILERS. RAYMOND HODGSON, Freeport, N. Y. Filed Oct. 28, 1920. Serial No. 420,091. 1 Claim. (Cl. 137—76.)



A device for plugging the water tubes of water tube boilers having in combination a conical plug adapted to enter and close the end of a tube, a hand hole stopper adapted to close a hand hole on the inner side of the header, said closing means having an angularly faced wrench engaging extension formed on a portion extending through the hand hole and a central threaded perforation and a threaded rod adapted to screw through the perforation in the closing means and abut against the tube plug.

1,452,048. HAT-CLIPPING MACHINE. FERDINAND E. KAUFFMANN, Rahway, N. J. Filed Nov. 6, 1920. Serial No. 422,205. 12 Claims. (Cl. 223—30.)

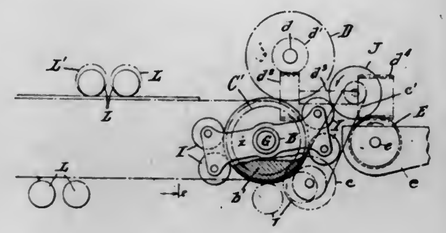


1. A hat clipping machine comprising a hat support including a block to hold a hat with its crown taut and shaped, a clipping device, and means for moving the parts so that the clipping device traverses the entire crown of the hat.

1,452,049. MACHINE FOR FINISHING THE EDGES OF HAT BRIMS. FERDINAND E. KAUFFMANN, Rahway, N. J. Filed Dec. 31, 1920. Serial No. 434,234. 7 Claims. (Cl. 223—24.)

1. A machine for finishing the edges of the brims of velour hats comprising a hat holding means including a support for the hat brim, a brushing mechanism to brush across the edge of the brim, and means for causing the brushing mechanism to successively engage adjacent portions of the hat brim.

1,452,050. INKING MECHANISM FOR PRINTING PRESSES. CARL A. KELLOGG, Brooklyn, N. Y. Filed Mar. 26, 1919. Serial No. 285,338. 28 Claims. (Cl. 101—341.)

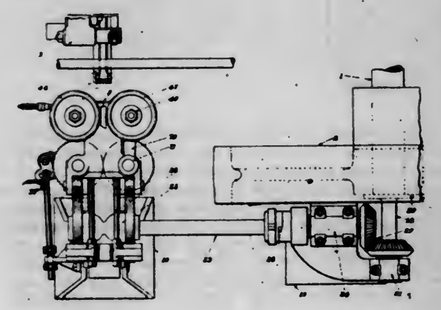


1. In a printing press, a form bed, in combination with inking mechanism embodying an ink supply, an inking surface separate from and independent of the form bed, a distributor roller co-operating with said surface, means for rotating said distributor roller to traverse said surface while in engagement therewith, and a ductor roller movable between the ink supply and the inking surface.

1,452,051. INKING MECHANISM FOR PRINTING PRESSES. CARL A. KELLOGG, Brooklyn, N. Y. Filed Mar. 26, 1919. Serial No. 285,340. 27 Claims. (Cl. 101—341.)

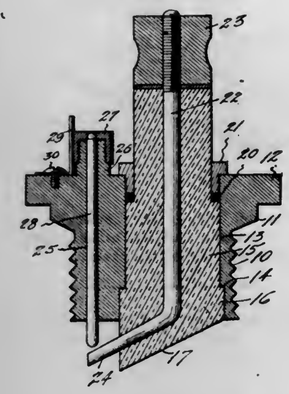
1. Inking mechanism for printing presses embodying an ink supply, a curved ink surface, a distributor roller bodily rotatable about the center of curvature of the ink

surface and adapted to take ink from the ink supply and feed it directly to the surface, and to distribute the ink



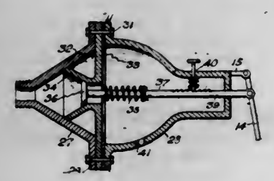
on said surface, an endless chain a form roller mounted on the chain and operated thereby to traverse the ink surface and be charged therefrom.

1,452,052. DETACHABLE BUTTON. CHARLES R. NALLE, Richmond, Va. Filed Feb. 14, 1922. Serial No. 536,448. 4 Claims. (Cl. 24—90.)



1. In a detachable button, a frusto-conical shell having an opening in its reduced end and being interiorly enlarged for receiving a portion of the fabric to which it is to be attached, and a fastening element including resilient prongs for inserting the fabric in said opening and frictionally engaging the same within said shell, thereby securing the latter to the fabric.

1,452,053. SELF-FEEDING MACHINE AND METHOD. WILLIAM B. PEIRCE, North Tonawanda, N. Y. Filed Apr. 24, 1920. Serial No. 376,259. 73 Claims. (Cl. 10—79.)



1. In a feed mechanism for feeding a stock bar to a machine adapted to cut a blank of uniform size from the end of said stock bar, the combination of a carriage mounting the stock bar, means for moving said carriage with the stock bar out of the path of the blank cut therefrom, means to then feed the carriage back to the original position and means to feed the stock bar forwardly upon the carriage into position for formation of the next blank.

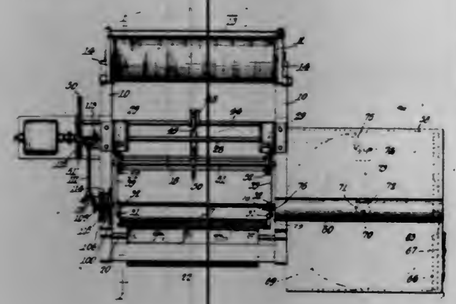
1,452,054. SPARK PLUG. CHRISTY A. PROPST, Longview, Tex. Filed Feb. 18, 1921. Serial No. 446,105. 2 Claims. (Cl. 123—169.)

1. In a cleanable spark plug, the combination of a barrel, an insulating member eccentrically mounted in the barrel, a stationary electrode embedded in the member and having its lower end projecting from said member and exposed, and a removable electrode eccentrically mounted in the barrel and overhanging the projecting end of the stationary electrode, an adjusting device connected with the removable electrode and mounted on top of the barrel, and an adjusting gauge co-operating with the adjusting means.

1,452,055. VALVE FOR AIR-BRAKE SAFETY APPLIANCES. HENRY C. STOKES, Sumter, S. C. Original application filed Sept. 29, 1920, Serial No. 413,508. Divided and this application filed May 20, 1921. Serial No. 471,032. 8 Claims. (Cl. 251—156.)

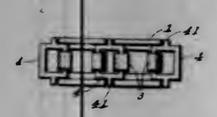
1. A valve adapted to be connected with the train pipe of an air brake system comprising a two part casing, a valve seat mounted between the parts of the casing, a valve for cooperating with said seat, a spring pressed reciprocating actuating rod for supporting the valve in its seat and extending through the outer casing member, a ratchet along said rod, a spring pressed pawl cooperating with said ratchet for holding said valve open when said rod has been actuated, and a handle on said pawl for releasing it and allowing the valve to close.

1,452,056. EXHAUST MUFFLER. CHARLES G. STOCKTON, Ocean Grove, N. J. Filed June 21, 1922. Serial No. 569,867. 4 Claims. (Cl. 137—160.)



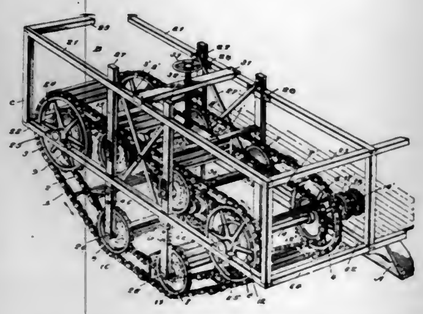
3. A muffler comprising a tubular casing, partitions in said casing dividing the chamber thereof into longitudinal passages two of which are inlet passages and two outlet

passages, a series of transverse compound Venturi tubes leading from the inlet passages to the outlet passages,



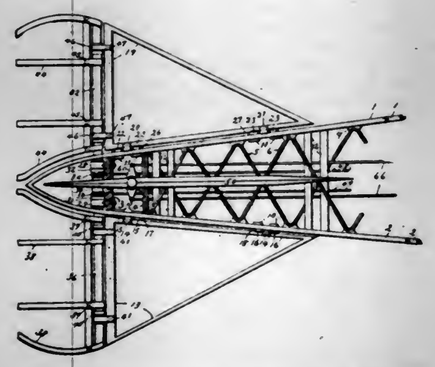
and end plates one closing the outlet passages at the inlet end of the casing and the other closing the inlet passages at the outlet end of the casing.

1,452,057. LOOM. JOSEPH C. UPTON, Pelzer, S. C. Filed Feb. 4, 1922. Serial No. 534,080. 8 Claims. (Cl. 139—20.)



1. In a loom of the character described, means for supporting and advancing the warp leaves, heddles for shifting the leaves, a needle for carrying a plural strand filling yarn transversely between the leaves, means for twisting the strands of each filling together between the warp leaves, means for locking each filling to one edge of the fabric, and a reed to beat up the twisted filling.

1,452,058. BOX-LINK CHAIN. WARREN E. WILLIS, North Attleboro, Mass., assignor to Wallace G. Franklin, Clarence W. Fisher, and Elton B. Fisher, Copartners doing business as E. I. Franklin & Co., North Attleboro, Mass. Filed May 27, 1922. Serial No. 564,157. 1 Claim. (Cl. 59—80.)

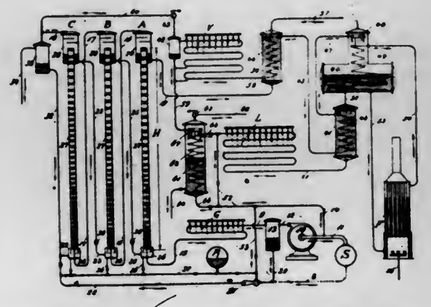


A box-link chain, made up of a multiplicity of open ended boxes carrying a jewel socket to one side of the box and a hook at each end of the box, bent toward the other; an endless connecting link between opposed hooks upon adjacent box links, having spacing pins projecting from the sides of the links between the opposed ends of the sides of the several box links and lying in line with the bottom of the jewel socket adjacent thereto.

1,452,059. BOAT-PROPELLING MEANS. CARL J. BAER, St. Louis, Mo. Filed July 3, 1922. Serial No. 572,748. 22 Claims. (Cl. 115—63.)

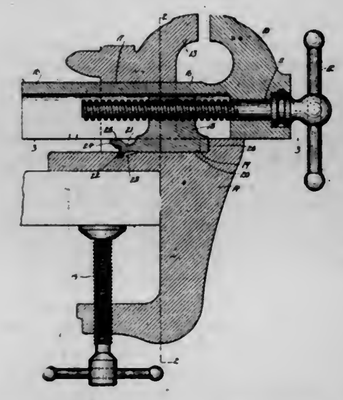
1. The combination with a boat, of propelling means therefor comprising endless flexible elements mounted to travel longitudinally of the boat and two slidably connected water-impact members of foraminated material carried by said elements.

1,452,060. RUDDER AND ELEVATOR ASSEMBLY FOR AEROPLANES. OSMOND THERON BELCHER, Los Angeles, Calif., assignor to Belcher Aerial Manufacturing Company, a Corporation of California. Filed Feb. 21, 1922. Serial No. 538,280. 5 Claims. (Cl. 244—29.)



1. In a rudder and elevator assembly, in combination a fin adapted to be removably fixed to a fuselage framework, a casing rotatably mounted within the tail of the fuselage rearward of and in alignment with the fin, a second casing removably fixed to the first mentioned casing and adapted to rotate therewith and extending outwardly along the rear edge of said fin, bearings rotatably connecting the fin with the casing second above mentioned and a control surface mounted upon said second mentioned casing and extending backwardly therefrom.

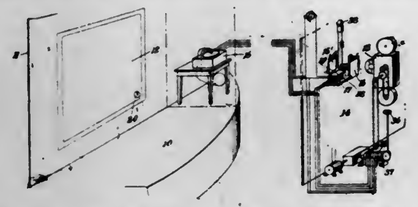
1,452,061. GAS EXPANSION AND ABSORPTION PROCESS AND APPARATUS THEREFOR. JOHN C. BERTSCH, Tulsa, Okla. Filed Oct. 21, 1920, Serial No. 418,569. Renewed Sept. 9, 1922. Serial No. 587,231. 12 Claims. (Cl. 252.)



1. The absorption process which consists in mixing a gas and a liquid and putting the mixture under pressure; expanding the gas of said mixture in the act of

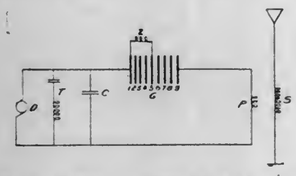
elevating its liquid and saturating it with the vapor contained in the gas; mechanically separating the ex-

panded gas from the saturated liquid and from the latter the vapor by heat; liquefying said vapor and cooling the denuded liquid, and mixing the latter again with gas.



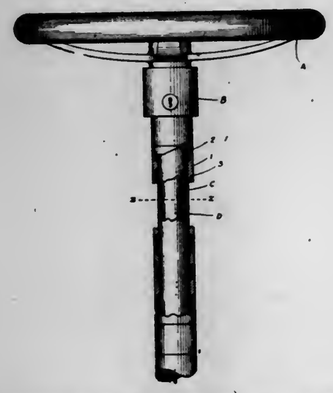
1,452,062. BENCH VISE. LUCIEN P. BLOT, Southington, Conn., assignor to The Peck, Stow & Wilcox Co., Southington, Conn., a Corporation. Filed Aug. 14, 1922. Serial No. 581,564. 5 Claims. (Cl. 81—17.)

1. A bench-vise having a frame, an abutment in fixed relation thereto, a fixed jaw, a movable jaw, an operating-screw, a nut for the said screw provided with an integral, flexible locking-member adapted to be engaged with and dis-engaged from the said abutment, whereby the said nut is anchored in place against longitudinal displacement, and means for preventing the vertical displacement of the nut.



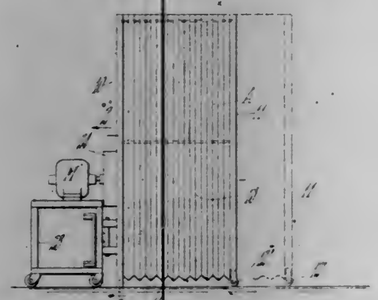
1,452,063. ART OF SYNCHRONOUS OPERATION OF ENTERTAINMENT APPARATUS. WILLIAM H. BRISTOL, Waterbury, Conn. Filed Apr. 22, 1920. Serial No. 375,724. 4 Claims. (Cl. 88—16.2.)

3. In the synchronous operation of a motion picture projector with other entertainment apparatus: the method of maintaining synchronism between same, which consists in projecting with the picture a representation of a pair of indicator members correspondingly to the movement of the picture, said indicator members simulating a uniform rotary movement, the movement of the two members differing to effect coincidence at predetermined intervals, imparting from the other entertainment apparatus to a further pair of indicators a similar



movement, initially registering the corresponding coincidences of the respective pairs, and conforming same in the event of a displacement therebetween.

1,452,064. RADIOTRANSMITTER. VANNEVAR BUSH, Chelsea, Mass., assignor to American Radio & Research Corporation, Medford, Mass., a Corporation of Delaware. Filed Nov. 22, 1918. Serial No. 263,757. 5 Claims. (Cl. 250—37.)

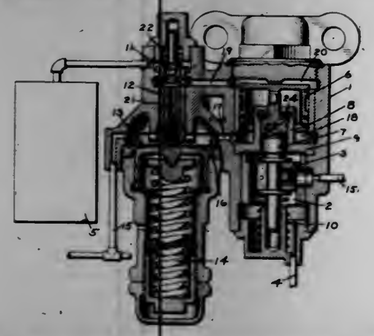


5. A radio transmitter, comprising a primary circuit which includes a generator, a primary condenser, a spark gap of high sparking length compared with the potential of the circuit and consisting of a plurality of unit gaps, and impedance shunted across a portion of the unit gaps to cause the initial breaking down of part of the unit gaps of the series gap and a final breaking down of all of the gaps in the series gap, the impedance having in conjunction with the capactiy of the gap a time constant which is small compared with the audio period of the circuit and large compared with the radio period.

1,452,065. AUTOMOBILE LOCK PROTECTIVE DEVICE. HAROLD AUGUSTIN CALAHAN, New York, N. Y. Filed Nov. 19, 1921. Serial No. 516,272. 8 Claims. (Cl. 74—39.)

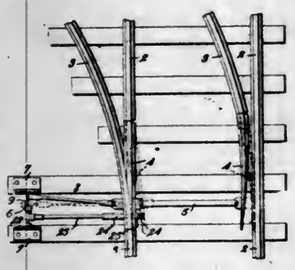
1. In combination with the steering column of an automotive vehicle, a protective covering disposed around the steering column.

1,452,066. DRYING APPARATUS FOR CLOTHES. HENRY CAVE, Hartford, Conn. Filed Feb. 20, 1920. Serial No. 360,142. 6 Claims. (Cl. 34—19.)



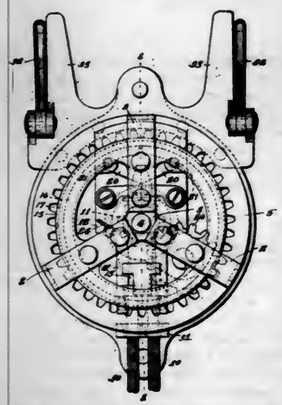
1. In an apparatus of the class described two substantially rigid oppositely positioned walls, other walls connecting the first-named walls to permit one thereof to be moved towards and away from the other, said walls forming a drying chamber of variable cubical contents, a door in one of said first-named walls, and means associated with one of said first-named walls for causing a current of air to be drawn through said drying chamber.

1,452,067. MANICURE BUFFER. NORTON W. CHAPMAN, Guilford, Conn., assignor to The Guilford Mfg. Co., Guilford, Conn., a Corporation. Filed Apr. 13, 1922. Serial No. 552,201. 2 Claims. (Cl. 132—78.)



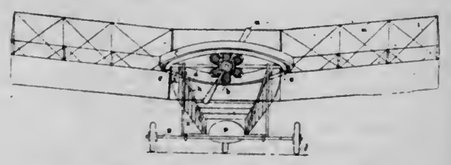
2. A buffer comprising a base and a back, the outer edge of the lower face of the back cut away, whereby a slot is formed between said base and back and a metal spring arranged between the base and back and extending into said slot, the edge of the said spring slitted and rolled.

1,452,068. FEED-VALVE DEVICE. JOHN WILLS CLOUD, London, England, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Aug. 16, 1922. Serial No. 582,263. 3 Claims. (Cl. 50—11.)



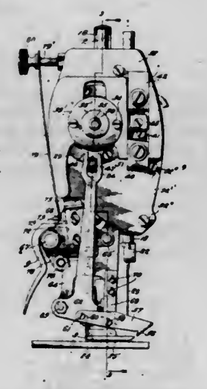
1. A feed valve device comprising a main valve, a piston for operating said valve, and a pilot valve for supplying fluid under pressure to one side of said piston in one position, said pilot valve having means for effecting the equalization of fluid pressures on opposite sides of said piston in another position.

1,452,069. RAILWAY-SWITCH LOCK. PATRICK COMERFORD, Victoria, British Columbia, Canada. Filed Mar. 25, 1922. Serial No. 546,710. 1 Claim. (Cl. 246—402.)



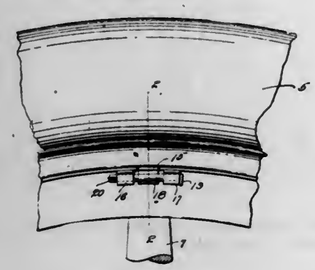
Means for locking a railway switch bar at either limit of its movement, said means comprising a switch-stand, an upright shaft, a reinforcing sleeve for said shaft having bearing in said stand, a forked lever pivoted to said reinforcing sleeve, a sliding sleeve mounted on said reinforcing sleeve, links connecting said lever with said sliding sleeve, a crank, a connecting rod between said crank and the switch bar whereby rotation of said reinforcing sleeve and rod will cause the movements of the switch points, a rocking shaft extending across beneath the rails of the switch, short levers secured on said rocking shaft that may be projected upward by rotation of said rocking shaft to secure the switch bars at either limit of their movement, a crank on said rocking shaft, a strap swivelly secured to said sliding sleeve and a link connecting said strap to said crank on said rocking shaft, whereby raising and lowering said first mentioned lever will rock said rocking shaft, and whereby turning said upright shaft will not effect the connection between said sliding sleeve and said rocking shaft, all being arranged substantially as shown and described.

1,452,070. LOWERING DEVICE. CHARLES F. DAVY, Syracuse, N. Y. Filed Nov. 29, 1918. Serial No. 264,697. 3 Claims. (Cl. 254—157.)



1. A lowering device comprising a frame, a shaft carried by the frame, a carrier rotatable about the shaft, a centrifugal member rotatable with said carrier and arranged astride the shaft, a spring connected at its opposite ends to said member on opposite sides of the shaft and having its intermediate portion arranged to engage the shaft during the outward throw of the centrifugal member, and brake means operated by rotation of the carrier element and the throw of the centrifugal member, substantially as and for the purpose specified.

1,452,071. AEROPLANE ASSURING AUTOMATICALLY THE LATERAL AND LONGITUDINAL STABILITY. JOSEPH DEHOUCK, Thielt, Belgium. Filed Aug. 17, 1921. Serial No. 493,109. 2 Claims. (Cl. 244—29.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In an improved aeroplane having automatic longitudinal and lateral stability, the combination of: a substantially horizontal outer ring carrying the wings; an inner ring having the fuselage secured thereto, mounted concentrically within said outer ring and capable of rotation about a central vertical axis in relation to such outer ring; a pair of diametrally opposed bearings on the underside of said inner ring; and a transverse axle, carrying the propeller shaft rotatably supported in said bearings and having the under-carriage pivotally suspended thereto, said transverse axle extending at right angles to the longitudinal axis and through the centre of gravity of the aeroplane; substantially as described.

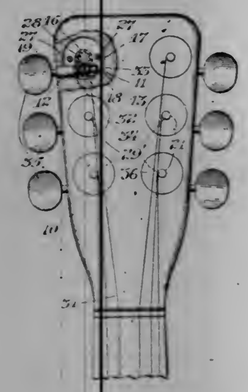
1,452,072. FEEDING MECHANISM FOR SEWING MACHINES. ALBERT H. DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Mar. 20, 1920. Serial No. 367,556. 11 Claims. (Cl. 112—212.)

10. In a sewing machine, in combination with the stitching mechanism, cooperating presser and feeding means for the work to be stitched, an auxiliary feeding element adapted to engage the work in advance of the stitching mechanism, operating means therefor comprising an oscillating driving member, a driven member having frictional driving engagement with the driving member, a supporting lever fulcrumed on the frame of the machine and having lost motion connection with the presser element, means pivoted to the supporting lever and connected with the driving element for transmitting movement to the auxiliary feeding element, means connected with the driven member independently of the driving member for transmitting movement from the driven member to the auxiliary feeding element and yielding means acting through the supporting lever to urge the auxiliary feeding element against the work.

1,452,073. AUTOMOBILE RIM. JOSE S. EDWARDS, Helper, Utah. Filed Apr. 14, 1921. Serial No. 461,319. 1 Claim. (Cl. 152—21.)

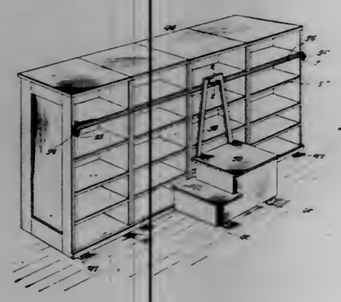
An automobile tire rim comprising two telescoping sections, one bearing on the other, means for fastening the inner of said sections to the felly of the wheel, means for securing the other section to the wheel comprising keepers, permanently attached at spaced relations to the outer section, angle irons permanently attached to the inner section at spaced relations and a locking bolt passing through said keepers for locking the two sections together to prevent circumferential and lateral movement thereof with respect to each other.

1,452,074. LOOSE-LETTER SIGN AND THE LIKE. THOMAS NELSON EVENS, London, England. Filed Dec. 8, 1922. Serial No. 605,660. 11 Claims. (Cl. 40—142.)



1. An advertising board having relatively swinging elements, the cooperating faces of which form character receiving grooves, and means whereby the elements may be swung relatively to each other to open or close the grooves to release or hold the characters.

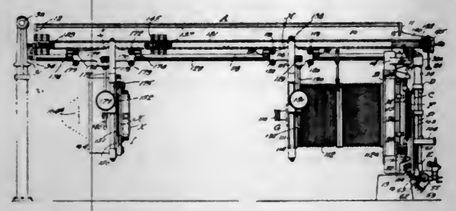
1,452,075. TUNING DEVICE FOR STRINGED MUSICAL INSTRUMENTS. HANS O. HAMMER, Chicago, Ill. Filed Mar. 17, 1922. Serial No. 544,464. 4 Claims. (Cl. 84—306.)



1. A tuning device for stringed musical instruments comprising a head, a socket formed in said head, a bear-

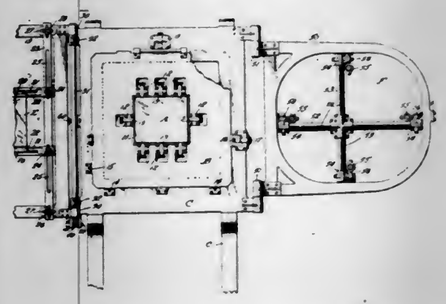
ing base positioned in said socket, a gear and worm seated in said base, a bearing cap secured to said base

and means formed integrally with said cap for preventing displacement of said worm.



1,452,076. STORE LADDER. HASTING P. HOWARD, Memphis, Tenn. Original application filed Nov. 30, 1921, Serial No. 518,944. Divided and this application filed Apr. 17, 1922. Serial No. 553,697. 1 Claim. (Cl. 228—53.)

In a store, the combination of a row of shelving, eyes projecting from the ends of the row near the top thereof, a rail arranged parallel with the front of the shelving and having downturned ends secured in said eyes, a rolling platform upon the floor immediately adjacent the front of the shelving, a standard rising from the platform at the side thereof adjacent the shelving, the entire standard being in a vertical plane parallel with the vertical plane of the track rail and between the rail and the platform and a grooved roller carried by the upper end of the standard at the rear side thereof and running on the upper side of said rail.

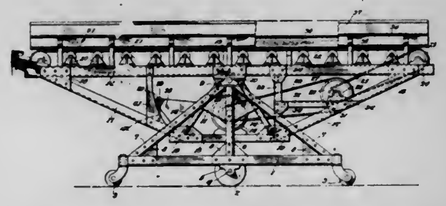


1,452,077. PHOTOGRAPHIC-PROJECTION PRINTING APPARATUS. WILLIAM C. HUEBNER, Buffalo, N. Y., assignor to Huebner-Bleistein Patents Company, Buffalo, N. Y. Filed Sept. 29, 1919. Serial No. 327,244. 37 Claims. (Cl. 88—24.)

17. The combination of a holder for a sensitized surface, a photographic projection device and a copy support, a resiliently mounted overhead support, and supporting carriages for said holder, said projection device

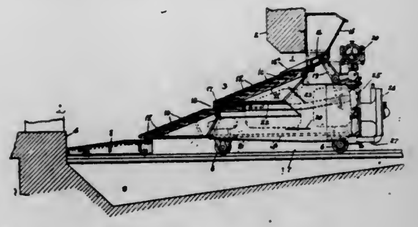
and said copy support movably mounted on said overhead support to permit relative movements between said holder, said projection device and said copy support.

1,452,078. APPARATUS FOR POSITIONING THE PRINTING PLATES ON THE PLATE HOLDERS OF PHOTOGRAPHIC-PRINTING MACHINES. WILLIAM C. HUEBNER, Buffalo, N. Y., assignor to Huebner-Bleistein Patents Company, Buffalo, N. Y. Filed Oct. 16, 1920. Serial No. 417,385. 20 Claims. (Cl. 95—73.)



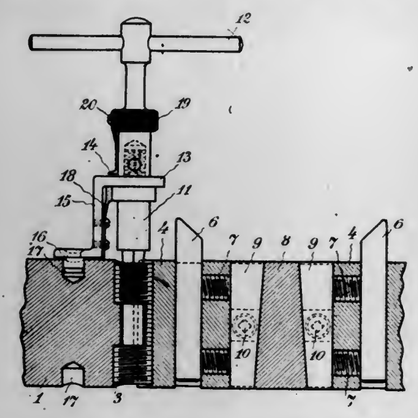
18. In an apparatus of the character described, the combination of a holder for a transparent printing plate, means for supporting said holder in a predetermined position, a registering device bearing a master image, a holder for said registering device arranged to support said device face to face with said printing plate whereby the relative positions of the images on the registering device and printing plate can be observed visually, and means for adjusting the printing plate on its holder operable when the registering device holder is in position in front of said printing plate, whereby the images on the printing plate and registering device can be placed in register.

1,452,079. WRENCH. CLAYTON M. JONES, Jamestown, N. Y. Filed May 20, 1922. Serial No. 562,352. 3 Claims. (Cl. 76—114.)



3. The hereindescribed method of making wrenches which consists in forming a fixed jaw with a pair of communicating inner and outer barrels and with a transverse opening intersecting the inner barrel, then in providing an adjustable jaw having a part fitted in the outer barrel and a rack in the inner barrel, then in heating a nut having an opening and placing same in the transverse opening formed in the fixed jaw, then in inserting a screw having a shank in the inner barrel and engaging same with the said rack and inserting the shank of the screw through the nut opening, and then in cooling the nut to cause same to shrink onto the screw shank.

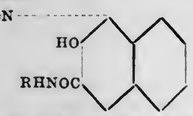
1,452,080. LOADER. WILLIAM T. JONES, Omar, W. Va. Filed Nov. 21, 1922. Serial No. 602,402. 1 Claim. (Cl. 198—121.)



A loader comprising a truck and a loader frame mounted to oscillate on the truck, said truck and frame being symmetrically arranged as regards the vertical plane through the axis of oscillation; said truck including a wheeled base, a pair of cheeks rigidly mounted upon said base, said cheeks being of triangular shape and made of structural material terminating at the apex with bearing elements; said frame being also constructed of structural material in the shape of two pairs of inverted triangles having common bases formed of straight beams, trunnions secured on said beams at the junction of said triangles, and a platform connecting the apexes of said triangles, a motor mounted upon said platform, rollers revolubly mounted upon said straight beams, an endless belt engaging said rollers, and inclined longitudinal guide members forming a trough with said belt as a bottom, and secured upon said straight beams; suitable gearing between said motor and said rollers, and means for elevating said frame inserted between the frame and the truck; all movable parts being confined between said cheeks, whereby the loader may pass through the doors of a box car.

1,452,081. AUTOMATIC STOKER. KARL F. JUENGLING, Lakewood, Ohio. Filed May 27, 1918. Serial No. 236,667. 3 Claims. (Cl. 110—32.)

3. In a self contained movable stoker for furnaces, the combination with a furnace chamber, of rails extending therein, and an automatic stoker comprising a wheeled enclosed frame supported on said rails so as to be movable into and out of said chamber, a suitable grate and means for supplying a blast of air to said grate, the air blast means with said frame and grate comprising a unitary structure substantially as described.



1,452,082. ADJUSTABLE TOOL HOLDER. GUSTAF HENNING LARSSON, Svedala, Sweden. Filed July 29, 1922. Serial No. 578,451. 2 Claims. (Cl. 29—96.)

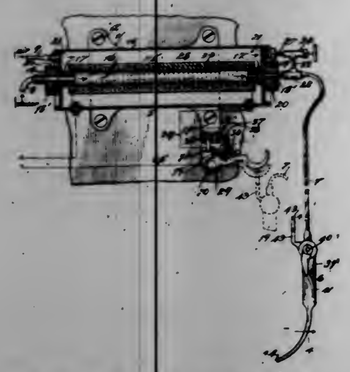
1. An adjustable tool holder, including a boring bar formed with an elongated slot, one end of which is inclined and the other end of semi-cylindrical form having a central projection, a threaded pin mounted in the slot having a reduced section cooperating with the projection to prevent axial movement of the pin in the slot, a tool carrier slidably mounted in the slot having one end formed for threaded cooperation with the pin, said carrier having a tool receiving opening, means for removably securing a tool in the carrier, and a wedge member having an inclined face for cooperation with the inclined portion of the slot and removably secured therein, holding the tool carrier in cooperative engagement with the pin.

1,452,083. BLACK AZO DYESTUFFS AND PROCESS OF MAKING SAME. AUGUST LEOPOLD LASKA and ARTHUR ZITSCHER, Offenbach-on-the-Main, Germany, assignors to Chemische Fabrik Griesheim-Elektron, Frankfort-on-the-Main, Germany, a Corporation. Filed Aug. 9, 1922. Serial No. 580,759. 8 Claims. (Cl. 260—83.)

1. As new articles the azo dyestuffs, which can be obtained by combining the diazo compound of an aryl azo-1-naphthylamin compound not containing a sulfo group with an aryl-amid of 2.3-oxynaphthoic acid which dyestuffs have probably the general formula:

wherein X means the residue of an 4-naphthylamin compound capable of combining in the 4-position and not containing a sulfo group, R an aromatic radical, which dyestuffs are when dry, black powders with metallic lustre, insoluble in water and soluble in concentrated sulfuric acid to a blue green solution, yielding upon reduction with stannous chloride an arylamin, a 1.4-diamino compound of the naphthalene series and an arylid of 1-amino 2 oxy-3-naphthoic acid, and, when produced on the fiber, dyeing cotton in black shades of an excellent fastness.

1,452,084. GOLFING OUTFIT. WILLIAM S. LUCKETT, Chestnut Hill, Pa. Filed Feb. 24, 1922. Serial No. 538,923. 1 Claim. (Cl. 150—1.5.)

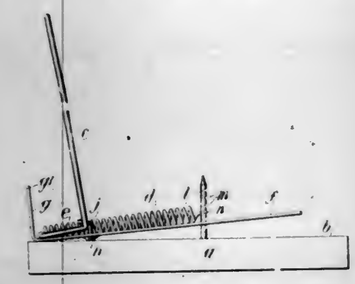


A golf bag comprising a body formed of flexible material, a relatively rigid annular rim portion connected to the upper edges of the flexible body, a cup like rigid bottom receiving the lower end of the body and having its central portion thickened and provided with an open ended screw threaded socket, a circular supporting plate

of a circumference similar to the circumference of the bottom, a central up-standing exteriorly threaded stud carried by the plate for detachable engagement with the socket for releasably maintaining the plate in intimate contact with the bottom, prongs depending from the under surface of the plate for penetrating the ground, and a

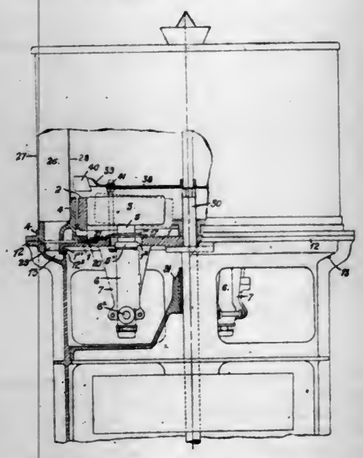
series of reinforcing rods secured to the flexible body and extending vertically thereof and positioned between the rim portion and the bottom to render the body self-sustaining and to permit of the bag with the plate attached thereto to be thrust against the ground so that the prongs enter therein.

1,452,085. DENTAL SYRINGE. DAVID J. MACHOL, West New Brighton, N. Y. Filed Oct. 15, 1921. Serial No. 507,881. 3 Claims. (Cl. 128—224.)



1. In a dental syringe, a casing closed at both ends, a tubular electrical heating element within the casing, said element being smaller in diameter than said casing to provide an air chamber around said heating element, means to pass water through said tubular heating element, means to introduce air into the chamber around the heating elements, a nozzle, a flexible duct connecting the tubular heating element and said nozzle, means to connect the air chamber with said duct at will, and a check valve to prevent air from flowing into the heating unit.

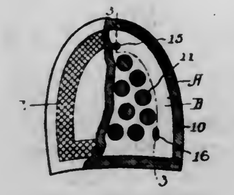
1,452,086. PROCESS FOR THE MANUFACTURE OF SOLID PLASTIC MATERIAL FROM CASEIN. FRANCIS GEORGE MARIES, Kingston-on-Thames, England. Filed Oct. 31, 1921. Serial No. 511,778. 4 Claims. (Cl. 106—38.)



3. The process of manufacturing solid plastic material from casein or milk curd consisting firstly in soaking the casein in a solution containing glycerine, then heating the solution with the casein therein to dry the same then subjecting the mixture to pressure to shape the same, and then soaking the pressed mixture to a solution composed of formaldehyde, glycerine, calcium chloride, water, and acetone.

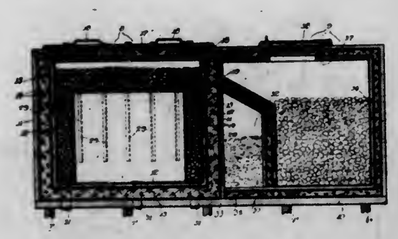
1,452,087. TRAP FOR MICE, RATS, OR OTHER VERMIN. WILLIAM MARK, Wetheral, near Carlisle, and FREDERIC JOHN PARKER, Carlisle, England, assignors to The Mark Patent Company, Limited, Weston, Bath, England. Filed Aug. 22, 1921. Serial No. 494,157. 4 Claims. (Cl. 43—81.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

4. A vermin trap, comprising a base; a tilting platform pivotally mounted thereon and provided with a central longitudinal slot; a vertical bait hook attached to the base and extending upwardly through said slot, said bait hook being provided with a vertical series of notches; a hingedly-mounted, skeleton jaw provided with a central crank and adapted to bear upon the platform and thereby set the trap; and a spring disposed directly above and in line with the slot and connected at one end to said crank, the other end of said spring having a loop which is interchangeably engaged with the notches on the bait hook to adjust the height of the loop above the surface of the platform, so as to vary the sensitiveness of the trap.



1,452,088. GRINDING OR CRUSHING MACHINE. DONALD JOHN GUNN MILLER, Bootle, and RICHARD ASSHETON LLOYD, Liverpool, England. Filed June 20, 1922. Serial No. 569,733. 6 Claims. (Cl. 83—45.)

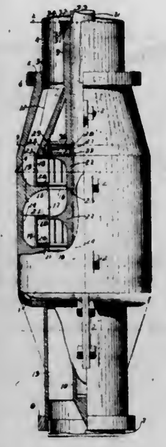
1. A grinding or crushing machine, comprising a revolving pan, rollers, spindles for supporting the rollers,



said spindles being carried in radially moving bearings revolving with the pan and passing through openings in the pan bottom, and a flexible collar extending about said openings and between the pan bottom and rollers, whereby to make a closure for said openings.

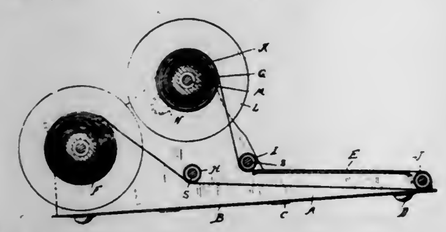
1,452,089. RESILIENT TREAD FOR FOOTWEAR. FRANCIS A. NOLAN, St. Paul, Minn. Filed Nov. 3, 1919. Serial No. 335,445. Renewed Jan. 11, 1923. 4 Claims. (Cl. 36—35.)

1. A resilient tread having embedded therein a fastener to receive and hold a fastening nail, consisting of a thin flexible metal plate longitudinally unyielding to resist the lateral strain of the fastening nail and adapted to resist and hold the head of the nail against passing through, said plate having a substantially smooth upper surface and being easily penetrable and readily yielding to the point of the nail to form an indenture and prevent the point from deflecting when the nail is driven through the tread and fastener.



1,452,090. REFRIGERATOR VEHICLE. LOUIS B. OLIN, Chicago, Ill. Filed Aug. 13, 1920. Serial No. 403,440. 1 Claim. (Cl. 296—24.)

In a vehicle of the class described, the combination of the running gear, a rectangular structure mounted thereon and divided into a refrigerator section and an ice and salt section, said structure having temperature insulating double walls, a container within the refrigerator section spaced away from the walls thereof, vertical partitions dividing said space into ice compartments, a side opening leading to said container, a door for said opening, an inlet opening in the top of said structure for charging ice into the ice compartments and a cover for said opening, a collecting space for moisture below said ice compartments and a drain leading therefrom to the exterior of said structure, ice inlet and outlet openings for the ice section, a salt bin within the ice section, and openings leading to said salt bin from the exterior of said structure.



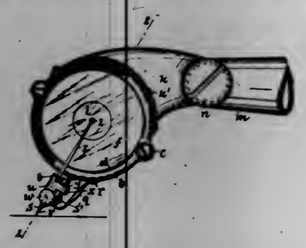
1,452,091. PUMP MECHANISM. PONTUS OSTENBERG, San Jose, Calif. Filed Aug. 20, 1920. Serial No. 404,760. 7 Claims. (Cl. 103—102.)

2. In a pump, a bowl having axially aligned inlet and discharge openings concentrically arranged with relation to the axis of the bowl, a shaft bearing concentrically arranged in said bowl, and means for supporting said bear-

ing in said bowl, said bowl and bearing being divided longitudinally into a plurality of parts, and means for securing said parts in operative relation to each other.

1,452,092. DESK MEMORANDUM PAD. HENRY THOMAS PLATZ, Ashland, Ohio, assignor to Memo Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed May 2, 1921. Serial No. 466,000. 6 Claims. (Cl. 281—7.)

1. A desk memorandum pad comprising a frame including a table or writing tablet, a pair of paper holding rolls journaled in said frame, one of said rolls being located above said table, idler rolls also journaled in said frame and arranged to guide the paper strip extending from one roll around and over said writing tablet and to the other roll, and means for rotating said rolls to wind the strip from one to the other.



1,452,093. METHOD OF CLEANSING. ISRAEL POLLACK, Dorchester, Mass. Filed Aug. 19, 1920. Serial No. 404,658. 3 Claims. (Cl. 87—5.)

1. The method of cleansing, which consists in first applying, rubbing, and removing a mixture of soap, sand, potassium permanganates, starch and borax; and in a similar application of a second mixture of soap, sand, sodium bisulphite, starch and borax.

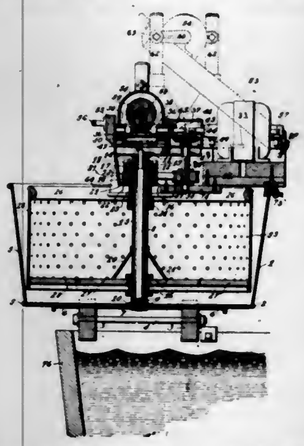
1,452,094. PHONOGRAPH REPRODUCER. ALBERT B. REHN, Philadelphia, Pa. Filed Nov. 1, 1921. Serial No. 512,112. 4 Claims. (Cl. 274—35.)

1. In combination, a sound-box including structure having opposite convergently arranged sound-box walls, one

of which is a diaphragm, and a forked stylus device carried by the sound-box and having its fork arms respectively

bearing against said walls, said stylus device being adjustable in said structure relatively to said walls toward and from the direction in which they converge.

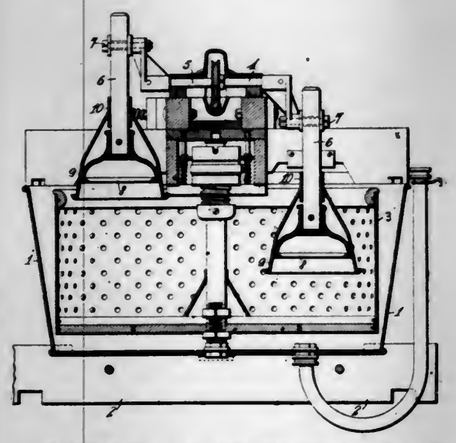
1,452,095. PRESSING DEVICE. EMILE REIZENSTEIN, Brookline, Mass. Filed Jan. 19, 1922. Serial No. 530,372. 15 Claims. (Cl. 100—37.)



1. A pressing device comprising a plurality of pressing members adapted to press articles therebetween, one of the members being relatively narrow and being located near the edge of the other member, said narrow member being adjustable toward and from said edge to accommodate articles in different positions, and means for clamping the two members together in various positions of adjustment of the narrow member.

6. A pressing device comprising a plurality of pressing members adapted to press articles therebetween, a stiffening ridge extending along the back of one of said members, and clamps extending over the edges of said members for clamping the members together, said clamps bearing on said ridge.

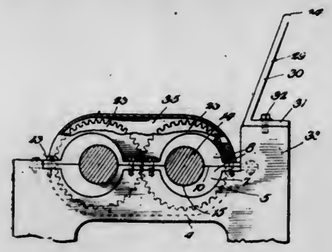
14. A pressing device comprising a pressing board, a pressing member extending along one edge of said board, and a flexible connection between said member and said board permitting movement of the member away from the board and also adjustment away from said edge when in use.



1,452,096. WASHING AND DRYING MACHINE. HARRY B. ROSS, Denver, Colo., assignor to The Fjord Company, Denver, Colo., a Corporation of Colorado. Filed May 13, 1921. Serial No. 469,198. 21 Claims. (Cl. 68—19.)

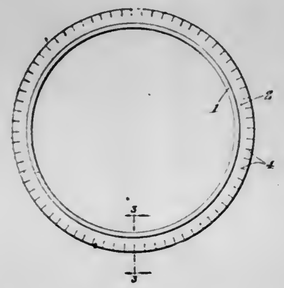
1. In a machine of the character stated, a tub, a vertical standard rigidly mounted in the tub, a perforated cylinder rotatably mounted on said standard, said standard projecting above the top of said cylinder and having bearings for said cylinder, a base frame secured on the edge of

said tub to project over said cylinder, a motor on said base frame and power transmitting mechanism from said motor to said cylinder.



1,452,097. WASHING MACHINE. HARRY BEAUREGARD ROSS, Denver, Colo. Original application filed May 13, 1921, Serial No. 469,198. Divided and this application filed Nov. 7, 1922. Serial No. 599,553. 3 Claims. (Cl. 68—5.)

1. In apparatus of the class described, a vacuum cup clothes working member comprising a rod, a rubber vacuum cup on the end of said rod, an outer vacuum cup slidable on said rod and enclosing said rubber cup said rubber cup being adapted, when said outer cup is in the lowermost position to effect a securing engagement with the same, substantially as shown and described.

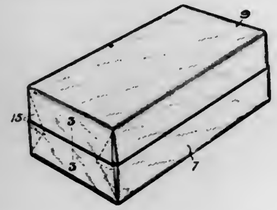


1,452,098. MEAT-TENDERING MACHINE. LILLIE A. SHORT, Washington, D. C. Filed Mar. 15, 1921. Serial No. 452,493. 3 Claims. (Cl. 64—52.)

1. In a device of the class described, spaced supports each having upper surfaces provided with a pair of equally spaced parallel bearing seats of substantially semi-circular contour, and recesses on each side of the seats and in continuation thereof; a pair of rolls having journals, gears detachably secured on said rolls, a bearing for each journal fitting said seats, a pair of ears on each bearing in dimetrically opposite position thereon and adapted to engage in said recesses so as to lie flush with said upper surfaces, said bearings each having

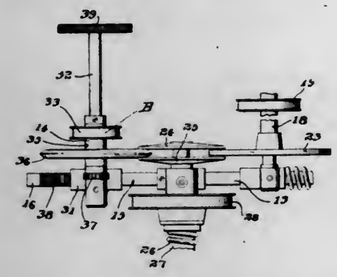
a bore adapted to engage a journal and eccentrically located in a diametrical plane running through said ears; said ears having openings and said recesses having correspondingly threaded apertures, and retaining bolts adapted to engage said openings and apertures to rigidly secure said bearings in axial and perpendicular directions of said seats while said gears are in mesh with each other.

1,452,099. ELASTIC TIRE AND METHOD OF MAKING SAME. JOHN F. SIPE, New York, N. Y. Filed Nov. 2, 1920. Serial No. 421,223. 25 Claims. (Cl. 154—2.)



1. A tire including an undivided base portion and multiplicity of tread sections whose adjacent surfaces are normally in contact with each other.

1,452,100. PACKAGE. WILLIAM M. WHEILDON, Ashland, Mass., assignor to Edward H. Angier, Framingham, Mass. Filed Aug. 12, 1918. Serial No. 249,420. 9 Claims. (Cl. 100—14.)

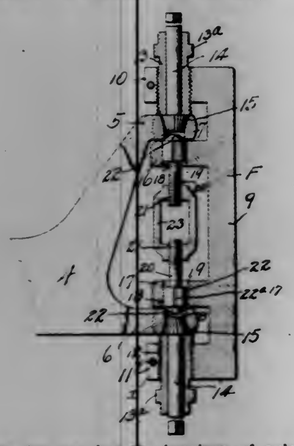


1. A package comprising a compressed commodity and a covering therefor comprising paper sheets on the upper and lower faces thereof folded over the sides, interlocked pairs of bars at each side of the package, opposed edges of the two sheets being folded about the bars of a pair.

6. A bale comprising a compressed commodity and a covering therefor comprising two cup-like elements of paper having opposed edges at the sides of the bale, hooked bars corresponding in length to the sides of the bale and secured to said edges, opposed bars being arranged normally to be held in engagement by the resiliency of the commodity, one of said elements having

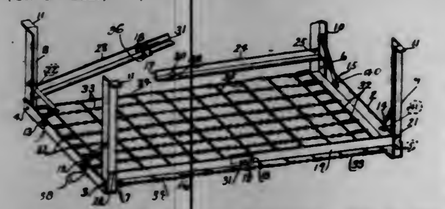
a fullness at the corner of the bale to facilitate disengagement of said hooks.

1,452,101. MOTION-PICTURE APPARATUS. HARRY C. WILLIAMS, Fulton, Ky. Filed May 23, 1921. Serial No. 471,697. 6 Claims. (Cl. 242—55.)



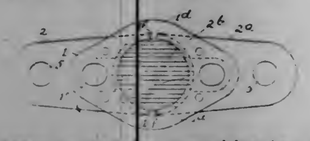
2. In a motion picture machine, the combination with a magazine, a take up reel arranged in the magazine, a rewind reel arranged in the magazine, an operating shaft, a drive shaft for the take up reel, means for operatively connecting the drive shaft with the take up reel, a friction wheel carried by the drive shaft, a pair of sliding friction wheels adapted to engage the opposite sides of the first mentioned friction wheel, a shaft for carrying the last mentioned friction wheels, means operatively connecting the last mentioned shaft with the operating shaft, a rotatable and slidable shaft, a starting and stopping disc rotatably mounted upon said shaft and adapted to be forced between the pair of friction discs, and a drive pulley wheel for the rewind reel operatively connected to said starting and stopping disc.

1,452,102. INTERLOCKING SPLICE FOR THREADS OF TWO STRANDS. TAKEJIRO YAMAMOTO, Nishinari-gun, Osaka, Japan. Filed May 3, 1922. Serial No. 558,233. 1 Claim. (Cl. 96—23.)



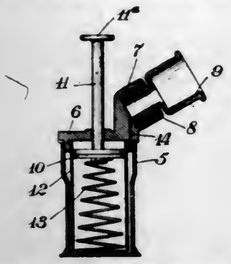
An interlocking device for threads of two strands, in which each strand of one thread crosses each strand of the other thread at two points, whereby the strands of both threads form four crossings, substantially as set forth.

1,452,103. REAMING TOOL. WINSLOW YERXA, Delburne, Alberta, Canada. Filed Feb. 17, 1922. Serial No. 537,267. 8 Claims. (Cl. 77—62.)



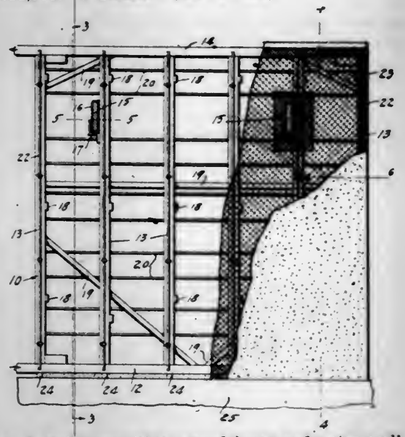
1. A jig for reaming the bearings of axle bars comprising a holder, a reamer carrier adjustably mounted in said holder, a reamer rotatable in said carrier, and extensible means for simultaneously engaging both bearings to maintain the reamer in axial alignment therewith.

1,452,104. BED. TOM D. ANDERSON, San Jose, Calif. Filed May 13, 1922. Serial No. 560,644. 4 Claims. (Cl. 5—112.)



1. A one-piece folding cot comprising a pair of end members L shaped in cross-section, a fabric supported thereby, a leg L shaped in cross-section pivotally mounted upon each end of each end member, the two legs on each end member folding one into the other and into the end member into parallel relationship to each other, and a side bar pivotally mounted on each leg and L shaped in cross-section whereby to fold into the leg upon which it is mounted and into the end member, the free ends of the side bars on each pair of side legs being adapted to engage each other, and means for locking said ends in rigid relation to each other when engaged.

1,452,105. HEATER OR VAPORIZER. IRVING E. ASKE, Duluth, Minn. Filed Feb. 11, 1921. Serial No. 444,146. 3 Claims. (Cl. 219—38.)



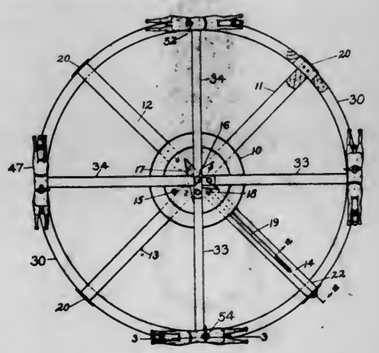
1. A heater or vaporizer comprising two electricity-conducting wings spaced from each other and electrically connected together by an electricity-conducting grid or screen.

1,452,106. MASSAGING DEVICE. FREDERICK HOWARD AULD, Columbus, Ohio. Filed June 23, 1919. Serial No. 306,097. 1 Claim. (Cl. 128—300.)

A massaging device comprising, in combination, an exterior vessel, a removable head directly connected with the vessel for air tightly closing the same, a cylinder within the vessel attached at its upper end to said head and open at its lower end, said cylinder removable from the vessel with the head, a piston for said cylinder having an operating stem extending through said head with an air excluding fit, a spring in said cylinder compressible by the piston against the bottom of the exterior vessel, and a vacuum cup carried by said head having a passage communicating with the vessel for both the intake and exit of air therefrom.

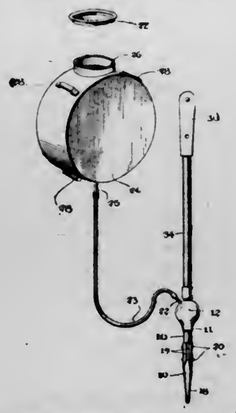
1,452,107. WALL CONSTRUCTION. HERBERT A. BAUMHOVER, Dubuque, Iowa. Filed May 6, 1922. Serial No 558,915. 5 Claims. (Cl. 72—46.)

1. A wall comprising spaced inner and outer wall sections, an insulating medium disposed intermediate said inner and outer wall sections, and a continuous cementitious coating applied to the outer faces, top and bottom of said wall structure and completely enclosing said wall sections and the space therebetween.



1,452,108. TOOTHBRUSH. JOHN H. CARTER, Cohoes, N. Y. Filed July 1, 1921. Serial No. 481,869. 3 Claims. (Cl. 15—167.)

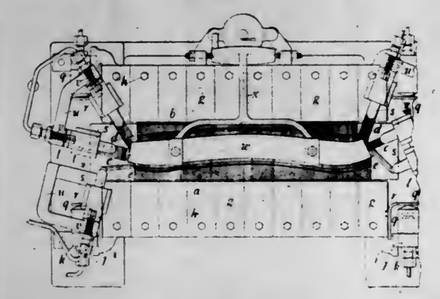
1. A brush comprising a handle having a substantially oval head which is substantially elliptical in cross section,



stiff tufts of bristles carried by the central portion of one face of said head, and a line of longer more flexible tufts adjacent the margin of said face and diverging from said central tufts.

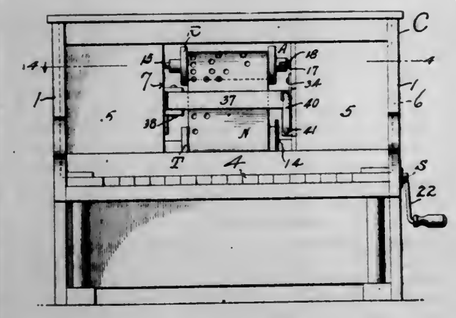
1,452,109. TOY. LORENZO R. CENTERBAR, Fitchburg, Mass. Filed Aug. 6, 1921. Serial No. 490,219. 22 Claims. (Cl. 46—27.)

1. In a toy of the character described, the combination with a motor casing, of a folding support therefor comprising a plurality of radial arms spaced around the center of the casing, one of said arms being fixed to said casing and the rest of the arms being pivotally connected therewith on the bottom an arm opposite the fixed arm being slidable inwardly past the center of the casing into a position adjacent to the fixed arm and the others being adapted to swing into a position substantially parallel with the fixed arm.



1,452,110. TRANSPLANTING DEVICE. HENRY DEMASCUS ELLIOTT, Tabor, N. C. Filed Dec. 22, 1921. Serial No. 524,272. 3 Claims. (Cl. 47—37.)

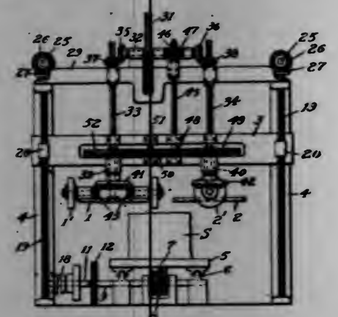
1. In a device of the character described, a tubular stock having an orifice intermediate its ends and in the side wall thereof communicating with a liquid chamber, a spring pressed valve member within the tubular stock, a rod having its one end connected with said valve member and its other end formed with a lateral projection adapted to seat upon the upper end of the stock and hold the valve member in position for closing said orifices, and means whereby said valve member may be lifted to open said orifice.



3. In a device of the character described, a liquid injecting section comprising a tubular member, a division wall extending longitudinally thereof, an end closure for the lower end of said section adapted to form two separate compartments with said division wall, and said end closure having a plurality of orifices communicating with said compartments of the tubular member, and projections formed upon the lower face of the lower end closure for the purpose described.

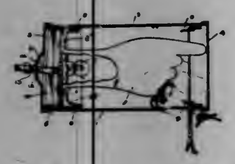
1,452,111. MACHINE FOR USE IN THE MANUFACTURE OF LINEN COLLARS AND THE LIKE. EDGAR BEVERLEY FENBY, Leamington Spa, England. Filed Dec. 28, 1920. Serial No. 433,720. 8 Claims. (Cl. 223—55.)

7. In folding machines for use in the manufacture of linen collars and the like, the combination comprising groups of relatively adjustable thin metal folder strips, holder for the said strips, fluid pressure cylinders for producing movements of the holders in one direction, springs for returning the holders, a heated pressure plate over which the folder strips slide, a fluid pressure diaphragm acting on the said plate for producing pressure between the pressure plate and the folder strips, a hinged arm, a shaped plate carried on the arm, the shaped plate being adapted to co-operate with the folder strips and pressure plate, a valve automatically admitting and releasing the pressure fluid to and from the said cylinders and diaphragm, means on the hinged arm for controlling the said valve, and means on one of the holders for putting the said valve controlling means out of action, substantially as described.



1,452,112. TOY PLAYER PIANO. FRED R. GOOLMAN, Syracuse, N. Y., assignor, by mesne assignments, to Mimmo Toy Company, Inc., a Corporation of New York. Filed Oct. 7, 1919. Serial No. 329,059. 17 Claims. (Cl. 84—102.)

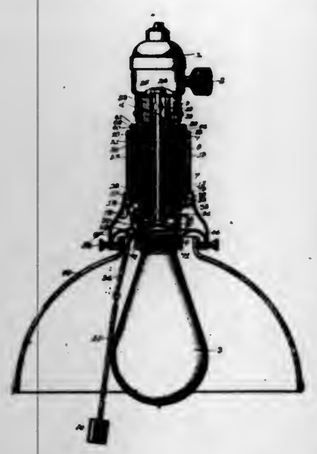
1. A toy player piano including a player unit, comprising a winding roll and a rewind spindle mounted to



rotate in fixed locations, a power shaft having means for operatively connecting with either the winding roll or rewind spindle, a tracker device and means controlled by said tracker device for shifting said power shaft at right angles to its axis for automatically causing the connection between the rewind spindle and power shaft and between the latter and the winding roll to be operative or inoperative.

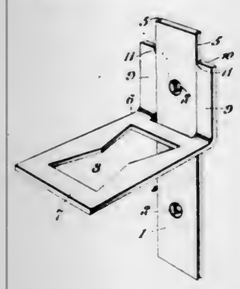
1,452,113. STONE-SURFACING MACHINE. FRED J. GOULD, Springfield, Mass. Filed Oct. 3, 1919, Serial No. 328,112. Renewed Nov. 28, 1922. 4 Claims. (Cl. 51—90.)

1. In a stone surfacing machine, a frame, a common drive shaft, a pair of shafts driven therefrom, rotary surfacing heads mounted on said shafts, rotary surfacing implements mounted on said heads, a pair of hollow shafts sleeved about said first-named pair of shafts, gearing between said hollow shafts and the arbors of said rotary surfacing implements for rotating said implements independently of the rotation of said heads, a shaft disposed between said pair of shafts and driven from said common drive shaft and gearing between said intermediate shaft and said hollow shafts.



1,452,114. DIRECTION INDICATOR FOR AUTOMOBILES AND OTHER VEHICLES. JOHN OSCAR GAENIER, Vancouver, British Columbia, Canada. Filed Dec. 24, 1921. Serial No. 524,731. 2 Claims. (Cl. 116—39.)

1. A direction indicator comprising an elongated tubular casing having one end closed and provided with an air inlet, a piston having a sliding fit in said casing and adapted to be moved toward the open end of the casing by the air admitted into the latter, a pointer carried by the piston adapted to be concealed within the casing in the retracted position of the piston, and means for limiting the movement of the piston toward the open end of the casing comprising a roller mounted in the casing adjacent the closed end thereof, and a web wound on the roller and having its free end attached to the said piston.

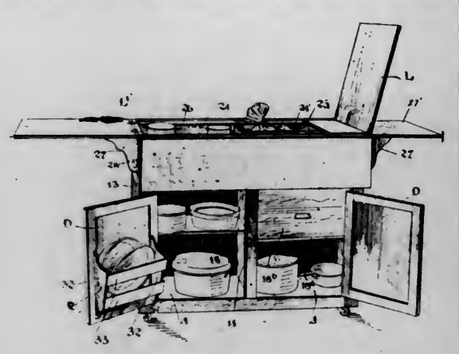


1,452,115. DIMMING MECHANISM. ALFRED HERZ, Chicago, Ill., assignor, by direct and mesne assignments, to Electric Auxiliaries Company, Dover, Del., a Corporation. Filed July 24, 1916. Serial No. 110,953. 28 Claims. (Cl. 219—49.)

1. In combination an inductance coil, a plug mounted on one end of said coil, said plug comprising a core of insulating material having a grooved bore therethrough, a switch mounted on the other end of said inductance coil, said switch having a block of insulating material having a

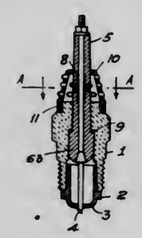
grooved bore therethrough and a bolt having flat portions engaging said grooved bore and preventing said core from turning.

1,452,116. DOOR AND WINDOW BUCK. JOSEPH H. HEUE, Carroll, Iowa. Filed Dec. 15, 1921. Serial No. 522,484. 4 Claims. (Cl. 72—101.)



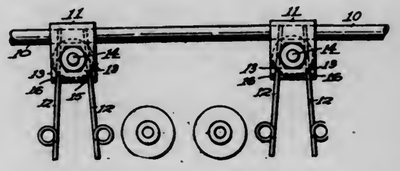
1. A device of the class described, an attaching plate adapted to be secured to the outer faces of the side members of a door or window frame in longitudinal alinement therewith, in combination with a lock plate adapted to be embedded in the motar between the courses of brick or other material of the wall having the frame, said lock plate having a pair of perpendicularly disposed arms at one end spaced apart a distance to receive the attaching plate between the same, whereby said plates are secured together against lateral movement.

1,452,117. CONVERTIBLE FURNITURE. LORA ELLA HOLMES, Moultrie, Ga. Filed Sept. 16, 1922. Serial No. 588,690. 2 Claims. (Cl. 45—16.)



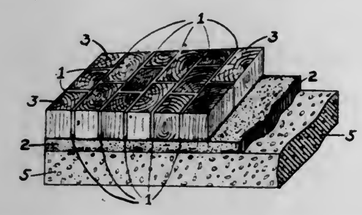
2. A cabinet including a structure adapted to form a compartment at its upper end having two opposing ends open and also the top open, a pair of drawers slidable within said compartment, one being slidable within each end thereof, a lid hinged to each end of the cabinet and adapted to be folded inwardly for forming a top closure for said compartment, and a board slidable within longitudinal

guideways formed in the opposing walls of said compartment and operating beneath the hinged point of said lids and adapted to be extended from the one end of said cabi-



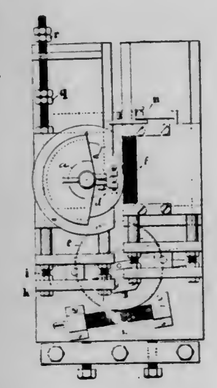
net and also adapted to be pushed within the cabinet to form a partial top closure for the compartment therebeneath.

1,452,118. SPARKING PLUG FOR INTERNAL-COMBUSTION ENGINES. HERBERT FLEETWOOD HOLWORTHY, Salop, England. Filed Aug. 9, 1920. Serial No. 402,180. 1 Claim. (Cl. 123—169.)



1. A spark plug for internal combustion engines comprising a hollow body portion one end thereof being constructed for attachment to an engine and the other end to maintain a dome, a dielectric comprising two members which are insulated one from the other, an electrode which extends through and beyond the dielectrics, a dome associated with the base and with one of the dielectrics to serve as a brace therefor said dome surrounding the jointure between the dielectrics and having therethrough orifices which are overlaid by outward projecting concavo-convex open-ended projections.

1,452,119. QUILLER-WIRE HOLDER. LEWIS T. HOUGHTON, Worcester, Mass. Filed June 12, 1922. Serial No. 567,622. 3 Claims. (Cl. 242—157.)

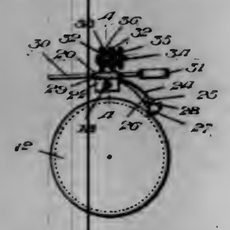


1. In a quiller wire support, the combination with a U-shaped bracket for receiving a supporting rod between its flanges, of a pair of quiller wires having ends, one end of each extending along one flange toward the rear thereof, a rod lying over said ends and means spaced from the rod and between the rod and the eye-ends of said wires for forcing the rod against the wires to clamp them together.

1,452,120. COMPENSATING FILLER FOR BLOCK PAVING. RICHARD LAMB, New York, N. Y.; Sarah E. Lamb, executrix of said Richard Lamb, deceased, assignor to Sarah E. Lamb. Filed Mar. 11, 1920. Serial No. 365,091. 8 Claims. (Cl. 94—18.)

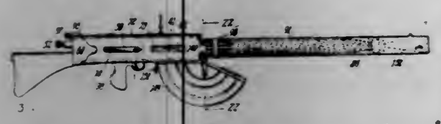
1. The combination with paving blocks, of a support therefor, and a filler between adjacent blocks composed of an intimate mixture of colloidal agents, argillaceous sand and clay in such proportions that the filler will be solid and hard when dry and soft and yielding when wet.

1,452,121. APPARATUS FOR CUTTING TOOTHED GEARS. FRANK MICHAEL LEWIS, London, England. Filed Aug. 23, 1920. Serial No. 405,332. 8 Claims. (Cl. 90—4.)



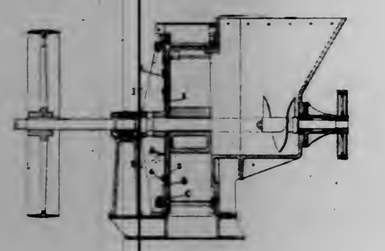
2. Apparatus for forming toothed gears comprising a blank holder, a slide supporting said blank holder, a roller member on said slide, a second slide having a track thereon engaging said rolling member, a cutter adapted to rotate across the face of the blank and means for varying the relative speeds of movement of said slides.

1,452,122. RECORDER. WILLIAM N. MCCONNEL, Milner, Idaho. Filed Apr. 12, 1921. Serial No. 460,722. 4 Claims. (Cl. 234—10.)



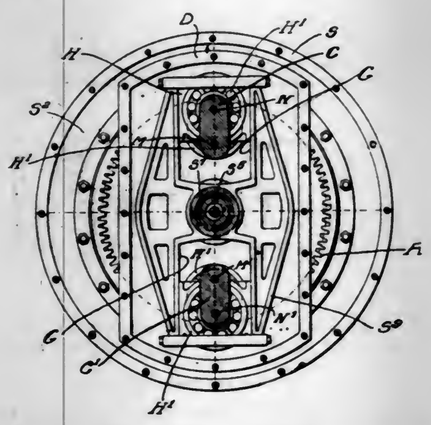
1. In a recording device, a rod, a carrier bent from sheet metal having end portions extending at an angle and fitted on said rod for sliding and turning movements, said carrier having a bent portion forming a split sleeve, an arm extending from the carrier to one side of the rod

for supporting a marking element to bear on a chart, means for moving said carrier along said rod, and a rod



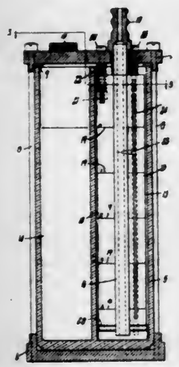
frictionally gripped in said sleeve for transverse adjustment relatively to the aforesaid rod and having a weight to press the arm toward said chart.

1,452,123. MACHINE GUN. JOHN C. R. MCCRUDDEN, Hurstville, near Sydney, New South Wales, Australia. Filed June 19, 1920. Serial No. 390,153. 10 Claims. (Cl. 89—3.)



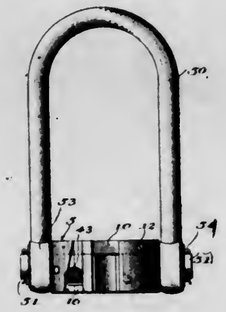
1. A machine gun having a recoilable barrel, a carriage attached to said barrel as a rearward extension thereof and axially slidable therewith, a body casing surrounding said carriage, an axially sliding bolt, a withdrawable master pin mounted in the rear end of said bolt and serving as an abutment therefor, a drop down latch for said bolt housed in said carriage said latch being automatically opened in the recoil movement of the carriage and automatically closed in the forward return movement thereof, trigger mechanism mounted in the body casing, means for automatically cocking and firing the gun engageable by said trigger mechanism, and means for varying the rate of fire during action.

1,452,124. DRUM ROOT CUTTER WITH A HORIZONTAL AXIS. ABEL MAGUIN, Paris, France, assignor to Societe Nouvelle des Etablissements Alfred Maguin, Aubervilliers, Seine, France. Filed Nov. 20, 1922. Serial No. 602,268. 2 Claims. (Cl. 146—11.)



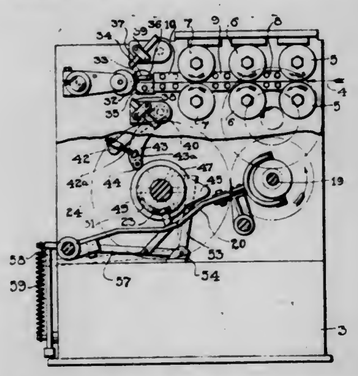
1. In a horizontal drum-shaped root cutter the combination of a stationary disc and a rotary member, the rotary member having a radial slot and a hole arranged diametrically opposite said slot, said slot being adapted for the purpose of enabling the stationary disc to be scraped, whilst the hole serves for the removal of material which is collected between the stationary disc and the rotary member and for the injection of a cleaning liquid.

1,452,125. INTERNAL-COMBUSTION ENGINE. JOSÉ FONS PONT, Barcelona, Spain. Filed Dec. 9, 1919. Serial No. 343,650. 4 Claims. (Cl. 123—11.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In an explosion motor of the described type, two sets of pistons revolving in the interior of an annular chamber or casing, two rings upon which are fixed respectively the pistons of each of the two sets, two crossheads connected respectively to said two rings, a toothed ring, and revolving pinions meshing with said toothed ring, said pinions having each, two points or cranked portions diametrically opposite one another connected directly and respectively to the two cross-heads.

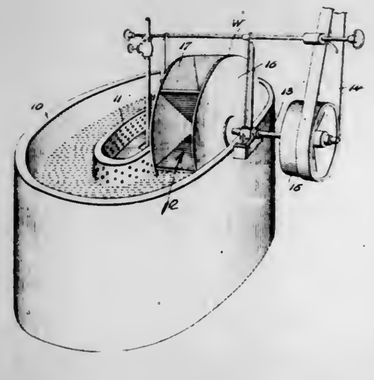
1,452,126. PRESSURE GAUGE. WILLIAM A. READY, Brookline, Mass., assignor to National Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Jan. 10, 1921. Serial No. 436,160. 10 Claims. (Cl. 73—31.)



1. A gauge having, in combination, a container for liquid, a vertical tube of transparent material located in said container and open at its opposite ends, the lower end of said tube terminating adjacent to the bottom of said container and spaced apart therefrom, means to connect the upper end of said tube to a source of pressure and a vertical scale wholly within said container adjacent to said tube.

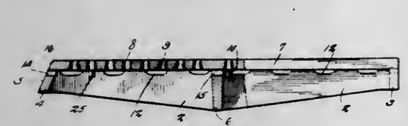
1,452,127. ROD ELEVATOR. CHARLES E. SITZMAN, Taft, Calif. Filed Jan. 9, 1922. Serial No. 527,046. 3 Claims. (Cl. 294—91.)

1. A device of the character specified comprising a body having a centrally arranged opening and a radial slot forming a means whereby a rod may be inserted into said centrally arranged opening, a latch arm pivoted to said body and extended across said slot, said latch arm having its forward portion provided at one side with a recess, the bottom wall of said recess being formed with a socket, and a trigger pivoted intermediate its ends to said body and having its upper portion provided with a pin adapted to be received within said socket, and a thumb piece connected to the lower portion of said trigger.



1,452,128. SPRING-COILING MACHINE. FRANK H. SLEEPER, Worcester, Mass., assignor to Sleeper & Hartley, Inc., Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 18, 1921. Serial No. 453,279. 4 Claims. (Cl. 153—64.)

1. In a spring coiling machine, the combination with wire feeding devices, coiling tools, a wire severing device, and means for automatically interrupting the operation of the feeding devices and for operating the severing device after a predetermined length of wire has been coiled, of means for manually rendering the wire feed interrupting and severing devices inoperative to permit the coiling of any desired length of wire.

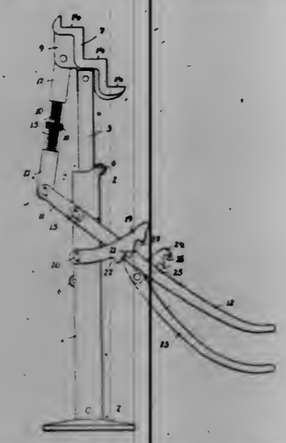


1,452,129. DYEING MACHINE. FRANCIS C. W. STELTER, Astoria, N. Y. Filed June 16, 1921. Serial No. 478,103. 2 Claims. (Cl. 8—19.)

2. In a dyeing machine, in combination, a tank comprising spaced parallel inner and outer walls of substantially elliptical form and adapted to hold between them a body of dye liquor containing articles to be dyed, and a paddle wheel for moving the dye liquor and articles floating or contained therein in a substantially elliptical path between the walls of the tank, said paddle wheel

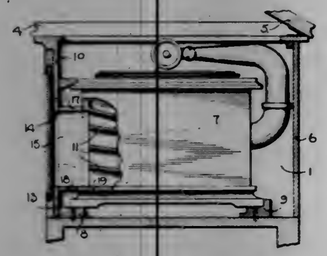
being substantially half submerged in the liquid and comprising a plurality of radial blades extending from the periphery to the axis of rotation and having a disc secured to each side thereof, the diameter of which is substantially equal to the diameter of the paddle wheel.

1,452,130. GRATE BAR. WILLIAM AUGUST VIETOR, Eureka, Calif. Filed Oct. 19, 1922. Serial No. 595,594. 1 Claim. (Cl. 126—168.)



In a device of the class described, a bearing bar comprising sides, ends, and a partition connecting the sides, and a top plate resting on the bearing bar and extended in a single length from one end of the bar to the other, the top plate having openings disposed out of alinement with the sides, the ends, and the partition, the top plate being supplied with depending lugs cooperating with the bearing bar to limit the movement of the top plate, the lugs being spaced from the bearing bar sufficiently so that the top plate can expand and contract, the bearing bar being provided in its upper edge with air-admission notches, one end of the bearing bar being downwardly and outwardly inclined, and the corresponding end of the top plate being inclined to cooperate with the slope of said end of the bearing bar.

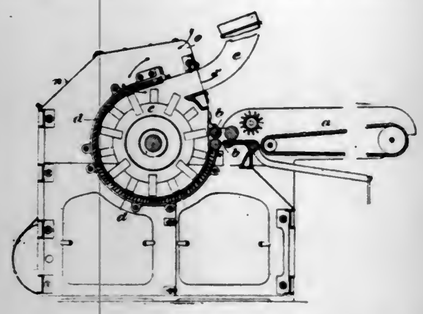
1,452,131. AUTO JACK. FREDERICK E. WALDEN, Worcester, Mass.: Grace E. Walden executrix of said Frederick E. Walden, deceased. Filed Aug. 3, 1920, Serial No. 401,012. Renewed Sept. 15, 1922. Serial No. 588,481. 4 Claims. (Cl. 254—116.)



1. An auto-jack comprising two telescopically disposed members, one having a base and the other a stepped axle-engaging device, a lever pivoted to the member provided

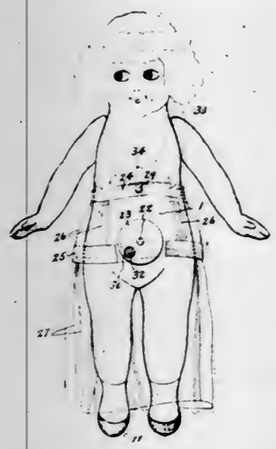
with a base, an internally threaded thimble pivoted to the short arm of said lever, an internally threaded thim-

ble pivoted to the stepped device, a right and left hand screw turning in said thimbles, and means for turning said screw.



1,452,132. PHONOGRAPH CABINET. JOHN B. WEEKS, Hanover, Pa., assignor to Long Furniture Company, Hanover, Pa., a Corporation of Pennsylvania. Filed Nov. 8, 1922. Serial No. 599,648. 3 Claims. (Cl. 45—52.)

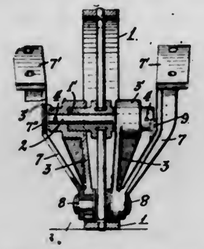
3. The combination with a cabinet having a compartment of a sufficient size to receive a talking machine, said compartment having an open front and an open back, the machine being inserted within the compartment through the open back, a front wall extending across the top of the open front and a door for closing the open front of the hereindescribed attachment, comprising a front panel fitting flush within and filling the space at the open front below the front wall, said panel having a central opening of a size and shape to expose the slats of the talking machine, and strips extending inwardly from the panel at the said opening and engaging with the front of the talking machine, said strips defining a passage for the musical sounds issuing from the machine.



1,452,133. MACHINE FOR OPENING AND CLEANING COTTON AND OTHER FIBROUS MATERIALS. HENRY WILKINSON, Oldham, England, assignor of one-half to Platt Brothers and Company Limited, Oldham, England. Filed Dec. 28, 1921. Serial No. 525,414. 3 Claims. (Cl. 19—95.)

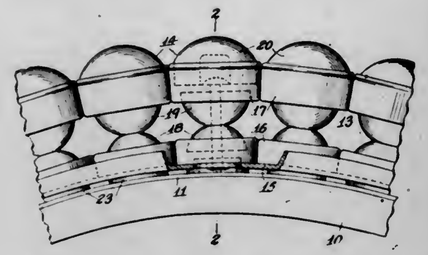
2. In machines having a down stroke porcupine cylinder, used for opening and cleaning cotton and other fibrous materials, the combination with such cylinder of cleaning bars arranged to commence at the feed rollers of the machine and to extend around three quarters of the circumference of the cylinder, the grid bars for the final quarter of the circumference being arranged at an

opposite angle to the other portion of the grid bars, to provide an outlet for the fibre on the same side as and above the feed, and having an air opening at the top of the casing of the machine substantially as described.



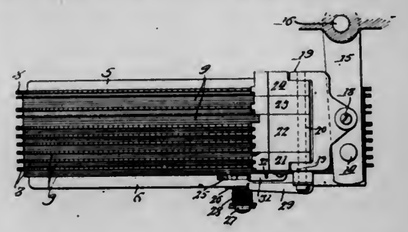
1,452,134. MECHANICAL DOLL. DAVID ZAIDEN, East Orange, N. J. Filed Mar. 13, 1922. Serial No. 543,214. 10 Claims. (Cl. 46—40.)

1. In a doll, the combination with the doll body of a spring motor mechanism within said body, a spindle rotated by said motor mechanism having a portion projecting exteriorly from the front of said body, a crank device on the exterior end of said spindle, and a costume with which said doll body is clothed, a portion of said costume being directly attached to said crank device whereby motion is imparted thereto.



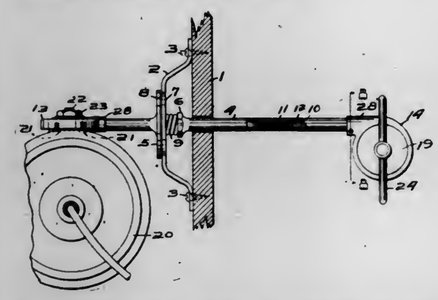
1,452,135. LOAD-SUPPORTING CONNECTION FOR WHEELED STRUCTURES. ORA L. ADAMS, Berkeley, Calif. Filed Nov. 21, 1921. Serial No. 516,601. 4 Claims. (Cl. 280—58.)

1. In a wheeled-vehicle and in combination with its wheel and body frame, a load-carrying connection comprising an axle for the wheel; a swinging link depending from said axle; a hanger carrying at its upper end the body-frame and at its lower end pivotally connected



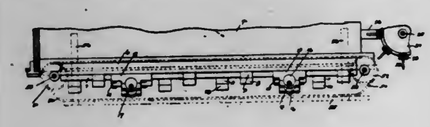
with the lower end of the link, and a stop on said hanger coacting with the head of the link to limit the return movement of the hanger.

1,452,136. TIRE CONSTRUCTION. ALFRED ANCIDONI, Newark, N. J. Filed Apr. 18, 1922. Serial No. 555,287. 15 Claims. (Cl. 152—9.)



6. A tire of the class described composed of a plurality of resilient units mounted in a circumferential path, said units each being composed of a plurality of resilient members, means for coupling said members together, a suitable mounting for said units, said mounting constituting a rim for the tire and being adapted to be mounted upon the felly of a wheel, means for supporting one of said resilient members of each unit in connection with said rim, another of said resilient members of each unit constituting a tread member, and another resilient member in each unit intermediate of said first named members.

1,452,137. PATTERN-CONTROL MECHANISM FOR KNITTING MACHINES. VIGGO W. ANDERSEN, Rockford, Ill., assignor to Burson Knitting Company, Rockford, Ill., a Corporation of Illinois. Filed Mar. 22, 1920. Serial No. 367,915. 2 Claims. (Cl. 66—28.)

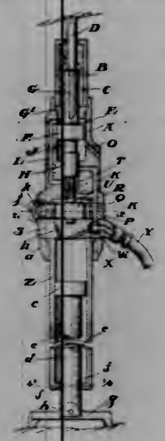


1. In a pattern control mechanism for knitting machines, the combination of a counting plate having peripheral teeth, a pawl carrier, means for reciprocating said carrier, a pair of concentric star wheels mounted to revolve in unison, one having peripheral teeth of the same length as those on said counting plate and the other having peripheral teeth of greater length, pawls on said carrier, one for engaging said counting plate and one each for said star wheels, and means operated by the pawl engaging the second mentioned star wheel for moving the counting plate pawl into and out of operation.

1,452,138. LAMP BRACKET. WALTER CHARLES BAER, Toledo, Ohio. Filed Sept. 27, 1920. Serial No. 413,212. 4 Claims. (Cl. 240—7.)

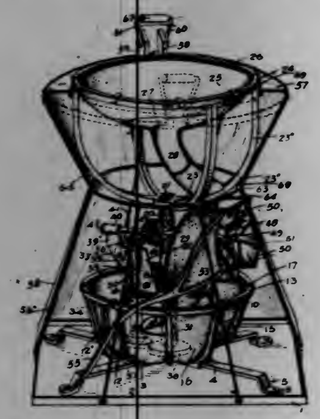
4. In an adjustable bracket, a rotatable supporting member, a pair of rotative members supported by the first named member and in tangential relation to the axis of the supporting member, a flexible member extending through and in tangential relation to and confined by the first named rotatable member and located substantially in the axis of rotation of the first named rotatable member, and interconnecting the last mentioned rotative members to produce rotation of one of the last mentioned rotative members by the endwise pressure or pull of the flexible member produced by the rotation of the other of the last named rotative members.

1,452,139. MANURE SPREADER. JAMES G. BAILEY, Delavan, Ill., assignor to Rotary Spreader, Mason City, Ill., a Corporation of Illinois. Filed Mar 31, 1922. Serial No. 548,330. 7 Claims. (Cl. 275—5.)



5. In a manure spreader, in combination with a vehicle body, of a feeding means including a plurality of longitudinally disposed boards arranged side by side, alternate boards constituting one of a set or series of boards, means for moving each set or series of boards alternately to the other set or series of boards, and an endless feeder embracing said sets or series of boards and moved by contact of the sets or series of boards therewith.

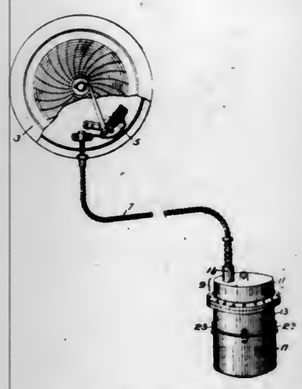
1,452,140. AIR-FEED CONTROL FOR ROCK DRILLS. LEWIS C. BAYLES, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 23, 1921. Serial No. 471,903. 7 Claims. (Cl. 121—5.)



7. In a rock drill of the hammer type, the combination of rifle bar rotation for the drill steel having a ratchet ring adapted to move upon increase of the resistance to rotation, means for feeding the machine for-

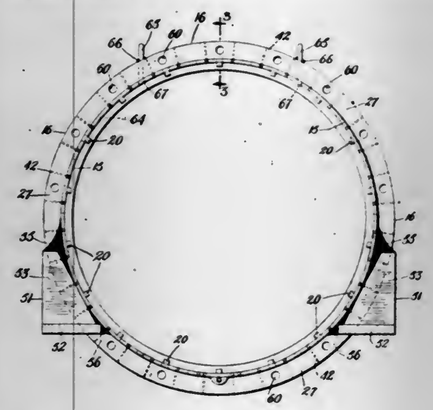
ward, a stop on the ratchet ring, and a valve mounted adjacent the ratchet ring and actuated by said stop, said

valve controlling the feeding means, whereby the feed is automatically regulated in accordance with the resistance to rotation.



1,452,141. HEN'S NEST. ERNEST ARTHUR BAXTER, St. Paul's, Ontario, Canada. Filed Sept. 9, 1922. Serial No. 587,128. 4 Claims. (Cl. 119—48.)

1. A hen's nest comprising a vertical stud, a nest proper having a central egg discharge orifice, means for resiliently supporting the nest proper upon the aforesaid stud, an annular egg receiver, means for rotating the receiver by a step by step movement by each depression of the nest upon the stud, and means for depositing the eggs transferred from the nest proper so as to fall successively into the egg receiver.

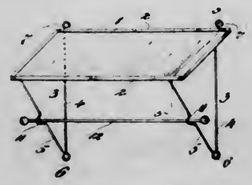


1,452,142. LIQUID HEAD GAUGE. EDGAR H. BRISTOL, Foxboro, Mass., assignor to The Foxboro Company, Foxboro, Mass., a Corporation of Massachusetts. Filed Apr. 22, 1919. Serial No. 291,940. 9 Claims. (Cl. 73—54.)

1. In a device for measuring the head of liquids, an instrument having a pressure-operated device, a pipe extending therefrom, a casing into which said pipe opens and means providing a pair of connected liquid-containing

wells, one opening to the casing and the other exposed for pressure of a liquid head thereon.

1,452,143. DYNAMO FRAME AND METHOD OF FORMING THE SAME. JAMES BURKE, Erie, Pa., assignor to Burke Electric Company, a Corporation of Pennsylvania. Filed Nov. 6, 1919. Serial No. 336,211. 9 Claims. (Cl. 172—252.)



1. The process of forming a frame structure for a rotary electrical machine comprising forming a cylindrical body portion by bending flat strips of metal stock, forming annular disk portions by welding together segments formed from flat metal stock and welding to said cylindrical body portion, reinforcing said frame by filling cement material in between said disk portions and thus uniting and binding said metal parts, and securing axially extending cross bars to the interior surface of said cylindrical body portion for receiving and positioning the laminæ.

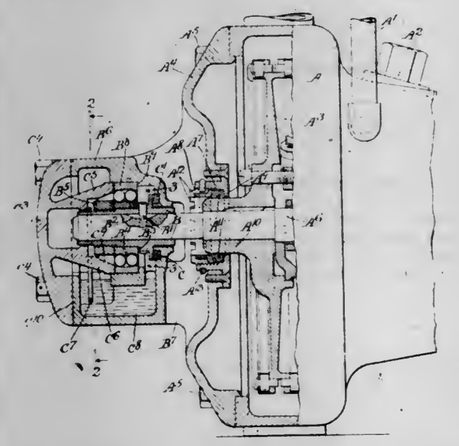
1,452,144. COMBINED SHELF AND BRACKET. ARVID F. CARLIN, New York, N. Y. Filed May 17, 1920. Serial No. 381,975. 2 Claims. (Cl. 45—55.)

1. A bracket shelf comprising a plate of sheet metal having the edge bent to form a bead on the upper portion with the margin projecting downwardly below the plate,

a pair of brackets each composed of a rod looped at the middle portion to form an eye, one upright arm projecting upwardly with the end portion bent to form an eye and the extremity bent laterally, the plate having apertures in the projecting flange to receive said bent ends,

the other arm of each bracket being inclined and extending forwardly at an angle to said upright arm with the end portion bent to enter an apertured portion in the said bead, whereby said brackets can support the shelf at each end by fastening means passed through said brackets, and can also fold against the plate.

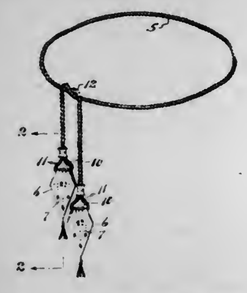
1,452,145. APPARATUS AND METHOD FOR CARRYING OUT CATALYTIC OXIDATION OF AMMONIA WITH OXYGEN. IVAR WALFRID CEDERBERG, Berlin, Germany. Filed Mar. 14, 1922. Serial No. 543,770. 4 Claims. (Cl. 23—1.)



1. An apparatus for carrying out catalytic oxidation of ammonia with oxygen, comprising a flow vessel in which there is a catalyst zone, and a catalyst in said zone the concentration of which catalyst increases from the inlet end towards the outlet end of the vessel.

1,452,146. VALVE CAP. WILLIAM H. CONROY, Cheboygan, Mich. Filed Aug. 18, 1922. Serial No. 582,636. 7 Claims. (Cl. 152—12.)

6. A cap for the valve stems of pneumatic tires comprising a recessed body portion internally threaded adjacent the open end of its recess for application to the threaded end of the stem, a compressible packing element within the recess immediately inside the threaded portion, a concavo-convexed pressure plate having its peripheral portion engaging the corresponding portion of the inner side of the packing element, a screw threaded through the end of the body portion opposite the open end of its recess, said screw having a head engaging the convexed side of the pressure plate, and a thumb nut applied to the outer end of the screw by means of which the screw may be rotated thereby to depress the pressure plate and compress between its peripheral portion and the opposed end of the valve stem the aforesaid packing element.



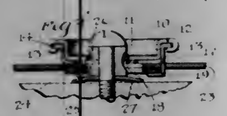
1,452,147. PACKING FOR STEAM TURBINES. CHARLES W. DAKE, Chicago, Ill., assignor to The Pyle-National Company, Chicago, Ill., a Corporation of New Jersey. Original application filed June 21, 1918, Serial No. 453,991. Renewed Mar. 21, 1921. Patent No. 1,377,755, dated May 10, 1921. Divided and this application filed Mar. 10, 1919. Serial No. 281,890. 5 Claims. (Cl. 286—7.)

3. A bearing packing gland comprising a ring threaded about a part of its exterior and of reduced exterior diameter about the unthreaded portion of its exterior, a plurality of slots across one of its ends and a plurality of exterior grooves in register with said slots and extending throughout a part of the exterior length of the ring, the surface of the other end of said ring inwardly inclined.

4. A bearing cover stuffing box comprising a cylinder threaded throughout a portion of its interior, channeled about one end of its outer circumference and carrying at one end a radial flange extending outwardly and inwardly from its interior and exterior surfaces.

1,452,148. GIRDLE FOR WOMEN'S APPAREL. OTTO DAVID, Far Rockaway, N. Y. Filed Mar. 9, 1922. Serial No. 542,251. 4 Claims. (Cl. 241—8.)

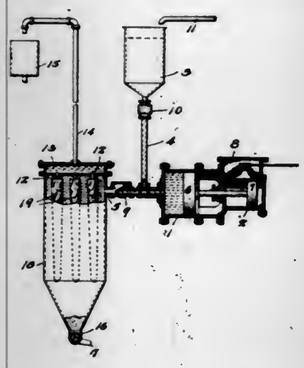
1. An article of wearing apparel in the form of a girdle for exterior wear and adornment, consisting of a flexible



main body portion adapted for tying about the waist of the wearer so as to provide pendant free ends, and ornamental terminal portions provided with means forming pocket spaces therein, said terminal portions being attached to said pendant free ends of said main body portion so as to hang therefrom.

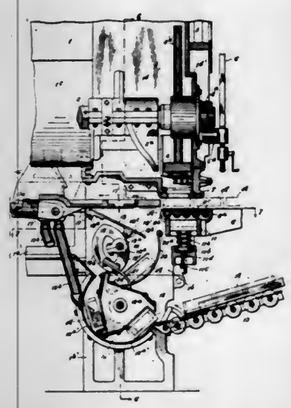
1,452,149. LOG-CARRIAGE-OFFSETTING MECHANISM. SAMUEL ERB, Tacoma, Wash. Filed May 28, 1921. Serial No. 473,346. 2 Claims. (Cl. 143—111.)

1. The combination with a pair of wheeled axles movable in reverse directions along guide rails, a carriage mounted for lateral shifting on the axles, a cable extended about wheels alined parallel with the rails and friction means for retarding movement of the cable, of stop toggle mechanisms connected with said axles, each comprising inner and outer members and a hinge pin connecting said members, the inner toggle members having pivot pin connections with the carriage frame and the outer members having pivotal connection with the axles, and actuating links for the toggles having their inner ends mounted on the connecting pivot pins of the toggle members and outer ends connected with the cable and adapted to open and close the toggles by connection with the hinge pins thereof.



1,452,150. FASTENER FOR VEHICLE CURTAINS. CHARLES J. FOSTER, Higby, and ROBERT D. SIMPSON, Columbus, Ohio. Filed Mar. 22, 1922. Serial No. 547,349. 3 Claims. (Cl. 24—211.)

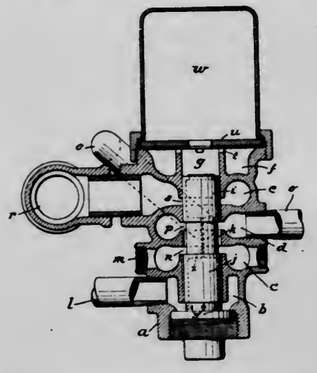
1. In a device of the character described the combination of the following elements: a post adapted to be attached to a vehicle and provided with sections adapted to receive a fastener, and a fastener adapted to engage with said post and comprising means for attachment to a vehicle curtain, a fixed disk member, a disk member adapted to rotatably move on said fixed member, openings in said fixed and rotatable disk member, said openings being adapted when in register to receive the said post and when out of register to cause the said fixed and rotatable disk members to lock securely on the said post.



1,452,151. CONTINUOUS THICKENING PROCESS. ALBERT LEGRAND GENTER and GEORGE CAMBELL, JONES, Salt Lake City, Utah, assignors, by direct and mesne assignments, of one-half to The General Engineering Company, Salt Lake City, Utah, a Corporation of Utah, and one-half to Albert L. Genter, Salt Lake City, Utah. Filed Feb. 19, 1918. Serial No. 218,140. 5 Claims. (Cl. 210—182.)

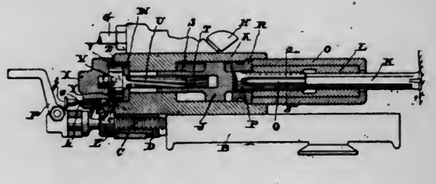
1. The process of filtering and thickening the mixture being filtered within a container with which the mixture to be filtered and the filtrate are continuously in contact with opposite sides of the filter medium, consisting in subjecting the mixture to be filtered to positive pressure which acts against one side of the filter medium intermittently, and, in alternation therewith, permitting the

hydrostatic back pressure of the filtrate to exert the cleansing action against the other side of the filter medium by relieving the pressure on the unfiltered mixture.



1,452,152. BRICKMAKING APPARATUS. HENRY W. B. GRAHAM, New London, Ohio; Margaret Graham, executrix of said Henry W. B. Graham, deceased; said Henry W. B. Graham, assignor to The Arnold Creager Company, New London, Ohio, a Corporation of Ohio. Filed Sept. 5, 1918, Serial No. 252,681. Renewed May 25, 1922. Serial No. 563,674. 29 Claims. (Cl. 25—48.)

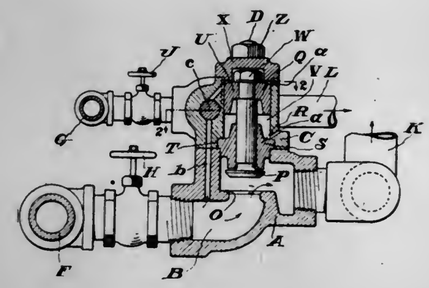
1. In apparatus of the class described, the combination with a brick machine having a filling station and a mold push out, of means for moving empty molds into position for feeding to said filling station, said means including a swingable receiver adapted to support a mold in position for engagement by said push-out.



28. In a brick making machine, the combination of a pair of supports correlated to support molds and permit movement thereof from one support to the other, means for moving molds from one support to the other, one of said supports being pivoted whereby it may be moved to form a gap between them, and means for operating said pivoted support about its pivot to permit the delivery of a mold through the gap and the positioning of the mold on one of said supports.

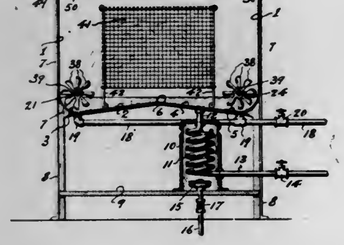
1,452,153. MILKING-MACHINE RELAY. SELDEN H. HALL, Poughkeepsie, N. Y., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 18, 1921. Serial No. 446,037. 9 Claims. (Cl. 31—101.)

1. In a milking machine relay, in combination, a source of pneumatic pulsations independent of the relay, a cylinder one end only of which is adapted to communicate with said source of pneumatic pulsations, an air chamber in communication with the other end of the cylinder, and a piston in the cylinder, there being a constantly open restricted passage affording communication between the source of pneumatic pulsations and the air chamber, the air chamber being of sufficient size relative to said restricted passage to maintain therein an approximately uniform pressure at a value substantially half way between the extremes of the pulsations.



1,452,154. ROTATION RELEASE FOR ROCK DRILLS. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, New York, N. Y., a Corporation of New Jersey. Filed July 23, 1920. Serial No. 398,372. 3 Claims. (Cl. 121—7.)

1. A rock drill of the hammer type having rifle bar rotation for the drill steel including a drill casing, a back head a rotation ratchet ring having a recess in its periphery adapted to register with a locking recess in the drill casing, a spring pressed pin carried in the back head in longitudinal alignment with the drill casing, said pin adapted to enter said recesses and engage said ratchet ring, casing and back head at a point of juncture of said ratchet ring, casing, and back head for producing positive rotation of the drill steel, but removable therefrom to release the rotation and permit slip of the ratchet ring relative to the drill casing.

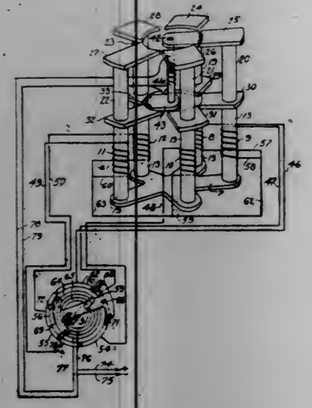


1,452,155. AUTOMATIC LIQUID VALVE. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 9, 1920. Serial No. 422,838. 5 Claims. (Cl. 137—139.)

1. An automatic valve passing both liquid and gas under pressure and adapted to shut off the flow of gas with a given drop in the pressure of the liquid, comprising a casing having separate passages for liquid and gas, a valve controlling the gas passage, a by-pass leading directly from the gas passage to the valve, a pilot valve controlling said by-pass, means on said pilot valve

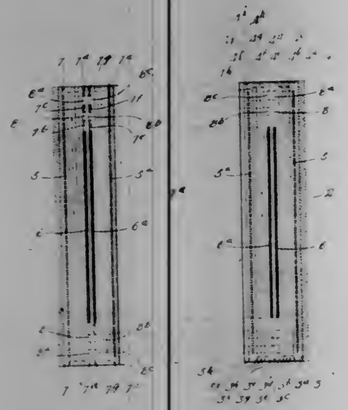
adapted to form a part of the by-pass, said pilot valve being subjected to the pressure of the liquid, and means for automatically opening the by-pass and causing the said gas valve to close when the pressure of the liquid drops to a predetermined amount.

1,452,156. DISHWASHING MACHINE. ANDREW L. HATFIELD, Hillside, N. J. Filed Nov. 7, 1919. Serial No. 336,268. 2 Claims. (Cl. 141—9.)



1. In a dish-washing machine, the combination with a tank having trough-like depressions extending along two sides of its bottom interior, a shaft extending through said tank above each trough like depression; radial dasher members mounted on each shaft and relatively set to form a helical line of the same along each shaft, the dasher members of one shaft being set thereon to operate in successive alternate relation to the opposing corresponding dasher members of the other shaft, means for supporting dishes within said tank intermediate said shafts and their dasher members, and means for rotating said shafts in opposite directions to dash water from said trough-like depressions upwardly and over said dish-supporting means and its contents.

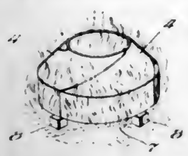
1,452,157. INDICATOR MOTOR. CHARLES J. HENSCHEL, Brooklyn, N. Y. Filed Sept. 18, 1920. Serial No. 411,067. 6 Claims. (Cl. 172—239.)



1. An indicator motor provided with an armature having two pole pieces and a winding designed for energization from a remote source of current intermediate the pole pieces to confer a polarity on one of the pole pieces

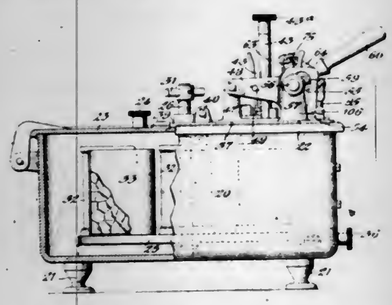
and the opposite polarity on the other, several field members for the armature, each provided with two pole

pieces and winding designed for energization from a remote source of current at one end of each field member to confer similar polarity on both of its pole pieces.



1,452,158. TRANSFORMER. SAMUEL HORELICK, Pittsburgh, Pa., assignor to Pittsburgh Transformer Company, a Corporation of Pennsylvania. Filed July 21, 1921. Serial No. 486,636. 8 Claims. (Cl. 175—356.)

1. A transformer coil comprising windings, circumferentially extending sheets of insulating material between portions of said windings, and axially extending insulating strips spaced from each other between said sheets and windings, certain of said strips extending nearer the end of the coil structure than other intermediate strips.

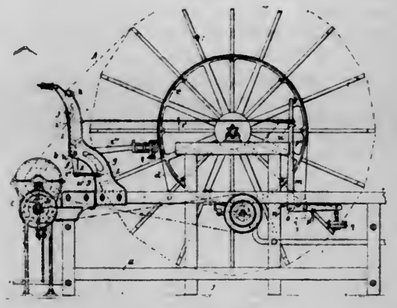


1,452,159. PACKAGING ROD PACKING IN COMBUSTIBLE MATERIAL FOR UNSWEATING THE SAME. GEORGE C. JEROME, Chicago, Ill. Filed May 1, 1922. Serial No. 557,536. 6 Claims. (Cl. 206—47.)

1. In a package, the combination of a metallic packing formed of sections having means for temporarily causing them to adhere together as a unitary structure, and a quantity of fuel adapted to cause the structure

to separate into its component parts by complete combustion of the fuel without injury to the packing.

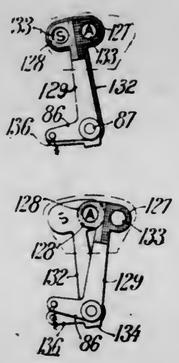
1,452,160. BUTTER-BLOCKING MACHINE. EUGENE W. KNOWLTON, Buffalo, N. Y., assignor to John E. Smith's Sons Company, Buffalo, N. Y., a Corporation of New York. Filed Sept. 30, 1920. Serial No. 413,698. 17 Claims. (Cl. 31—65.)



1. A machine of the character described, comprising a casing, a table rotatably mounted therein and having radial notches adjacent to the periphery thereof, butter containers arranged on said table and open at either end, an ejecting device adapted to co-operate with each container for intermittently discharging butter therefrom, and a retractible stop arranged radially of said table and adapted to engage said notches to properly position each container in alinement with said ejecting device.

3. A machine of the character described comprising a casing, a butter container arranged in said casing and having a discharge opening, an ejecting device for expelling butter through said opening, means for actuating said ejecting device, a cutter movable transversely of the discharge opening, a rock shaft having rock arms one of which carries the cutter, a vertically-movable plunger operated by said actuating means, a vertically oscillating bell crank lever, a link connecting one arm of said lever with said plunger, and a horizontally disposed link connecting the other arm of said lever with the other of said rock arms.

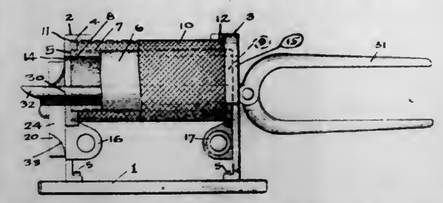
8. A machine of the character described, comprising a casing, a butter container arranged in said casing and having a discharge opening, an ejecting device in said container, a rock shaft journaled on said casing and carrying a coupling-pin, a plate mounted on said shaft and having a segmental slot which engages said pin, a cutter movable across the discharge end of said container, a vertically-movable member for operating said cutter, and a push rod connected to said plate for actuating said vertically-movable member, and means carried by said shaft for actuating said ejecting device.



17. An ejector for butter containers comprising a rod, collapsible piston leaves mounted on said rod and hinged on an axis at right angles thereto, and stop-arms secured to said leaves and arranged to engage said rod for limiting the collapsing movement of the leaves.

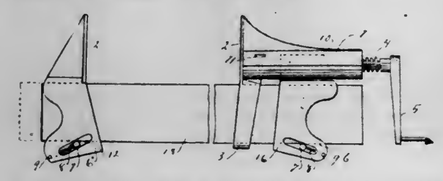
1,452,161. TENSION-CONTROLLING MEANS FOR BEAMING MACHINES. GEORGE W. KUENNETH, Paterson, N. J., assignor, by mesne assignments, to Jeannette Kuenneth, Paterson, N. J. Filed Dec. 3, 1918. Serial No. 265,128. 4 Claims. (Cl. 28—35.)

1. The combination, with the frame of a beaming machine, a reel and a beam therein, and a brake for the reel, of yielding means to exert pressure against one face of the warp between the reel and beam normally holding the brake set, and a cushioning control for said means operatively interposed between the same and the frame.



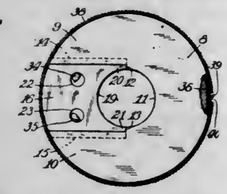
1,452,162. COMBINED TYPEWRITING AND COMPUTING MACHINE. ADOLPH G. KUPETZ, New Rochelle, N. Y., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed July 10, 1918. Serial No. 244,250. 58 Claims. (Cl. 235—60.)

1. In a combined typewriting and computing machine, the combination with a printing mechanism, of computing mechanism, multichrome ribbon mechanism, means for computing the printed numbers additively, means for computing the printed numbers subtractively, and means for indicating at a single point on the machine the type of computation and color of printing.



1,452,163. CURLING-IRON HEATER. HENRI G. LEVY, San Francisco, Calif. Filed Mar. 14, 1921. Serial No. 451,938. 3 Claims. (Cl. 219—23.)

1. A device such as described comprising an open-ended cylindrical member having a heating means connected therewith; an annular member disposed on an end of said element and normally adapted to lie eccentric with the axis of said cylindrical element; said annular member being adapted to engage an article to be heated and to position



the same substantially parallel to the axis of said cylindrical member.

1,452,164. FURNITURE CLAMP. ANTHONY MARGELIS, Grand Rapids, Mich. Filed Aug. 14, 1922. Serial No. 581,675. 3 Claims. (Cl. 144—303.)

1. In combination with a furniture clamp, a supporting bar, a movable clamping head, a yoke integral therewith and made to enfold the supporting bar, a long cylindrical body integral with said head and having a slot through one side, an anchoring body fitted upon the supporting rail and having laterally disposed slots through it at an incline from the horizontal a roller and an actuating spring connected with the body in said slots, a nut made integral with the anchoring body and positioned inside of the cylindrical body of the clamping head, an actuating screw passing through the cylindrical body and the nut for moving the clamping head longitudinally of the supporting bar, and means for preventing the screw from moving longitudinally in the body when screwing it through the nut.

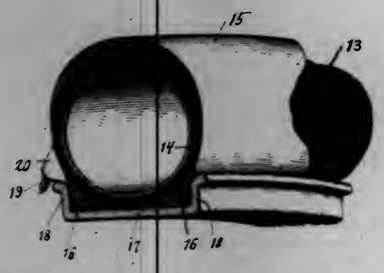
1,452,165. LOCOMOTIVE-WHEEL-HUB LINER. JOHN BAKER MICHAEL, Selma, Ala. Filed June 18, 1921. Serial No. 478,767. 10 Claims. (Cl. 64—25.)

3. In a sectional annular hub liner, the combination with a unitary main liner plate having a gap therein and a pin-hole extending from the gap, of a sectional plate inserted in the gap and having an aperture therein and also a pin-hole extending from the aperture to the pin-hole in the main liner plate, and a securing pin inserted in the pin-holes and having a head thereon arranged in the aperture in the sectional plate.

1,452,166. APPARATUS FOR DRYING CHAR. HENRY E. NIESE, Morristown, N. J., assignor to The American Sugar Refining Company, New York, N. Y., a Corporation of New Jersey. Filed June 10, 1920. Serial No. 387,823. 23 Claims. (Cl. 34—35.)

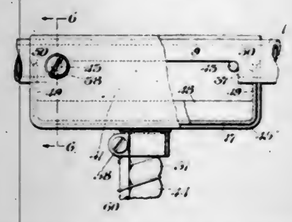
4. An apparatus for drying granular or finely divided material of the character described having a plurality of

passages for the material to be dried, a plurality of flues for drying gas extending substantially transverse to the



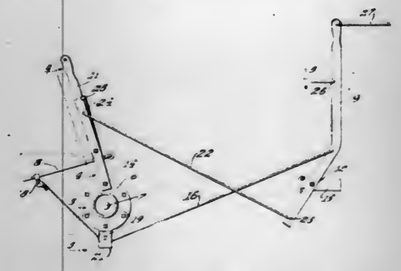
direction of flow of the material through said passages and in open communication with each of said passages, and means for supplying drying gas to said flues.

1,452,167. IGNITION COIL. HARRY R. PATTERSON, Toledo, Ohio, assignor to The Electric Auto-Lite Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 26, 1919. Serial No. 347,593. 6 Claims. (Cl. 175—360.)



1. In a device of the class described the combination of a core, a primary winding and a secondary winding wound thereon, a casing for said core and windings, comprising a member of magnetic material extending approximately around the same, a member of non-conducting material joining the adjacent ends of said casing and a high tension terminal carried by said non-conducting member.

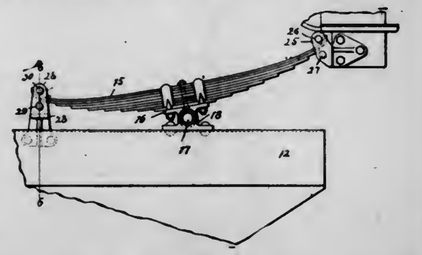
1,452,168. PNEUMATIC TIRE. HARLAN S. RECTOR, Chicago, Ill. Filed Aug. 9, 1921. Serial No. 490,943. 1 Claim. (Cl. 152—20.)



The combination with a rim of a conventional form comprising a base and side flanges of a pneumatic tire composed of a jointless single tube provided with a base fitting in and normally shaped to confrom to the base and flanges of the rim and a completely tubular carcass which permits sufficient and substantially uniform expansion throughout the base of the tire by air pressure to firmly secure the tire in the rim and against longitudinal displacement, entirely by friction produced by the pneumatic expansion of the tire against the base and flanges of the rim without localized distortion of the tire in the rim.

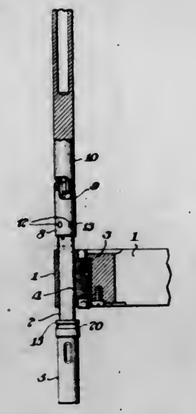
1,452,169. SYSTEM OF ELECTRICAL CONSTRUCTION. ARCHIBALD T. SAMPSON, Lynn, Mass., assignor to Sampson Axcess System, Inc., Lynn, Mass., a Corporation of Massachusetts. Filed May 7, 1917. Serial No. 166,813. 1 Claim. (Cl. 247—3.)

The improved process of electrical installation which consists in providing metallic conduits, weakening a portion of said conduit at a plurality of desired points along the length thereof, the weakened portions at such points constituting a portion of an outlet receptacle therefor, installing said conduits permanently in position in a building, placing electric wires therein, then removing any desired weakened portion without injuring or disturbing the wires contained within the conduits, making a connection between the wires in the conduit and branch wires, and adding means to complete the construction of an outlet receptacle over the portion of the conduit removed.



1,452,170. LEVER CONTROL FOR CLUTCH PEDALS. SWAN A. SANDBERG and ABEL F. JEANBLANC, Lee Center, Ill. Filed May 15, 1922. Serial No. 561,055. 6 Claims. (Cl. 74—39.)

6. The combination with the clutch pedal of a tractor, of a hand lever mounted at a forward position on the tractor, a connection between said lever and the clutch pedal for operating the latter, and means for holding said lever in a clutch-disengaging position.

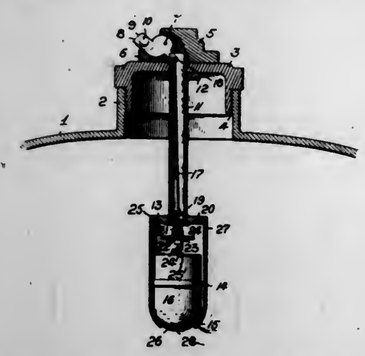


1,452,171. TRACK-LAYING TRACTOR. EDWIN H. SAVAGE, Cleveland, Ohio, assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed Feb. 28, 1921. Serial No. 448,486. 5 Claims. (Cl. 105—9.)

4. In a track laying tractor, the combination of a main frame, two endless track structures which lie on opposite sides of the main frame, load supporting connections between the main frame and each endless track structure near one end of the latter, and an independent spring suspension between the main frame and an end of each endless track structure, each of said spring sus-

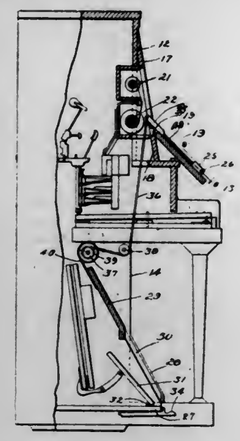
pensions consisting of a leaf spring which near its middle is secured with the endless track structure and has an operative connection at one end with the endless track structure and an operative connection at its opposite end with the main frame.

1,452,172. DRILL-SPINDLE-ADJUSTING MECHANISM. ROBERT F. SCOTT, Philadelphia, Pa., assignor to Edwin Harrington, Son & Company, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 14, 1921. Serial No. 500,578. 3 Claims. (Cl. 77—24.)



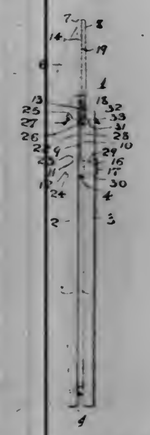
1. A drill spindle adjusting mechanism comprising a bearing, in combination with a spindle journalled therein, and means for revolving said spindle in said bearing, said spindle having a threaded end provided with a hole extending transversely therethrough, said means provided with an interiorly threaded member engaging said threaded spindle end and having a hole adapted to register with said hole first named, one of said holes having the form of a slot extending in the direction of the axis of said bearing, and a pin adapted to pass through said slot and holes aforesaid for fixing said spindle to said member.

1,452,173. LOW-WATER INDICATOR. ROYAL L. SCOVILLE, New York, N. Y., assignor to Edwin M. Rosenbluth, Wallingford, Pa. Filed Apr. 5, 1921. Serial No. 458,856. 4 Claims. (Cl. 116—118.)



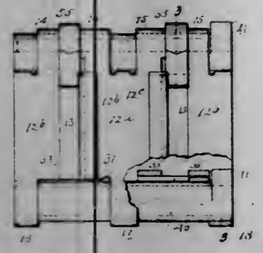
4. In a low water indicator, the combination with a radiator spout and cap, of a float located below the same and spaced therefrom, a float chamber therefor

enclosing the same, and of not much greater length than said float, said chamber having an upper and a lower opening both of which are normally below the water



level, a tube of less diameter than said chamber connecting the same to said cap an indicator on said cap and means passing through said tube connecting said float and indicator.

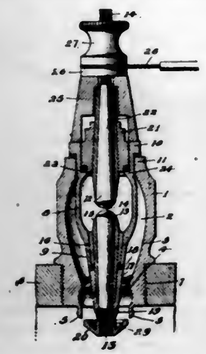
1,452,174. PLAYER PIANO. WILLIAM B. TUNSTALL, Worcester, Mass. Filed July 29, 1920, Serial No. 399,738. Renewed Oct. 14, 1922. Serial No. 594,657. 8 Claims. (Cl. 84—81.)



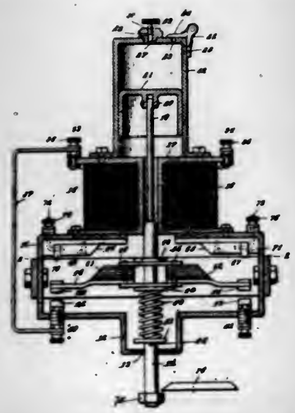
1. A player piano comprising a case including a substantially vertical case front above the keyboard, and a hood located between the ends and projecting forward from the central portion of said front, said hood having an inclined front wall which includes a hinged panel which is movable to open and close the hood, roll-carrying mechanism extending forward from the case front into said hood, and rendered conveniently accessible by its forward extension when the hood is opened, said front wall being inclined relatively to the case front and thereby adapted to serve as a music rest when the hood is closed, and manually operable means carried by said panel for controlling the operation of automatic playing mechanism within the case, said controlling means being projected from the case front by the panel, and rendered conveniently accessible, when the hood is opened, and concealed by the panel when the hood is closed.

1,452,175. FRUIT PICKER. SIMEON VAN DUYNE, Boonton, N. J., assignor to Samuel M. Doland, Boonton, N. J. Filed Apr. 8, 1922. Serial No. 550,628. 4 Claims. (Cl. 56—333.)

1. A fruit-picker comprising a pair of flexibly connected handle-members, each handle-member having a laterally extending hole, combined with a pair of frame-sections, each frame-section having a shank-portion extending along one face of a handle-member and having a part extending beyond the end of the handle-member, said shank-portion being further provided with a right-angled member disposed in the hole of the handle-member, and a second right-angled member extending along another face of the handle-member, a means of pivotal connection between the extending portions of said shank-portions, and a fruit-receiving bag having mouth-portions, said mouth-portions being secured to said projecting shank-portions.



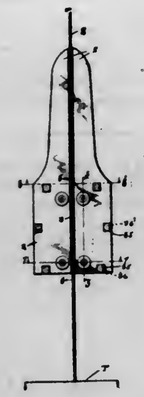
1,452,176. TRACK BELT AND UNIT THEREFOR. ROLLIN H. WHITE, Cleveland Heights, Ohio, assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed Mar. 15, 1920. Serial No. 365,776. 5 Claims. (Cl. 305—10.)



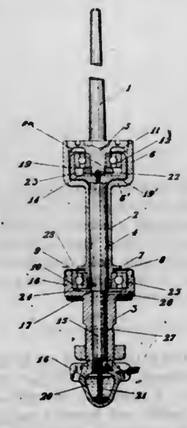
4. A sheet metal track belt, including a plurality of units, each unit comprising a top member and a bottom member spaced apart and connected together, a track portion on the top member and a pin for connecting the adjacent units together and adapted to be engaged by sprocket teeth on each side of the track portion.

1,452,177. SPARK PLUG. FRANK ARAGOSE, North Adams, Mass. Filed Apr. 2, 1920. Serial No. 370,715. 9 Claims. (Cl. 123—169.)

1. The combination with an internal combustion engine, of a spark plug extending through a wall and into the combustion space thereof, said plug being provided with spark gaps positioned one on each side of said wall and further provided with a chamber adjacent the outer gap, a restricted opening leading from said chamber and into the combustion space of said engine adjacent the inner gap, whereby the gases exploding in the outer chamber are forced through said opening with high velocity and caused to contact the electrodes of the inner gap and purge the same, substantially as described.

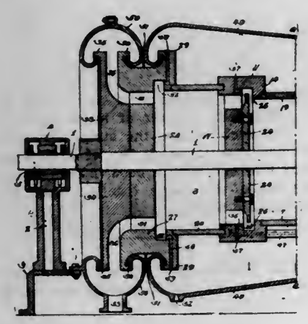


1,452,178. ELECTRIC-SIGN-FLASHING APPARATUS. ELMER L. BALLEW, Chicago, Ill. Filed Feb. 13, 1918. Serial No. 216,925. 1 Claim. (Cl. 200—90.)



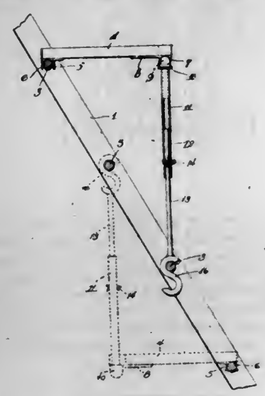
In a device of the class described, a solenoid including a coil and a core therefor, means permitting the prompt and positive movement of the core in one direction and causing the gradual return thereof to a lower position when acted upon by gravity, adjustable resilient means carried by the core, a contact making device carried by the core and under the control of the resilient device, contact members carried by said contact making device, a set of contacts with which the contacts first named cooperate when the core is drawn upwardly by the energization of the coil, additional contacts maintaining the circuit completed by the others of said contacts after the said circuit has been broken by those contacts, means for connecting the contacts with feed wires and with a load circuit, and means for completing a circuit through the coil and the feed wires when the core and contact making device moves downwardly under the action of gravity.

1,452,179. BAND-SAW GUIDE AND GUARD. FREDRICK N. BRENNER, Tell City, Ind. Filed Dec. 8, 1921. Serial No. 520,975. 1 Claim. (Cl. 143—162.)



In a saw guiding device, the combination of upper and lower pairs of rollers, the rollers of each pair being spaced for receiving and guiding a saw therebetween, a saw-back-guide mounted between the upper and lower pairs of rollers, this saw-back-guide comprising a roller having its axis at right angles to a plane coinciding with the spaces between the rollers of the upper and lower pairs, and means for supporting the saw-back-guide and for adjusting the same so as to bring different parts thereof in position to contact with the back of the saw when the latter is traveling in the space between the rollers of said pairs, said means being spring pressed in the forward direction for yieldingly resisting backward movement of the saw.

1,452,180. SPINNING SPINDLE. HAROLD E. BRUNNER, Larchmont, N. Y., assignor to The Hess-Bright Manufacturing Company, a Corporation of Delaware. Filed Nov. 14, 1919. Serial No. 337,973. 9 Claims. (Cl. 118—66.)



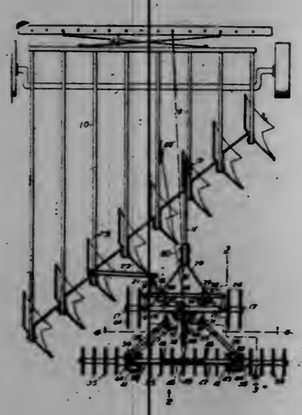
1. In a spinning spindle, the combination with a rotary blade, of a normally stationary base, a normally stationary standard carried by the base and in axial alignment with the blade, a whorl surrounding the standard and fast with the blade, the whorl having a belt receiving portion, and a pair of ball bearings comprising inner and outer rings, the inner rings whereof being mounted on the whorl above and below the belt receiving portion and the outer rings being carried by the stationary portions of the device, the said belt receiving portion of the whorl being of less diameter than the diameter of the pitch circle of the ball bearings.

1,452,181. CENTRIFUGAL AMALGAMATOR. ROLLO J. BUTLER, Tonopah, Nev. Filed June 23, 1922. Serial No. 570,356. 2 Claims. (Cl. 83—67.)

1. A centrifugal separator comprising a shaft, rotatable wheel-like members mounted on said shaft, a plurality of circular tubes connected to said members, the rims of said wheel-like members positioned in a circular housing and provided with radially distributed openings for the discharge of mercury into said housing.

1,452,182. PLATFORM LADDER JACK. CLARENCE A. BUTRUM, Holton, Kans. Filed Sept. 28, 1920. Serial No. 413,283. 1 Claim. (Cl. 304—35.)

In a ladder platform, the combination with a ladder having cross rungs, of a platform having removable spaced cleats at one end to receive one of the rungs, said platform being provided with bearing sleeves at the opposite end of the platform and having a hinge pin extending through said sleeves, elbows detachably connected with the ends of said pin, telescopic members detachably connected with the elbows and extending at right angles to said hinge pin, said telescopic members each comprising an extension sleeve and a rod, said sleeve



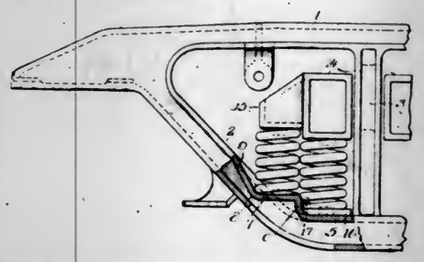
and rod in each telescopic member having openings adapted to register with each other, means for locking the extension sleeves and rods in an adjusted position, and S-shaped hooks formed integral on the free end of each of the telescopic members to engage the rungs of the ladder.

1,452,183. TATTING SHUTTLE. GUSTAV A. CARLSON, Chicago, Ill., assignor to The Boye Needle Company, Chicago, Ill., a Corporation of Illinois. Filed June 6, 1921. Serial No. 475,407. 7 Claims. (Cl. 96—22.)

1. A tatting shuttle formed of a single strip of sheet material and comprising a pair of bows united at one end by a reduced neck portion the strip being folded on itself at said neck portion and, one of said bows being equipped at its free end with a hook, means securing the free end portions of the bows together, and a bobbin mounted between said bows.

1,452,184. CLOD CRUSHER. OCTAVE CARON, Faribault, Minn. Filed Mar. 16, 1922. Serial No. 544,329. 4 Claims. (Cl. 97—6.)

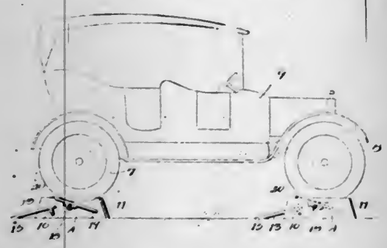
1. A clod crusher for operation in conjunction with a gang of plows comprising a unit having a frame with supporting disks adjacent its opposite ends journaled to rotate and to swivel about vertical axes, means to attach the said swiveling means to operate in consonance, means to attach the unit to a beam of one of the plows, means to attach the swiveling means to a beam of another of said plows, and a second disk-supported unit attached in the rear of said first unit.



1,452,185. ALKALI-METAL PRODUCT AND PROCESS OF PRODUCING THE SAME. HARRY W. CHARLTON and RANDOLPH NORRIS SHREVE, New York, N. Y., assignors to American Potash Corporation, New York, N. Y., a Corporation of Virginia. Filed Mar. 5, 1921. Serial No. 449,912. 8 Claims. (Cl. 23—22.)

1. The process of dissolving potassium from greensand which consists in heating said material with lime, water and a sodium salt having an acid radical adapted to combine with an alkali metal, substantially as described.

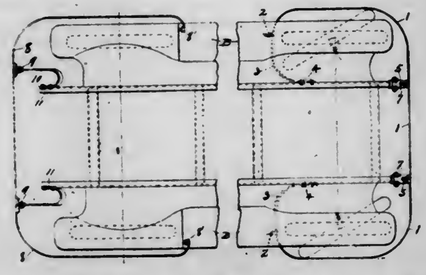
1,452,186. ACCELERATING AGENT IN POTASH RECOVERY. HARRY W. CHARLTON and RANDOLPH NORRIS SHREVE, New York, N. Y., assignors to American Potash Corporation, New York, N. Y., a Corporation of Virginia. Filed Mar. 5, 1921. Serial No. 449,913. 3 Claims. (Cl. 23—22.)



1. The process of accelerating the recovery of the potassium contained in greensand, which consists in digesting said green sand with potassium nitrate, and milk of lime under a super-atmospheric pressure and at a corresponding temperature, substantially as described.

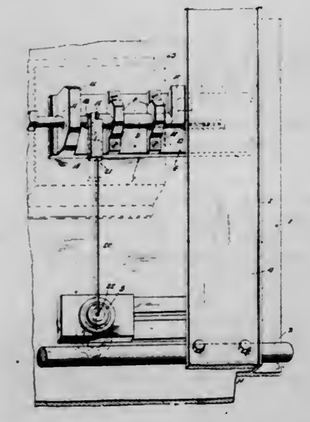
1,452,187. CAR TRUCK. GEORGE SCOTT CHILES, Chicago, Ill. Filed May 15, 1922. Serial No. 561,133. 7 Claims. (Cl. 105—197.)

1. In a car truck, a side-frame comprising an upper compression member, a lower tension member, a column connecting said compression and tension members at the central part thereof, springs supported on said tension member on each side of said column, some of said springs being offset from the longitudinal center line of said side-frame.



1,452,188. LIFTER BLOCK FOR MOTOR VEHICLES. BENJAMIN F. CHRIST, Ida Grove, Iowa. Filed Oct. 22, 1921. Serial No. 509,619. 4 Claims. (Cl. 254—88.)

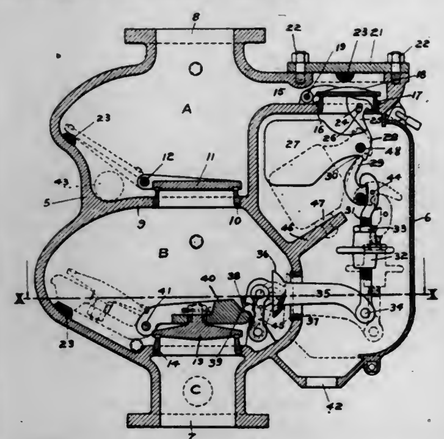
1. A device of the character described, comprising a block adapted for facilitating the rolling of a wheel thereon, a tiltable platform associated therewith, adapted when said wheel has reached the forward end of the block to tilt forwardly and hold the wheel against return movement, and means whereby the wheel will be held against forward movement.



1,452,189. AUTOMOBILE GUARD AND BUMPER. EMIL CHRISTENSEN, Portland, Oreg. Filed May 7, 1921. Serial No. 467,711. 5 Claims. (Cl. 293—55.)

4. A combination guard and bumper member for automobiles, comprising a member having its middle portion adapted to act as a bumper and extending across the end of an automobile and its opposite ends bent to extend along the opposite sides of said automobile and along the sides of the opposite wheels, supporting members attached to the frame members of the automobile and to said guard and bumper member, and means pivotally connecting said guard and bumper member at

other places to said automobile, whereby it can be raised from a horizontal position to a vertical position, for the purpose indicated.



1,452,190. LOCK MECHANISM. HERMAN H. CLAUSSEN, San Antonio, Tex. Filed Apr. 11, 1922. Serial No. 551,456. 3 Claims. (Cl. 109—3.)

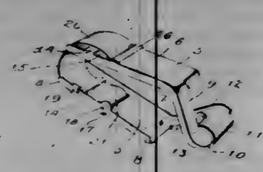
1. The combination with a main lock mechanism including a shiftable bolt member and a combination device subject to displacement by violence, of an auxiliary lock mechanism comprising a freely rotatable shaft, a locking head extending therefrom and angularly movable, in the rotation of the shaft, between a position out of the path of movement of the bolt member and a position in the path of movement of said member, and means tending to overbalance the shaft and rotate the same to move the locking head to locking position and including a sustaining element connected with the combination device, the said overbalancing means comprising a weight suspended beyond the shaft, and the said sustaining element comprising a relatively rigid member connected at one end to the said weight and at its other end to the said combination device.

1,452,191. DRY PIPE MECHANISM FOR AUTOMATIC SPRINKLER SYSTEMS. CURTIS T. CLIFFORD, San Francisco, Calif. Filed Mar. 31, 1919. Serial No. 286,561. 3 Claims. (Cl. 169—21.)

1. In a main valve for supplying a sprinkler system, a compartment normally containing compressed air and a compartment open to the atmosphere and a connection for high pressure water supply thereto; a main valve member closing said water connection from said atmospheric chamber; a one-way valve between said atmospheric chamber and said compressed air chamber normally held on its seat by said compressed air; a pilot valve within said compressed air chamber normally held upon its seat by compressed air and mechanism including a trigger, a pivoted weight, a latch, a link including means constructed

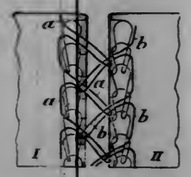
and adapted to vary its length, a lever carrying a valve, a tumbler engaged by the lever, said tumbler engaging the main valve member to retain it in normal closed position; said mechanism co-operating with said pilot valve, so that upon the release of the compressed air from the compressed air compartment the pilot valve opens releasing the mechanism which in turn releases the main valve member.

1,452,192. HANDLE-ADJUSTING MECHANISM. HARMON J. COOK, Torrington, Conn., assignor to The Torrington Company, Torrington, Conn., a Corporation of Connecticut. Filed Feb. 21, 1922. Serial No. 538,333. 7 Claims. (Cl. 306—4.)



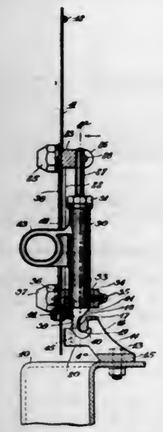
1. The combination with a machine having a vertically swinging handle provided above its pivotal point with a depending swinging brace or link; of a guide below the link and along which the cross bar of the link slides, a shoulder or stop for the link at the forward end of the guide, and means for retaining the link against said stop.

1,452,193. MANIFOLDING ATTACHMENT FOR TYPEWRITERS. MALCOLM L. COSSITT, Alameda, Calif., assignor to Manifold Impressions Corporation, Carson City, Nev., a Corporation of Nevada. Filed July 20, 1922. Serial No. 576,276. 5 Claims. (Cl. 197—126.)



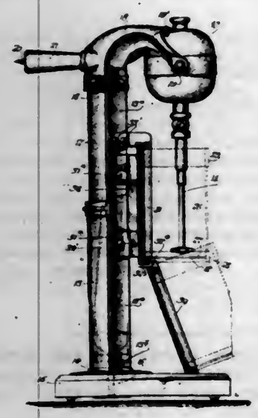
1. A manifolding attachment for typewriters comprising a rotatable shaft mounted on the machine; a plurality of independently operatable pairs of pivotally mounted spaced arms; a manifolding member carried by each pair of arms and adapted by the movement of said arms to be placed in and removed from functional position in the line of type impact; an arm-operating member fitted upon said shaft for rotation therewith and for linear movement thereon; means for controlling the linear movement of said member; and coacting devices on said member and said arms for independently selectively moving each pair of arms about their pivotal centers, by the rotation of the shaft.

1,452,194. ELECTRICAL TESTING CLIP. GEORGE B. DUSINBERRE, Elmira, N. Y. Filed June 22, 1921. Serial No. 479,571. 3 Claims. (Cl. 173—273.)



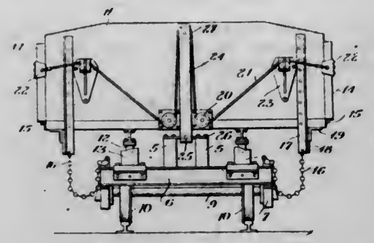
2. A test clip having handle members each including crossed portions terminating in opposed jaws, flanges extending along the edges of the handle members and the jaws, said flanges being prolonged rearwardly to form retaining means, cross-bars connecting said retaining means and tensioning means positioned between the retaining means and interlocking with the handle members forward of said cross-bars.

1,452,195. MACHINE-MADE SEAM FOR KNITTED MATERIALS AND THE LIKE. HERBERT EUGEN ESCHE, Chemnitz, Germany. Filed Jan. 13, 1922. Serial No. 528,991. 1 Claim. (Cl. 112—262.)



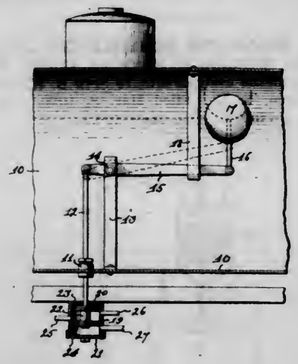
A seam for knitted materials which comprise two selvages, embodying a thread for one selvage passing under alternate loops of that selvage; and a second thread for the other selvage passing under alternate loops of said other selvage in staggered relation to said loops of the first-named selvage, said threads being interconnected in such a way that one thread passes through a loop of the other thread and then around a succeeding loop of said other thread and back through the loop through which it first passes, the loops of each thread being disposed in staggered relation to the loops of the other thread.

1,452,196. FASTENING DEVICE. GUSTAVE E. FRANQUIST, Rochester, N. Y., assignor to James Cunningham, Son & Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 26, 1921. Serial No. 448,028. 5 Claims. (Cl. 292—109.)



1. A fastening device for securing the motor hood of an automobile to the body thereof comprising a support projecting inwardly of the hood, a guide projecting inwardly of the hood in spaced relation with said support, a pair of telescopically extensible parts one of which is fixed at one end to said support and the other part slidably guided by said first part and by said guide for rectilinear extension and retraction, a spring resisting extension of said other part, a catch on said automobile body, a latch on said other part, and a handle on the latter projecting exteriorly through a slot in the hood.

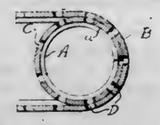
1,452,197. DRINK MIXER. RAYMOND B. GILCHRIST, Newark, N. J., assignor to The Gilchrist Company, Newark, N. J., a Corporation of New Jersey. Filed Feb. 25, 1922. Serial No. 539,059. 53 Claims. (Cl. 259—134).



1. In a machine of the character described, the combination of a motor, an agitator driven by the motor and supported from above, means to support the motor, a guide for directing a receptacle while it is being moved by hand into operative position around the agitator, and means for securing the receptacle in its such position.

1,452,198. DUMPING CAR. GEORGE L. HANCOCK, Geneva, N. Y. Filed Oct. 25, 1922. Serial No. 596,874. 5 Claims. (Cl. 105—276.)

1. In a dumping car, supporting means, a container body mounted thereon for dumping movement to either of opposite sides, gates supported adjacent their bottoms at the sides of said body and movable to open and closed positions, flexible means connected at the ends thereof with said gates, guide means on the end of said body adjacent its bottom about which said flexible means is carried, and a member arranged on the supporting means below the top of said body for engagement with said flexible means to deflect the latter when said body is in material carrying position and to move said gates to closed position.

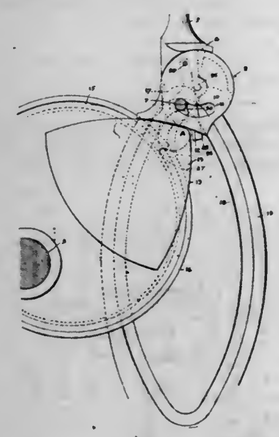


1,452,199. LOAD-CONTROLLED AIR BRAKE. BRODERICK HASKELL, Franklin, Pa. Filed Aug. 20, 1921. Serial No. 493,802. 4 Claims. (Cl. 303—22.)

3. A load brake apparatus for a car, the combination with an empty brake cylinder, a load brake cylinder, a valve device for controlling the brake pressure in either solely in the empty brake cylinder or simultaneously in the empty and load brake cylinders and a float actuated and controlled by the fluid material at high or low level and forming the load on the car for adjusting said valve device to convey the brake pressure in either of said empty brake cylinder or simultaneously in said empty and load brake cylinders.

1,452,200. METHOD OF MAKING METAL WHEEL HUBS. JOSEPH L. HECHT, Davenport, Iowa, assignor to G. Watson French and Joseph L. Hecht, Davenport, Iowa, and W. H. Stackhouse, Springfield, Ohio, composing the firm of French & Hecht. Filed Dec. 7, 1921. Serial No. 520,548. 2 Claims. (Cl. 29—174.)

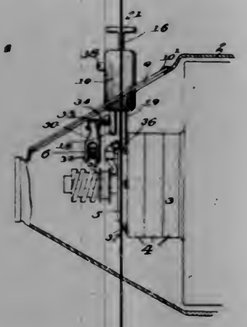
1. The method of making wheel hubs with circumferential spoke chambers, which method consists in assembling a cylindrical blank within a U-shaped blank, each with a groove in one side and a corresponding protuberance on the other side, and bending the legs of the U shaped blank



around the cylindrical blank to give the U-shaped blank cylindrical form, while causing the protuberance on the inner blank to become interlocked in the groove in the surrounding blank.

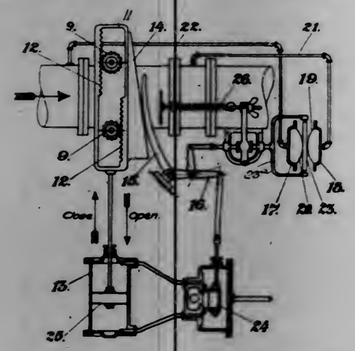
1,452,201. WAISTBAND. MILTON L. HELLER, Brooklyn, N. Y. Filed Mar. 18, 1922. Serial No. 544,914. 2 Claims. (Cl. 2—142.)

2. A waistband in combination with a pair of trousers comprising a buttonhole strip having buttonholes at intervals throughout its length, said strip being attached to said trousers a distance below the upper edge thereof, said strip being folded upon itself adjacent the lower ends of the buttonholes and again at a point adjacent the upper edge of said buttonholes, and extending down to a point adjacent the point of attachment to said trousers, a stiffening strip between the spaced folds of said buttonhole strip, and an attaching strip fastened at its upper end to the edge of said trousers, and at its lower end to said buttonhole strip adjacent its first mentioned fold.



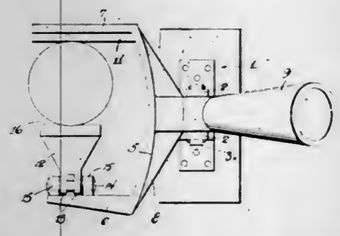
1,452,202. INTERNAL-COMBUSTION ENGINE. WILLIAM E. JOBY, Martinez, Calif. Filed June 6, 1922. Serial No. 566,207. 5 Claims. (Cl. 74—14.)

1. In an internal combustion engine, a piston rod, an engine shaft, an eccentric disc fixed to the shaft, an eccentric ring loosely surrounding the disc, a pin carried by the piston rod, a connection between said pin and the ring, a thrust member mounted so as to rock on said pin, a cam member fixed on the disc and with which said thrust member is adapted to engage, a guide having an elliptical



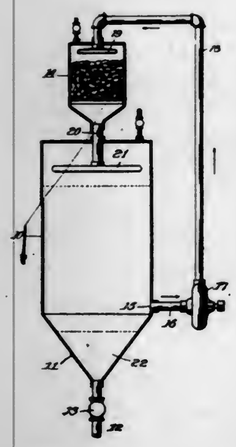
guide groove in which the pin extends, and means for preventing relative movement of the ring and disc throughout the down stroke of the piston rod and permitting relative movement thereof upon the up stroke of said rod.

1,452,203. TRANSMISSION LOCK. HERMAN F. KAELBLE, Egg Harbor City, N. J. Filed Aug. 14, 1922. Serial No. 581,735. 3 Claims. (Cl. 70—90.)



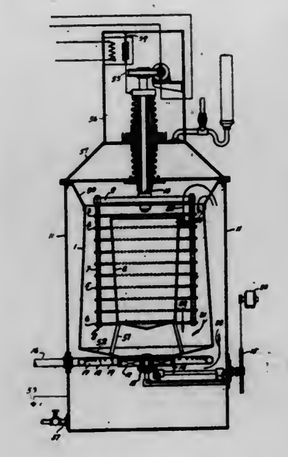
1. The combination with a transmission casing having an opening through the wall thereof and having a clutch lever shaft extending therethrough, of a base plate adapted to be secured to the casing in position to cover the opening, a block integral with said base plate and extending exteriorly of the casing, said block having a longitudinal bore formed therethrough and a socket therein in spaced parallel relation to the bore and opening through the lower face of the base plate, said socket being in communication intermediate of its length with said bore through a lateral slot, a plunger reciprocable in the bore and having a handle at the upper end thereof, said plunger being of a length to extend within the transmission casing when in extended position with respect to the block, a stop carried by said clutch lever shaft in position to engage said locking plunger when the latter is in an extended position, a second plunger slidable in the socket, said second plunger having a longitudinal slot therethrough intermediate of its length, spring means urging said second plunger toward position to engage with stops on a plate within the transmission casing, and a lateral projection extending from said first named plunger into the slot of said second named plunger whereby movement of the latter independently of the formed is limited.

1,452,204. SEPARATOR FOR GASEOUS FLUIDS. OLIVER P. LUETSCHER, Peru, Ill. Filed Nov. 19, 1921. Serial No. 516,449. 5 Claims. (Cl. 183—40.)



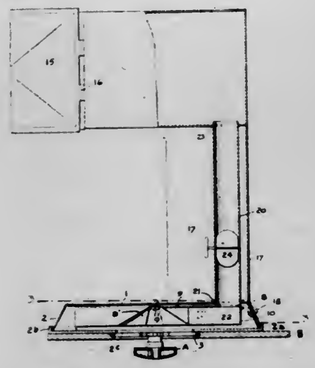
1. A separator for gases having in combination a shell having a plurality of tortuous passages therethrough, means movable transversely of the tortuous passages for controlling the flow of gases through the said passages, and mechanism operative by and in accordance with changes in the differential between the pressures at the inlet and outlet ends of said passages for shifting the controlling means to vary the number of passages through which the gas may flow.

1,452,205. POST PULLER. PEDER C. MADSEN, Granada, Minn. Filed Jan. 26, 1922. Serial No. 531,955. 2 Claims. (Cl. 254—131.5.)



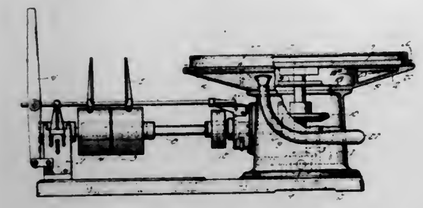
1. A post puller of the character described comprising a supporting standard equipped with a bearing rod, a substantially U-shaped bracket member pivoted on the bearing rod and including parallel arms, one of the arms being provided with a sharpened cleat to engage one side of the fence post, the other arm being mounted with a pivoted gripping dog adapted to engage the opposite side of the fence post, the said body having a socket extending from the pivoted portion in a direction opposite to that of the bracket member, and a handle adapted to be mounted in the socket.

1,452,206. MEANS FOR DEHYDRATING ALCOHOLIC LIQUIDS. MATTHEW D. MANN, Jr., Roselle, N. J., assignor, by mesne assignments, to Seth B. Hunt, trustee, Mount Kisco, N. Y. Filed Mar. 8, 1920. Serial No. 364,197. 3 Claims. (Cl. 260—156.)



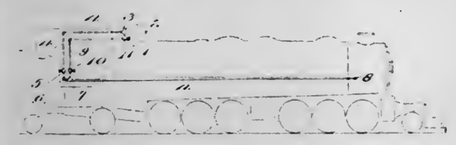
1. The process of dehydrating isopropyl alcohol which consists in admixing it with caustic alkali, permitting the aqueous solution of the caustic alkali thereby formed to separate from the dehydrated alcohol and drawing off the aqueous solution.

1,452,207. DEHYDRATOR. WYNN MEREDITH, Alameda, Calif., assignor to Petroleum Rectifying Company, San Francisco, Calif., a Corporation of California. Filed Oct. 28, 1920. Serial No. 420,245. 8 Claims. (Cl. 204—24.)



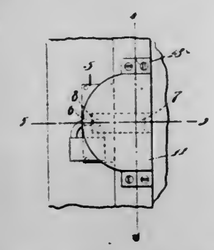
1. In combination with a treatment chamber for the dehydration of emulsions, a propeller for circulating said emulsion and driving means for said propeller, plates adapted to guide the circulation of said emulsion to direct it through a zone of treatment within said chamber, in combination with an electrode adapted to rotate between said plates.

1,452,208. COOKING DEVICE. ANTHONY MILLER, Burlingame, Calif. Filed Aug. 16, 1921. Serial No. 492,736. 3 Claims. (Cl. 126—215.)



3. A cooking device comprising a member for supporting a plurality of cooking vessels in close proximity to a single burner of a gas cook stove, means for conducting heat from the burner to certain points of said member over which the vessels are disposed, which means comprises a distributor, the central portion of which is adapted to be disposed over the center of the burner, extension portions on the distributor arranged to direct the heat from said central point to the certain points of said member, and downwardly directed flanges on the margins of said central and extension portions of said distributer.

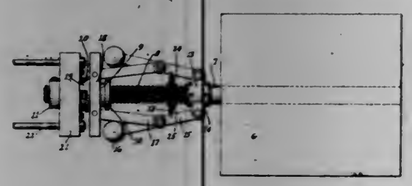
1,452,209. DISK GRINDER. JOHN MILLER, Jr., Beloit, Wis., assignor to Charles H. Besly & Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 16, 1920. Serial No. 351,759. 1 Claim. (Cl. 51—273.)



In a grinding machine, the combination of a pedestal including a flaring wall portion and a vertical partition wall, a spindle journalled in said pedestal, having a disk mounted at the upper end thereof, said flaring wall portion having a finished marginal surface spaced below the under side of said disk, and forming therewith a slot, communicating with an exhaust chamber formed between said disk, flaring wall portion and vertical partition wall, and a dust ring secured to the marginal portion of said flared wall portion and spaced radially from the edge of said disk.

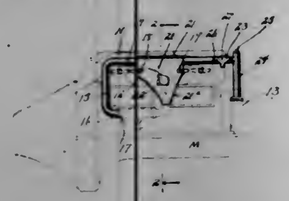
1,452,210. LOCOMOTIVE COMBUSTION REGULATOR. EDMUND T. D. MYERS, Jr., Richmond, Va. Filed July 22, 1921. Serial No. 486,912. 2 Claims. (Cl. 110—150.)

1. In a locomotive combustion regulator, in combination with the smoke box, a source of boiler pressure, a pop-valve connected thereto, means to automatically discharge steam from said source of boiler pressure into said smoke box to moderate the draft, said means acting in advance of the discharge of said pop-valve, and hand-operated means for discharging steam from said source of boiler pressure into said smoke box.



1,452,211. LATCH. WILLIAM L. MYERS, Industry, Ill. Filed Apr. 3, 1922. Serial No. 549,214. 1 Claim. (Cl. 292—205.)

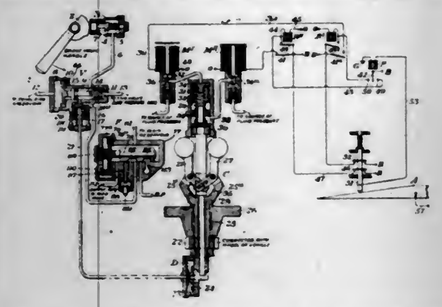
In a latch, a base plate having a right angled tongue formed intermediate its ends and disposed adjacent to one of the side edges thereof, a pivoted arm having connection with the base plate and having a right angled



extremity cooperating with the tongue to lock the closure supporting the latch, said tongue and right angled end having openings to accommodate a locking element, a keeper including a plate having leg portions formed integral therewith, said plate adapted to overlie a portion of the base plate and the tongue, said pivoted arm adapted to move to a position to engage one of the leg members of the keeper, and the last mentioned plate providing a guard.

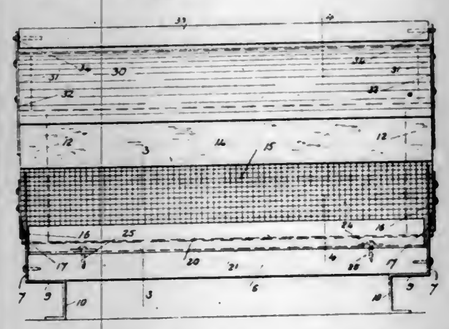
1,452,212. BRAKE-ACTUATING MECHANISM. ROBERT AUGUST NEAL, Lexington, Ky., assignor of one-half to Laurence J. Heymann, Lexington, Ky. Filed July 20, 1921. Serial No. 486,302. 8 Claims. (Cl. 188—162.)

1. In combination with a brake yoke and brake rods therefor, an actuating member loosely mounted in the brake yoke, a motor, and means driven by the motor for causing the actuating member to pull upon the yoke and apply the brake.



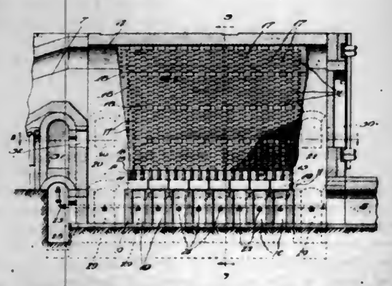
1,452,213. EXTENSION MANIFOLD. ANDREW NELSON, Milwaukee, Wis. Filed Dec. 21, 1920. Serial No. 432,197. 4 Claims. (Cl. 123—119.)

1. An attachment for internal combustion motors comprising a pipe having a return bend at one end, means for clamping said pipe with its main portion alongside and against the exhaust manifold and with its bent end in communication with the air inlet to the carburetor, said clamping means being extended to form a housing for the intake manifold, the other end of said pipe being in communication with the breather opening, and an opening in said pipe for the admission of air.



1,452,214. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. FRANK H. NICHOLSON, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 12, 1918. Serial No. 253,747. 29 Claims. (Cl. 246—74.)

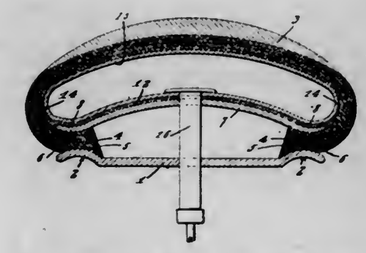
16. Railway traffic controlling apparatus comprising a plurality of block sections, a vehicle; apparatus on the vehicle adapted when in one condition to cause an automatic application of the brakes if the speed exceeds a predetermined intermediate value, and when in another condition to cause an automatic application of the brakes if the speed exceeds a predetermined lower value; means for placing said apparatus in the first-mentioned condition when the vehicle enters the section in the rear of an occupied section, means for placing said apparatus in the second mentioned condition when the vehicle reaches a point at a predetermined distance in the rear



of an occupied section, and means on the vehicle acting to prevent operation of said apparatus if the brakes are applied through the usual manually operable means.

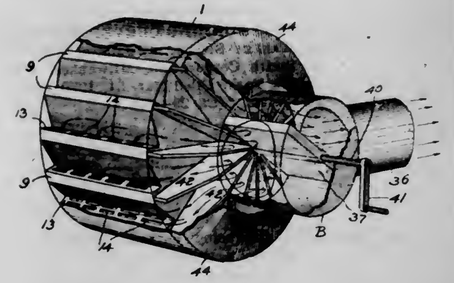
1,452,215. CHICKEN FEEDER. JESSE NULL, Arcadia, Calif. Filed Dec. 14, 1922. Serial No. 606,823. 5 Claims. (Cl. 119—52.)

3. In a chicken feeder, a base, end plates secured to the base and provided with V-shaped notches, a removable hopper provided with front and rear sides of wirework and having V-shaped end plates which fit in the notches of the end plates of the base, adjustable food retaining plates provided with base flanges which rest on the top of the base at its edges, and clip plates secured to the base and overlapping the base flanges of the retaining plates and securing them in place.



1,452,216. REGENERATOR. JAMES V. PETERKA, Indiana Harbor, Ind. Filed Dec. 18, 1920. Serial No. 431,696. 25 Claims. (Cl. 263—19.)

1. A structure of the character set forth, comprising a chamber containing an inlet and an outlet at opposite

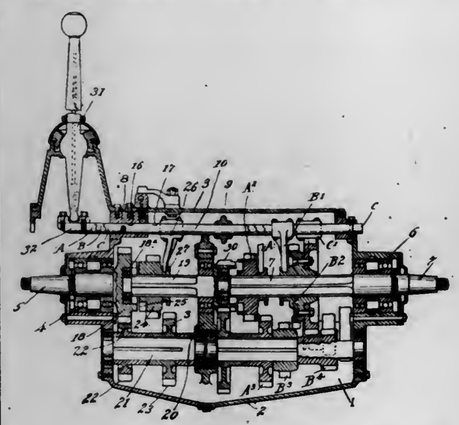


ends thereof, and a series of upwardly-extending passages substantially unobstructed from the top to the bottom thereof and communicating at opposite ends with said inlet and outlet, whereby the gases travel lengthwise of said chamber from the inlet to said outlet.

1,452,217. TIRE. FRED BROWN PFEIFFER, Akron, Ohio. Filed Aug. 16, 1921. Serial No. 492,730. 4 Claims. (Cl. 152—20.)

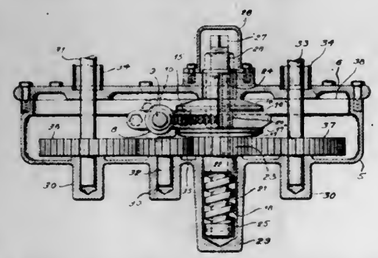
4. In a device of the class described, a rim; an inflatable casing, of appreciably greater width than height, having its longitudinal edges supported on the rim, the longitudinal edges of the casing being inwardly extended toward the median plane of the casing, and the casing projecting outwardly beyond all portions of the rim; a ring extended circumferentially of the casing, the longitudinal edges of the ring engaging the longitudinal edges of the casing, the ring responding freely to the inflation of the casing to exert a binding action on the longitudinal edges of the casing, the interior of the casing presenting a cross section of substantially common height, between the ring and the tread portion of the casing; and an inflating means for the casing.

1,452,218. PULVERIZING MILL. RALPH E. H. POMEROY, Canton, Ohio. Filed Jan. 18, 1923. Serial No. 613,346. 3 Claims. (Cl. 83—9.)



1. A pulverizing mill having in combination a drum, one of the heads provided with a plurality of ports, a distributing head provided with inlet and outlet passages communicating with said drum and adjustable means for connecting the ports in communication with the drum with the passages in distributing head.

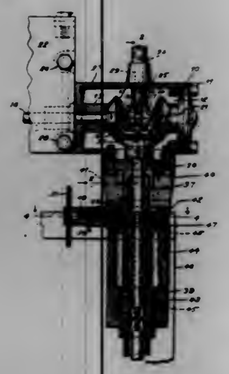
1,452,219. ENAMEL COMPOSITION. ADOLPH F. POZDECH, Newark, N. J. Filed Dec. 23, 1921. Serial No. 524,523. 2 Claims. (Cl. 134—39.)



2. A quick-drying enamel composition consisting of the following ingredients in substantially the proportions given, ground zinc white one-half pint, French varnish two ounces, benzine ten drops, lacquer one-half ounce.

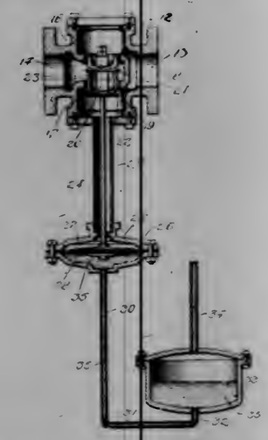
1,452,220. TRANSMISSION MECHANISM. GUSTAVE A. SCHACHT, Plainville, Ohio. Filed Dec. 22, 1919. Serial No. 346,468. 1 Claim. (Cl. 74—58.)

In a motor vehicle, the combination of a gear case, a driving shaft at one end thereof, a driven shaft at the other, an internal shaft located within the casing in line with the driving and driven shafts, clutch devices on the driven and internal shafts adapted to be shifted to connect the two shafts in line for direct drive, a jack shaft in the case located alongside of the driven shaft, and driven by the internal shaft, said jack shaft having gears thereon, and sliding gears on the driven shaft to mesh with said gears to provide a second and third speed for the driven shaft, a lever connected to operate said clutch devices and the sliding gears on the driven shaft by movement to a plurality of positions, a jack shaft alongside the internal shaft, and driven by gearing from the driving shaft, and a clutch device located between the driving shaft and the internal shaft, and normally in position to connect them in line for direct drive, and an independent lever for shifting out said clutch device, and a gear portion on said clutch device adapted when said independent lever is shifted to mesh said internal shafts with the jack shaft last mentioned, whereby the lever first mentioned may be employed for all normal driving changes, without modification over the usual gear shift, and the additional lever may be shifted to impart a geared drive to the internal shaft, with the functions of the main lever being not otherwise interfered with.



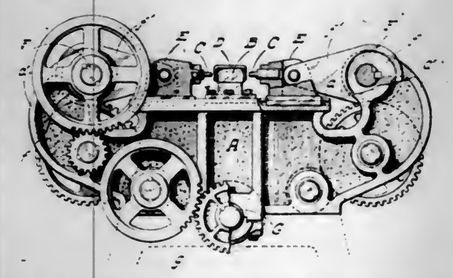
1,452,221. MECHANICAL MOVEMENT. GEORGE SLIDER, Baltimore, Md. Filed Sept. 27, 1921. Serial No. 503,563. 4 Claims. (Cl. 74—29.)

3. In a mechanical movement, the combination with a pair of discs, each comprising a bearing portion for revolubly supporting said disc and a second bearing por-



tion on one of said discs, of a gear wheel revolubly mounted on said second bearing portion, means for pressing said discs against said gear, and a gear driven by said discs.

1,452,222. GEARING. GEORGE SLIDER, Baltimore, Md. Filed Nov. 18, 1921. Serial No. 516,007. 3 Claims. (Cl. 74—101.)



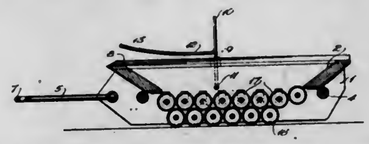
1. The combination with an arbor, a driving shaft revolubly mounted therein, a gear fixed on said shaft, and a casing open at one end and having its bottom secured to said arbor, said casting having an opening in said bottom to permit the passage of said gear therethrough, of a cap secured to said casting for closing said end, a housing in each of said casting and cap, a pintle revolubly mounted in said housings, a gear revolubly mounted on said pintle adjacent each housing and meshing with said first named gear, a squared portion on said pintle between said gears forming a shoulder for said gears, a clutch member on each gear, a cooperating clutch member slidably mounted on said portion, and means for moving said cooperating clutch member.

1,452,223. DIFFERENTIAL GOVERNOR FOR BOILER FEED PUMPS. CARL J. SMITH, Indiana Harbor, Ind. Filed Oct. 12, 1921. Serial No. 507,291. 8 Claims. (Cl. 103—19.)

1. In apparatus of the character set forth, the combination of a source of fluid pressure, means operated from said source for generating pressure, and means for maintaining, under variations of pressure of the fluid from said source, the pressure generated by said first-named means at a constant excess over the pressure of fluid supplied from said source, comprising a column of fluid, the upper portion of which is subjected to the pressure from said source and the lower portion of which is subjected to the pressure generated by said first-named means, and valve means for controlling the flow of fluid pressure from said source to said first-named means, controlled by said column of liquid.

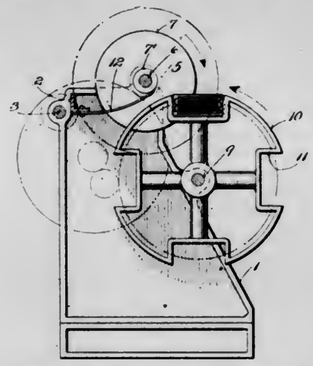
1,452,224. PUNCHING PRESS AND DIE THEREFOR. REUBEN STANLEY SMITH, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Oct. 20, 1919, Serial No. 331,995. Renewed Jan. 25, 1923. 6 Claims. (Cl. 164—102.)

1. In a piercing press for punching holes in the opposite flanges of a channeled bar, a frame, and a plurality of punches therein working simultaneously toward each other to offset and neutralize the opposed strains in punching, in combination with an anvil or die member fixed in the frame between the punches, the said anvil or die member being formed as a solid block upon which the channeled bar is placed with the opposite flanges of the said channeled bar engaging the side faces of the anvil, the said anvil having a bore for each punch and a common discharge chute connected with and leading from the bores, whereby the slugs produced in punching are guided away from the press.



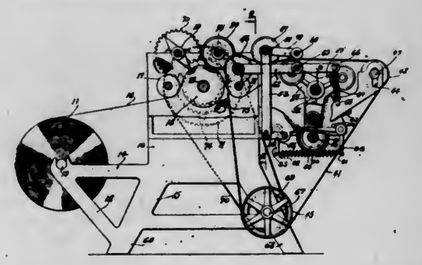
1,452,225. PROCESS OF FORMING CURVED FLANGED BARS. REUBEN STANLEY SMITH, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Mar. 31, 1920. Serial No. 370,136. 10 Claims. (Cl. 29—152.)

1. The process of producing curved, flanged bars, which consists in confining a single wide metal plate by pressure upon the sides thereof, subjecting the plate to bending pressure applied to the edges thereof at separated points along the opposite edges of the blank, such separated points at one edge of the plate being staggered with relation to the points on the opposite edge, whereby the metal of the plate will be caused to flow away from the longitudinal center line of the plate, punching a curved blank from the plate, and turning the curved side margins of the blank from the plane thereof to form the flanges.



1,452,226. BOLL-WEEVIL DESTROYER. MADISON A. SPENCER, Yonkers, N. Y., assignor of one-half to Bert E. Nussbaum, Muskogee, Okla. Filed Nov. 21, 1922. Serial No. 602,331. 7 Claims. (Cl. 43—138.)

1. A boll-weevil destroyer comprising a frame having an open top and bottom, superposed series of horizontally arranged juxtaposed rollers supported in the lower portion of said frame and disposed transversely of the same,

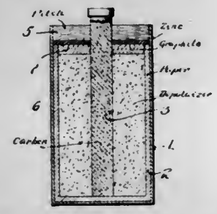


the lower series of rollers movably supporting said frame, and draft means connected to one end of the frame.

1,452,227. PAPER-CUTTING MACHINE. LOUIS A. STRAUBEL, Green Bay, Wis. Filed Nov. 8, 1921. Serial No. 513,632. 3 Claims. (Cl. 164—68.)

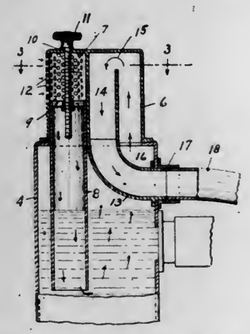
1. A machine for cutting elongated folded paper stock into shorter lengths comprising a revolubly mounted carrier having a plurality of aligned pockets and spaces therebetween, a revoluble cutter having a plurality of circular knives adapted to enter the said spaces between the pockets as the carrier revolves, said pockets extending in unbroken continuity from space to space to provide a support for each shorter length of folded paper stock, and means for rotating said carrier and cutter.

1,452,228. REWINDING MACHINE. LOUIS A. STRAUBEL, Green Bay, Wis., assignor to Straubel Machine Company, Green Bay, Wis. Filed Mar. 14, 1922. Serial No. 543,546. 11 Claims. (Cl. 242—55.)



1. The combination of a plurality of pulleys, a belt running over said pulleys, a plurality of core spindle pulleys, means carrying said last named pulleys, means supporting said first named pulleys, and adjusting means cooperating with said belt for deflecting said belt to a greater or lesser extent to engage one of said core spindle pulleys.

1,452,229. BALLOON ENVELOPE MATERIAL AND PROCESS OF MANUFACTURING THE SAME. ERICH TRENCKMANN and BRUNO TRENCKMANN, Berlin-Tempelhof, Germany, assignors to B. G. Tertilwerke G. m. b. H., Berlin-Tempelhof, Germany. Filed Aug. 27, 1921. Serial No. 495,033. 23 Claims. (Cl. 149—1.)

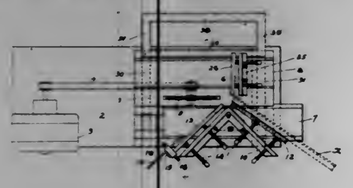


16. The herein described process of manufacturing gas tight balloon envelope material which consists in cleaning the entrails of quadruped animals, then adhesively attaching the pieces together so that they overlap, one piece bridging the joints between two adjacent pieces, then stretching the same, then spreading adhesive material on one face thereof and then applying fabric to said face.

1,452,230. HIGH-POWER DRY BATTERY. ALFRED A. WELLS, Montclair, N. J., assignor to National Carbon Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 2, 1918. Serial No. 209,925. 2 Claims. (Cl. 204—29.)

1. A dry cell comprising a metal container serving as one electrode, a carbon electrode therein, a depolarizing mass comprising conducting carbon and an insoluble oxidizing agent between the carbon electrode and the metal electrode, and localized bodies containing a higher proportion of carbon than the bulk of the depolarizing mass between the two electrodes, whereby internal low-resistance paths are provided.

1,452,231. AIR-WASHING ATTACHMENT FOR CARBURETORS. JACOB L. WELLS, Minneapolis, Minn. Filed Apr. 23, 1918. Serial No. 230,199. 2 Claims. (Cl. 123—25.)



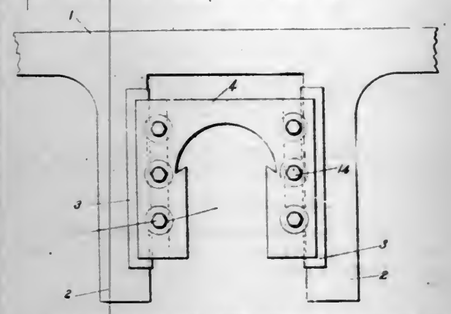
1. The combination, with an internal combustion engine carburetor, of a radiator and casing mounted thereon and having perforations in its walls, a pipe open at each end fitting within said casing and communicating with said perforations and having its lower end depending within the water in said radiator, means for adjusting said pipe to increase or decrease the volume of air intake, said casing having an elbow formed thereon, one end of said elbow communicating with the space in said radiator above the level of the water and the other end having a coupling in the wall of said radiator and a pipe leading from said coupling to the carburetor.

1,452,232. ALLOY. CARL J. ZAISER, Milwaukee, Wis., assignor to American Metal Products Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 23, 1921. Serial No. 471,914. 1 Claim. (Cl. 75—1.)

An alloy consisting of the following ingredients in substantially the following proportions, namely:

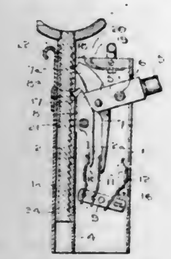
	Per cent.
Iron	13 to 60
Copper	82 to 30
Aluminum	5 to 10

1,452,233. COMBINED HOLDING-SETTING DEVICE FOR CIRCULAR SAWS. LOUIS ZSUFFA, New York, N. Y. Filed Apr. 7, 1921. Serial No. 459,378. 1 Claim. (Cl. 143—169.)



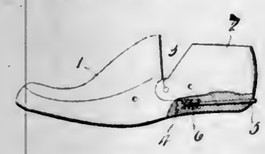
In a mitering machine, two sections adapted to slide longitudinally of the table, an L-shaped angle piece, also L-shaped in cross section, removably secured to one of said sections; a straight piece, L-shaped in cross section, removably secured to the second sliding section in a perpendicular direction to the plane of the saw blade, straight bars for receiving the material to be cut, adjustably connected to the faces of said angle piece and said straight piece; thumb screws passing through the vertical sides of said L-shaped pieces and adapted to adjust said bars therewith with relation to said angle and straight pieces, and a stop carried by one of said bars for gauging the length of the material to be cut.

1,452,234. MAIL-BAG DELIVERY AND RECEIVING CRANE. HARRY BARLOW and JOHN ERNEST HENRY MATHIES, East Moline, Ill. Filed Jan. 28, 1922. Serial No. 532,453. 3 Claims. (Cl. 258—9.)



1. In a mail bag delivery apparatus, the combination with a crane arm, of a collar engaged with the outer end thereof, means passing through the collar and through the arm to hold the collar in place, and provided with a rearwardly extending projection, a guard plate secured to the collar and provided with means engageable upon opposite sides of the metallic loop of a mail bag, to hold said loop on said rearwardly extending projection, so as to prevent the loop from rocking, and a spring tensioned angle clamping plate hingedly mounted upon the guard plate and bearing upon the metallic loop for holding it against the guard plate.

1,452,235. WEDGELESS DRIVING BOX. ANDREW S. BRANDOCK, Pueblo, Colo. Filed Apr. 30, 1921. Serial No. 465,685. 3 Claims. (Cl. 105—79.)



1. In a device of the class described, a driving box; frusto-conical rollers; means for mounting the rollers on the box for rotation and for endwise movement; and spring means for advancing the rollers.

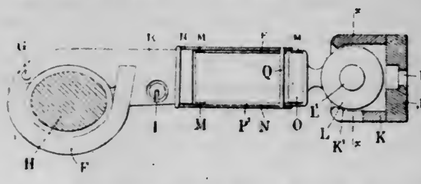
1,452,236. LIFTING JACK AND HAULER. CHARLES EDMUND CLEWS and ARTHUR WYNDHAM BEEBE, Auckland, New Zealand, assignors to Percy Nichol Kingswell, Auckland, New Zealand. Filed June 6, 1922. Serial No. 566,291. 6 Claims. (Cl. 254—110.)

1. Apparatus of the kind described comprising a load bearing member operable through a casing; a pawl pivoted to the latter adapted to hold said member against the weight of the load borne thereby; an operating lever pivoted to said casing carrying at one end a pawl adapted to engage and operate said member; said lever having its pawl carrying end formed to force the load holding pawl into engagement with the load bearing member on said inner end being lowered.

1,452,237. SHOE LAST. WALTER E. DENTTEN, Milwaukee, Wis. Filed Mar. 4, 1922. Serial No. 541,189. 4 Claims. (Cl. 12—141.)

1. In combination with a shoe last including relatively adjustable toe and heel sections, the heel section having a longitudinal way formed in its lower portion, and a catch of a length greater than the heel section slidable in said way having its inner end normally extended beyond the inner end of the heel section adapted to have abutting engagement with an adjacent portion of the toe section, as and for the purpose set forth.

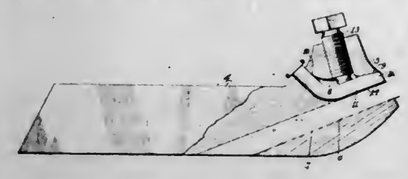
1,452,238. METHOD OF MAKING FLANGED TANK COUPLINGS. JOHN JOSEPH FINNIGAN, Atlanta, Ga. Filed Apr. 3, 1922. Serial No. 549,095. 4 Claims. (Cl. 29—148.2.)



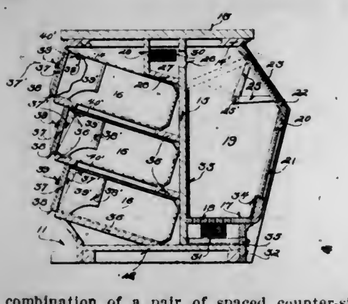
1. A method of preparing flanged couplings for positioning, consisting in cutting away of a portion of the flange, bending the flange and finally filling the cut out portion of the flange with a malleable metal.

1,452,239. METHOD FOR UTILIZING SOLID FUEL. HERMANN GÜTLIN, Basel, Switzerland, assignor to Elektrizitatswerk Lonza, Gampel, Switzerland, a Corporation of Switzerland. Filed Feb. 20, 1922. Serial No. 538,055. 5 Claims. (Cl. 44—7.)

1. The method of heating a body, consisting in attaching to said body, by means of an adhesive, a mass of solid fuel material, and igniting said mass.



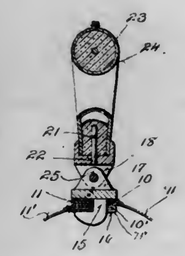
1,452,240. APPARATUS FOR PREVENTING THE STEALING OF MOTOR CARS. MARIUS ANDRÉ HAMON, Paris, France. Filed Oct. 6, 1920. Serial No. 415,164. 1 Claim. (Cl. 70—129.)



In an apparatus for locking the steering wheel of a motor car for preventing the stealing of the car, comprising a base member adapted to be fixed to the car body and provided with a hemispherical cup, an extensible arm having a spherical member at one end adapted to fit into said cup to form a ball and socket joint, a hooked member pivotally connected to the free end of said arm, a locking device adapted to lock the said hooked member upon the said steering wheel, and fixing means for attaching the base member to the car body, the arrangement whereby the fixing means is concealed or exposed respectively when the arm is engaged with or disengaged from the steering wheel comprising a transverse aperture through the said ball such aperture when the arm is in its disengaged position being adapted to allow the fixing means to be placed in position or removed.

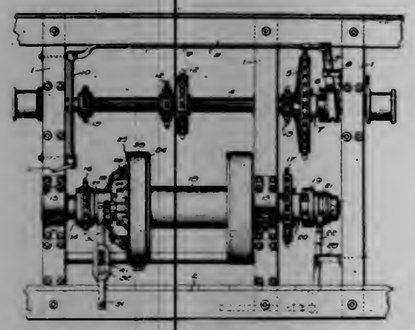
1,452,241. TOOL HOLDER. CHARLES A. HUESTIS, Elmhurst, N. Y. Filed Apr. 28, 1921. Serial No. 465,170. 2 Claims. (Cl. 29—96.)

1. A tool holder comprising a stock having a tool-receiving socket and a key chamber at one side of the same having an offset portion opening through the stock, a key in the chamber adapted to bear against the tool placed on the socket and having an offset portion in the offset portion of said key chamber, and a set screw threaded in the stock and bearing against the key.



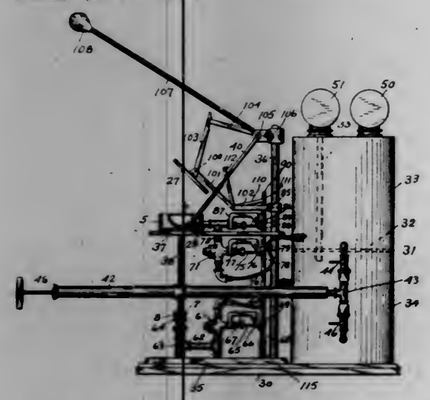
1,452,242. COUNTER. THOMAS P. JENSEN, Racine, Wis. Filed Mar. 21, 1922. Serial No. 545,453. 1 Claim. (Cl. 211—11.)

The combination of a pair of spaced counter-sides, a longitudinal partition extending from one of said sides to the other, a plurality of tiers of receptacles on one side of said partition, said tiers taking up an entire side of said counter, a plurality of bins on the other side of said partition, said bins taking up said other side of the counter, a screen in one of said sides, a counter top resting on said sides and said partition, a vertical member depending from said counter top and spaced from said partition, said screen being located between said vertical member and said partition, and a longitudinal member extending from said vertical member to said partition and from one of said sides to the other, said partition, said top, said vertical member and said longitudinal member forming a longitudinal chamber for conducting air from said screen, said partition having an opening therein leading into said chamber, a screen covering said opening, the bottom of said bin having a plurality of apertures therein, and a second screen in one of said sides for leading air from said side to the apertures in the bottom of the said bin.



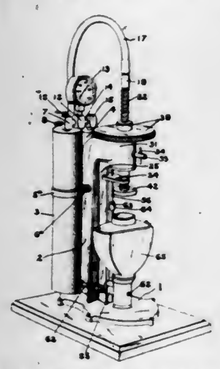
1,452,243. HANDLE FOR TRAVELING BAGS. ARTHUR KAHLOW, Mayville, Wis. Filed Mar. 14, 1922. Serial No. 543,575. 3 Claims. (Cl. 190—55.)

1. The combination of a metallic frame member, a base member, a depending hook extending downwardly thru said



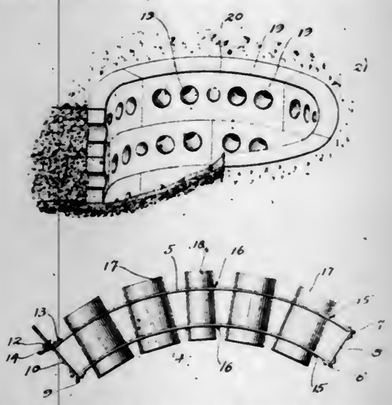
metallic frame member, a second metallic member, said second frame member having a slot therein for the reception of said depending hook, said depending hook being adapted to hold said frame members in close contactual relationship, a handle, and means pivotally connecting said handle to said base member.

1,452,244. CONTROL MECHANISM FOR WELL-DRILLING MACHINES. HAROLD J. LOCKHART, Parkersburg, W. Va., assignor to The Parkersburg Rig & Reel Company, Parkersburg, W. Va., a Corporation of West Virginia. Filed Oct. 21, 1921. Serial No. 511,914. 5 Claims. (Cl. 192—17.)



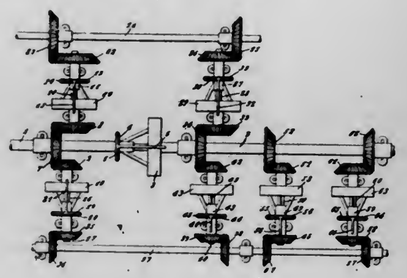
2. In a rotary draw works, a drive shaft, a drum shaft, a drum mounted thereon, a friction clutch, one element of said clutch being carried by said drum, the other element being loosely mounted on said drum shaft, means for driving said loosely mounted element from said drive shaft, a brake band arranged on said drum, a lever controlling said brake band, and a pivotally mounted control lever connected to the loosely mounted element of said clutch, said clutch lever being provided with an elongated slot for the reception of said brake lever, whereby movement of said brake lever in one plane will actuate said clutch lever.

1,452,245. APPARATUS FOR CASTING ARTICLES OF METAL. STANMORE PICKENS MARSHALL, Cincinnati, Ohio, assignor to H. B. Byrd Manufacturing Company, Incorporated, Washington, D. C., a Corporation of Virginia. Filed Oct. 23, 1921. Serial No. 509,593. 9 Claims. (Cl. 22—73.)



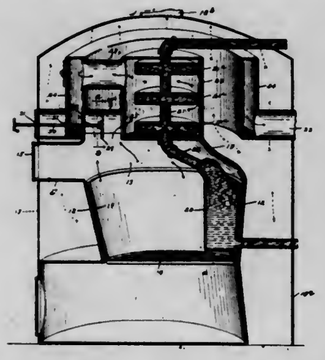
1. In an apparatus for casting articles of metal the combination with a flask adapted to enclose a mold of porous material and having an upper and a lower opening, of a receptacle above the upper opening of the flask and in communication therewith, a crucible within the receptacle above the upper opening of the flask and at such distance from it as to leave a substantial air space between the crucible and the flask, means for creating a partial vacuum within the flask, and means for discharging the contents of the crucible into the upper opening of the flask.

1,452,246. ART OF AND APPARATUS FOR CASTING METALS. STANMORE P. MARSHALL, Washington, D. C., assignor to H. B. Byrd Manufacturing Company, Incorporated, Washington, D. C., a Corporation of Virginia. Filed Dec. 30, 1922. Serial No. 609,781. 21 Claims. (Cl. 22—69.)



1. In the art of casting by machines in which two pressure containers are employed, the steps of filling said containers simultaneously from a single source of pressure, then cutting off the pressure between said containers, then fusing the material to be molded in temporary retaining means separated by an air gap from means for molding said material, then producing a vacuum in said molding means by an ejector device operated by pressure derived from one of said containers, and finally forcing said material through said temporary retaining means by fluid pressure derived from the other of said containers into said molding means.

1,452,247. MOLD FOR MAKING CEMENTITIOUS PRODUCTS. THOMAS A. MAYBERRY, Los Angeles, Calif., assignor, by direct and mesne assignments, of four-fifths to Walter E. Winfield, La Verne, Calif., and one-fifth to M. Thompson, Pomona, Calif. Filed Oct. 31, 1921. Serial No. 511,735. 3 Claims. (Cl. 25—121.)

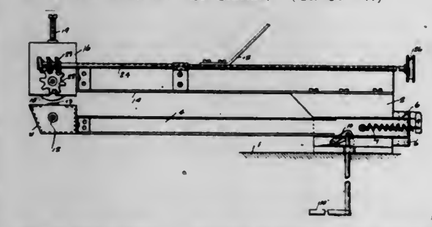


2. In a mold for concrete wall blocks, the combination of an end member, concentric arcuate members, one of the arcuate members being connected with the end member and the other arcuate member being hinged to the end member, a gate hinged to one of the arcuate members, and means to releasably fasten the gate to the other arcuate member.

1,452,248. AUTOMOBILE TRANSMISSION. ALFRED E. MILARCH, Atlanta, Ga., assignor to Isabel Ammon Milarch, Atlanta, Ga. Filed July 7, 1921. Serial No. 482,976. 3 Claims. (Cl. 74—59.)

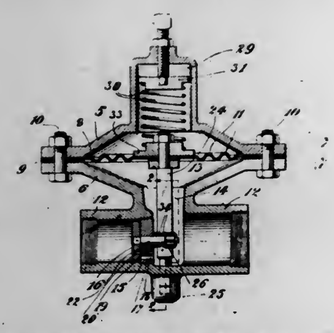
1. In transmission mechanism a guide plate having a transverse channel, there being spaced longitudinal channels in the plate intersecting the transverse channel, blocks slidably mounted within the respective longitudinal channels for attachment to controlling clutches, each of said blocks having a transverse groove, all of the blocks being normally located across the transverse channel with the grooves in alignment, a shiftable lever and means carried by the lever and shiftable along the transverse channel for engagement with any one of the grooved blocks and shiftable with the lever to move the engaged block within the longitudinal channel.

1,452,249. COMBINATION HEATER. DANA O. MILLER, Reading, Mass. Filed Nov. 29, 1922. Serial No. 604,024. 3 Claims. (Cl. 126—101.)



1. A combination heater comprising a domed fire-pot, a water-circulating system including a water leg in the fire-pot and a riser extending upward through the dome, an inner drum enclosing the riser, an outer drum spaced from the inner drum, a flue connecting the upper portions of said drums, the dome being provided with an inner outlet communicating with the inner drum, and with an outer outlet communicating with the outer drum, means for closing either outlet and leaving the other open, the arrangement being such that the hot products of combustion pass wholly through the inner drum, and are concentrated on the riser when the outer outlet is closed, and pass wholly through the outer drum, and are excluded from the riser when the inner outlet is closed, and a casing enclosing the said heater, and provided with means for the admission and discharge of air.

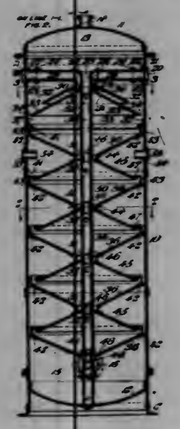
1,452,250. TAG. LAWRENCE LUDLOW MOORE and FREDERICK W. RADCLIFFE, Los Angeles, Calif.; said Moore assignor to said Radcliffe. Filed Feb. 23, 1922. Serial No. 538,759. 1 Claim. (Cl. 40—2.)



A tag for use on delicate articles comprising an elongated body of pasteboard onto which the price of the article and other data pertaining thereto may be written, and a soft cloth covering applied to the back of the tag and being of the same area as the back whereby to prevent the edges of the tag from scratching and marring the delicate article to which it is attached, said cloth covering and said pasteboard body being formed with registering openings for the reception of a tie cord.

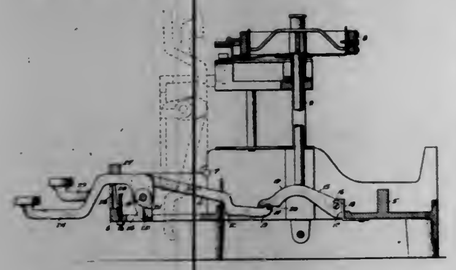
1,452,251. SEAM PRESSER FOR SHOE UPPERS. EDWARD D. MORRIS, Chicago, Ill. Filed Sept. 24, 1921. Serial No. 502,953. 14 Claims. (Cl. 69—7.)

12. A seam presser of the character described comprising a base member having a groove open at one side; an arm adapted to swing into and snugly engage said groove and be rigidly supported against movement in all directions except toward the open side; and removable means for preventing movement of said arm toward said open side.



1,452,252. AUTOMATIC SAFETY EXPANSION VALVE. JOSEPH MÜLLER, Dayton, N. J. Filed May 12, 1922. Serial No. 560,409. 4 Claims. (Cl. 50—23.)

1. An automatic expansion safety valve, comprising a casing provided with an inlet and an outlet opening, a pressure influenced diaphragm within the casing, a valve



seat between the inlet opening and the interior of said casing having a series of spaced openings in radial alignment, and successively decreasing in diameter from the outer margin of said seat inwardly, a valve plate on one side of said seat having a series of spaced openings, arranged in circles of different radii, and in staggered relation to each other, the openings of said valve plate being adapted to register with openings of similar diameter in said seat on rotation of said valve plate, and means connected with said diaphragm and valve plate adapted to impart a rotary movement to said valve plate.

1,452,253. LIQUID AND VAPOR SEPARATOR. HENRY G. NEVETT, Tampico, Mexico. Filed Jan. 8, 1921. Serial No. 435,884. 14 Claims. (Cl. 183—25.)

1. In a separator, a casing, means for delivering a liquid and gaseous or vapor mixture thereto to flow by gravity therethrough, means for spreading a portion of said flowing liquid, means for bringing said portion together again, and escape means for gases or vapors separated from said liquid, said means being arranged to carry said gases or vapor away from the path of said flowing liquid without remixing with said liquid.

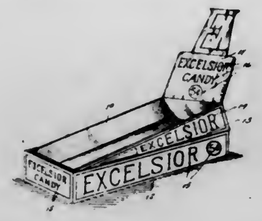
1,452,254. FOLDING TYPEWRITER. CARL O. NOACK, Stamford, Conn., assignor to The Hammond Typewriter Company, a Corporation of New York. Filed Mar. 21, 1921, Serial No. 453,864. Renewed Oct. 2, 1922. Serial No. 591,987. 6 Claims. (Cl. 197—186.)

1. In combination with a typewriter having a main frame keyboard carrying frame foldable relatively to the main frame and a shiftable type carrier mounted on the main frame; an actuator arm for the type carrier, and key-actuated means mounted in the keyboard carrying frame and coacting with said actuator arm in the normal position of the frame, said means remaining relatively stationary and moving as a unit with said frame throughout the folding movement thereof.

1,452,255. CARTRIDGE FUSE. MANUEL R. RODRIGUES, Brooklyn, N. Y. Filed July 7, 1920. Serial No. 394,429. 4 Claims. (Cl. 200—132.)

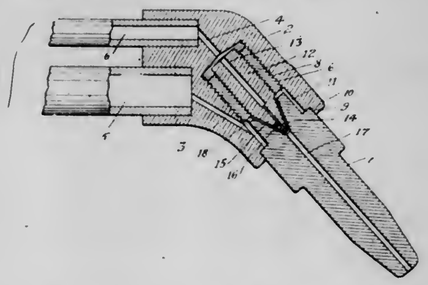
1. In a device of the class described, a casing, a closure therefor, a dual member attached in a horizontally movable relation at the end portion of the casing and comprising a supplemental closure, and a fuse element the end of which is held between the members of the supplemental closure.

1,452,256. PERCOLATOR. EDWARD G. ROWLEY, Newark, N. J., assignor of one-half for Sun Typewriter Company, Newark, N. J., a Corporation of New Jersey. Filed Aug. 10, 1921. Serial No. 491,067. 7 Claims. (Cl. 53—3.)



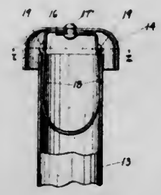
1. A percolator comprising a body having its walls extended below the bottom thereof, a heating coil in the space below the bottom, said coil having its end elements extending into said body, and a tube removably engaging one of the end elements, said tube extending centrally to the upper part of said body.

1,452,257. DISPLAY CONTAINER AND METHOD OF ADVERTISING IN CONNECTION THEREWITH. JOSEPH B. SINGER, Brooklyn, and ARTHUR B. LEVY, New York, N. Y. Filed July 16, 1919, Serial No. 311,208. Renewed Feb. 28, 1923. 2 Claims. (Cl. 40—7.)



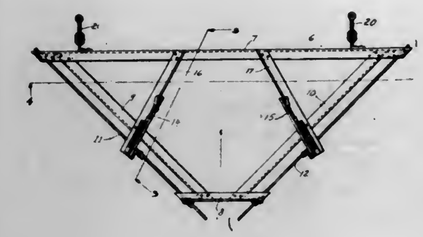
1. A display carton comprising a box body, and a cover adapted to telescope therewith and to be inverted

to receive the inclined body in the display position of the carton, said box body having on its sides diagonally ex-



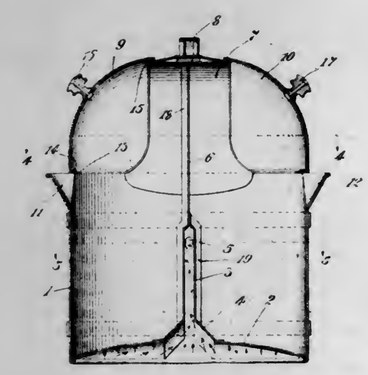
tending lines adapted to register approximately with the top edge of the inverted cover to indicate the correct positioning of the carton parts.

1,452,258. WELDING-TORCH TIP. ELMER H. SMITH, Minneapolis, Minn. Filed May 12, 1919. Serial No. 296,489. 4 Claims. (Cl. 158—27.4.)



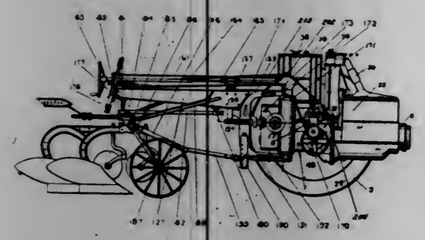
4. In combination a head having therein a screw-threaded socket with oxygen and acetylene passages in the head leading to said socket, a screw-threaded tip in said socket and in turn having a screw-threaded socket therein terminating in a conical wall, a screw threaded plug having a longitudinal passage therethrough and a conical end adjustable in the tip socket to leave an annular space between the conical end of the plug and the interior conical wall of the tip socket, said tip also having ports leading from said conical space to the head socket and to the outer end of the tip as described.

1,452,259. BREATHER TUBE. LYLE K. SNELL, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 24, 1920. Serial No. 412,489. 11 Claims. (Cl. 121—194.)



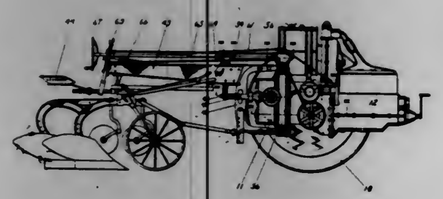
1. In combination, a breather tube, a cap therefor and yieldable supporting means for the cap slidable within the tube and having means to prevent movement of the cap to closed position.

1,452,260. ROAD DRAG. MARTIN STOFFEL, McHenry, Ill. Filed Oct 18, 1921. Serial No. 508,521. 1 Claim. (Cl. 37—170.)



A road drag including a triangularly shaped frame comprising angular front and rear frame members and opposite diverging angular side frame members, angular reinforcing members secured to the front frame member and the side frame members, diverging blades hingedly carried by the front and rear frame members, lug members carried by the blades, an operating lever pivotally carried by each of the reinforcing members and secured to said lugs, and a toothed segment carried by the reinforcing members for engagement with the catch mechanism of the lever to prevent movement thereof and whereby the blades are held rigid during operation.

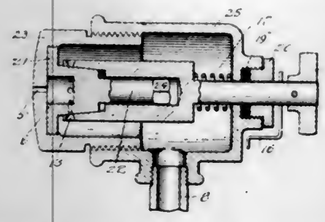
1,452,261. COOKING AND WASH UTENSIL. WILLIAM E. WARNER, Linden, N. J. Filed Sept. 7, 1921. Serial No. 499,085. 3 Claims. (Cl. 53—1.)



1. A utensil comprising a body having a concave bottom with an opening in its innermost portion, relatively deep tapering walls secured about the bottom opening, said body having an enclosed space therewithin connected at its base to the tapering walls and a plurality of outlets communicating with said space through the sides of the body, said plurality of outlets being widely spaced around the body, the enclosed space being of substantially the same width as the upper ends of the tapering walls.

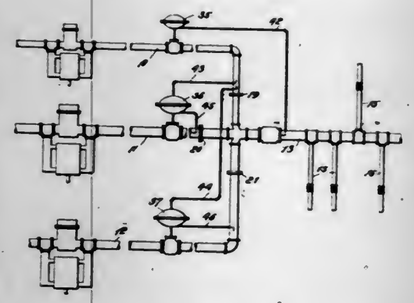
1,452,262. TRACTOR. EDWARD H. BELDEN, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 9, 1919. Serial No. 329,429. 29 Claims. (Cl. 180—54.)

1. In a machine of the class described, an engine casing having a flared circular opening, a transmission casing having a circular end portion for connection with said opening, said end portion having integral pads at its upper part forming a radiator support and a radiator seated on said pads.



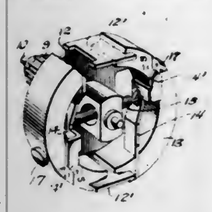
1,452,263. STEERING MEANS FOR TRACTORS. EDWARD H. BELDEN, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Original application filed Oct. 9, 1919, Serial No. 329,429. Divided and this application filed Nov. 22, 1920. Serial No. 425,899. 8 Claims. (Cl. 180—12.)

1. In a self propelled vehicle having driving wheels and a driving motor, steering mechanism therefor comprising a shaft having a hand wheel at one end thereof, an oscillatable steering member, means for operatively connecting said member with an intermediate part of said shaft, means at the other end of said shaft for connecting the same with said motor to be rotated thereby in either direction independently of said driving wheels, and means independent of said hand wheel for controlling the aforesaid means connecting the motor and the shaft.



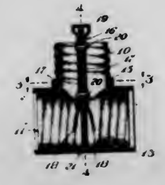
1,452,264. ADJUSTABLE SPRAY NOZZLE. HARRY D. BINKS, River Forest, Ill. Filed Mar. 9, 1921. Serial No. 451,023. 3 Claims. (Cl. 299—118.)

1. In a spray nozzle, a casing enlarged at one end and having an outlet, a cup-like member fixedly secured within the casing with its open end facing and communicating with the outlet and having its periphery spaced from the casing interior, said cup-like member having a plurality of pairs of lateral ports extending from its interior through its periphery, and a rotatable stem in the casing having a cup-shaped end rotatably mounted over the periphery of the cup-shaped member



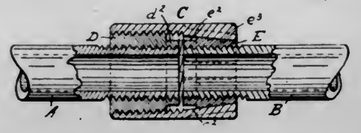
and having a single pair of ports for selective register with the respective ports of a pair of ports of the cup-shaped member.

1,452,265. METHOD AND APPARATUS FOR PROPORTIONALLY REGULATING THE FLOW OF FLUIDS. CHARLES S. COLLINS, New York, and LOUIS ROESSEL, Brooklyn, N. Y. Filed Apr. 1, 1919. Serial No. 286,813. 20 Claims. (Cl. 137—78.)



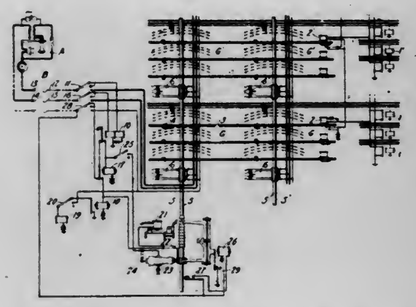
3. The method of regulating the proportional flow of fluids through orifices which consists in maintaining on opposite sides of the orifices pressure variations equal or in contant relation to each other and controlling the initial pressures on the fluids in accordance with the final pressure.

1,452,266. CENTRIFUGAL GOVERNOR. HENRY F. DOBBIN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 6, 1920. Serial No. 428,695. 4 Claims. (Cl. 188—184.)



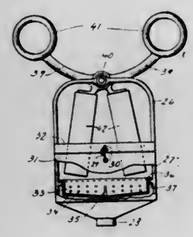
3. A centrifugal governor comprising an arc-shaped fly-weight, an adjustable member supported on one of said weight and substantially parallel to a chord extending between the ends thereof, a second fly-weight, a retractile spring attached to said adjustable member and adapted to restrain both fly-weights against centrifugal motion.

1,452,267. CONNECTING DEVICE FOR ELECTRIC CIRCUITS. SAMUEL M. ESLER, Chicago, Ill., assignor to Esler Electric Manufacturing Company, Marion, Ind., a Corporation of Indiana. Filed Aug. 7, 1919. Serial No. 315,927. 7 Claims. (Cl. 173—335.)



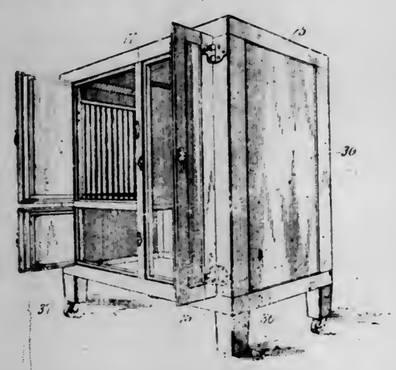
1. In a device of the class described, the combination of a screw-shell, a strip of insulating material held in position in said screw-shell by engagement at its side edges therewith, being in spaced relation to the screw-shell about the greater portion of the inner face thereof, a second screw-shell connected electrically with said first named screw-shell, and electrically connected contacts supported by said strip in operative relation to said screw-shells and insulated from said screw-shells by said trip.

1,452,268. COUPLING FOR PIPES, CONDUITS, ETC. FREDERIC W. ERICKSON, Tarrytown, N. Y. Filed Apr. 28, 1921. Serial No. 465,331. 5 Claims. (Cl. 285—120.)



4. A coupling for the purpose described, comprising two internally threaded bushings of relatively hard and soft material, the harder bushing having ratchet-shaped teeth at one end to engage the adjacent end of the softer bushing, and an enclosing sleeve having an internal formation to draw the bushings into tight endwise relationship.

1,452,269. TELEPHONE-EXCHANGE SYSTEM. CHARLES L. GOODRUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 17, 1920. Serial No. 374,534. 11 Claims. (Cl. 179—18.)

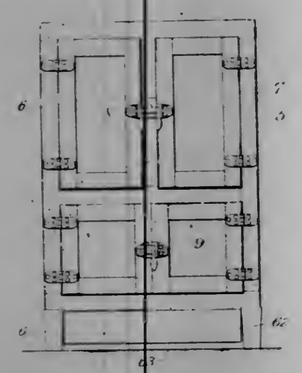


1. In a telephone system, a sender, a selector, a plurality of trunks terminating in said selector and arranged in equivalent subgroups, means for preselecting a subgroup containing an idle trunk, and means including said sender for operating said selector to select said idle trunk.

1,452,270. LEMON SQUEEZER. WILLIAM E. GRAY, Chicago, Ill. Original application filed Nov. 13, 1920. Serial No. 423,770. Divided and this application filed Sept. 24, 1921. Serial No. 503,053. 7 Claims. (Cl. 100—41.)

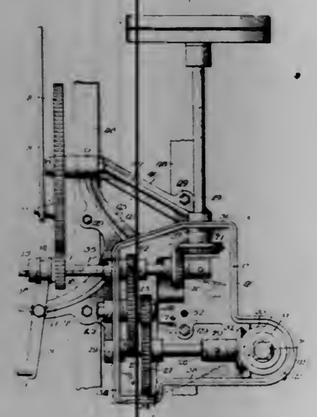
7. A device of the class described comprising an upper bracket and a rectangular case detachably connected thereto, a perforated rectangular container detachably mounted in said case, means for retaining fruit at the center of said container, and a pair of flanged squeezer blades pivotally mounted in said bracket and centered above said retaining means and container.

1,452,271. REFRIGERATOR CONSTRUCTION. HERBERT J. GWYER, Yonkers, N. Y. Filed May 22, 1920. Serial No. 383,346. 11 Claims. (Cl. 217—7.)



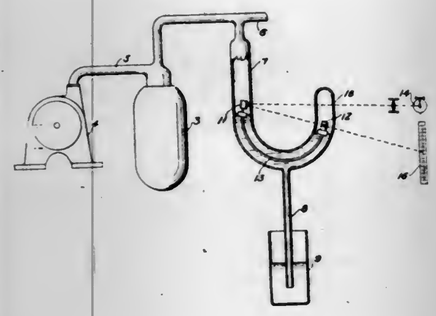
1. In a refrigerator construction, four sides, a top unit, a bottom unit, four corner posts, a tie beam across the ends of two of said corner posts and secured thereto for holding the corner posts rigidly together, said top and bottom units fitting over the said sides and the ends of said posts, one of said units having a groove for receiving said tie beam, and rods passing longitudinally of said corner posts and engaging said top and bottom units for drawing the latter together and securing all of said parts together in cabinet formation.

1,452,272. REFRIGERATOR CONSTRUCTION. HERBERT J. GWYER, Yonkers, N. Y. Filed July 30, 1920. Serial No. 400,208. 12 Claims. (Cl. 217—7.)



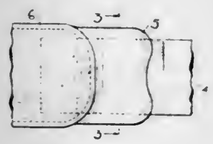
1. In a construction of the character described, a front panel unit comprising corner posts, top and bottom tie

beams secured to the upper and lower ends of said posts, a cross beam secured to said posts intermediate the ends thereof, a vertical beam secured to said cross beam and to one of said tie beams, fillet pieces secured to said cross and vertical beams and forming with said tie beams jambs for doors, a back panel unit including corner posts,



side panel units, and top and bottom panel units fitting over the ends of and securing said panel parts together to form a cabinet.

1,452,273. MECHANICAL MOVEMENT AND BASE THEREFOR. CHARLES F. HENRY and JOHN M. HULETT, Belvidere, Ill., assignors to National Sewing Machine Company, Belvidere, Ill., a Corporation of Illinois. Filed Apr. 18, 1921. Serial No. 462,239. 5 Claims. (Cl. 74—50.)

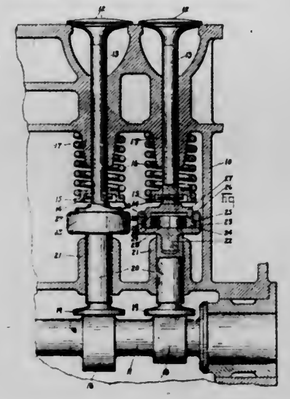


1. As a new article of manufacture, the casting for a gearing support, comprising a bottom plate of generally rectangular form surrounded by side and end walls, a cover adapted to fit the top margins of said walls, means for removably securing the cover to the casting, one of the walls having a plurality of shaft bearings, a recess in the opposite wall, an arm projecting from one side provided with a lever support at its end, a second projecting arm provided with a shaft bearing, a brace arm, and means for securing said arms and the bottom plate to a fixed support.

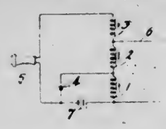
1,452,274. PRESSURE GAUGE. WILLIAM G. HOUSKEEPER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 14, 1919. Serial No. 338,071. 8 Claims. (Cl. 73—31.)

1. A pressure gauge comprising a transparent tube having a plurality of arms adapted to be partially filled with a sealing fluid, one of said arms being connected to the apparatus to be evacuated, means provided with a reflector and floating on the fluid in both arms and means for indicating the deviations in the path of a beam of light from said reflector.

1,452,275. METHOD OF MAKING LEADING-IN CONDUCTORS. WILLIAM G. HOUSKEEPER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Continuation of application Serial No. 158,574 filed Mar. 30, 1917. This application filed Feb. 27, 1920. Serial No. 361,706. 6 Claims. (Cl. 49—81.)



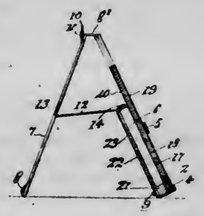
5. The method of making a seal between a metallic conductor and a vitreous material which consists in shaping the conductor into a ribbon form having a width at least ten times its thickness and edge angles of not more than eight degrees, heating the conductor until its surface is covered with oxide, and then embedding it in such vitreous material without the addition of a flux thereto.



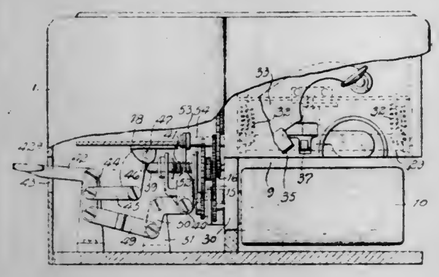
1,452,276. AUTOMATIC TAKE-UP DEVICE. FRANCIS JERDONE, Jr., Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 24, 1919. Serial No. 278,768. 12 Claims. (Cl. 123—90.)

1. In an automatic take-up device, the combination with a member to be actuated, operating mechanism therefor, a recessed member mounted upon said operating mechanism having an inwardly disposed inclined face,

a plurality of wedge-shaped members seated upon the inclined face of the last mentioned member and co-operating with the member to be actuated to compensate for lost motion between said member and the operating mechanism.

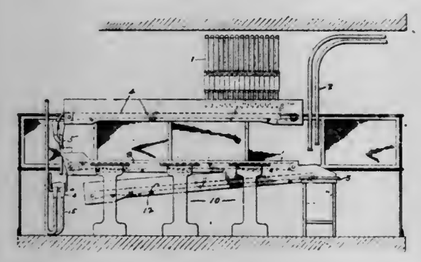


1,452,277. TELEPHONE SUBSTATION SET. KENNETH S. JOHNSON, Jersey City, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 8, 1917. Serial No. 195,364. 13 Claims. (Cl. 179—81.)



1. A telephone circuit including three elements which consist of a line, a receiver and a transmitter, a transformer associated with said elements, said transmitter being connected across a coil of said transformer, said receiver being connected across said coil and another coil of said transformer, said line being connected across all the coils of said transformer, said coils being so wound and arranged that current passing through them from one extreme electrical terminal to the other extreme electrical terminal of said transformer produces a series aiding effect in said transformer as a whole.

1,452,278. DISPLAY CONTAINER AND HOLDER. HERMANN KIND, Stapleton, N. Y. Filed May 12, 1921. Serial No. 468,874. 3 Claims. (Cl. 206—44.)

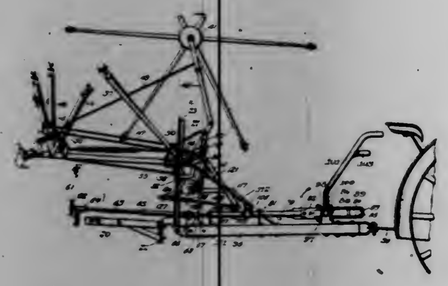


1. A display container and holder comprising a thin body portion having display spaces at one side thereof and compartments for stock at the other side thereof, and a cover secured to the upper portion of the body adapted to close the stock compartments and acting as an easel to support the body in an inclined position on a show-case or the like.

1,452,279. FABRIC MEASURING AND COST COMPUTING MACHINE. GEORGE B. KYLE, St. Louis, Mo., assignor to The Measuregraph Company, St. Louis, Mo., a Corporation of Delaware. Filed Nov. 7, 1921. Serial No. 513,303. 9 Claims. (Cl. 33—133.)

1. In a fabric measuring machine comprising a presser roller, and marking means to mark the edge of the fabric, and to raise the presser roller when the said means is actuated, the combination of a measuring roller, indicating mechanism, resetting means, for returning the indicating mechanism to the zero position, a movable member independent of the marking means, and means actuated by said member for raising the presser roller and for simultaneously actuating the resetting mechanism to reset the indicating mechanism to zero.

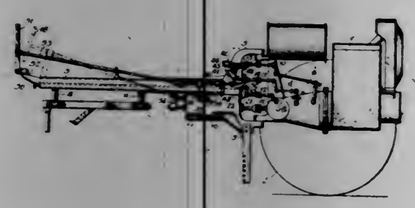
1,452,280. PNEUMATIC-DISPATCH SYSTEM. JAMES G. MACLAREN, Mamaroneck, N. Y. Filed Aug. 19, 1920. Serial No. 404,637. 17 Claims. (Cl. 243—1.)



9. In a dispatch system, a belt for conveying carriers, a pneumatic dispatch tube arranged to receive carriers from said belt and a second conveying belt arranged to receive carriers from said tube.

1,452,281. METALLIZING ARTICLES. QUINTIN MARINO, Hampstead, London, England. Filed Sept. 10, 1921. Serial No. 499,820. 2 Claims. (Cl. 204—8.)

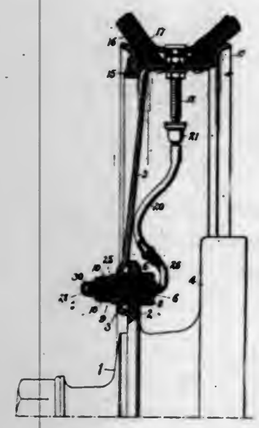
1. A process of metallizing articles composed essentially of non-conductive ceramic ware, which comprises applying to the surface of the article, while such surface is substantially free from glaze, a solution of silver nitrate in an alcoholic solvent, allowing the alcohol to evaporate, applying to the surface a reducing agent containing the



formic acid radical, brushing the surface of the article with a metallic brush, applying to the surface of the article, a warm solution containing silver cyanide, washing the article, and thereafter electro-depositing a metallic coating upon said article.

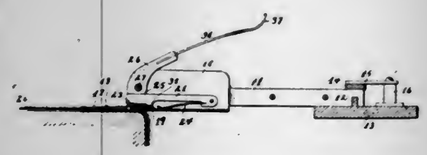
1,452,282. CONTROLLING MECHANISM FOR HARVESTERS. CHARLES PEARSON, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Feb. 26, 1919. Serial No. 279,438. 21 Claims. (Cl. 56—22.)

1. In combination, a harvester, adjusting mechanism carried thereby, power connections for actuating said mechanism, a draft member connected to the harvester and manually operable controlling means for said connections mounted on said draft member.



1,452,283. TRACTOR. LEROY C. SHONTS and OTIS W. HOWARD, Moline, Ill., assignors, by mesne assignments, to Moline Plow Company, Incorporated, Moline, Ill., a Corporation of Virginia. Filed July 10, 1920. Serial No. 395,420. 15 Claims. (Cl. 180—12.)

1. A tractor having a power plant, driving mechanism including a clutch and transmission, steering mechanism independent of the driving mechanism, and controlling means for the clutch, transmission, and steering mechanisms operable by a single member that is movable forward, backward, to the right, to the left, or in any combination of these directions.

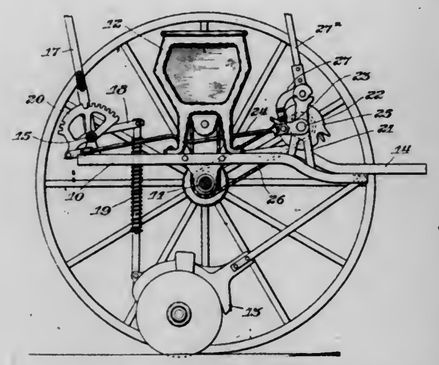


1,452,284. TIRE-INFLATING ATTACHMENT FOR DISK WHEELS. JOSEPH A. STEINMETZ, Philadelphia, Pa. Filed Apr. 11, 1921. Serial No. 460,408. 1 Claim. (Cl. 152—12.)

A pneumatic tired wheel for vehicles comprising a hub, a disk detachably mounted upon said hub, bolts upon the hub extending through the disk, nuts upon the bolts for securing the disk upon the outer face of the hub, one of said bolts having an air passageway formed therethrough, said last mentioned bolt having a nipple formed upon the outer end thereof for the attachment of an air supply pipe, a cap adapted to fit loosely over the end of said

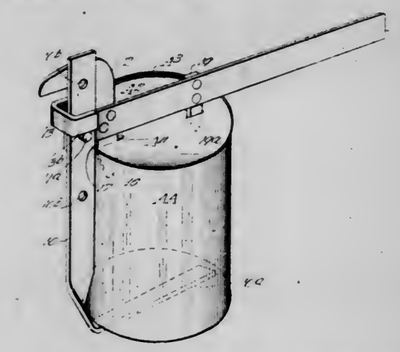
nipple, said cap being detachably secured upon the nut and removable with said nut from the bolt carrying the same, and means forming a confined air passageway between the inner end of the bolt and the pneumatic tire.

1,452,285. PILE-CUTTING DEVICE. PAUL A. WAGNER, Jersey City, N. J. Filed Mar. 21, 1922. Serial No. 545,399. 14 Claims. (Cl. 139—62.)



14. In a device of the character set forth, a carrier, a fixed jaw thereon, a movable jaw loosely mounted on said carrier, the adjacent faces of said jaws arranged to strike one upon the other in the closing movement, and movable means on said carrier separate from said movable jaw and arranged to act upon said movable jaw and close the latter in such biting contact upon said fixed jaw.

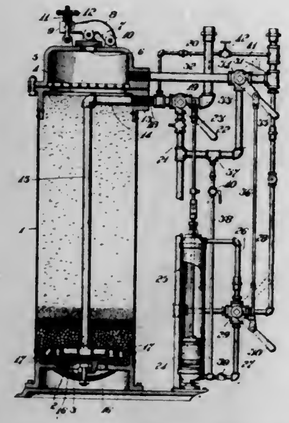
1,452,286. POWER-LIFT DRILL. HARRISON B. BOZARD, Hamilton, Ontario, Canada, and CHARLES W. ROBINSON, Auburn, N. Y., assignors, by mesne assignments, to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed July 15, 1920. Serial No. 396,402. 5 Claims. (Cl. 97—72.)



4. An implement comprising the combination of a wheel supported frame, a gang of drag-bars pivoted to the frame, a sectional rock-shaft journaled on the frame, a lifting connection between each drag-bar and the shaft,

means for oscillating each section of the rock shaft independently to lift and lower the drag-bars connected to

that section, and a single traction actuated lift device connected to all the shaft sections for oscillating them jointly.



1,452,287. CAN OPENER. ALBERT C. BURKE, La Crosse, Wis. Filed July 16, 1921. Serial No. 485,290. 8 Claims. (Cl. 164—119.)

1. An implement for opening cans comprising a bar having a pair of spaced cutting points thereon adapted to cut openings in the can at diverse places by an inward bending of the wall of the can, one of the cutters being arranged to leave a portion of the wall free from the inward bend of the substance of the wall, and the other to make an air vent in the wall.

1,452,288. WATER-SOFTENING APPARATUS. JOHN E. CAPS, Wilmette, Ill. Filed Oct. 28, 1918. Serial No. 259,901. 4 Claims. (Cl. 210—24.)

1. Water softening apparatus comprising a housing for a bed of zeolite, a salt chamber connected therewith, means for introducing salt into said chamber at intervals, a water supply pipe connected with the chamber, and a service pipe connected with the housing relatively arranged to cause water to flow through the bed of zeolite from the chamber to the service pipe, a drain pipe connected with the serving pipe, a three-way valve normally maintaining the housing connected with the service pipe and adapted to be positioned to connect the same with the drain pipe, fluid pressure actuated means for actuating said valve, connection between the fluid pressure actuated means and water supply pipe, a valve controlling the same for causing said three-way valve to be turned to either of its two positions, means for controlling the speed of movement of said three-way valve in one direction, a valve controlling the water supply to said chamber, and con-

nection between said water-controlling valve and the valve controlling the pressure actuated means for causing the same to open and close in unison.

1,452,289. ENSILAGE-CUTTER-KNIFE ADJUSTMENT. EDWARD S. CHARLES, Berwyn, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Apr. 7, 1921. Serial No. 459,263. 5 Claims. (Cl. 146—26.)

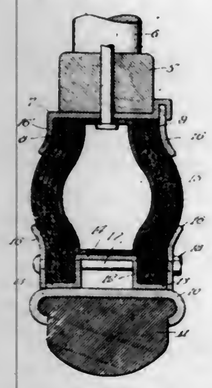
1. In an ensilage cutter, a flywheel, a knife support mounted on said flywheel comprising a plurality of members, and means comprising an L-shaped bolt connecting said members for adjusting said support.

1,452,290. PLAN SIFTING MACHINE. HERMANN CONRAD, Neustadt, Haardt, Germany. Filed Nov. 16, 1921. Serial No. 515,727. 1 Claim. (Cl. 83—38.)

In a plan sifting machine, in combination, two oscillatory sieve-boxes, a belt-driven crank-disc horizontally ar-

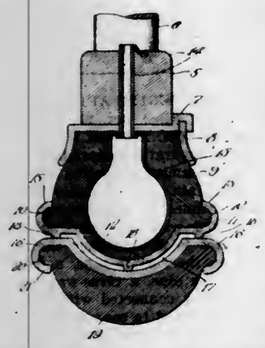
ranged between the latter and balanced around its oscillatory centre, and crank-pins on said crank-disc attached to said sleeve-boxes, one of said crank-pins lying in the central axis of said crank-disc and the other at 180° thereto relatively to said oscillatory centre, substantially as and for the purpose set forth.

1,452,291. RESILIENT WHEEL FOR VEHICLES. JOSEPH L. DONAT, Chicago, Ill. Filed Dec. 26, 1919. Serial No. 347,257. 2 Claims. (Cl. 152—33.)



1. A device of the character described having in combinative association a pneumatic tire casing with laterally extending, circumferential beads, near its outer edge; a cushion tire having similar beads near its inner edge, overlying the pneumatic tire; a ring between the casing and tire; and metal side rings, one on each side of the tire and casing, each ring having outwardly curved, circumferentially extending parts to overlie the respective beads on both tires, and an inner outwardly turned annular portion adapted to partially enclose the pneumatic tire casing; and bolts passing thru said side rings and the intermediate ring to hold the parts together.

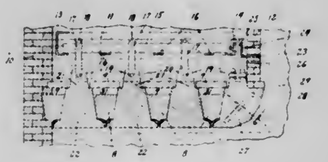
1,452,292. RESILIENT WHEEL FOR VEHICLES. JOSEPH L. DONAT, Chicago, Ill. Filed Dec. 26, 1919. Serial No. 347,258. 1 Claim. (Cl. 152—33.)



A resilient tire for a wheel having in combination a felly; a spaced apart outer concentric ring; two flat resilient rings having their inner and outer circumferential edges bolted to the felly and to the outer ring, respectively; two cushion rings of resilient material each having its outer side surface substantially convex and its inner side surface concave, with their concave surfaces confronting, thereby forming a substantially circular, circumferentially extending opening between the cushion rings, said composite cushion ring being within and substantially filling the opening between the felly and outer ring and the two side rings so that the cushion rings and side rings together form a cushion which expands and contracts laterally as a unit under a wheel load; and two reinforcing metal rings on each side of the structure, one pair bolted to the felly and the other pair to the spaced apart ring to limit the lateral movement of the flat resilient rings.

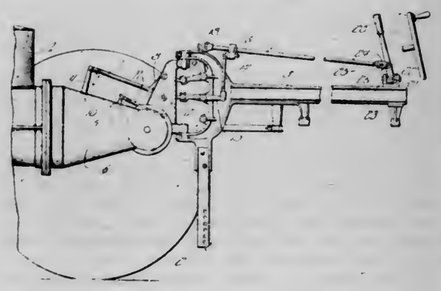
1,452,293. RESILIENT TIRE. JOSEPH L. DONAT, Chicago, Ill. Filed Dec. 26, 1919. Serial No. 347,259. 1 Claim. (Cl. 152—33.)

A resilient wheel having in combination a two part casing provided by two like normally flat resilient rings, each ring consisting of a plural ply fabric of uniform thickness throughout; a rim to hold the inner edges in place, having flanges of uniform thickness; an outer rim having an inwardly extending abutment, comprising a channel opening outwardly, to support the inner tube and to overlie the outer edges of the flexible rings; flanges engaging the outer surfaces of the flexible flat rings and bolts passing thru both flanges, both rings and the channel structure to hold the assembled parts together.



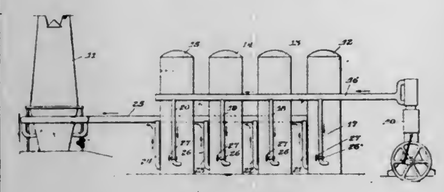
1,452,294. RESILIENT WHEEL. JOSEPH L. DONAT, Chicago, Ill. Filed Dec. 26, 1919. Serial No. 347,260. 1 Claim. (Cl. 152—33.)

A device of the character described comprising an annular casing substantially U-shape in cross section having relatively thick side walls joined by a relatively thin



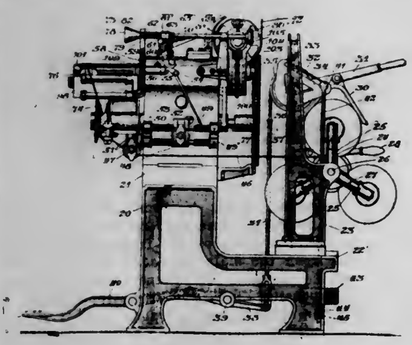
transversely curved peripheral wall of uniform thickness and extending radially beyond the abrupt terminal edges of the side walls, said side walls providing abrupt shoulders at their junctions with the peripheral wall; integral annular beads extending laterally from the lower edges of the side walls, and a rim having parts underlying the shoulders provided by the juncture of the side walls with the peripheral wall and inwardly curved edges overlying said beads and an intermediate curved peripheral portion in intimate contact with the intermediate peripheral wall.

1,452,295. FIRE ARCH FOR FURNACES. ERNST EMIL FROZETH and TERRY BLINT, Minneapolis, Minn. Filed May 24, 1921. Serial No. 472,261. 3 Claims. (Cl. 110—99.)



1. A fire arch of the class described consisting of a number of suspension blocks, the same being widest at their lower ends and arranged so as to form with their lower ends the entire underside of the arch, means for hanging the suspension blocks in a boiler or furnace, and a number of downwardly tapered wedge blocks adapted to be inserted and substantially fill the space in between the suspension blocks above said lower ends.

1,452,296. CONTROLLING MECHANISM FOR TRACTORS. OTIS W. HOWARD, Moline, Ill., assignor, by mesne assignments, to Moline Plow Company, Incorporated, Moline, Ill., a Corporation of Virginia. Filed Aug. 5, 1920. Serial No. 401,440. 7 Claims. (Cl. 180—77.)

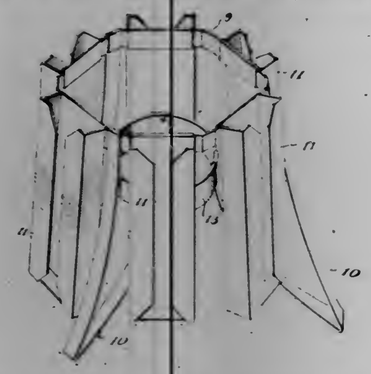


1. A tractor having a power plant, clutch mechanism, transmission mechanism, a coupling frame extending rearwardly, a lever positioned near the rear of the coupling frame and mounted so as to be movable in two planes, and controlling means connecting the lever with the tractor mechanisms so that movements of the lever in one plane operate the clutch, and movements in another plane operate the transmission.

1,452,297. SAFETY DEVICE FOR HOT-BLAST STOVES. HENRY PHELPS HOWLAND and FRANK ALBERT WILEY, Chicago, Ill., assignors, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed June 27, 1918. Serial No. 242,325. 25 Claims. (Cl. 137—144.)

6. In combination, a plurality of valves, independent actuating mechanisms for said valves, and controlling means for each of said actuating mechanisms for preventing the operation of one of said mechanisms to close one of said valves unless one or more of the remaining valves is open.

1,452,298. CONTROLLING MECHANISM FOR BALLING MACHINES. MATHIAS J. KASPARI, Chicago, Ill., assignor, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed Feb. 5, 1918. Serial No. 215,495. 8 Claims. (Cl. 242—37.)



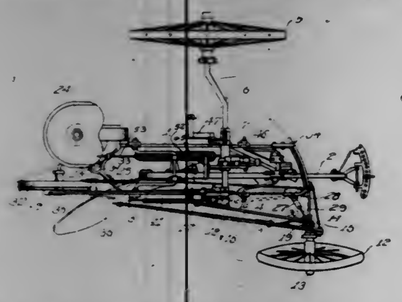
1. The combination with a balling machine including a spindle, a twine guiding member, and actuating means therefor; of a spring pressed slidable member adapted to be engaged by the twine and normally placing the twine under tension and a throw-out device for the actuating means including an element in the backward path of said slidable member and positioned to be engaged thereby when the twine releases said slidable member.

1,452,299. ANTISEPTIC CONTAINER. FRANK C. LEAHY and GEORGE H. HILEMAN, Detroit, Mich. Filed Dec. 9, 1921. Serial No. 521,221. 2 Claims. (Cl. 167—3.)

1. In a sanitary receptacle for combs and brushes, a container having a removable cover, a rack adapted to be removably received within said container so formed as to provide a plurality of brush and comb receiving pockets arranged around a centrally positioned support for a removable vessel, and a vessel adapted to contain a disinfectant compound removably carried by said support.

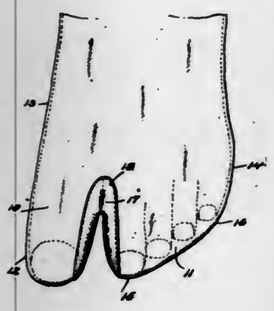
2. In a sanitary receptacle for combs and brushes, a container having a removable cover, a rack adapted to be

removably received within said container having a plurality of brush and comb receiving pockets, said rack having legs of such a character as to be compressible in-



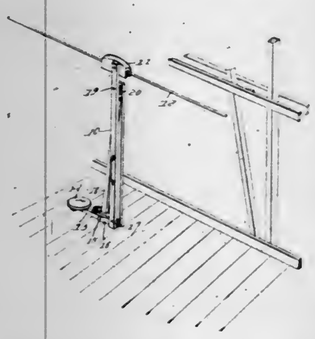
wardly but adapted to spread outwardly against the circumferential wall of the container when the rack is disposed therein.

1,452,300. ELEVATING TRUCK. ARTHUR D. LIGHTNER and EDWARD HOLMES, Toledo, Ohio, assignors to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 18, 1919. Serial No. 271,834. 16 Claims. (Cl. 254—2.)



1. In an elevating truck, in combination, a main frame portion, a movable frame portion, means for transmitting movement to the movable frame portion, and means pivoted upon the main frame for equalizing the movement of the movable frame and having portions extending in opposite directions from the points of pivotal connection with the main frame.

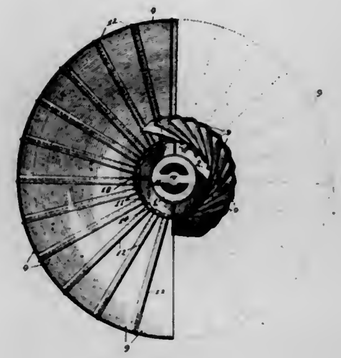
1,452,301. SULKY PLOW. ALEXUS C. LINDGREN, Evanston, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed May 14, 1920. Serial No. 381,439. 5 Claims. (Cl. 97—81.)



1. A tillage implement comprising a main frame having at one end a pair of horizontally spaced bearing members, a furrow wheel, a support for the furrow wheel pivoted to the main frame for horizontal motion and having a laterally extending curved portion slidingly supported by said bearings.

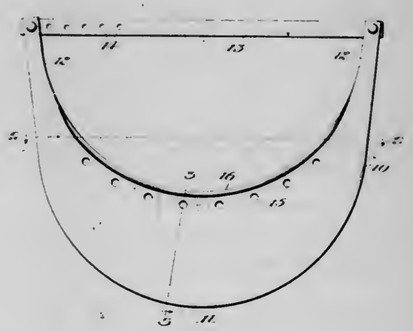
1,452,302. STOCKING. CARL LOVEN, Portland, Oreg. Filed Feb. 16, 1922. Serial No. 537,044. 5 Claims. (Cl. 2—23.)

1. A stocking having its toe portion formed of two separated, closed pockets only, one to receive the big toe and the other to receive the four lesser toes.



1,452,303. MILKING STOOL. HENRY E. LUEBKER, Plum City, Wis. Filed July 14, 1922. Serial No. 575,092. 3 Claims. (Cl. 31—13.)

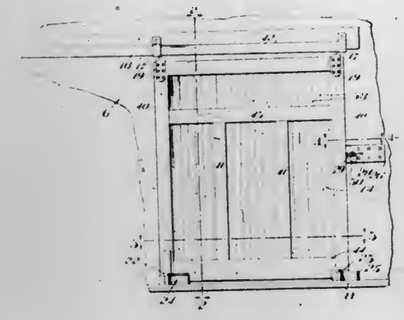
1. A milking stool for use in connection with a plurality of stalls having a hanger bar provided with a traveler for traversing an overhead track, and a seat carrying arm foldably mounted on the hanger bar, the hanger bar being provided with a spring actuated tongue operatively connected with the seat carrying arm for yieldingly holding the latter in folded relation with said bar.



3. A milking stool for use in connection with a plurality of stalls having a hanger bar provided with a traveler for traversing an overhead track, and a seat carrying arm foldably mounted on the hanger bar, said hanger bar consisting of parallel spaced elements provided at their lower extremities with forwardly directed cars between which the seat carrying arm is pivotally mounted, and the said tongue being mounted between said elements and terminally connected with the seat carrying arm.

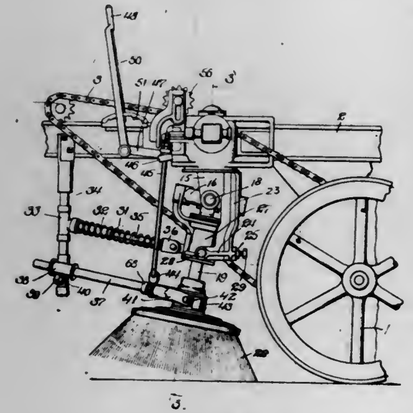
1,452,304. COLLAPSIBLE ELECTRIC HEATER. EDWARD J. MCCORMACK, San Francisco, Calif. Filed July 13, 1921. Serial No. 484,391. 16 Claims. (Cl. 219—34.)

1. A folding electrical heater comprising a heating element; a collapsible reflector connected to said element; and means for normally retaining said reflector in an extended or folded position.



1,452,305. EYE SHADE. WILLIAM F. MAHONY, Washington, D. C. Filed Jan. 18, 1921. Serial No. 438,152. 1 Claim. (Cl. 2—149.)

An eye shade of substantially crescent shape comprising flat projecting horns, and having an inwardly bent integral hollow bearing-bead formed on its contact edge adapted to present a smooth contact surface, said bearing-bead tapering outwardly towards said flat horns so as to cause a buckling of the parts and to provide a ventilating opening substantially adjacent the temples of the wearer.

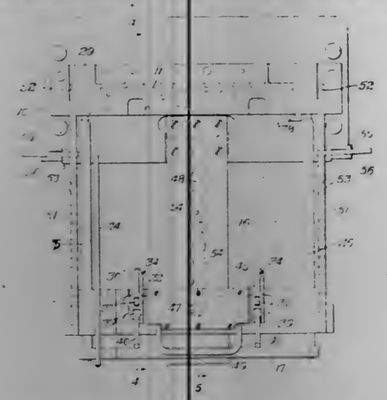


1,452,306. STORAGE BUILDING. PAUL MANDEVILLE, Chicago, Ill. Filed Mar. 13, 1919. Serial No. 282,437. 13 Claims. (Cl. 20—19.)

1. The combination with a building having a doorway, of a sliding door adapted to close said doorway, said door being pivotally suspended to swing outwardly about a horizontal axis, and means operating on the lower marginal portion of the door by edgewise movement

thereof into operative position to move the door laterally so that its side and top margins are brought into close contact with the frame of the doorway.

1,452,307. GUTTER-BROOM ARRANGEMENT FOR STREET SWEEPERS. ELMER R. MARTIN, Elgin, Ill., assignor to Elgin Street Sweeper Co., Elgin, Ill., a Copartnership consisting of Charles A. Whiting, James Todd, and Daniel M. Todd. Filed Mar. 28, 1922. Serial No. 547,361. 16 Claims. (Cl. 15—87.)



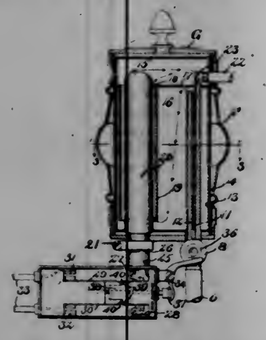
1. In a street sweeping machine, an articulated shaft depending at one side of the machine, a brush mounted thereon, means yieldingly resisting a swinging of the brush-carrying shaft portion rearwardly of the machine, and means limiting the swinging of the said shaft portion forwardly of the machine.

1,452,308. MATERIAL-BLANKING OPERATION. EWELL BALFOUR MILLER, Cicero, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 15, 1921. Serial No. 445,251. 9 Claims. (Cl. 164—48.)

1. In a mechanism for punching strips with oppositely extending projections from sheet material, blanking tools, two carriages, one of said carriages having means for supporting the sheet material, said carriages movable independently and also as a unit to feed the sheet ma-

terial toward said blanking tools with a combined forward and sideway movement whereby the projections on

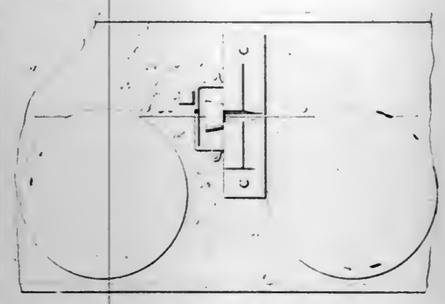
the strips will be cut from the material between the projections of adjacent strips.



1,452,309. ASPHALT STRUCTURE AND COMPOSITION. GUSTAV MONRATH, New York, N. Y., assignor, by mesne assignments, to The Barber Asphalt Paving Company, Philadelphia, Pa., a Corporation of West Virginia. Filed Feb. 1, 1918. Serial No. 214,903. 5 Claims. (Cl. 116—31.)

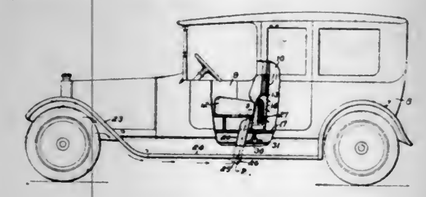
1. Asphalt mastic structures made in part of an asphalt composition comprising the following ingredients in substantially the following proportions: petrolene about 20 to 30%; asphaltene about 50 to 70%; carbenes about 10 to 20%.

1,452,310. ASPHALT COMPOSITION. GUSTAV MONRATH, New York, N. Y., assignor, by mesne assignments, to The Barber Asphalt Paving Company, Philadelphia, Pa., a Corporation of West Virginia. Filed Feb. 1, 1918. Serial No. 214,904. 5 Claims. (Cl. 106—31.)



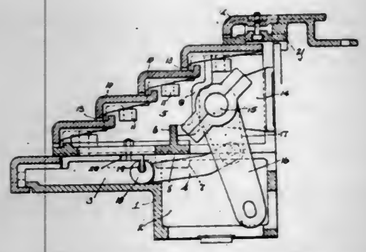
1. An asphalt composition comprising the following ingredients in substantially the following proportions: petrolene about 20 to 30%; asphaltene about 50 to 70%; carbenes about 10 to 20%.

1,452,311. HEATING DEVICE FOR LIQUIDS. CHARLES E. PARKHURST, Somerville, Mass. Filed Mar. 11, 1922. Serial No. 542,989. 13 Claims. (Cl. 219—39.)



1. A heating device comprising liquid control means including a valve having a plurality of operative positions in which liquid flows, and means operative in a part only of said positions for heating the flowing liquid.

1,452,312. DIE HOLDER. WILLIAM D. PIERSON, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed Apr. 21, 1921. Serial No. 463,168. 16 Claims. (Cl. 205—25.)

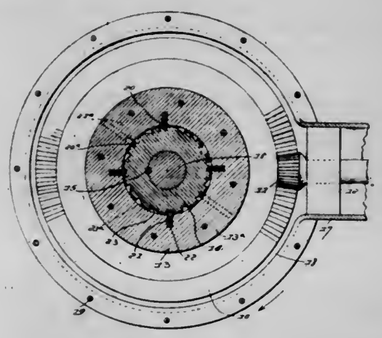


1. A device for the purpose described, comprising a box or container separate and independent from the die, and in which the die is held, with means for movably mounting the same upon a wire drawing machine adjacent to the die head.

1,452,313. VENTILATING SYSTEM. DELMAR G. ROOS, Bridgeport, Conn., assignor, by mesne assignments, to The Locomobile Company, Bridgeport, Conn., a Corporation of Delaware. Filed Nov. 30, 1918. Serial No. 264,807. 11 Claims. (Cl. 98—22.)

1. In a ventilating system for vehicles, the combination of a deflecting means provided with a downwardly and rearwardly inclined deflecting surface and a horizontal deflecting surface extending rearwardly therefrom, an air duct having a forwardly directed inlet adjacent the underside of said horizontal deflecting surface, said duct leading in an upward direction from said inlet, and a chamber into which said duct discharges.

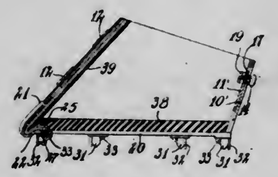
1,452,314. EXTENSION GRATE APPARATUS. GILBERT WAYNE RUGGLES, Youngstown, Ohio. Filed Nov. 26, 1920. Serial No. 426,342. 6 Claims. (Cl. 110—33.)



1. In a mechanical stoker, the combination of an extension grate, a member adapted to slidably support same,

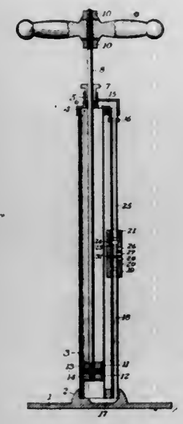
a reciprocable link, said grate being tiltable relatively to said member, and operating connections between said grate and link adapted to be disengaged upon such tilting of the grate.

1,452,315. PROCESS FOR BLEACHING BARYTES. JOSEPH B. SCHEUER, Lanett, Ala. Filed Oct. 5, 1922. Serial No. 592,607. 6 Claims. (Cl. 252.)



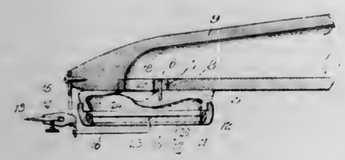
1. In the process of purifying barytes, the steps which comprise reducing the ore to a fine powder, heating the powder in the presence of an oxidizing agent to oxidize some of the impurities therein, and removing the oxidized impurities.

1,452,316. DIFFERENTIAL GEAR. WILLIAM M. SHIRLEY, Alicevile, Ala. Filed Mar. 11, 1922. Serial No. 542,921. 3 Claims. (Cl. 74—7.)



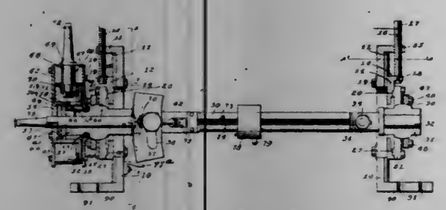
1. A differential for drive wheel shaft members having a main gear actuable by the motor drive shaft, an operating clutch member carried by the main gear, operated clutch members fixed respectively to the drive wheel shaft members for receiving motion from the operating clutch member, and driving and reverse pawls carried by the operating clutch member for engagement with the complemental rachet faces on the operated clutch members, the driving pawls being yieldingly engaged with the operated clutch members and the reverse pawls being automatically maintained out of engagement with said members when the driving pawls are operative.

1,452,317. HOOF-PROTECTING HORSESHOE. DEZSÖ SIMON and ABRAHAM GOTTLIEB, New York, N. Y. Filed Dec. 14, 1921. Serial No. 522,260. 6 Claims. (Cl. 168—18.)



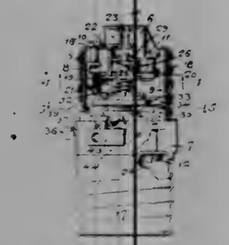
3. A horseshoe comprising a collar adapted to fit around the hook of the horse and being split at the front into two sections hinged to one another, a sole member fixed to said collar, and means for securing the free ends of the collar to one another in different adjusted positions, said means comprising a key having an enlarged neck, adapted to fit in different serrations in registering slots in the said free ends.

1,452,318. PUMP. THOMAS A. SPIKER, Pittsburgh, and JOHN E. AYRES, McDonald, Pa. Filed Oct. 20, 1921. Serial No. 509,124. 2 Claims. (Cl. 103—227.)



1. A double acting fluid pump comprising a cylinder, a piston therein, and a valve outside of the cylinder and connected thereto by cylinder connections at each end thereof and by conduits from the cylinder connections; the valve comprising a body connected to one of said conduits and having a chamber therein, a slide valve in the chamber adapted to be moved by the fluid, means for preventing rotation of the slide valve with respect to the body, said valve having openings adapted to provide fluid passages, said body having openings adapted to register with the openings in the slide valve according to the motion of the piston, and a cap for the body adapted to hold the slide valve therein and also limit its movement, said cap supporting the other conduit at one end, the second conduit having its other end adapted to slidingly fit into a cylinder connection whereby the cap may be attached to the body, substantially as described.

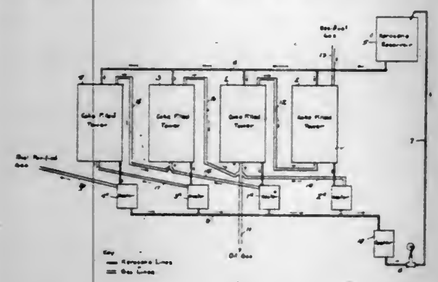
1,452,319. SOUND BOX. CHARLES S. SPITZER and JOHN GLOUB, Chicago, Ill. Filed May 2, 1921. Serial No. 466,084. 1 Claim. (Cl. 274—25.)



In a sound-box, the combination of a case, a diaphragm at one side of and forming a chamber in the case, and a tone arm at its other side, the case being formed with a helicoidal sound-conduit therein between said chamber and said connection, said sound-conduit on the diaphragm side being substantially coextensive in area with said diaphragm and being progressively constricted toward said tone arm.

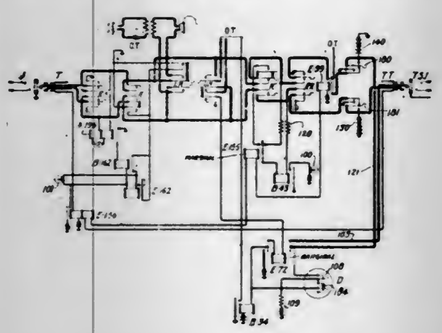
1,452,320. PORTABLE BORING MACHINE. JOSEPH STAEMPFLI, New Orleans, La. Filed July 16, 1920, Serial No. 396,636. Renewed Mar. 3, 1923. 15 Claims. (Cl. 77—2.)

1. In a portable boring machine, a boring bar provided with a shaft portion at each end, independently adjustable supports for each end of the bar, and a ball and socket joint connection between each shaft portion and its support.



1,452,321. ADAPTER. LUDWIG STENDAHL, Fairfield, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Mar. 31, 1922. Serial No. 548,366. 3 Claims. (Cl. 173—344.)

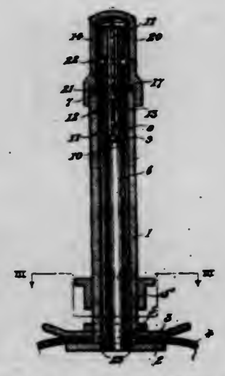
1. In an adapter, a pair of insulating buttons, standards spacing the same apart to afford a switch chamber, a screw shell surrounding said chamber, a switch mechanism arranged therein, a center contact associated with said shell to form therewith the plug contacts of the fitting, a second pair of screw shell and center contacts forming the receptacle contacts of the fitting, means for connecting one of the plug contacts and one of the receptacle contacts to one of the standards to establish constant electrical connection therebetween, a switch terminal associated with the other of the plug contacts, a cooperating switch terminal associated with the other spacing standard, and a switch member for making and breaking the circuit between said switch terminals.



1,452,322. METHOD OF SEGREGATING OLEFINES. LEROY C. STEWART, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Jan. 12, 1920. Serial No. 350,999. 11 Claims. (Cl. 260—170.)

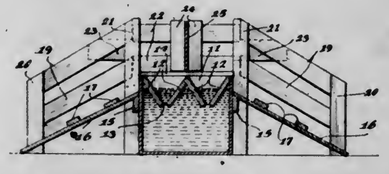
1. In a method of segregating olefines from a gaseous intermixture of the same, the step which consists in bringing such intermixture into contact with a cold petroleum oil capable of absorbing propylene and the

higher members of the series in preference to ethylene, whereby such propylene and higher members are separated from such ethylene, substantially as described.



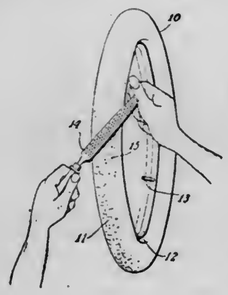
1,452,323. TOLL TRUNKING CIRCUITS FOR MACHINE-SWITCHING TELEPHONE SYSTEMS. RAY L. STOKELY, Floral Park, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 1, 1921. Serial No. 448,890. 6 Claims. (Cl. 179—6.3.)

1. In a machine switching system wherein the toll operator sets automatic switches at a distant automatic office over a two-wire interoffice toll trunk and trunks local to the automatic office, and the completed connection includes a repeating coil at the automatic office, the combination with coin boxes at the substations of the lines having coin disposal magnets therein, sources of collect and refund current at the automatic office, electromagnetic means at said automatic office to apply current from one or the other of said sources to selectively operate said magnet to collect or refund coins, and means under the control of the toll operator to control said electromagnetic means over said interoffice trunk and local trunks.



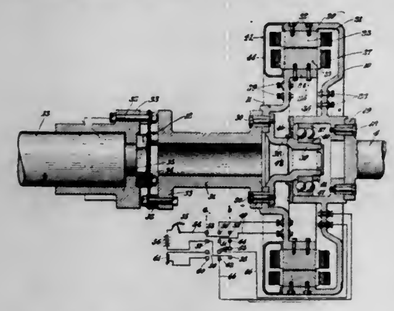
1,452,324. TIRE VALVE. LOUIS P. STRUTZ, Corning, N. Y. Filed Jan. 6, 1922. Serial No. 527,315. 2 Claims. (Cl. 152—11.5.)

2. A tire valve comprising a casing, a tubular member secured in the casing providing an annular air chamber with the outer ends of the casing and tubular member lying in the same plane, a valve mechanism including a pipe section threaded into the tubular member, an air valve carried by the pipe section, a tensioned and regulable exhaust valve positioned exteriorly of the pipe section and casing and adapted to close the outer end of the air chamber between the casing and tubular member, said exhaust valve being of ring formation and embodying a depending valve body, an upstanding collar and an inwardly directed flange for engagement with a



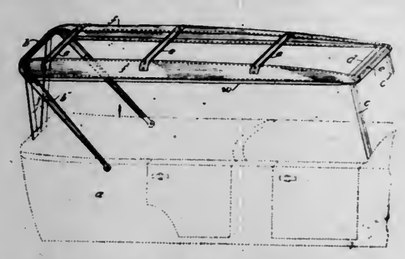
spring, an outwardly directed flange carried by the exhaust valve, and a shouldered cap threaded on the casing with the shoulder thereof engaging the outer flange of the valve to lock the valve on its seat.

1,452,325. STOCK WATERER. HENRY TERNES, Albion, Nebr. Filed Oct. 13, 1922. Serial No. 594,228. 4 Claims. (Cl. 119—74.)



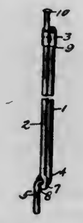
1. In an animal watering device, a tank adapted to contain a body of water, a tray fitting in the top of the tank and having a trough at each side thereof, and approaches arranged at opposite sides of the tank one for each trough.

1,452,326. METHOD OF PROLONGING THE LIFE OF EXPANSIBLE VULCANIZING CORES. JAMES D. TEW, Hudson, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed July 1, 1922. Serial No. 572,255. 8 Claims. (Cl. 18—53.)



1. In the art of vulcanizing pneumatic tire casings on fluid-expansible, rubber cores, the method which comprises using the core in repeated vulcanizations until a hardened crusts has formed on its outer surface, removing said crust, substituting a fresh rubber coating, and using the core in further vulcanizations.

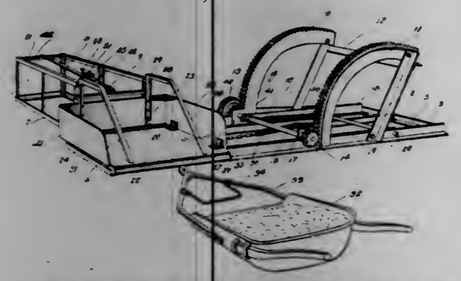
1,452,327. POWER-TRANSMISSION ARRANGEMENT. MILTON E. THOMPSON, Ridgway, Pa. Filed Dec. 20, 1919. Serial No. 346,292. 14 Claims. (Cl. 172—239.)



1. A magnetic coupler comprising magnetic members whose power transmitting faces are separated by an air gap, and a spherical journal supporting one of said members upon the other.

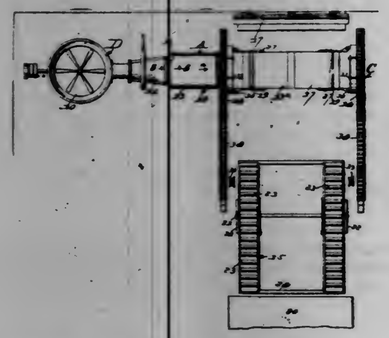
1,452,328. VEHICLE TOP. ARTHUR ALDERTON TOWERS, Cleveland, Ohio. Filed Feb. 10, 1921. Serial No. 443,860. 8 Claims. (Cl. 296—102.)

1. In a frame for vehicle tops, the combination with two laterally curved sheet metal members forming continuous side pieces of said frame, of transverse struts secured at intervals for rigidly uniting the same, and means adjacent to the ends of said side pieces for supporting the frame from the vehicle body, substantially as set forth.



1,452,329. PROP OR BRACE. PHIL UTTER and PAUL W. SCHENCK, Los Angeles, Calif. Filed July 25, 1921. Serial No. 487,427. 5 Claims. (Cl. 287—99.)

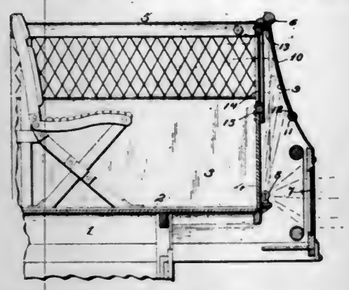
1. A prop or brace adapted to be collapsed or extended into position of service, said prop or brace including a plurality of independent arm members loosely joined together,



there being means carried by certain of the arm members for engaging the next adjacent arm member to maintain said arm members in locked alignment; said means including a sleeve member adapted to frictionally engage said arm members, and one of said arms being formed with means to prevent withdrawal of said friction element from one of said arms.

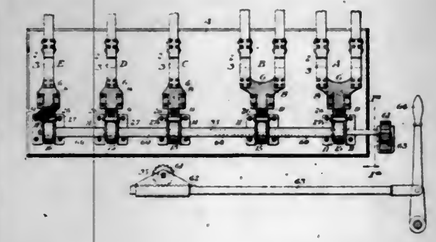
1,452,330. EARTH LOADER. EDWARD B. WINTERS, Coffeyville, Kans. Filed May 15, 1922. Serial No. 560,929. 10 Claims. (Cl. 214—92.)

1. An earth dumping mechanism comprising a base, arms pivoted to the base, a hopper pivoted to the arms, a shaft rotatably mounted on the arms, pinions carried by the shaft, arcuate rack bars over which the pinions travel to raise the arms when they rotate in one direction and to lower them when rotating in an opposite direction, a winding drum on the pinion shaft, a cable wound on the drum, and means for unwinding the cable on the drum to rotate the pinion shaft to cause the pinions to pass over the arcuate racks to move the arms in hopper-raising position.



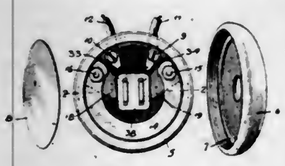
1,452,331. BLANK-TRANSFER MECHANISM FOR SAGGER-MAKING MACHINES. FRANKLYN J. WOLFF, Trenton, N. J. Filed May 7, 1920. Serial No. 379,549. 31 Claims. (Cl. 25—2.)

1. A blank transferring and inverting apparatus for sagger forming mechanisms having spaced receiving and delivery stations and a flat blank carrying table automatically reversible and movable between said stations for successively conveying the blanks from the former to the latter during the inversion thereof.



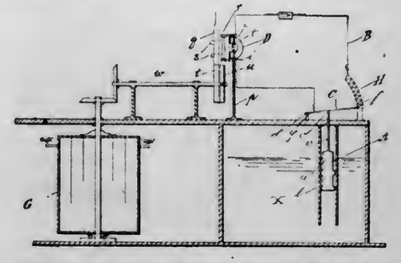
1,452,332. DISPLAY SIGN FOR PASSENGER VEHICLES. EDWARD WOTTON, Edgewater, N. J. Filed Dec. 10, 1921. Serial No. 521,282. 4 Claims. (Cl. 40—129.)

1. In a combination with a bus body having an upper passenger deck, a destination sign pervious to light supported at the front of the body adjacent the level of the deck, a lamp in rear of said sign to illuminate it so that it can be read from in front of the bus, and an advertising



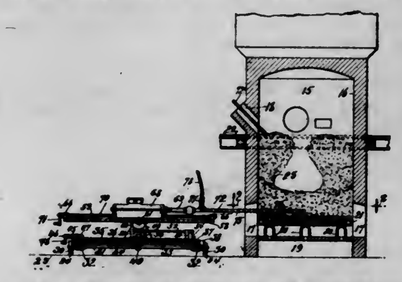
sign supported above and in front of the deck and facing to the rear to be read from the deck, said advertising sign being exposed to the direct rays of said lamp so as to be illuminated thereby.

1,452,333. ELECTRIC SWITCH. CHARLES N. ALTER, Alliance, Ohio. Filed June 21, 1919. Serial No. 305,837. 13 Claims. (Cl. 200—18.)



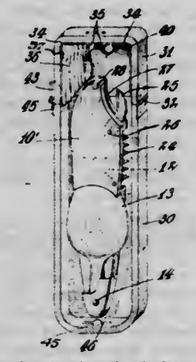
1. In an electrical switching device, the combination of a contact, a pivoted contact member, a reciprocable yoke, yieldable means operatively connecting said yoke and said contact member, and eccentric means operating said yoke to impart a snap action to said contact member through said yieldable means, substantially as described.

1,452,334. TELEPHONE RECEIVER. CHARLES TOWNSEND BAISLEY, North Edgecomb, Me., assignor to Manhattan Electrical Supply Co. Inc., New York, N. Y., a Corporation of Massachusetts. Filed May 11, 1922. Serial No. 560,061. 4 Claims. (Cl. 179—119.)



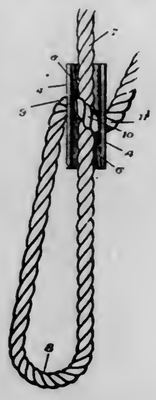
1. A telephone receiver of the watch-case type, having pole plates with integral base straps offset therefrom, magnet coils mounted on said pole plates, and insulating spacing washers common to said pole plates and engaged thereon above and below the coils to locate the poles in accurate parallelism, the upper washer being forced upon the pole pieces to frictionally grip the same and thus to secure said parts together as an assembly unit, substantially as described.

1,452,335. STARTING DEVICE FOR TREATING LIQUIDS. JOHN P. BALL, Chicago, Ill. Filed Feb. 27, 1922. Serial No. 539,577. 5 Claims. (Cl. 210—8.)



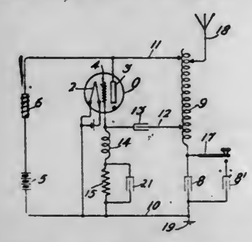
1. The herein described method which consists in subjecting sewage sludge to an intermittent action of centrifugal force and acceleration given to the speed, depending on the density of the sludge contained.

1,452,336. POWER DECLINKERING APPARATUS. GEORGE R. BRADLEY, Brooklyn, N. Y. Filed Oct. 18, 1920. Serial No. 417,817. 3 Claims. (Cl. 214—23.)



1. In a declinkering apparatus the combination of a movable truck, a turntable for the truck, a bed plate trunnioned over the turntable, a drill cylinder slidably supported on the bed plate, a declinkering bar actuated by the drill cylinder, means to locate the drill cylinder with its bar in different angular positions and means to feed the bar into the material operated upon and to withdraw it therefrom.

1,452,337. CAMPER'S COMBINATION UTENSIL. EDWARD BRECEL, Brooklyn, N. Y., assignor of one-fourth to Peter Dzmitrowicz, Brooklyn, N. Y. Filed Nov. 16, 1921. Serial No. 515,525. 5 Claims. (Cl. 206—16.)

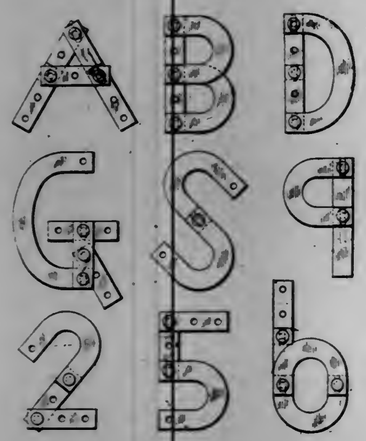


1. A holder for a utensil of the type described, comprising a casing consisting of a main body and a cap element hinged together, a series of strips of fibrous material carried in the said cap element, and doors forming the side walls of the said cap element.

1,452,338. ROPE AND CABLE TIE. WILLIAM JAMES FLOWERS, Complete, Miss. Filed Mar. 27, 1922. Serial No. 547,096. 12 Claims. (Cl. 24—130.)

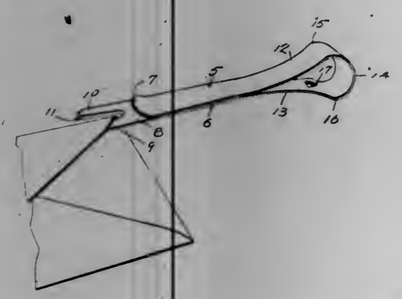
1. A device of the character described comprising a portion along which a portion of a rope can lay, and having slots opening in different directions for receiving the terminal portion of the rope to extend across the aforesaid portion of the rope and the slots being so arranged that a pull on said terminal portion of the rope will clamp the first named portion of the rope between said terminal portion and said portion of the device.

1,452,339. ELECTRICAL DISCHARGE DEVICE. RAYMOND A. HEISING, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 28, 1918. Serial No. 237,110. 20 Claims. (Cl. 250—36.)



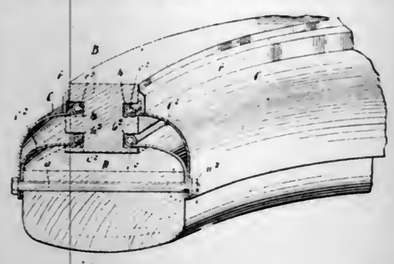
1. In combination, an electron discharge device having a cathode and an impedance varying element, means for impressing an alternating voltage thereacross, and a leak path between said cathode and said element, said leak path having a highly inductive reactance to alternating current of the frequency produced by said voltage.

1,452,340. EDUCATIONAL TOY. GWENDOLEN BEATRICE NORA EGERTON HUBBARD, Hollywood, Calif. Filed Sept. 2, 1920. Serial No. 407,679. 2 Claims. (Cl. 35—1.)



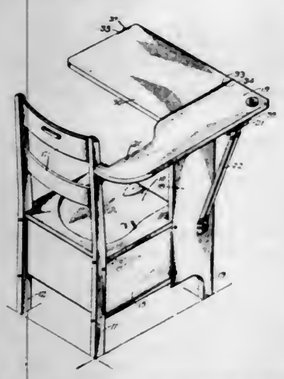
2. A toy of the character described, consisting of multiples of only three types of elements, whereof one is oblong, a second is U-shaped, and a third is C-shaped, and the oblong elements are all of the length required

for half the length of a straight portion of a letter B of the size to be made with the toy, and the U-shaped and C-shaped elements are dimensioned and proportioned, the former all so that each will constitute one arch of the said letter B and the latter all so that each will constitute the arch of a letter D of a size corresponding



to the said letter B, each element being of uniform width throughout its length and the same width as each of the other elements, the terminal portions of all of said elements being provided with perforations whereby the elements in the built up letters may be secured together in overlapping relation, substantially as described.

1,452,341. COMBINED PAPER CLIP AND ENVELOPE OPENER. VICTOR JACQUEMIN, St. Louis, Mo. Filed Apr. 17, 1922. Serial No. 553,829. 1 Claim. (Cl. 24—259.)

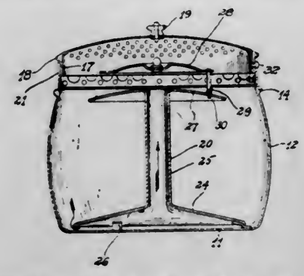


A combined paper clip and letter opener comprising a single strip of spring material of uniform width, a substantially semi-circular bend formed in said material at a point other than its center so as to form a long and a short arm, said arms being tensioned toward each other so as to contact for a portion of their length only, and provided with gradually curved diverging portions extending from the contacting portions to the semi-circular portions whereby the arms lie snugly when in use, and a short upturned portion formed on the free end of the shorter end whereby the clip may be applied without first spreading the arms apart.

1,452,342. RESILIENT-TIRED WHEEL. JAMES THOMAS JONES, Maidenhead, England. Filed Nov. 15, 1921. Serial No. 515,253. 3 Claims. (Cl. 152—8.)

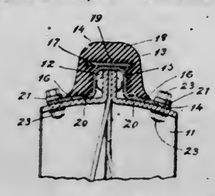
2. A vehicle wheel having a rim, a tread radially spaced therefrom and of materially less transverse extent, in combination with cushioning supports for the tread, said cushioning supports comprising a plurality of resilient members extending from each of the opposite sides of the rim toward the tread and engaging the opposite sides of the latter at radially spaced points, to afford a plural spring arch-like support for the tread, the spring line of the plural arch coinciding substantially with the wheel rim and the tread forming a key member common to said plural arch-like supports.

1,452,343. CHAIR DESK. WILLIS O. JONES, Louisville, Ky. Filed Feb. 13, 1922. Serial No. 536,033. 4 Claims. (Cl. 155—128.)



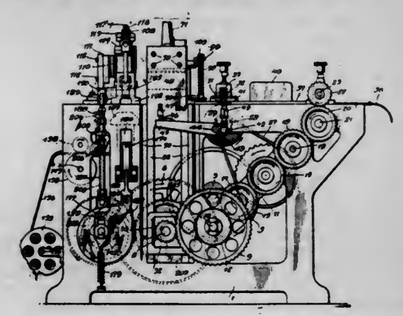
1. In a chair desk, the combination with a chair proper having a vertically-extending support rising above one side of the seat and in advance thereof, of a transverse member rigidly supported thereby extending horizontally across the front of the seat, and a desk top pivoted at the upper outer edge of the transverse member so that when turned down horizontally it will rest on the top of and cover said transverse member and so that when it is turned back it will expose the top thereof and will be held by gravity against the outer side thereof.

1,452,344. MILK BOILER. MICHAEL KANIUK, Boyertown, Pa. Filed May 1, 1922. Serial No. 557,797. 1 Claim. (Cl. 53—1.)



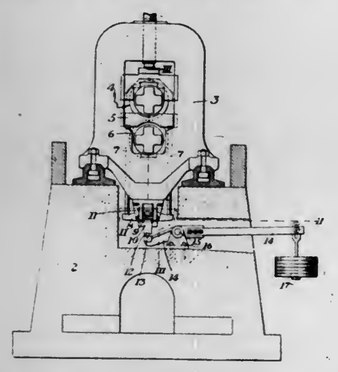
The combination with a kettle having a bottom and side wall extending upward therefrom and a removable cover, of an insert comprising a concavo-convex base supported in spaced relation above said bottom, a tubular stem extending upwardly from the raised center of said base, an outturned star-shaped flange on the upper end of said stem, said flange being substantially parallel

with said base and integrally connected with it by said stem, a deflector removably supported in spaced relation over said flange and upper end of said stem, a perforated



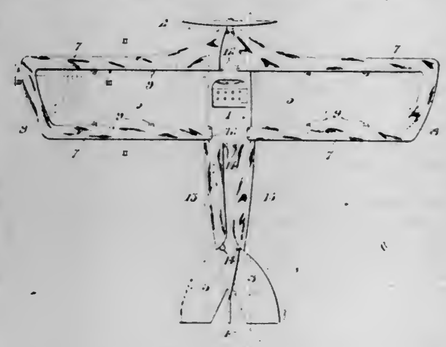
ring adapted to be interposed between the upper edge of the kettle and the cover thereof, means on said ring to resiliently engage the upper edge of said kettle, and means for locking the cover to said ring.

1,452,345. TIRE STRUCTURE FOR TRACTORS. IRWIN F. KEPLER and ARTHUR A. ROBB, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Sept. 15, 1921. Serial No. 500,866. 6 Claims. (Cl. 301—39.)



5. A tire for the steering wheels of tractors, said tire being made in segments each comprising a metal base having an arched middle portion, side attaching flanges, and a pair of longitudinal tie-plates each having one end secured to its segment and the other end overlapping the base of the adjoining segment and formed with a longitudinal slot, and bolts adapted to pass through said slot and through holes in the segment bases and wheel rim for securing said segments together upon the wheel.

1,452,346. TRAY-MAKING MACHINE. FREDERICK E. KUSTER, Evansville, Ind.; Charles E. Kuster administrator of said Frederick E. Kuster, deceased. Original application filed May 4, 1920, Serial No. 378,793. Divided and this application filed Nov. 26, 1921. Serial No. 517,891. 9 Claims. (Cl. 93—41.)

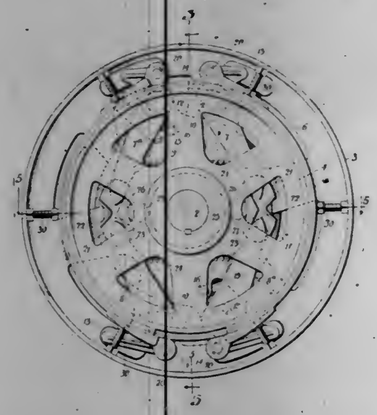


1. In a tray-forming machine, cooperating organized means for scoring a blank, shaping the tray, and applying a reinforce over the edges of the sides of the tray, the same embodying a plunger and inclined reciprocatory members cooperating with said plunger to strike against the reinforcing elements to press the same against said sides.

1,452,347. ROLL-BALANCING MECHANISM. LEIF LEE, Youngstown, Ohio. Filed Jan. 3, 1921. Serial No. 434,620. 4 Claims. (Cl. 80—56.)

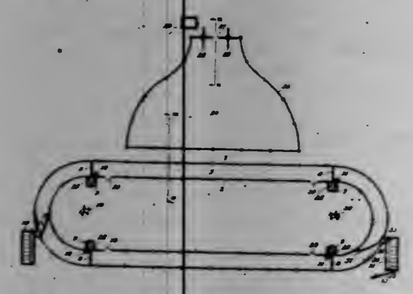
2. Roll balancing mechanism consisting in the combination with a vertically movable roll bearing, supporting struts therefor, and an equalizing lever upon which the supports are mounted, of a crosshead to which the equalizing lever is pivoted, and a balancing device having a contact engagement with said crosshead, substantially as described.

1,452,348. AEROPLANE SAFETY APPLIANCE. FRANK J. MATOUSHEK, Prairie du Sac, Wis. Filed Nov. 7, 1921. Serial No. 513,461. 4 Claims. (Cl. 244—5.)



1. In an aeroplane having horizontally extending planes, inflatable gas bags surrounding said planes, a filling valve carried by each bag, and spacing cords provided in said bags for limiting the expansion of the same.

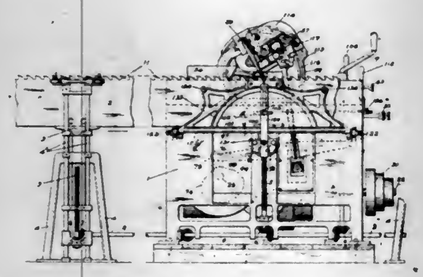
1,452,349. FRICTION CLUTCH. CHARLES G. OBERLEY and ROBERT GRIGNON, Munising, Mich. Filed Apr. 20, 1920. Serial No. 375,321. 5 Claims. (Cl. 192—80.)



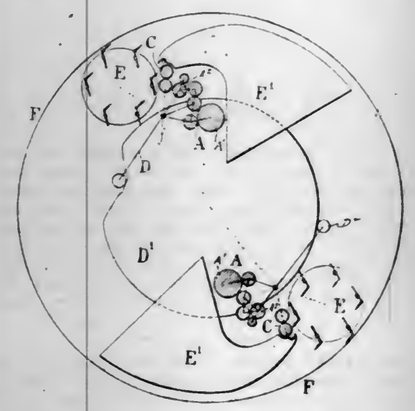
1. In a friction clutch, a pair of drum-like members, a clutch band for engagement with one of said members, a pair of levers pivotally supported on the other member,

each connected at its outer end to one end of said clutch band, the pivotal support of one lever being fixed and

that of the other being adjustable, radially movable operating heads embracing the inner ends of said levers for tightening the band.



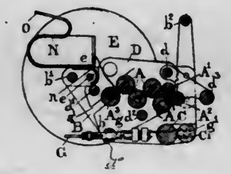
1,452,350. OUTDOOR GAMING APPARATUS. FRANK T. WAKEFIELD, Pittsburgh, Pa. Filed Oct. 15, 1921. Serial No. 507,893. 2 Claims. (Cl. 46—73.)



1. In an outdoor gaming apparatus, a pair of spaced parallel endless fence constructions forming a track or chase course therebetween, said fences being of foraminous construction to permit viewing of a chase therethrough, a plurality of gates arranged at intervals along the course and each being independently operable, a barrier associated with the outer fence adjacent one of said gates and adapted to be swung across the track when opened defining a confined area on the track for animals prior to a chase, and an animal housing structure positioned outwardly of the outer fence in communication with a passageway to the track afforded by the opening of the barrier, said gates being horizontally hinged at their lower ends whereby the lowering opening movement thereof gives an equal start to the animals in the chase.

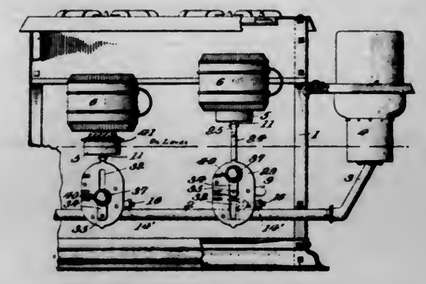
1,452,351. AUTOMATIC SAW-SHARPENING MACHINE. EDWARD P. ARMSTRONG and HENRY W. ARMSTRONG, Portland, Oreg. Filed Jan. 8, 1919. Serial No. 270,209. 52 Claims. (Cl. 76—40.)

16. In a saw-sharpening machine, a horizontally reciprocable carriage, an arm pivoted on said carriage, a saw-engaging finger carried by said arm, a driven shaft, a rocker-arm engaging with said cam element, a connection between the rocker arm and the carriage, means for holding the rocker-arm constantly but yieldingly on the cam element, said motion-transmitting means being adapted to cause a constant thrust on the articulations of said motion transmitting connections, and said motion-transmitting means being further adapted to exert a force couple on the carriage thereby causing it to have a constant bearing against the same faces of its guiding elements.



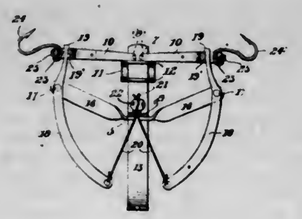
1,452,352. APPARATUS FOR GRADING OR SEPARATING FIBERS ACCORDING TO THEIR LENGTH. WILLIAM LAWRENCE BALLS, Manchester, England. Filed Sept. 27, 1918. Serial No. 255,957. 10 Claims. (Cl. 19—65.)

1. Apparatus for sorting and grading fibers according to length, comprising members for firmly gripping therebetween fibers and separating them from a tuft of fibers, means movable relative to said members for loosely engaging the fibers as they are delivered and a collector for receiving said fibers from said means.



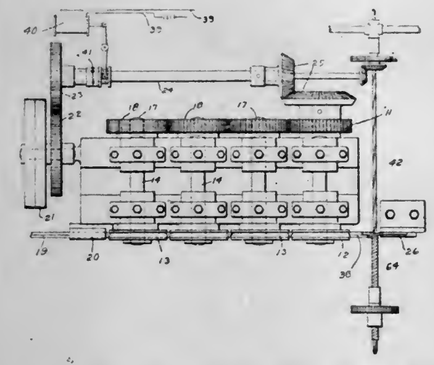
1,452,353. APPARATUS FOR GRADING OR SEPARATING FIBERS ACCORDING TO THEIR LENGTH. WILLIAM LAWRENCE BALLS and FREDERICK HUTCHINS, Manchester, England. Filed Sept. 1, 1920. Serial No. 407,447. 4 Claims. (Cl. 19—65.)

1. An apparatus for sorting or grading cotton or other fibers according to their length, comprising a frame, a set of delivery rollers journaled in said frame, wheels supporting said frame and adapted to traverse a stationary surface, means for transmitting motion from said wheels to said rollers, a second frame mounted for rocking movement toward and away from said first-named frame, a set of feed rollers journaled in said second frame and adapted to cooperate with said delivery rollers, means for retaining said last-named frame apart from said first-named frame during the movement of the apparatus over said surface and permitting said last-named frame to move



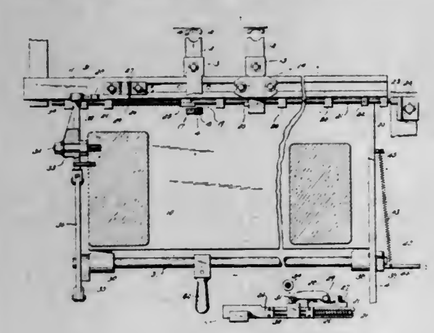
toward said first-named frame at the end of said movement and means for moving said last-named frame away from said first-named frame, and means for imparting movement to the feed rollers.

1,452,354. WICKLESS OIL BURNER. ATWELL J. BLACKFORD, Cleveland, Ohio, assignor to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed Sept. 19, 1921. Serial No. 501,709. 19 Claims. (Cl. 158—42.)



1. A wickless oil burner, comprising an oil containing member or trough, means for maintaining a body of oil in said trough, a lighting member wholly within the trough, one of said members movable vertically in respect to the other during operation for controlling the flame.

1,452,355. ANIMAL TRAP. JOHN BOLF, Miles, Tex. Filed Mar. 4, 1922. Serial No. 540,978. 4 Claims. (Cl. 43—92.)

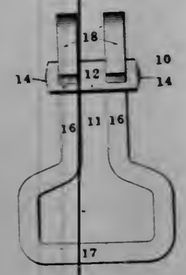


1. In a jaw trap of the class described, a stirrup having outturned leg portions and upturned ends, a pair of swinging jaws pivoted at their ends to said upturned ends of the stirrup, springs means for normally urging the jaws upwardly toward each other, the central portion of the stirrup being adapted to have a bait disposed thereon, means for holding the jaws in separated position and means including flexible members extending upwardly through the base of the stirrup and attached to the bait and to the jaw holding means.

1,452,356. MACHINE FOR MAKING FLEXIBLE TUBULAR ARMOR. STEPHEN W. BOURN, Providence, R. I. Filed July 28, 1921. Serial No. 488,256. 6 Claims. (Cl. 113—35.)

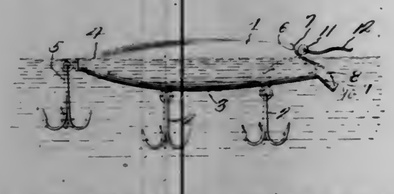
1. In a machine for making tubular armor, a fixed strip coiling guide plate, means for grooving a strip of material and feeding it to said guide, the guiding portion of said plate being of a width less than that of the strip to be coiled and having an opening into which the strip is fed endways, the inner edge of said opening being shaped to coil the strip into helical form with its edges interlocking, and means for simultaneously rotating the tube as formed.

1,452,357. STOP MECHANISM. JESSE B. BURTON, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed May 20, 1920. Serial No. 382,876. 21 Claims. (Cl. 192—143.)



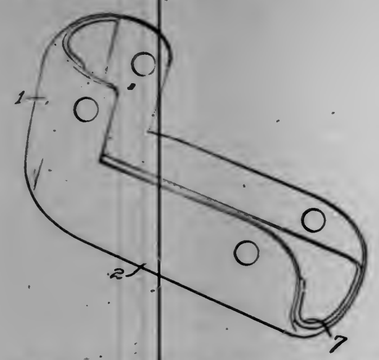
1. In a carrier mechanism for transferring articles from one station to another; a reciprocating member; a second member connected therewith and having movement relative thereto; and positively actuated mechanism for stopping the movement of the first member, the action of said mechanism being initiated by the second member and transmitted through a part connected with said reciprocating member.

1,452,358. COUPLING-RELEASE RIGGING. STERLING H. CAMPBELL, St. Louis, Mo. Filed May 27, 1921, Serial No. 473,142. Renewed Mar. 5, 1923. 6 Claims. (Cl. 213—190.)



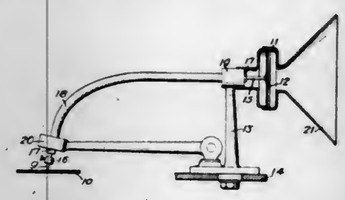
1. In a device of the class described, the combination with a coupler locking pin, of an operating lever therefor having a laterally extending integral portion, and a stirrup

passing through the eye of the locking pin and provided with a pair of arms having their ends bent in a plane



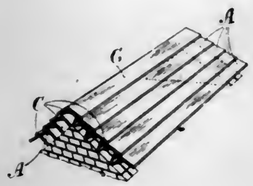
substantially at right angles to the plane of the stirrup and engaging with the laterally extending integral portion of the operating arm to lift the locking pin.

1,452,359. FISHING LURE. FRANK AUSTIN CASS, South Bend, Ind., assignor to South Bend Bait Co., South Bend, Ind., a Corporation of Indiana. Filed Aug. 24, 1921. Serial No. 495,127. 5 Claims. (Cl. 43—46.)



1. A diving fishing lure comprising a body having a downwardly and forwardly inclined recess in its forward end, a diving plate disposed in said recess and longitudinally dished, the lower end of said diving plate terminating in a slightly upwardly arched portion, and upwardly extending and outwardly diverging diving wings having substantially plane water resisting surfaces carried by said diving plate and forming means whereby the lure will continue to dive as it rolls from side to side.

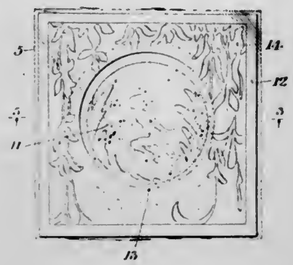
1,452,360. KNEE PAD. CHARLES L. CLARKE, Fort Worth, Tex. Filed Sept. 27, 1920. Serial No. 412,948. 3 Claims. (Cl. 2—110.)



1. A knee pad comprising a fabric constituting the body of the pad, a felt lining therefor, and a rubber cover for said fabric, said fabric and felt rubber cover being curved to conform to the contour of the knee and all vulcanized together.

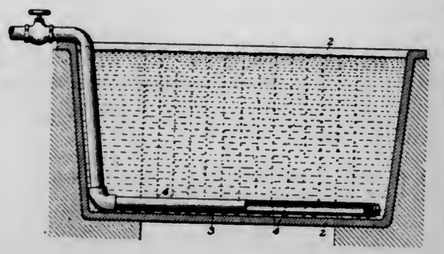
1,452,361. PHONOGRAPHIC APPARATUS. HENRY P. CLAUSEN, Mamaroneck, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 3, 1920. Serial No. 356,052. 7 Claims. (Cl. 274—26.)

1. A phonographic device comprising a phonographic record, a stylus to engage therewith, a movable member spaced from the stylus, a longitudinally curved element relatively inflexible longitudinally but relatively flexible transversely extending longitudinaly between and mechanically associated with the stylus and the movable member to translate movement therebetween, and a member of energy-absorbing material engaging the side of the element to resist transverse vibrations of the element.



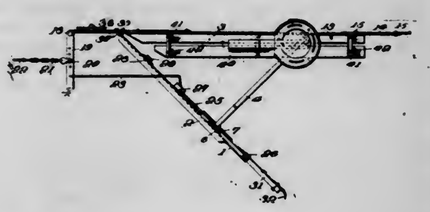
1,452,362. CONSTRUCTION OF CONCRETE ROOFS. WILLIAM ERNEST CLIFTON and JOHN STURTON EWART, Nottingham, England, assignors to The Clifton-Ewart Construction Company Limited, Nottingham, England. Filed June 27, 1921. Serial No. 480,844. 2 Claims. (Cl. 108—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat L., 1313.)

1. In a roof, the combination of two principals spaced apart, and a plurality of longitudinal reinforced concrete members all of the same L-section arranged in a row each parallel to the roof ridge with their angles uppermost, each member having one limb which is spaced away from the corresponding limb of the adjacent members and is supported by its free edge at its two ends only on said principals, and each member except an end one in the row having its other limb overlapping the angle of the member below it, and the length of each member measured in the direction in which it extends between the principals being great in relation to its measurement at right angles thereto.



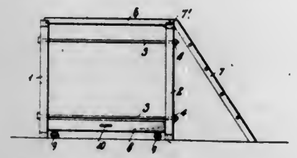
1,452,363. TOILET-ARTICLE PACKAGE. MORRIS CRUPAIN, Newark, N. J. Filed Nov. 13, 1922. Serial No. 600,769. 1 Claim. (Cl. 206—46.)

A toilet article package comprising in combination a powder puff having an ornamental face, a transparent envelope encasing said puff and through one wall of which one side of said puff may be inspected, and a printed or pictorial ornamental relatively stiff sheet insertible within the envelope to maintain the envelope in substantially extended form, said sheet being provided



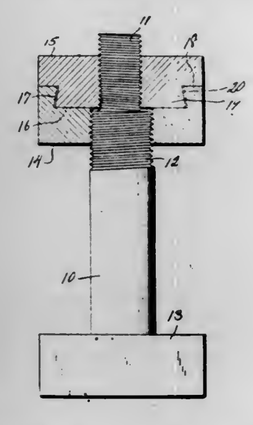
with an opening through which the ornamental side of the powder puff is observable through the opposite side of the envelope.

1,452,364. METHOD OF PURIFYING MOLTEN METAL. WALTER T. DAVIS, Wheeling, W. Va., assignor to Wheeling Stamping Company, Wheeling, W. Va., a Corporation of West Virginia. Filed May 20, 1921. Serial No. 471,104. 2 Claims. (Cl. 266—35.)



1. The herein described method of purifying molten tin or/and lead metal, which consists in liberating air at the lower portion of the mass of metal to be purified, and causing said air to pass upwardly through the body of metal, substantially as described.

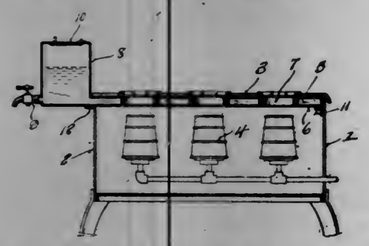
1,452,365. ROAD GRADER AND DITCHER. HENRY L. DEVER, Owensboro, Ky., assignor to Owensboro Ditcher & Grader Company, Owensboro, Ky., a Corporation of Kentucky. Filed Sept. 21, 1916. Serial No. 121,460. 12 Claims. (Cl. 37—173.)



1. The combination of a running-beam, cutting-blade, pulling-beam, and a hand-rail removably connected with the cutting-blade, and affording a means of detachably securing the pulling-beam to the cutting-blade.

1,452,366. COLLAPSIBLE ROOST. NAOMI EGAN, Redding, Calif. Filed Jan. 25, 1922. Serial No. 531,550. 1 Claim. (Cl. 119—22.)

A knock-down roost, comprising frame members of substantially rectangular formation, having open interiors, tie rods for uniting a pair of said frame members and for holding the same against separation, the upper portions of said frame members being formed with a plurality of spaced notches extending partially therethrough from the inner sides of said frame members, said notches in said frame members being in axial alignment, removable roost rods supported by said frame members and entering the notches therein, said roost rods serving to space the frame members apart at their upper ends, a removable element leading from a supporting surface to one of said roost rods and a removable tray positioned between said frame members and slidably engaging the same, said tray when in a normal position serving to separate the side members at their lower ends.



1,452,367. LOCK NUT. HANS ELLINGSON, Hamilton, Ohio. Filed Aug. 10, 1921. Serial No. 491,183. 1 Claim. (Cl. 151—16.)

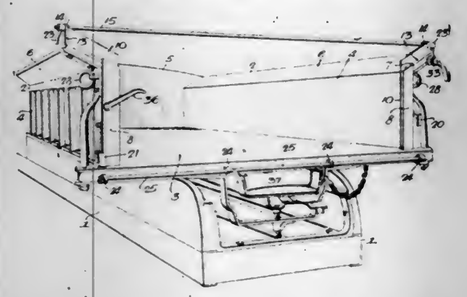
The combination with a bolt having a reduced threaded portion and a threaded portion adjacent the reduced threaded portion but having its threads reversed, of a nut formed in two sections, one of said sections having a threaded aperture adapted to engage with the last named threads, the outer section having a threaded aperture adapted to engage with the threads on the reduced portion, the first named nut section being formed with a recess in its outer face concentric to the central aperture and defined by a peripheral wall, the inner face of which overhangs, the second named section having a central boss smaller in diameter than the body of the section, the outer edge face of said boss extending outward at an inclination to the axis of the nut section, said central boss being disposed within the recess of the first named nut section whereby said nut sections have swiveled engagement with each other, the internal diameter

of the peripheral wall of the first named section being larger than the exterior diameter of the central boss of the second named section whereby to permit the two sections of the nut to be intermittently turned to unscrew the nut as a whole from the bolt.

1,452,368. HOT-WATER ATTACHMENT FOR STOVES. OSCAR EVENSON, Rio, Wis. Filed Aug. 7, 1922. Serial No. 580,371. 2 Claims. (Cl. 126—53.)

1. In combination, a stove having a box-like casing, a row of burners therein, a top plate, and an interior flange at one end of said casing spaced below its top edge, said casing having a recessed portion at its other end; and a hot water attachment comprising an elongated rectangular, thin, heating chamber removably supported at one end upon said flange, extending lengthwise over said burners, and projecting at its other end thru said recessed portion, said chamber having a plurality of walled openings aligning with said burners, and a storage reservoir forming an extension of, and in communication with, said projecting portion and overbalanced by said elongated heating chamber.

1,452,369. AUTOMOBILE BODY. FRANK R. FAGEOL, Oakland, Calif. Filed Feb. 16, 1922. Serial No. 536,867. 6 Claims. (Cl. 296—28.)

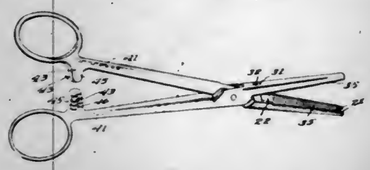


1. In combination with an automobile chassis having a body thereon, of a running board secured to said body and chassis beneath the plane of the body floor and extending substantially the full length of said body and doors on said body opening out from said running board.

1,452,370. TOY RAILWAY. ALAN R. FERGUSSON, Buffalo, N. Y. Filed Sept. 27, 1922. Serial No. 590,781. 43 Claims. (Cl. 238—10.)

2. In a toy railway, the combination of wire formed ties and a plurality of rails carried thereby and including a power rail.

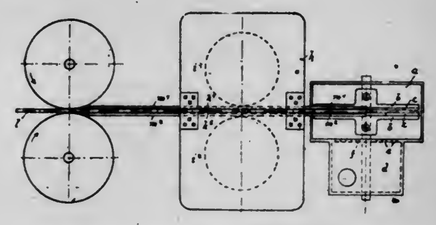
1,452,371. TRUCK OR WAGON BODY. ANTHONY E. GINTHER, Philadelphia, Pa. Filed Mar. 29, 1920. Serial No. 369,628. 4 Claims. (Cl. 296—51.)



1. The combination of a wagon body open at its rear; a groove at each side of the body near the rear thereof; a longitudinal cross bar extending from one side to the other at the upper end of the rear of the body; and a second longitudinal cross bar secured to the body at the rear of the floor, said grooves and upper and lower rods permitting the selective attachment of vertically sliding upwardly swinging or downwardly swinging tail boards respectively, so that different type of said boards may be used with the one type of wagon body.

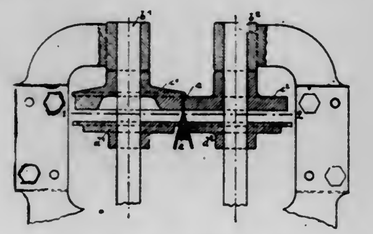
1,452,372. SURGICAL SUTURING DEVICE. JOAQUIN SÁNCHEZ GÓMEZ, Washington, D. C. Filed Oct. 15, 1921. Serial No. 507,886. 19 Claims. (Cl. 128—338.)

1. A suturing device comprising opposed interlocking elements, a needle like suture fixed to one of said elements, and means for supporting the elements on opposite sides of a wound.



1,452,373. SURGICAL LIGATURE AND MEANS FOR APPLYING THE SAME. JOAQUIN SÁNCHEZ GÓMEZ, Washington, D. C. Filed Oct. 15, 1921. Serial No. 507,887. 13 Claims. (Cl. 128—338.)

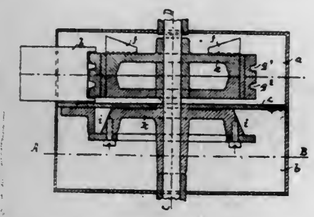
1. A surgical ligature consisting of a pair of clips each separate from the other and each having a back portion



and legs extending therefrom in parallel relation, the legs of each clip being provided with locking means cooperating with the legs of the other clip.

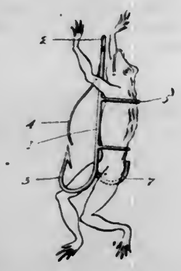
1,452,374. APPARATUS FOR IMPREGNATING MATCHES OF WOOD, PASTEBOARD, PAPER, OR THE LIKE WITH PARAFFIN. KARL PAUL GOTTSCHALK, Dresden, Germany, assignor to Henry Staier, Grunau, near Rosswein, Saxony, Germany. Filed Mar. 25, 1922. Serial No. 546,944. 5 Claims. (Cl. 144—60.)

1. In an apparatus for impregnating matches of wood, pasteboard, paper or the like with paraffin, in combination with a receptacle filled with paraffin, of discs rotating within said receptacle, arranged in a defined distance from each other and adjustable one toward another and layers of absorbing material coating the inner facing surfaces of said discs and transmitting the paraffin to the match-band passed between the upper parts of the discs mentioned.



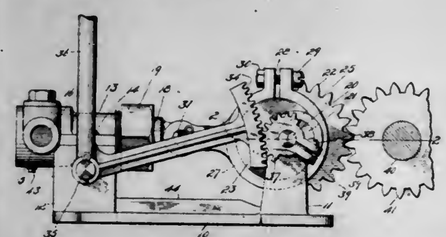
1,452,375. APPARATUS FOR ADJUSTING AND FIXING THE SETTING OR STRADDLING OF PARTLY-CUT MATCHES OF PAPER, PASTEBOARD, OR THE LIKE AND STILL CONNECTED IN THE SHAPE OF A CONTINUOUS STRIP OR BAND. KARL PAUL GOTTSCHALK, Dresden, Germany, assignor to Henry Staier, Grunau, near Rosswein, Saxony, Germany. Filed Mar. 25, 1922. Serial No. 546,945. 2 Claims. (Cl. 144—51.)

1. In an apparatus for adjusting and fixing the setting or straddling of partly cut matches of paper, paste board or the like and still connected together in the shape of an endless strip or band in combination with delivery rollers for moving or supplying the endless band mentioned, of wheels gearing together for passing the band to be set or straddled between their teeth and for alternately bending the partly cut matches to both sides of the band and means for varying and adjusting the setting or straddling.



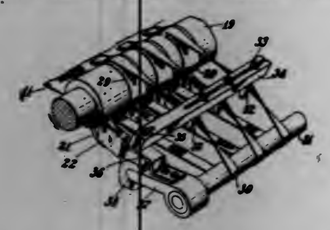
1,452,376. FILLING APPARATUS FOR MATCH-DIPPING MACHINES. KARL PAUL GOTTSCHALK, Dresden, Germany, assignor to Henry Staier, Grunau, near Rosswein, Saxony, Germany. Filed Mar. 25, 1922. Serial No. 546,946. 1 Claim. (Cl. 144—60.)

In a filling apparatus for match dipping machines, in combination with a receptacle and a container arranged in front of said receptacle, a filling disc rotating within said container, grooves provided on the periphery of the disc mentioned and slanting towards the receptacle, a partition interposed between the container and the



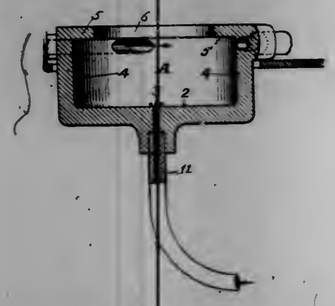
receptacle and an opening or recess provided in said partition for allowing the surplus of the igniting material supplied within the slanting grooves of the filling disc to run back into the container.

1,452,377. FISHHOOK. ARTHUR H. HANSELMAN, St. Paul, Minn. Filed Feb. 24, 1922. Serial No. 538,894. 8 Claims. (Cl. 43—40.



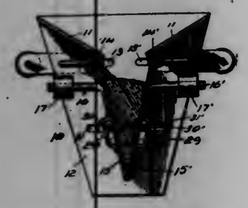
1. A fish hook, comprising a shank and supported hook, spaced rings carried by the shank and projecting therefrom oppositely to the hook, and an outwardly extending arm carried by the shank upon the ring side thereof.

1,452,378. BILGE PUMP. HENRY HANSON, Middletown, Conn., assignor to Wilcox, Crittenden and Company, Incorporated, Middletown, Conn., a Corporation of Connecticut. Filed Oct. 1, 1921. Serial No. 504,585. 5 Claims. (Cl. 74—14.)



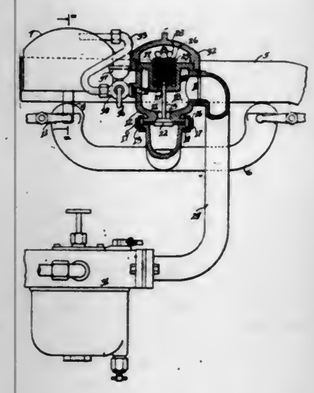
1. In a device of the character described, a base member; a shaft mounted therein and having an eccentric thereon; a sector secured thereto; a second sector pivotally mounted upon a fixed part, the teeth of which mesh into those of the first sector; a pinion loosely mounted upon said eccentric portion and an eccentric collar also mounted thereon and having a positive connection with said pinion; and a power transmitting member connected with said eccentric collar.

1,452,379. METHOD AND APPARATUS FOR BUILDING LAMINATED STRIPS. URBAN HAREN, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Nov. 4, 1919. Serial No. 335,772. 18 Claims. (Cl. 154—35.)



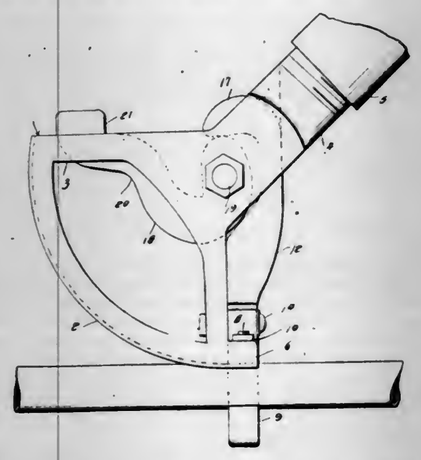
8. In a strip cutting and laminating machine, the combination of means for progressively feeding flexible sheet material and slitting it into strips, means for turning back adjoining strips in relatively short and long loops, means for deflecting the strip of the short loop to register it with the other, and means for superimposing it thereon.

1,452,380. LIQUID-FUEL FURNACE. CHARLES GILBERT HAWLEY, Chicago, Ill. Filed Jan. 21, 1920. Serial No. 353,045. Renewed Sept. 25, 1922. Serial No. 590,536. 4 Claims. (Cl. 158—4.)



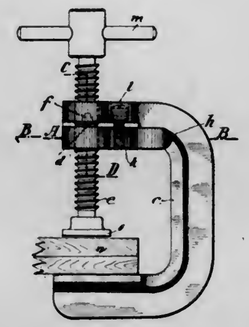
1. The herein described improvement in the art of gasifying and using liquid fuel that consists in generating a whirling hollow column of a supporter of combustion, such as air, and causing the same to move downwardly and at a fixed point of progress to move inwardly toward the axis of the column and thence upwardly; and, simultaneously feeding liquid fuel in to the bottom of said column and maintaining the mixture in a flaming condition which vaporizes the fuel as rapidly as it enters said column.

1,452,381. MEANS FOR FILLING MOLDS. WALTER S. HILDEBRAND, Mount Union, Pa. Filed Feb. 16, 1921. Serial No. 445,423. 5 Claims. (Cl. 25—103.)



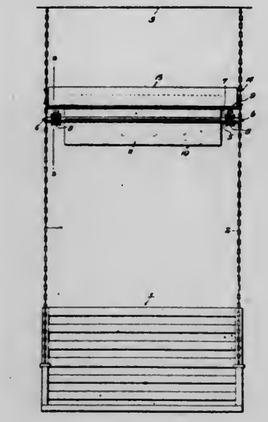
1. A mold filling mechanism comprising a material feed hopper, means depending from said feed hopper for forming a predetermined amount of the material into a substantially wedge-shaped mass, and means for actuating said first mentioned means for the discharge of the material, when formed, by gravity therefrom into a mold positioned beneath the hopper.

1,452,382. SUPERHEATER. WILLIAM F. HILLS, Mountain View, and WILLIAM H. CHARD, Paicines, Calif. Filed Feb. 6, 1922. Serial No. 534,474. 4 Claims. (Cl. 123—122.)



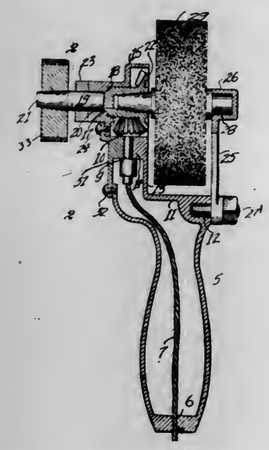
1. In a device of the character described, the combination of a casting adapted to receive carbureted air, means for delivering heated air to said casting and means for discharging said carbureted air and said heated air to an intake manifold of an internal combustion engine, said discharge means being opened by the vacuum in said intake manifold.

1,452,383. PIPE BENDER OR ELBOW FORMER. GRAYSON JONES, Nashville, Tenn. Filed Sept. 8, 1921. Serial No. 499,252. 6 Claims. (Cl. 153—40.)



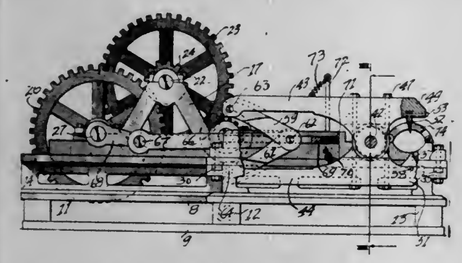
4. A pipe bender comprising a body, a movable jaw carried by said body and slidable thereon, said jaw having a shank provided with a hook, a cam pivoted on said body and engaging with said hook to raise said movable jaw, said cam provided with a shank having a foot rest, and a lever for operating said body.

1,452,384. SCREW CLAMP. KARL KISSENDORFER, Oberndorf-on-the-Neckar, Germany, assignor to Waffenfabrik Mauser, A. G., Oberndorf-on-the-Neckar, Germany. Filed May 8, 1922. Serial No. 559,394. 4 Claims. (Cl. 144—305.)



1. An adjustable screw-clamp, comprising a bow having a shank at each end, one of said shanks having an opening therein, and also a recess; a spindle associated with the opening of said shank; a thread member having a bolt for pivotally securing the member to the last-named shank, and provided with screw threads adapted to coact with said spindle; a lug on said member adapted to coact with said recess; and a spring on said bolt for forcing said member against said spindle.

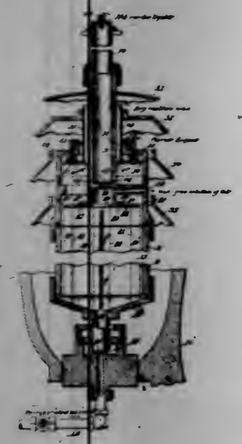
1,452,385. FAN ATTACHMENT FOR SWINGS. HIRAM MCGRATH, McConnelsville, Ohio. Filed Sept. 21, 1921. Serial No. 502,233. 3 Claims. (Cl. 230—7.)



1. The combination with a pair of vertically disposed swing side chains, of a pair of spaced parallel bars having means on their inner ends for loosely connecting them to a support, said bars arranged between and extending at right angles with respect to said chains, a fan shaft arranged below and inwardly with respect to the outer ends of the said bars and provided with journals mounted in opposed links of said chains, radially disposed fan blades secured to said shaft, pulleys attached to said shaft inwardly with respect to the journals thereof and arranged below said bar, a pair of spaced coupling members depending from each bar, and a pair of flexible members each connected at its ends to a pair of coupling members and wound intermediate its ends on a pulley whereby during the shifting of the chains a rotative movement will be imparted to the fan shaft.

1,452,386. SHOE-POLISHING DEVICE. MANUEL J. MORENO, San Francisco, Calif. Filed Jan. 6, 1922. Serial No. 527,357. 2 Claims. (Cl. 15—23.)

1. A device of the character described comprising a tubular handle having an aperture therein, a housing connected to said handle, a main drive shaft disposed in said housing, an auxiliary shaft frictionally engaging said main drive shaft and adapted to be actuated thereby, polishing implements mounted on the respective shafts, mechanism in said handle and housing adapted to actuate said drive shaft for rotating said implements, and means extending into said handle and connected to said mechanism, substantially as and for the purpose described.

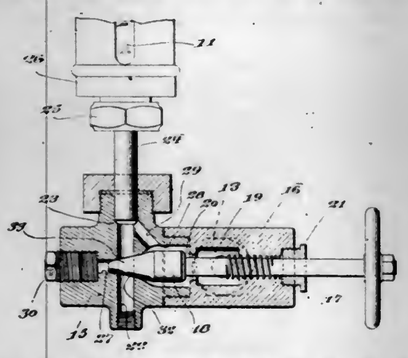


1,452,387. WOOD-SPLITTING MACHINE. KICHIMATSU MUKAI, San Francisco, Calif. Filed Apr. 17, 1922. Serial No. 553,368. 1 Claim. (Cl. 144—193.)

In a device of the character described, the combination with a base, gears mounted on said base, a crank adapted to be rotated by said gears, a pin carried by said crank, a connecting rod extending from said crank and adapted to deliver reciprocating motion, toggle means pivoted to said connecting rod, levers mounted above said base, each of said levers being provided with a jaw portion, a wood splitting element mounted in each of said jaw portions, one of said elements being provided with a bifurcated top and the other of said elements being provided with a single top, said splitting elements being arranged in said jaws at right angles to each other so that the top

of one splitting element will enter the bifurcated portion of the other splitting element, the opposite end of said levers being pivotally connected to the free end of said toggle members, substantially as and for the purpose described.

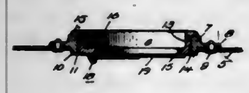
1,452,388. PROCESS AND APPARATUS FOR CENTRIFUGAL SEPARATION. CLOVIS A. PORTER and OSWALD C. BREWSTER, Casper, Wyo., assignors of one-half to Patrick Sullivan and O. R. Hagens, both of Casper, Wyo. Filed Nov. 19, 1921. Serial No. 516,495. 4 Claims. (Cl. 233.11.)



1. A process of separating waxy material from oil, which comprises passing a mixture of such oil with a solvent in such proportions as to produce a liquid of low viscosity, while refrigerated sufficiently to cause solidification of a large part at least, of the waxy material, through a centrifugal separator while causing such mixture to float upon a substantially non-progressing layer of aqueous fluid, withdrawing the solution of clear oil in solvent from the centrifugal, withdrawing the precipitated waxy material to a separate compartment of the centrifugal, then adding to such waxy material, a warm, aqueous liquid in amount sufficient to melt said waxy material, subjecting the mixture of molten waxy material and water to centrifugal force and separately withdrawing the separated wax and aqueous liquid.

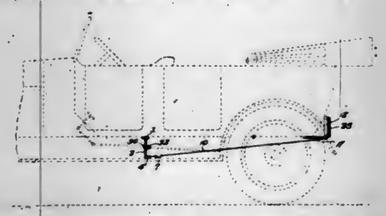
1,452,389. PAPER WAXING AND SIZING COMPOSITION. FRANK L. FULLEN, Oldtown, Me. Filed Sept. 21, 1922. Serial No. 589,700. 1 Claim. (Cl. 134—22.)

A liquid sizing for paper consisting of lime water, borax, wax and oil in substantially the proportions specified.



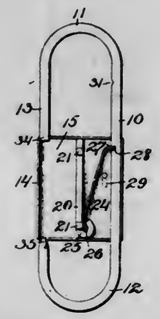
1,452,390. WATER-GAUGE GLASS FOR STEAM BOILERS. BERNARD C. RODENHIZER, Lynchburg, Va. Filed Feb. 19, 1921. Serial No. 446,229. 1 Claim. (Cl. 73—54.)

A valve for steam boiler water gauge glasses comprising a casing having a vertical drain passage therethrough positioned to communicate with the interior of a gauge glass connected with the valve, at the bottom of said glass, and a valve movable into position to close the said passage, said casing having a passage communicating with the first-named passage between the point of closure of the said first-named passage by the valve and the point of communication of the said first-named passage with a gauge glass connected to the casing, said valve



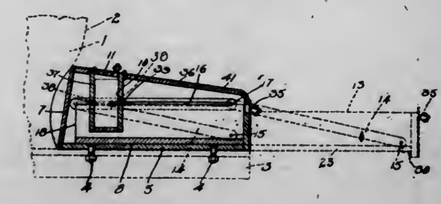
being movable into position to close the second-named passage when it is moved from its first-named closing position.

1,452,391. CLOSURE. LOUIS RUPERT, Decatur, Ill. Filed Mar. 22, 1921. Serial No. 454,348. 1 Claim. (Cl. 220—35.)



A closure of the class described, comprising an internally screw threaded ring of appreciable thickness and provided on its exterior with an annular ledge for attaching the ring to a container, another relatively thick ring having an external flange at one end defining a lip engaging over the top edge of the first named ring and at the opposite inner edge formed with an internal inwardly directed lip having the receiving and pouring orifice of the container, the two rings having matching screw threads where joining, and a spring impelled cover plate hinged to the seconnd named ring at one side thereof, whereby the plate will yield to opening forces and automatically return to the closed position when open.

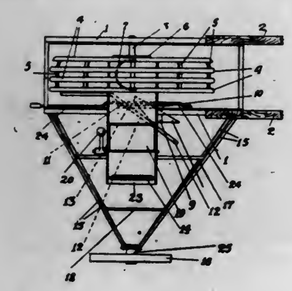
1,452,392. AUTO SIGNAL. FREDERICK J. RYAN, Toronto, Ontario, Canada. Filed Mar. 18, 1921. Serial No. 453,241. 2 Claims. (Cl. 116—36.)



1. An apparatus for the purpose set forth comprising an attaching block adapted to be secured to a vehicle body, an oscillatory bar pivotally connected to one end and depending from said block, a stirrup straddling and pivotally connected to the lower end of the rod, a threaded bolt carried by and projecting from said stirrup and at an angle with respect to said rod, an adjusting member mounted on the bolt, means arranged within said member and adjustably mounted on the threaded portion of the bolt for adjusting said member relatively to the bolt, a movable signal adapted to be supported from the vehicle body, and a flexible element attached to said member and signal for operating the latter when the bar is shifted.

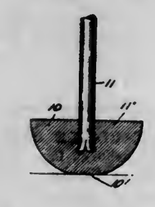
1,452,393. LOCK. FRANK P. SHEK, Brooklyn, N. Y. Filed Mar. 8, 1922. Serial No. 541,920. 3 Claims. (Cl. 70—108.)

3. A lock comprising a shackle formed of parallel strands and having closed ends, one of the strands having an opening therein, a casing formed of plates with recesses therein so that the assembled plates will slide on the strands, a bar having projections thereon, the plates of the casing having openings through which the projections can pass and be headed, a spring secured to the bar with its end bearing on one of the strands and substantially at right angles thereto, said strand having a detent disposed so that when the spring is in it the casing is locked when in position across the opening, said strand having also a slight depression disposed so that when in engagement with the spring it will hold the casing frictionally in non-locking position.



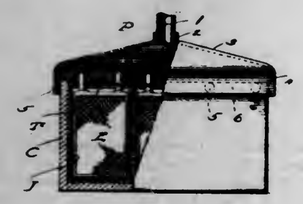
1,452,394. EXTENSION BODY FOR AUTOMOBILES. LEWIS SIMON, Gary, Ind. Filed Apr. 19, 1922. Serial No. 555,612. 4 Claims. (Cl. 296—26.)

1. In a device of the type described, a frame having an angular-shaped recess therein, a pin, a plate hingedly carried by said pin to permit the manual oscillation of said pin, said plate being adapted to be received and locked in said recess in either of two positions, a turn plate carried by said pin, said turn plate having diametrically opposed openings therethrough, and bolts pivotally disposed in said openings.



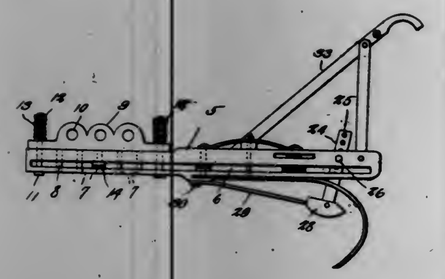
1,452,395. MACHINE FOR RAISING OR DIGGING TURNIPS AND OTHER LIKE ROOTS. ALEXANDER SMITH, Dykehead, and WILLIAM MARTIN WOOD, Montrose, Scotland. Filed Oct. 31, 1919. Serial No. 334,819. 4 Claims. (Cl. 55—50.)

1. In a root raising machine, an elevator wheel comprising the combination of spaced rings forming the rim of the wheel, an outer boss, an inner overhung ring, radial spokes extending from said boss to the overhung



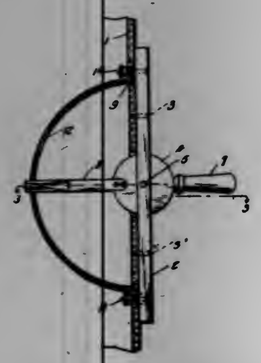
ring and connected to said spaced rings, and curved spaced bars extending inwardly from each of said spokes to form pockets in said wheel.

1,452,396. ADVERTISING DEVICE. LLOYD HENRY STERNER, HENRY M. LANDROTH, and MINNIE ESTELLA STERNER, Fremont, Nebr. Filed Feb. 1, 1921. Serial No. 441,708. 1 Claim. (Cl. 40—145.)



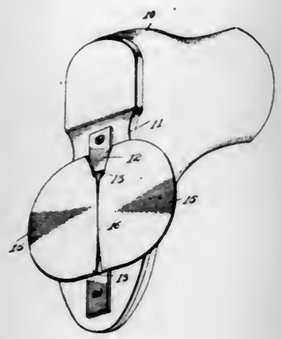
As a new article of manufacture, a combined portable and tiltable sign having inherent means to automatically cause it to assume a vertical position when shifted from perpendicular and when pressure is removed therefrom, and comprising a tubular standard having a relatively short longitudinal split at its inner end disposed with respect to the longitudinal axis thereof and providing a pair of semi-cylindrical short portions, each slightly flared, and a solid metal base of substantially semi-spherical form cast around the lower portion of and depending from the lower terminus of said standard and having its outer periphery uninterrupted throughout.

1,452,397. BATTERY STEAMER. HARRY P. STEVENS, New York, N. Y. Filed Aug. 27, 1920. Serial No. 406,517. 9 Claims. (Cl. 263—5.)



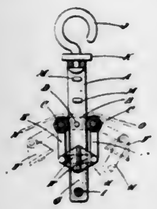
1. The herein described battery steamer comprising a hood having a steam inlet opening, and a mouth adapted to fit around the battery case, the hood having openings for the outlet of water of condensation.

1,452,398. CULTIVATOR. WILLIAM A. STOCKTON, Pleasant Hill, La., assignor of two-thirds to William Dowell, Pleasant Hill, La. Filed May 2, 1922. Serial No. 558,023. 1 Claim. (Cl. 97—175.)



A harrow comprising a body portion, said body portion having a plurality of openings, a securing member on the body portion and having a plurality of pins adapted to move within the openings, resilient means for normally holding the pins in the openings, tooth supporting sections pivotally mounted on the body portion, adjusting rods having connection with the sections and having their forward ends secured to the body portion by engagement with the pins, and curved harrow teeth supported by the sections.

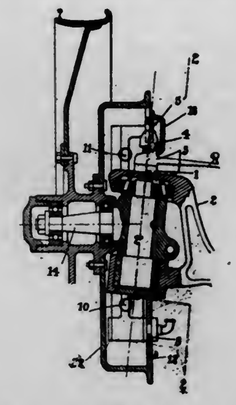
1,452,399. RADIO VARIABLE RHEOSTAT. HERMAN W. TOMPKINS, Greensburg, Pa. Filed Aug. 2, 1922. Serial No. 579,203. 2 Claims. (Cl. 219—48.)



1. A radio variable rheostat comprising a metal base plate, a metal hub pivotally mounted upon the base plate and provided with calibrations, a semicircular resistance secured at opposite ends to the base plate upon opposite sides of the hub and concentric therewith, one end of the resistance having electrical connection with the base plate, and the opposite end being electrically insulated therefrom, and a metal blade carried by the hub and in electric connection with the resistance to bring more or less thereof into circuit.

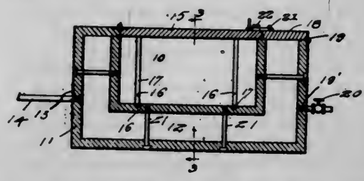
1,452,400. SWIMMING SHOE. ORIN FRED TORBRON, Ardmore, Okla. Filed Nov. 16, 1922. Serial No. 601,312. 5 Claims. (Cl. 9—21.)

1. The combination with a swimming sandal, of a flexible strip mounted on and extending longitudinally of the sole of the sandal, and foldable propelling wings movably mounted on the flexible strip and arranged to be moved into spread position thereby and into folded position by pressure of water.



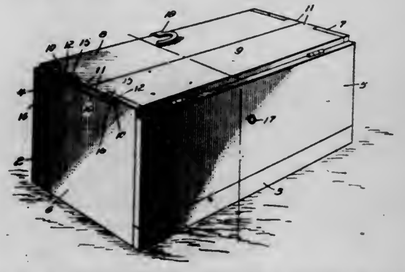
1,452,401. APPARATUS FOR SHARPENING THE BLADES OF SAFETY RAZORS. CYRIL T. WALKER, Secunderabad, Deccan, India. Filed Sept. 16, 1920. Serial No. 410,594. 5 Claims. (Cl. 51—63.)

1. In a razor stropping apparatus, a frame and a flexible strop movable lengthwise in both directions through the frame, said frame having guides to direct the strop in spaced parallel stretches, a blade holder mounted to oscillate between said stretches and adapted to hold a double edged blade and to simultaneously present one side of each edge to said strop, means operated by the strop to oscillate said holder, and cam operated means for adjustably controlling and limiting the oscillatory movements of said blade holder.



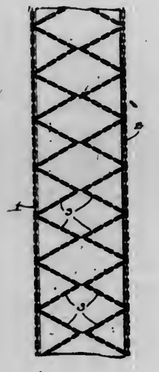
1,452,402. BRAKE MECHANISM FOR AUTOMOBILES. ACHILLE LÉON FRANÇOIS WATTEL, Sevres, France. Filed Aug. 24, 1921. Serial No. 494,879. 4 Claims. (Cl. 188—194.)

3. Braking device for steering wheels of automobiles, comprising in combination pivot pins for said wheels a brake-drum on each of said steering wheels, brake-blocks carried in operative relation to the drum, a shaft fixed to the axle in the prolongation of the pivot pin of each of said wheels, a cone slidably but non-revolubly mounted on said shaft, the surface of said cone being generated according to the nature of the braking action required, a cam-lever mounted on said shaft and engaging said



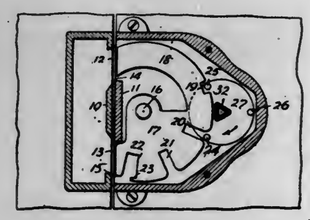
cone, means for rotating said cam lever to raise or lower said cone and means for transmitting motion of said cone to said brake-blocks.

1,452,403. COMPRESSED-AIR ICE MACHINE. VERNEY A. WILSON, Atalla, Ala. Filed Nov. 23, 1920. Serial No. 426,028. 2 Claims. (Cl. 220—9.)



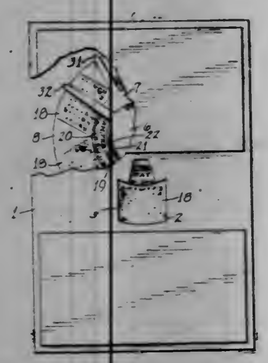
1. A receptacle consisting of a casing, a box therein, a cover for the casing, a movable lid member on said cover for the box, a movable door member to permit access to the space intermediate the casing and the box, fastening means to secure one of said members in closed position, and said members having portions contacting with each other whereby said single fastening means will secure both of said members in closed position.

1,452,404. FOLDING CRATE. BROADUS S. ALLEN, Gaffney, S. C., assignor, by mesne assignments, to May B. Lipscomb. Filed June 24, 1920. Serial No. 391,300. 1 Claim. (Cl. 217—47.)



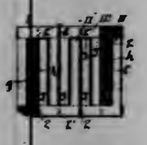
A crate comprising a foldable body having recessed end walls, said recesses opening through the top edges of said walls, a sectional top carried by the body, supporting tongues on the opposite ends of each section of the top and adapted to be seated in said recesses when the top is closed and the body set up, and oppositely disposed manually operable fasteners concealed within each of the end walls and slidable through the side walls of the recesses to engage and lock in the adjacent tongues at one end of the top sections when seated in the recesses, thereby fastening the said sections of the top closed.

1,452,405. TIRE CHAIN. FRANK ANDRASKA, Marshfield, Wis. Filed Mar. 11, 1921. Serial No. 451,558 1 Claim. (Cl. 24—237.)



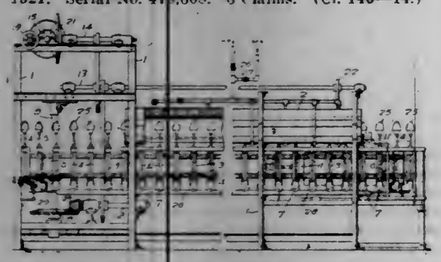
A chain connecting link having a continuous non-yieldable circular eye portion, and side sections extending from the eye portions from diametrical points and at a slight incline to each other, each of said sections having its end portions formed into a hook, and said hooks extending towards each other to be arranged in overlapping relation when the sections are bent towards each other.

1,452,406. LOCK. MAX ARM, New York, N. Y. Filed Jan. 19, 1922. Serial No. 530,395. 2 Claims. (Cl. 70—46.)



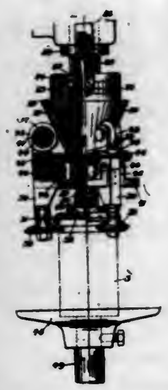
2. A lock mechanism which comprises a rotatable locking plate having a plurality of slots in its periphery, a rotatable actuating plate, pins on the actuating plate to sectionally engage in the solts in the first plate to move said plate, a knob stem engaging the second plate, means permitting said knob to be slid axially with respect to said plate, a key-operated lock, and a projecting stem on the key-operated lock normally engaging with the knob stem but being disengaged therefrom when the knob stem is slid axially as above mentioned, whereby the second mentioned plate can be actuated by the knob alone when desired.

1,452,407. CALENDAR. WILLIAM H. BAKER, Newton, Kans. Filed Mar. 20, 1922. Serial No. 545,219. 2 Claims. (Cl. 40—113.)



1. A device of the type described comprising a board having an opening therein, three disks of different sizes rotatably and concentrically mounted on said board, the smallest disk being disposed adjacent to the opening and having numbers of years printed thereon, the next largest disk having the names of the months and the number of days in the month imprinted thereon, and the largest disk having seven monthly calendars thereon with thirty-one days in each calendar, each calendar having the first of the month starting on a different day, and a handle operatively connected to each of said disks, whereby said disks can be rotated by said handles to bring any one of said calendars, names of months, and numbers of years into registration with said opening.

1,452,408. CHAIN AND METHOD OF MAKING SAME. SÁNDOR BOLGÁR, Vienna, Austria, assignor to Julius Breyer, Nashville, Tenn. Filed Dec. 23, 1921. Serial No. 524,498. 5 Claims. (Cl. 59—12.)

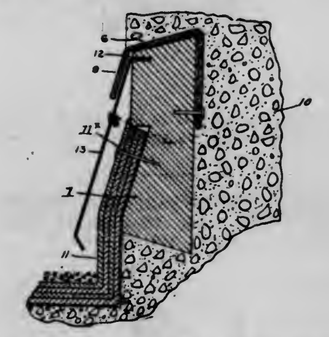


1. An endless weldless chain, substantially as set forth.

1,452,409. ROASTING MACHINE. EARNST A. BOSTROM, Griffin, Ga., assignor to Pomona Products Company, Griffin, Ga., a Corporation of Georgia. Filed June 18, 1921. Serial No. 478,608. 6 Claims. (Cl. 146—14.)

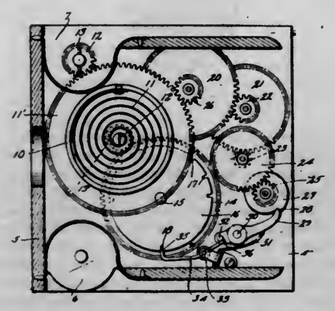
1. A roasting machine having a combination of a gas furnace, a carrier chain for conducting pimentos through the furnace, a rotating brush for removing the pimentos from the carriers, and a regulating device for controlling the speed of said carriers, substantially as set forth.

1,452,410. MACHINE FOR CAPPING BOTTLES OR THE LIKE. PIERRE JOSÉ BOUCHER, Kensington, London, England. Filed May 28, 1921. Serial No. 473,543. 5 Claims. (Cl. 226—87.)



1. In a machine for stoppering, capping, or sealing bottles, means for spinning the closure on to the container, comprising in combination, a work holder, a superimposed plate, coaxial with said work holder, a series of similar levers pivotally mounted on said plate, a spinning wheel mounted on the lower end of each lever, a roller mounted on the top end of each lever, a resilient bearing for each roller, a cone coaxially mounted with said plate for rotation therewith and slidable relatively thereto, resilient means for maintaining said rollers in contact with the surface of said cone, means for rotating said cone and plate, and means for sliding said cone during its rotation, consisting of a loose ring carried on said cone, diametrically opposite projections on said ring, a lever pivoted in a fixed part of the machine, and links connecting said lever to said ring.

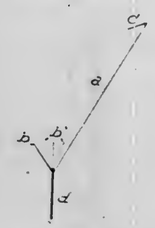
1,452,411. LIFE-SAVING GARMENT. ORRICE F. BUNN, Bristol, Tenn. Filed July 7, 1922. Serial No. 573,313. 1 Claim. (Cl. 9—17.)



A life saving garment comprising a hollow inflatable belt of considerable width in a vertical direction and adapted to surround the body below the armpits and to be inflated and to hold air under pressure, shoulder straps on the said belt, and flexible straps connected to the belt and of sufficient length to reach below the knees of the wearer and there provided with means for the fastening of said straps about the legs of the wearer; the said downwardly extending straps being elastic so as not to interfere with the movements of the legs of the wearer.

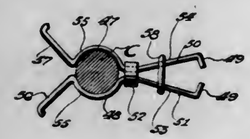
1,452,412. FLASHING FASTENING FOR CONCRETE AND OTHER BUILDINGS. ROBERT P. BURROWS, South Bend, Ind. Filed Apr. 3, 1922. Serial No. 549,036. 3 Claims. (Cl. 108—26.)

1. In a flashing fastening, a wall, a strip secured thereto, a cap on the strip and having a bendable flange overhanging the face of the strip, flashing connected to the strip, and counter flashing carried by the strip and extending downwardly between the same and said flange and arranged in lapped relation to the flashing.



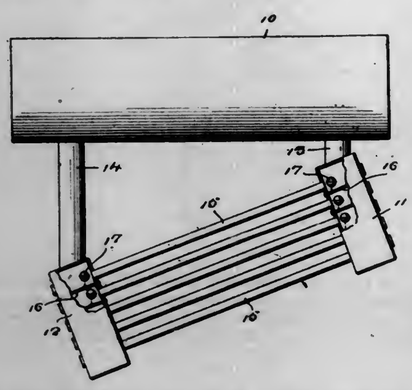
1,452,413. CAMERA. VINCENT CALABRESE, Brooklyn, N. Y. Filed Mar. 9, 1920. Serial No. 364,362. 6 Claims. (Cl. 95—311.)

1. In combination with a camera, its shutter operating mechanism, and film winding mechanism, automatic means for operating the film winding mechanism upon excessive operation of the shutter operating mechanism.



1,452,414. DEVICE FOR THE USE OF CARBON PAPER IN TYPEWRITERS. SALVADOR CARRAU and WARREN RICHARDSON COBEAN, Buenos Aires, Argentina. Filed Mar. 16, 1921. Serial No. 452,864. 3 Claims. (Cl. 282—29.)

1. A device for facilitating the making of carbon copies with a typewriter comprising a backing sheet provided with a folded end portion, a series of superposed tabs, each having one of its ends attached to the end portion of the backing sheet which is opposite to the folded end portion of said backing sheet, an extension projecting from the end of the backing sheet to which the tabs are

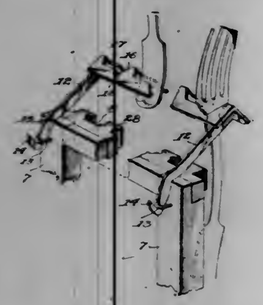


attached, and carbon sheets superposed on said backing sheet, each of said carbon sheets having one of its ends connected to the free end of one of the tabs.

1,452,415. CURTAIN STRETCHER. FERDINAND A. CMEJLA, Milwaukee, Wis. Filed Oct. 9, 1920. Serial No. 415,853. 1 Claim. (Cl. 24—81.)

A curtain stretcher clip comprising two companion wire members bent intermediate their ends to form ring sections and each having one end bent at an angle to form a jaw and the other end bent at an incline, a collar securing the members together and a ring for forcing the jaws together.

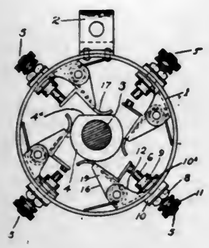
1,452,416. VALVE. CHARLES L. CORYELL, Neodesha, Kans. Filed Apr. 26, 1921. Serial No. 464,755. 2 Claims. (Cl. 137—139.)



1. The combination with a still of the character described including spaced headers, tubes communicating with said headers, stay bolts connecting said headers and arranged beneath said tubes, of a float valve connected with each stay bolt and normally disposed adjacent one end of the particular tube arranged above the stay bolt, said valve being designed to close said tube, and a narrow flange encircling said valve for the purpose specified.

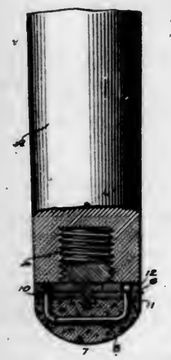
1,452,417. SEEDER BOOT AND SHOE. MOSES CULBERTSON, Kelfield, Saskatchewan, Canada. Filed July 20, 1920, Serial No. 397,721. Renewed July 13, 1922. Serial No. 574,823. 1 Claim. (Cl. 111—86.)

A device of the class described comprising a tube slit transversely and vertically to provide ears integral with it, said ears being bent to extend at an angle to each other, a shoe having angularly disposed blades, said tube resting on said blades intermediate the ears, said ears engaging the exterior of said blades, and means securing the ears to the blades.



1,452,418. DISH RACK. PETER CUNNEEN, New Rochelle, N. Y. Filed Oct. 14, 1921. Serial No. 507,628. 4 Claims. (Cl. 141—11.)

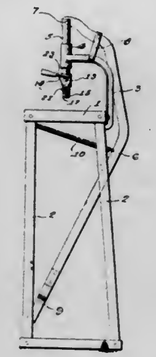
1. A dish rack, comprising means for supporting dishes in spaced relation, and a rack vertically adjustable thereon into and out of operative position and adapted removably to receive and support therein spoons, forks and the like.



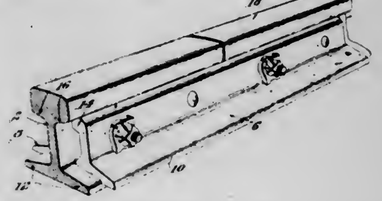
1,452,419. TIMER FOR INTERNAL-COMBUSTION ENGINES. LEO A. ECKERMANN, Detroit, Mich., assignor to Kales Stamping Company, Detroit, Mich., a Corporation of Michigan. Filed July 10, 1920. Serial No. 395,292. 5 Claims. (Cl. 200—27.)

3. In a timer, the combination with the shell thereof, of a contact post mounted upon said shell, a cam member rotatable centrally within the shell, and a unit secured to said shell by said post and comprising a switch member of bell crank form, having a cam engaging arm, and an arm engageable with the contact post, a bracket

providing a pivotal support to said switch member, and a spring urging said switch member to its circuit closing position.



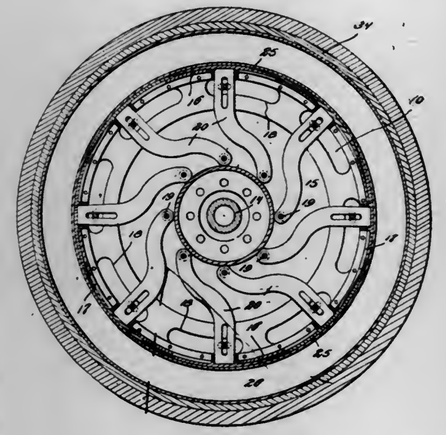
1,452,420. CUE-TIP FASTENER. HENRY JOSEPH GRENIER, Fairfield, Conn. Filed Aug. 30, 1922. Serial No. 585,292. 1 Claim. (Cl. 46—10.)



In a cue provided with a plane terminal face in the rear of which is a threaded portion, an attachment for the cue including the combination of a tip carrying element having also a plane terminal face in the rear of which is a threaded portion, the latter to co-act with the threaded portion of the cue to mount the attachment on the cue, a tip to be secured on said element, and means for securing the tip on the element including a plurality of wire lengths anchored in the cue and extending through the element and projecting beyond the latter as bendable studs upstanding from the rear face of the element at points removed from the axis of the element, and guiding and receiving means on the rear face of the element for each stud, comprising an elongated recess extending in a direction to intersect the base of said stud and also to intersect a radial line of the tip.

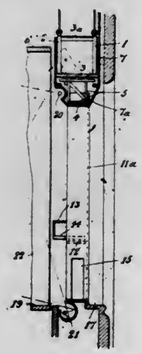
1,452,421. LEATHER-STAMPING MACHINE. OLAF HALVORSEN and ALBION H. JOHNSON, Chicago, Ill.; said Johnson assignor to said Halvorsen. Filed Feb. 25, 1922. Serial No. 539,227. 7 Claims. (Cl. 101—9.)

1. In a stamping machine, a vertically movably supporting rod, a type carrier pivotally carried by said rod for movement into horizontal type receiving or unloading position and movement into vertical stamping position, a handle pivotally supported by said type carrier, and means formed upon said handle for cooperation with said rod to lock the type carrier in adjusted positions.



1,452,422. LOCK NUT. FRANK S. HAMILTON, Boston, Mass. Filed Mar. 3, 1920. Serial No. 363,050. 7 Claims. (Cl. 151—38.)

1. The combination with a bolt and a nut threaded thereon adapted to clamp a nonrotatable body, of means for locking said nut against rotation upon the bolt; said locking means comprising a lock washer having fingers adapted to be bent to one side of its plane into engagement with a face of the nut, to lock said nut and washer together, and having a flange on the opposite side of said plane; an anchor plate around said bolt between said washer and the non-rotatable body, having an edge adapted to engage the said flange to prevent rotation of the nut with respect to the plate, and having an edge for engaging the nonrotatable body whereby the plate is held against rotation; the portion of the anchor plate surrounding the bolt being split and its sections bent oppositely to exert pressure axially along the bolt to hold the clamp taut.

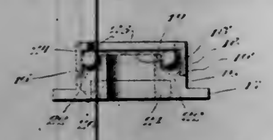


1,452,423. VEHICLE WHEEL. JAMES B. HARMON, Helena, Mont. Filed Sept. 19, 1921. Serial No. 501,531. 2 Claims. (Cl. 152—28.)

1. A wheel of the character described comprising a pair of side plates formed centrally with openings, a hub member disposed between said side plates and having an axle receiving opening of considerably less diameter than said holes, said hub member including a pair of side discs each formed with series of slots, a ring member connected with the outer edges of said second named discs and formed with a plurality of slots, a plurality of spokes having their inner ends pivotally connected with the hub member and having their outer ends slotted, pins passing transversely through said first named slide plates and through said first named slots and through the slots in the spokes, the outer ends of the spokes being adapted to pass through the slots in said ring member, an expansible member formed of a plurality of

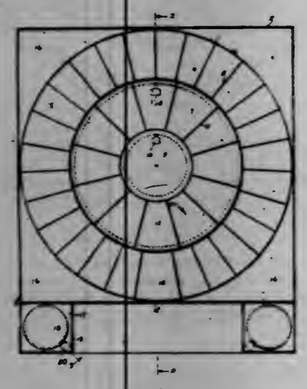
arcuate spring plates arranged in overlapping relation and surrounding said ring member, an inflatable tube surrounding said series of overlapped spring plates, and a rim connection with the outer edges of said first named side plates.

1,452,424. ADJUSTABLE SCENE PORTAL IN THEATERS. MAX HASAIT, Dresden, Germany, assignor to Aktiebolaget Ars, Stockholm, Sweden, a Corporation. Filed May 26, 1921. Serial No. 472,777. 7 Claims. (Cl. 46—70.)



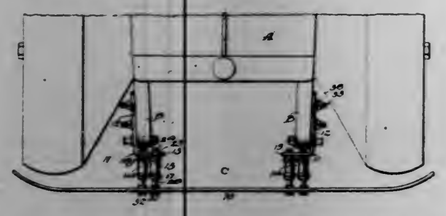
1. Adjustable scene-portals in theaters, comprising an upper portal part movable up and down a foot-bridge connected with the said upper portal part at the middle thereof, recesses provided in said foot-bridge at the ends of the portal part, and side parts of the portal movable to and fro in said recesses.

1,452,425. CAP-SPINDLE WASHER. JAMES T. HEMINGWAY, Woonsocket, R. I. Filed July 26, 1921. Serial No. 487,763. 1 Claim. (Cl. 118—66.)



A device of the class described comprising a centrally bored body, the outer face of the body having a series of circumferential steps, a series of balls on one of the

steps, the vertical face of the ball supporting step being threaded, and a cap screwed onto the said threaded portion of the step in such position that the flange of the cap serves to prevent outward movement of the balls,

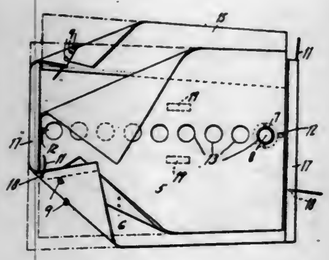


the body having a vertical flange above the ball carrying step serving to prevent inward movement of the balls, and the upper wall of the cap being formed with a central opening exposing portions of the balls for engagement by and supporting engagement with a spindle whirl.

1,452,426. BUILDING CONSTRUCTION. ROY HERBY IRWIN, Seattle, Wash. Filed Aug. 2, 1921. Serial No. 489,349. 2 Claims. (Cl. 20—1.13.)

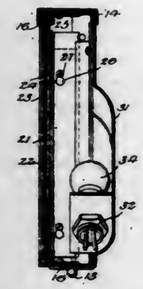
1. A building in combination an annular series of storage spaces, each of said annular series of storage spaces providing a passage-way, and a turn table disposed within and encircled by said series.

1,452,427. AUTOMOBILE BUMPER. EDWARD W. KETTLITZ, New York, and GEORGE KUHN, St. Albans, N. Y. Filed July 20, 1922. Serial No. 576,280. 3 Claims. (Cl. 293—55.)



3. A bumper for automobiles including angular brackets each consisting of a rearwardly projecting terminal attached to the ends of the chassis frame and inwardly projecting outer terminals, a pair of forwardly projecting cylinders from each of said terminals, plungers telescopically mounted in each cylinder, a coiled contractile spring within each cylinder for normally projecting the plungers therefrom, and a crossbar secured to the outer free ends of the plungers.

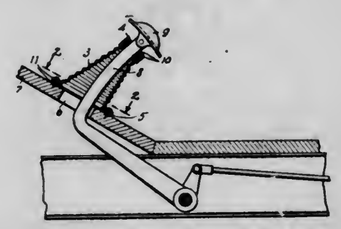
1,452,428. FUEL-SUPPLY PUMP FOR INTERNAL-COMBUSTION ENGINES. HARRY FERDINAND LEISSNER, Sodertalje, Sweden. Filed Dec. 29, 1921. Serial No. 525,688. 2 Claims. (Cl. 123—139.)



1. In a four stroke cycle internal combustion engine, the combination with pairs of cylinders, of a common fuel supply pump, a fuel admission valve for each cylinder, a rocking shaft for each pair of fuel valves, and two cams on each rocking shaft to each control one of said valves, said rocking shaft being driven from a control shaft, rotating with half the number of revolutions as that of the engine shaft operating the fuel supply pump.

1,452,429. SPRING OILER. GEORGE T. LEMELIN, Springfield, Mass., assignor of one-half to Edward A. Menard, Springfield, Mass. Filed July 31, 1922. Serial No. 578,582. 6 Claims. (Cl. 267—37.)

1. In a spring oiler, an outer cover of flexible material provided with oil-receiving means, and perforated to receive the ends of the spring clip, an extension secured to said cover adjacent to one longitudinal edge thereof and extending beyond the same, and an inner cover of absorbent material adapted to have portions thereof thrust by said clip ends through the perforations in said outer cover, and fastening means for said outer cover.



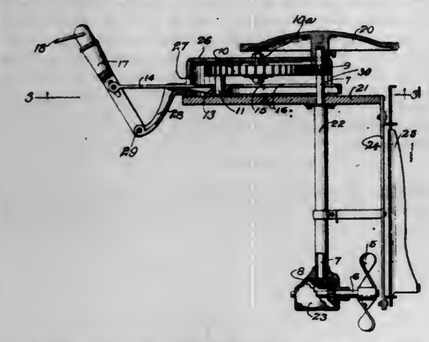
1,452,430. AUTOMOBILE LICENSE BOX. CHARLES G. MERCER, New York, N. Y. Filed June 5, 1922. Serial No. 566,052. 4 Claims. (Cl. 40——132.)

1. A license box comprising a closure formed with a body and a front hinged thereto, a plurality of angle bars

secured respectively to said body and to said front, said angle bars carried by the front, each having one leg spaced from the front wall of said front and the other leg overlapping the angle bars carried by the body for producing a substantially water-tight structure when the front is closed on the body, and means having cut-out portions indicating numbers carried by the front and clamped in place between said front wall and said legs of the angle bars spaced from said front walls, together with illuminating means arranged interiorly of said body.

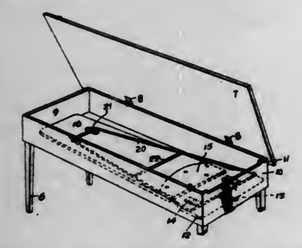
1,452,431. AUTOMOBILE PEDAL ATTACHMENT. GEORGE A. MILKIE, Brooklyn, N. Y. Filed Sept. 19, 1922. Serial No. 589,161. 1 Claim. (Cl. 74—81.)

As a new article of manufacture, a fume-trap for an automobile pedal including a bellows member of decreasing cross-section from bottom to top, a neck portion including a ring of elastic material, a base including a plurality of flat frame members of rigid material and a sheet member of flexible material interposed between said frame members, and a sleeve of flexible material having at one end a reduced portion constituting with said ring said neck portion, said sleeve being formed at its other end to establish said sheet member.



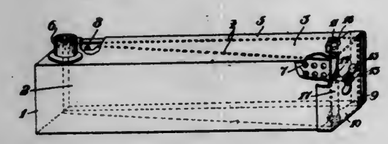
1,452,432. MATERIAL BUILDING UNIT. VERNON J. MILLER, East Orange, N. J. Filed Apr. 5, 1921. Serial No. 458,661. 1 Claim. (Cl. 72—26.)

A material building unit, including an impervious face-plate having a reinforced rigidified plastic backing secured thereto and having indentations therein filled with the plastic material of said backing plate, being substantially parallel to those of the facing plate, the walls of said backing plate being substantially parallel to those of the face-plate, the members interlocking along their longitudinal edges and ends by means of offset-portions which project along one side and edge and inset from the opposite side and edge.



1,452,433. MANUALLY-OPERATED BOAT. JOHN K. MILTON, Chicago, Ill. Filed Aug. 11, 1920, Serial No. 402,784. Renewed Nov. 18, 1922. 2 Claims. (Cl. 115—24.)

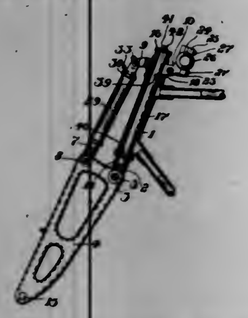
1. A boat propelling means comprising a portable base plate having means for attachment to a boat, a propeller shaft, a vertical drive shaft geared to the propeller shaft, a pinion on the drive shaft, a spur gear in mesh with the pinion, driving-means for the spur gear, a housing carried by the base plate and enclosing the spur gear and the pinion, said housing also supporting the spur gear, and a tubular housing and support for the drive shaft carried



by the base plate, said housing also having an enclosure for the gearing between the propeller shaft and the drive shaft, and a support for the propeller shaft.

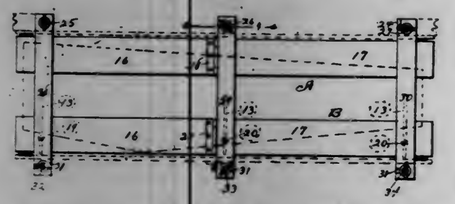
1,452,434. COMBINATION FURNITURE. ARTHUR LIVINGSTON NEIL, Brooklyn, N. Y. Filed Nov. 30, 1920. Serial No. 427,379. 1 Claim. (Cl. 68—10.)

In combination with a table having a hinged lid adapted to form the top of the table, the top edge of one of the end walls of said table being cut away, a board pivotally mounted in the table adjacent the said cutout end wall and having its upper edge flush therewith, a second board hingedly connected to said edge and having a thickness equal to the depth of said cutout, an ironing board carried thereby whereby the ironing board may fold outwardly of the table to a horizontal position and have its upper face lying in a plane flush with the top face of the lid forming the table top when the lid is in its closed position.



1,452,435. EXHAUST SILENCER FOR INTERNAL-COMBUSTION ENGINES. CYRIL G. PULLIN, Isleworth, England. Filed Apr. 12, 1920. Serial No. 373,038. 7 Claims. (Cl. 137—160.)

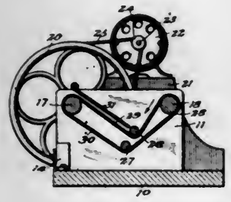
7. An exhaust silencer for internal combustion engines comprising a casing, a V-shaped baffle therein, so disposed that the casing is divided into three compartments, two adjacent tapering compartments, and a third of substantially even sectional area throughout, port admitting exhaust gases to the wide end of one tapering compartment,



openings in said baffle connecting the smaller end of the last mentioned tapering compartment to the large end of the other tapering compartment openings in the said baffle connecting the smaller end of the said other tapering compartment with the third compartment of even sectional area, a detachable cap on the outlet end of said casing, means adapted to secure the caps to the casing, spacing means adjacent the cap between the opposite walls of the casing, and an outlet opening in said cap registering with the outlet end of said compartment of even sectional area.

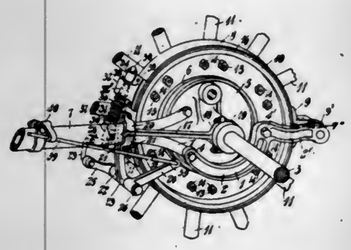
1,452,436. FRONT FORK FOR VELOCIPEDES. CYRIL GEORGE PULLIN, Isleworth, England. Filed July 20, 1920. Serial No. 397,572. 1 Claim. (Cl. 208—97.)

In combination on a velocipede, a ball head tube having a tubular T-shaped lower extremity, a transverse main hinge pin carried by said T piece, a pair of sheet metal triangular members, forming the arms of the front fork of the velocipede, mounted on said main hinge pin at the rear corners of their bases, and separated by said tubular T piece, means retaining said triangular members on said hinge pin, and against said tubular member, means connecting the apex of each triangular member to the respective end of the spindle of the front road wheel of the velocipede, and shock absorber means connecting the forward base corner of each triangular member to a point adjacent the top of said ball head tube, said shock absorber having a lower T shaped extremity carrying a bearing for a forward hinge pin projected through the forward base corners of said triangular member and the said T shaped extremity and having a lubricant conduit, leading from the interior of said shock absorber to said forward hinge pin.



1,452,437. TROUSERS HOLDER AND PRESS. HANS EJNAR RASMUSSEN, Graettinger, Iowa. Filed Apr. 18, 1922. Serial No. 553,109. 6 Claims. (Cl. 100—57.)

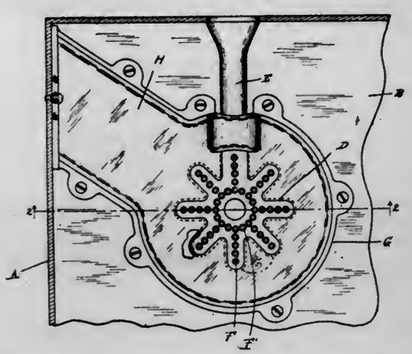
1. A trousers holder and press, comprising base members, a clamp fixed thereto, a clamp slidingly mounted on the base members substantially parallel with the first clamp, clamping bars pivoted to the base members and adapted to overlie both clamps, and means for clamping the bars on said clamps.



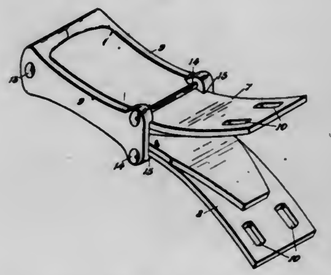
4. A trousers holder and press, comprising spaced base members each formed with a longitudinal slot, clamp members extending transversely of and fixed to said base members, clamp members hinged to the first clamp members, and hinged together, other clamp members slidingly connected to said base members, further clamp members hinged to said other clamp members and hinged together, bars pivoted to the base members and adapted to extend across both clamps, and means for clamping said bars toward said base members.

1,452,438. DEVICE FOR STRAIGHTENING PHOTOGRAPHIC PRINTS. CARL H. RISE, Rapid City, S. Dak. Filed Apr. 11, 1922. Serial No. 551,621. 3 Claims. (Cl. 25—70.)

1. A device for effecting the straightening of photographic prints which have become curled during the drying process, comprising a pair of rollers mounted in spaced relation, a stationary element, an endless belt trained around said rollers with the outer surface of the upper lead trained under the stationary element, and means for driving said belt.



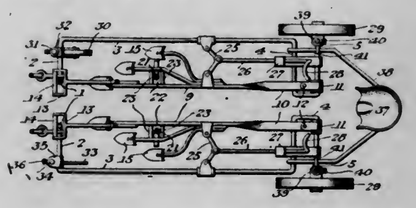
1,452,439. ATTACHABLE BRAKE. ELMER R. RITTER, Cincinnati, Ohio, assignor to Steve A. Wuestefeld, Cincinnati, Ohio. Filed Nov. 24, 1919. Serial No. 340,157. 14 Claims. (Cl. 188—77.)



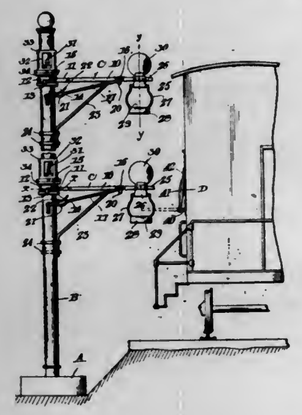
1. In an attachable brake, a brake-drum, means for attaching said drum to the wheel of a vehicle, operating means for exerting braking pressure on said drum, and a strut supporting said operating means and attachable directly to the axle-casing and directly to the adjacent radius rod of said vehicle.

1,452,440. GAS BURNER. WILLIAM V. ROBINSON, Owosso, Mich., assignor to The Independent Stove Co., Owosso, Mich., a Corporation of Michigan. Filed Nov. 30, 1921. Serial No. 518,752. 6 Claims. (Cl. 158—99.)

6. The combination with an imperforate wall of a gas burner mounted thereabove, and an air supplying device for said burner comprising a sheet metal hood adapted to fit over said burner and cut away to permit of the protruding therethrough of the burner tips and said cut away portion forming a passage-way for a narrow stream of air adjacent to the flame, an integral laterally extending conduit for supplying air to said hood and flanges on said hood and conduit respectively adapted to be secured to said imperforate wall.



1,452,441. AUXILIARY SPRING OR SHOCK ABSORBER FOR VEHICLES, PARTICULARLY MOTOR VEHICLES. THOMAS HENRY RODDA, Joslin, and BERTIE NORMAN RODDA, Torrensville, South Australia, Australia. Filed Jan. 7, 1922. Serial No. 527,731. 7 Claims. (Cl. 267—46.)



1. An improved auxiliary spring for vehicles comprising:—two curved members arranged in V form with their convex faces opposed, clamping plates enclosing the adjacent ends of said spring members extending along the edge thereof, and means carried by the extended portions of the plates for engaging said springs at a point remote from said end to limit the opening movement of the spring members.

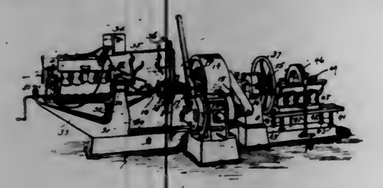
1,452,442. CULTIVATOR. ELI S. ROUSH, Lynchburg, Ohio. Filed July 31, 1920. Serial No. 400,440½. 7 Claims. (Cl. 97—156.)

1. An implement of the class described, comprising a main frame having forward upright portions and U-shaped rear portions, beams mounted on the rear portions for vertical and horizontal swinging movement, said beams being mounted for free vertical and limited horizontal play on the upright forward portions of the main frame, and means for adjusting the beams with respect to the main frame.

1,452,443. APPARATUS FOR DELIVERING MESSAGES TO MOVING TRAINS AND THE LIKE. JOHN RUTTER, Edmonton, Alberta, Canada. Filed Mar. 5, 1921. Serial No. 450,039. 3 Claims. (Cl. 258—26.)

1. A device of the character described comprising in combination a pivotally mounted delivery arm, message carrying means, means for detachably connecting the message carrying means with the delivery arm, a bracket for supporting the outer ends of the delivery arm, engaging means adapted to be mounted on the moving body adapted to engage the message carrying means and a roller on the delivery arm adapted to engage the bracket, the said bracket being of semi-circular shape formed with a notch at the centre and one at each end and the end notches adapted to retain the roller therein.

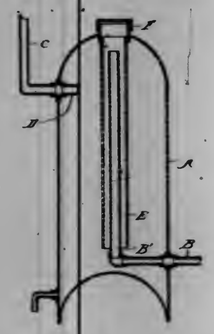
1,452,444. WELL TOOL. CHARLES ALFRED SAMUELL, Hedgesville, Mont. Filed May 10, 1921. Serial No. 468,323. 1 Claim. (Cl. 294—102.)



A device of the character described comprising in combination, a tubular member of uniform diameter throughout its length and open at both ends, spaced par-

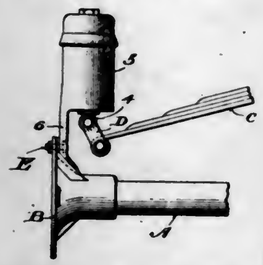
allel arms projecting from one end of the member, curved blade-like members supported by the lower extremities of said arms and forming an integral part thereof, said blade-like members contacting at a point adjacent the upper ends thereof, and shaped to provide a flared entrance passage between said blades, and a lifting device including a second tubular member adapted to be received by the first mentioned tubular member and arranged above the latter.

1,452,445. SILICATE COMPOSITION. LÉON SEIDEMAN, New York, N. Y. Filed June 2, 1920. Serial No. 386,059. 2 Claims. (Cl. 134—76.)



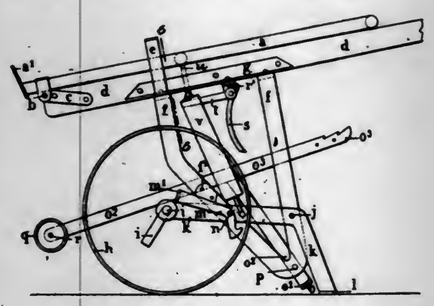
2. A metallic paint composition which consists of a water-soluble silicate, a vegetable oil, and a metallic powder.

1,452,446. ENGINE-BEARING BURNING-IN AND RUNNING-IN MACHINE. JOSEPH H. STALEY, Columbus, Ind. Filed Mar. 1, 1921. Serial No. 448,876. 15 Claims. (Cl. 29—1.)



1. In a machine of the character specified, a base, a shaft journaled intermediate the ends of the base, a second shaft also journaled intermediate of the ends of the base but out of alinement with the first shaft, speed changing means connecting the two shafts, means to receive and hold an automobile engine in position with its crank shaft alined with said first shaft, means for operatively connecting said crank shaft and first shaft, means to receive and hold the block of an automobile engine with its crank shaft alined with the second shaft, and means for operatively connecting said last crank shaft and second shaft.

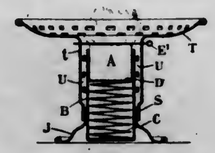
1,452,447. WATER SEPARATOR FOR AIR TANKS. EMERSON B. THATCHER, Marine City, Mich. Filed July 30, 1921. Serial No. 488,746. 1 Claim. (Cl. 183—75.)



The combination with an air storage tank, of an inlet conduit therefor having a portion extending from the upper end of the tank vertically downward to near the bottom thereof and provided with another portion which extends within said first-mentioned portion vertically upward and is in open communication therewith at its upper end.

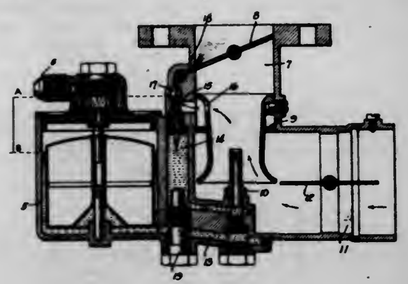
1,452,448. SUPPORT FOR VEHICLE SPRINGS. CLARANCE W. THOMPSON, Wilmington, Del., assignor to Thompson Spring Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 16, 1922. Serial No. 582,289. 5 Claims. (Cl. 269—29.)

1. In a vehicle-spring device, a member constituting a spring-supporting part thereof, and extending from a side of said member a support disposed in its portion adjacent to said member substantially parallel with the axis thereof and having a foot extending toward said axis, said foot and portion of the support adjacent to said member being arranged to abut closely against an axle structure and a flange-like member thereon and to be secured against those parts.



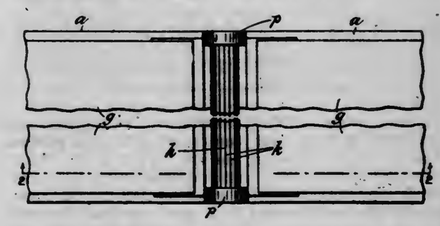
1,452,449. APPARATUS FOR HEAPING OR PILING UP PACKAGES, BAGS, AND THE LIKE. JEAN CLAUDE THOUVIOT, Paris-L'Hopital, France. Filed July 2, 1920. Serial No. 393,499. 8 Claims. (Cl. 254—3.)

1. An apparatus for heaping or piling up packages, bags and the like, comprising a pole, a pivoted frame *e* on the pole, a frame *f*, arms *k* pivoted to the frame *f*, an axle *i* mounted in the arms, wheels *h* on the axle, a prop *o* pivoted to the frame *f* and having a rack e^3 at one end, rollers *q* mounted in the other end of the prop, a retaining pawl *s* on the frame for engaging the rack of the prop, and hooks *m* on the prop for engaging the arms *k* to maintain the axle of the wheels in fixed position.



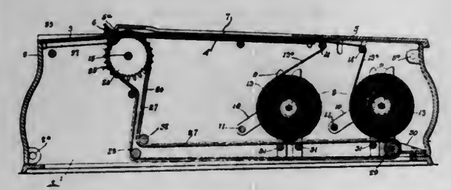
1,452,450. BURNER FOR BURNING METALDEHYDE. CARLO TOMMASI, JOHN SANDHOLM, HEINRICH DANNEEL, and AUGUSTO BUSCH, Basel, Switzerland, assignors to Elektrizitatswerk Lonza, Gampel, Canton of Valais, Switzerland, a Corporation of Switzerland. Filed July 19, 1921. Serial No. 485,950. 9 Claims. (Cl. 158—96.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

9. A burner for bodies of metaldehyde having a protecting sheath surrounding a part of a fuel body and constructed of a material which is a bad conductor of heat, a cup-shaped carrier, perforated for the passage of air, arranged around the protecting sheath and adapted to receive a supplementary supply of metaldehyde in the form of tablets or the like and having its lower part formed of a material which is a bad conductor of heat, a device which tends to push forward automatically the fuel body



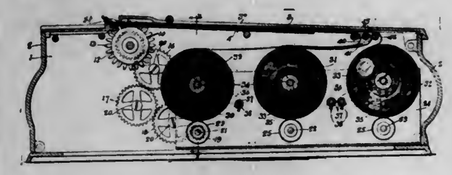
correspondingly with its consumption, and a retainer for the fuel body, mounted on the said cup-shaped carrier and being vertically adjustable relatively to the upper edge of the protecting sheath.

1,452,451. CARBURETOR. ARTHUR H. WEBBER, Boston, Mass. Filed Dec. 7, 1920. Serial No. 428,944. 1 Claim. (Cl. 261—41.)



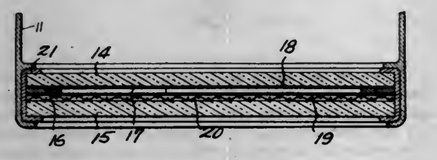
A carburetor including in combination a body providing a mixing chamber, a venturi positioned in advance of said mixing chamber, a throttle valve positioned at a point beyond said mixing chamber, a nozzle extending into said venturi, said carburetor being formed with a well having its end extending into a plane above that occupied by the upper end of the nozzle to permit fuel to stand therein at a level higher than the upper end of said nozzle, a source of fuel supply connected to both said nozzle and well, a second nozzle communicating with the upper end of said well, said carburetor being formed with an opening for the passage of air past said last-named nozzle and also providing a mixing chamber adjacent said nozzle, said carburetor body being further formed with a pasage extending from said last-named mixing chamber to a point adjacent said throttle valve.

1,452,452. BINDING CASE FOR HOLDING SHEET MUSIC AND THE LIKE. JOHN WILLIAM WEST, Camberwell, London, England. Filed Oct. 12, 1921. Serial No. 507,269. 5 Claims. (Cl. 129—39.)



1. In a binding-case, the combination with the rigid back-member and a string-bar on the back-member and provided with straining bridges at its ends, of a pair of cleat-pins fixed at the respective ends of the string-bar beyond the corresponding straining bridges, and a plurality of binding-strings constituted by successive portions of the length of a single continuous string passed to-and-fro from end to end over the convex surface of the string-bar and repeatedly doubled around each in turn of the respective cleat pins, substantially as set forth.

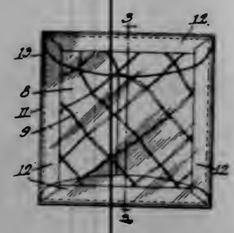
1,452,453. AUTOGRAPHIC REGISTER. AUGUST A. WIMMERS, Dayton, Ohio., assignor to The Egry Register Company, Dayton, Ohio, a Corporation of Ohio. Filed Feb. 13, 1920. Serial No. 358,557. 13 Claims. (Cl. 281—11.)



4. An autographic register comprising a casing having an opening, a paper support below the opening, manually operated devices for drawing the paper over the support, a paper roll supporting shaft and an endless band paper pay off device adapted to engage a paper roll arranged upon the supporting shaft and to pay off the paper as it is drawn over the paper support.

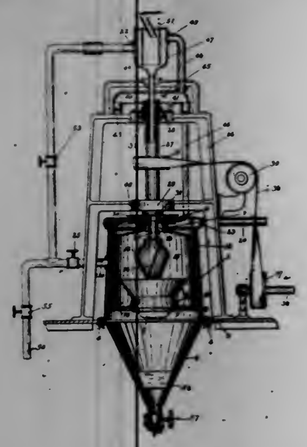
1,452,454. AUTOGRAPHIC REGISTER. AUGUST A. WIMMERS, Dayton, Ohio, assignor to The Egry Register Company, Dayton, Ohio, a Corporation of Ohio. Filed July 2, 1920. Serial No. 393,489. 14 Claims. (Cl. 281—11.)

1. An autographic register comprising a casing having an opening and a paper support below the opening, a paper-feeding mechanism comprising a manually operated actuating device, a paper feeding device extending above the paper support to engage and feed the strips of paper a predetermined amount at each actuation, of the actuating device, and co-acting devices to rotate the rolls of paper to cause them to pay off the same amount of the paper as is fed above the paper support.



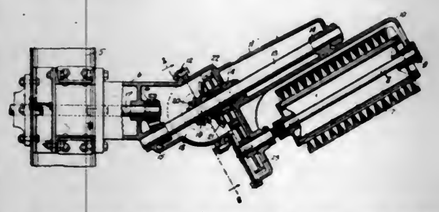
1,452,455. SIGNAL. LESLIE G. BELL and MORRIS GRIMM, Montreal, Quebec, Canada. Filed Dec. 27, 1921. Serial No. 525,065. 11 Claims. (Cl. 40—135.)

1. In a device of the class described, the combination with a source of light, of a sheet of paper arranged to be



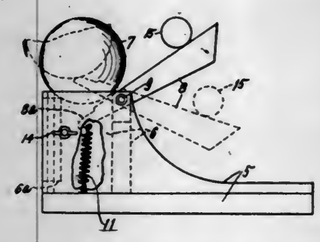
illuminated thereby and to become a secondary source of light, a second sheet of paper arranged to give passage to light from said secondary source, said latter sheet serving also to reflect external light and signal means interposed between said sheets to define the shape of beams of light passing from the secondary source of illumination to the reflecting sheet.

1,452,456. SANITARY PACKAGE. MORRIS CAUPAIN, Newark, N. J. Filed Nov. 9, 1922. Serial No. 599,850. 3 Claims. (Cl. 206—46.)



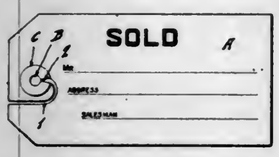
1. A sanitary package for hair nets, comprising a flat supporting sheet, a hair net smoothly drawn over one face of said sheet so as to exhibit the mesh of the net and bunched on the opposite face of said sheet, the relative size of the hair net and sheet being such that bunching of the net on one side of the sheet results as a natural consequence in forming the package, an opaque wall opposed to the face of the sheet on which the net is bunched whereby the hair net on such face is concealed, and a transparent wall opposed to the other face of the sheet through which the hair net is exposed to view.

1,452,457. APPARATUS FOR SEPARATING SEEDS. EDGAR DUNCOMBE EDDY, Toronto, Ontario, Canada. Filed Jan. 31, 1922. Serial No. 533,038. 10 Claims. (Cl. 83—82.)



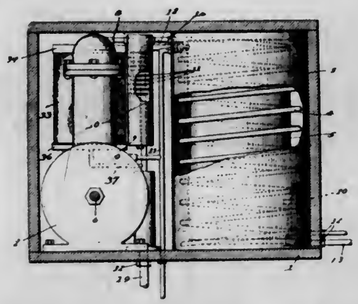
1. In seed and grain separators, the combination with the casing adapted to be filled with liquid, of an enclosed hollow seed separating rotor, means for introducing liquid and the seeds or grain to be separated therein into the rotor, means for introducing liquid under pressure into the casing, adjustable discharge means at the bottom of said casing and adjustable means for feeding liquid into the casing.

1,452,458. CLEANING BRUSH. EUGEN GEIGER, Karlsruhe, Germany, assignor to William L. D'Oller, New York, N. Y. Filed Aug. 18, 1921, Serial No. 493,434. Renewed Oct. 25, 1922. Serial No. 596,898. 5 Claims. (Cl. 15—21.)



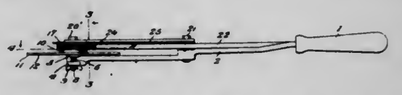
1. A cleaning device including a brush comprising a body portion, a shaft mounting said body portion, means for rotating said shaft, and means for bodily oscillating said shaft, the axis of oscillation extending in a line substantially parallel to the body of the brush.

1,452,459. BALL-THROWING TOY. JOSEPH W. GREENFIELD and WILLIAM WALLER, St. Paul, Minn. Filed Apr. 3, 1922. Serial No. 548,951. 2 Claims. (Cl. 124—1.)



2. In a device of the class described, a base having a vertical tubular portion adapted to support a ball in the longitudinal vertical plane of a beam lever, a beam lever tilting on a horizontal pivot in a vertical slot in said tubular portion, the outer end of the lever being adapted to be struck downward and the opposite end thereof being arranged to throw the ball when the outer end of the lever is hit, means for automatically raising the struck arm of the lever after each stroke, and means for varying the position of the ball when at rest as to its distance away from the fulcrum of the lever.

1,452,460. TAG. THOMAS I. HART, St. Louis, Mo. Filed May 1, 1920. Serial No. 378,290. 1 Claim. (Cl. 40—21.)

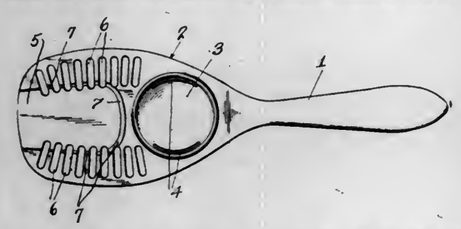


A tag provided with a reinforcing washer provided with cord-receiving hole, said washer being located adjacent to an end edge of the tag and the portion of the washer which lies furthest from said end edge having a tapering slot to provide a restricted inlet opening for the admission of the cord to said hole, said tag being provided with an approximately J-shaped and relatively wide cord receiving passageway leading from said end edge of the tag to said restricted inlet opening.

1,452,461. REFRIGERATING APPARATUS. CURTISS L. HILL, Dayton, Ohio. Filed Dec. 12, 1919. Serial No. 344,384. 1 Claim. (Cl. 62—116.)

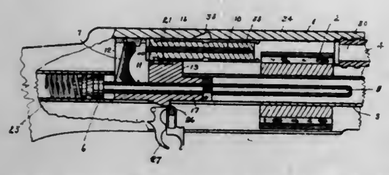
A refrigerating system comprising a casing, means for compressing the refrigerating medium used in the system, means for extracting the oil from the compressed refrigerating medium, means for cooling the compressed refrigerating medium after the oil is extracted therefrom, means for conveying the cooled compressed medium through the system and thence back to the compressor, a water saturated cotton wick arranged within the casing and being adapted to collect any escaping refrigerating medium from the system, a water supply pipe in communication with the wick, means associated with the wick to convey the escaped refrigerating medium from the system and means for increasing the volumetric capacity of the system.

1,452,462. HEDGE TRIMMER. JAMES A. HOUSEMAN, York, Pa. Filed June 11, 1921. Serial No. 476,868. 2 Claims. (Cl. 30—11.)



1. In a hedge trimmer, a handle having a shank extension provided with a shaft, a stationary blade secured on the shaft, a second blade centrally mounted for rotary movement on the shaft, a pinion freely mounted on the shaft, having means coengaging with means on the rotary blade whereby to impart motion to the blade, when the pinion is revolved, a second shank pivoted to the first mentioned shank, said second shank having its outer end provided with a handle and its inner end with a toothed segment to engage with the pinion, and said means between the pinion and rotary blade permitting a rotary movement being imparted to said blade when the pinion is influenced by the segment and the oscillatory movement of the second mentioned shank.

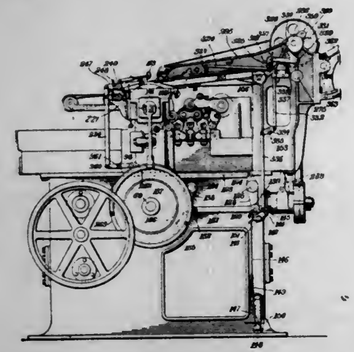
1,452,463. METHOD AND COMPOSITION FOR CEMENTING OIL WELLS. FREDERICK W. HUBER, Riverside, Calif. Filed May 24, 1922. Serial No. 563,378. 7 Claims. (Cl. 106—24.)



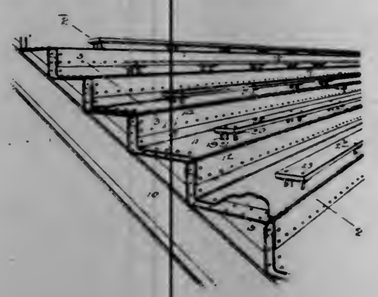
1. The method of cementing oil wells which consists in forcing into the space to be cemented, a thin grout consisting of Portland cement, water and an alkaline earth metal chloride, sufficient water being present therein to form a thin grout, capable of being pumped.

1,452,464. SPOON. SEBRIGHT B. ISAACS, Kansas City, Mo. Filed Mar. 14, 1921. Serial No. 451,994. 1 Claim. (Cl. 294—7.)

A culinary implement of the character described comprising a rolled handle, a widened extension formed integrally therewith and adjacent one end thereof, a flat blade formed on the end of the widened extension opposing the handle and designed to be below the surface of the extension, as and for the purpose specified.



1,452,465. ACTUATOR FOR MACHINE GUNS. MILLARD L. JOHNSTON, Utica, N. Y. Filed Jan. 8, 1918, Serial No. 210,912. Renewed Feb. 28, 1923. 3 Claims. (Cl. 42—3.)

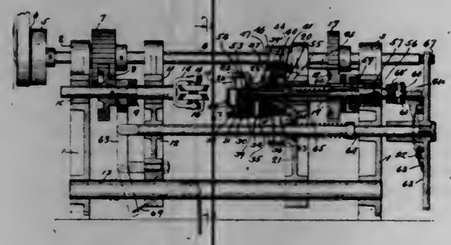


1. In an actuator for machine guns having a casing, a breech bolt containing a firing pin, a piston carrying a hammer, a dog having a depending lug adapted to lie in front of said hammer, and a recess in said casing whereby said hammer can slip by said lug to strike the firing pin.

1,452,466. PRINTING PRESS. WILLIAM M. KELLY, Jersey City, N. J., assignor to American Type Founders Company, Jersey City, N. J., a Corporation of New Jersey. Filed Feb. 20, 1914. Serial No. 820,042. 34 Claims. (Cl. 271—45.)

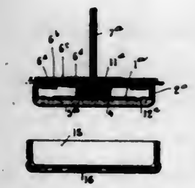
1. In a printing press, the combination of a pivotally supported feed board, a pivotally mounted frame arranged above said board, said frame and board having cooperating sheet manipulating means, the portion of said means on the board being disposed under said frame, and mechanism to operate said means, the pivotal mountings of the feed board and frame being constructed and arranged so that the frame may be raised to permit sheets to be fed from the feed board and both the frame and feed board may be raised to give access to parts thereunder without disconnecting said mechanism.

1,452,467. GRAND-STAND CONSTRUCTION. BYRON JAMES LAMBERT, Iowa City, Iowa. Filed Sept. 7, 1922. Serial No. 586,712. 5 Claims. (Cl. 189—1.)



1. A stepped structure of the class described, including plates Z-shaped in cross section and joined to form treads and risers, and butt spliced joints at the end edges of said plates, said joints comprising splice members following generally the Z-shaped lines of said plates and disposed beneath the same to overlap adjacent plates.

1,452,468. TOOL FOR INSERTING PISTON RINGS. ROSS LEE, Chaffee, Mo. Filed Mar. 20, 1922. Serial No. 545,109. 4 Claims. (Cl. 29—86.4.)

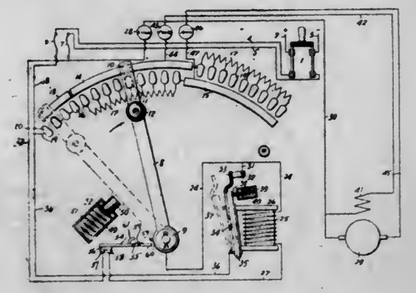


1. In a device of the character described, a main handle, an auxiliary handle pivotally mounted thereon, a resilient ring having one end secured to said main handle, a threaded rod secured to the opposite end of said resilient ring, and connections between said auxiliary handle and said rod to contact said ring when the auxiliary handle is swung on its pivot.

1,452,469. BALL-WINDING MACHINE. EVARTS G. LOOMIS, Newark, N. J., assignor to St. Mungo Manufacturing Company of America, Newark, N. J., a Corporation of New Jersey. Filed June 7, 1922. Serial No. 566,468. 17 Claims. (Cl. 242—3.)

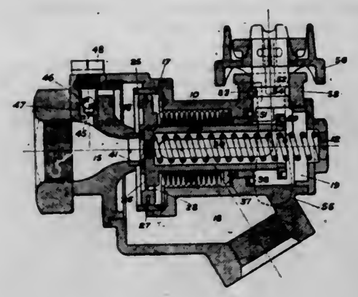
1. The method of winding a sphere which method consists in rotating the sphere a predetermined number of times about a predetermined fixed axis while simultaneously moving the plane of winding of the thread in a direction parallel to said axis to cause the thread to traverse the ball, intermittently rotating the sphere on secondary axes at an angle to said fixed axis and simultaneously imparting a third rotary motion to the sphere alternately in the same and in an opposite direction to the motion of the sphere about the predetermined fixed axis.

1,452,470. POWDER PUFF. JOSEPH EUGÈNE BAPTISTE MAILLARD, Coulombs, France. Filed Jan. 2, 1920. Serial No. 349,117. 2 Claims. (Cl. 132—78.5.)



In a powder puff containing powder and serving for the gradual supply of the same, the combination of a bottom piece used as a bearing surface, a circular ring formed thereon, a movable disk disposed within the said circular ring, a spring disposed between the bottom piece and the movable disk, a band of impermeable fabric secured within the circular ring and upon the said movable disk, a band of permeable fabric closing the open side of the circular ring, compressed powder between the movable disk and the said permeable fabric, a top portion covering the bottom piece on the outer side, and a handle disposed upon the said top portion.

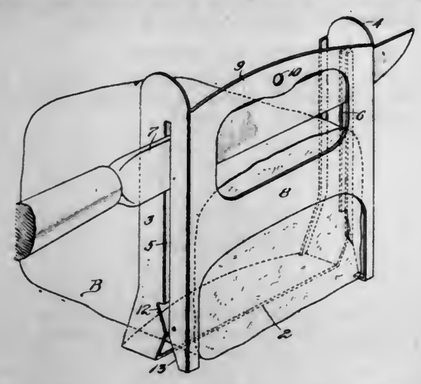
1,452,471. LOCK AND LOCK MOUNTING. EVERETT C. KLINE, Cincinnati, Ohio, assignor to The Laminated Metal Products Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 24, 1921. Serial No. 524,605. 1 Claim. (Cl. 70—14.)



In a lock mounting the combination with a wall having an aperture therein, of blocks mounted on the wall at opposite sides of the aperture, extending toward one another, one of said blocks having a slot opening toward the other block, a plate adapted to be seated in the aperture in the wall and to close said aperture and having a slot therethru, a band mounted on the plate, a lock between the band and the plate to which access may be had thru the slot in the plate, a bar between the lock and the band, a lug on the bar adapted to lie between and in engagement with the plate and the slotted block, the slot in the block being adapted to accommodate the bolt of the lock, and a lug on the plate adapted to lie behind the other block, and to retain the plate in engagement with said other block.

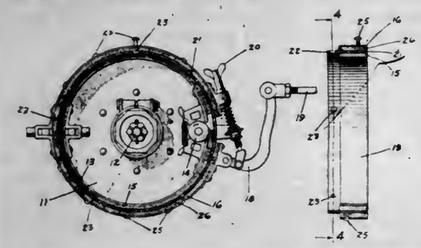
1,452,472. CONTROLLER FOR MOTORS. CARL W. PLEHATY, White Plains, N. Y., assignor of one-half to Francis R. White, White Plains, N. Y. Filed Jan. 25, 1922. Serial No. 531,791. 6 Claims. (Cl. 172—179.)

1. A motor controlling device which comprises a source of current, a rheostat having an arm, a switch, circuit connections between the above mentioned elements including the motor, said switch being normally open, said rheostat arm having normal, abnormal and operative positions, means made effective when the handle is moved to the abnormal position to effect the closing of the normally open switch whereby the power is applied to the rheostat to be applied to the motor in accordance with the further movement of the rheostat handle, and means engaging the handle when moved to its abnormal position, said means when the handle is released automatically returning it to a normal position.



1,452,473. AUTOMATIC ANGLE COCK. FRANK DESMOND SPRAGUE, Newport, R. I. Filed Oct. 22, 1921. Serial No. 509,754. 8 Claims. (Cl. 303—86.)

1. The combination with an air brake system, of an automatic valve located in and controlling the passage of air through the brake pipe, which when once opened will automatically maintain this opening so long as the hose couplings between cars are connected, and means for manually opening said valve.



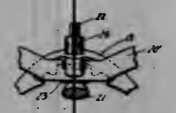
1,452,474. BREAD SLICER. JASPER WHITING, Boston, Mass. Filed Aug. 8, 1922. Serial No. 580,499. 8 Claims. (Cl. 146—12.)

1. A bread slicing device comprising in combination, a base having upright guides spaced apart to receive a loaf of bread between them, each of said guides having a vertical knife guiding slot therein open at its lower end and extending to a point near the top of the guide, and

means connecting said guides at the front of the device and forming an abutment for the end of the loaf of bread.

1,452,475. METHOD OF RELINING MOTOR-VEHICLE BRAKE BANDS. ROBERT SARDESON, Minneapolis, Minn. Filed Nov. 25, 1921. Serial No. 517,728. 5 Claims. (Cl. 218—29.)

4. The method of relining a motor vehicle brake-band which consists in removing the wheel and brake-drum, removing the old lining from the brake-band while the latter remains substantially in its normal position in the vehicle, placing a new lining and an anvil adjacent the brake-band with the lining between the brake-band and anvil, driving fastenings through the band and lining and against the anvil to clinch the fastenings and secure the lining and band together while the latter still remains substantially in said position, and removing the anvil.

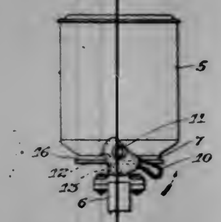


1,452,476. CHAIN LINK. CLARK E. CARTER, Montreal, Quebec, Canada. Filed Mar. 15, 1922. Serial No. 543,930. 3 Claims. (59—85.)

1. A link of the type described comprising a pair of relatively slidable shank, an eye formed upon one end of

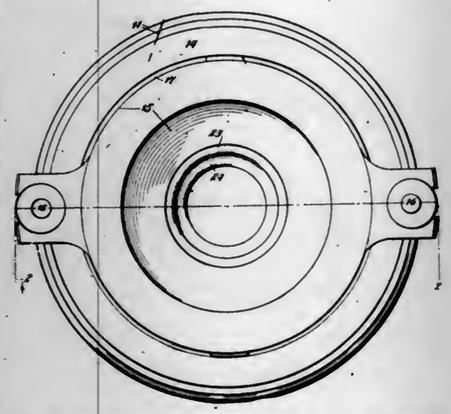
each shank and embracing the opposite shank whereby said eyes are adapted to contact with each other to limit in one direction the slidability of the shanks, and hooks formed upon the remaining ends of the shanks.

1,452,477. DENTAL ARTICULATOR. EDWARD L. CHOTT, Chicago, Ill. Filed May 29, 1922. Serial No. 564,449. 2 Claims. (Cl. 32—1.)



1. A dental articulator comprising a base frame having uprights thereon; there being inclined depressions in said uprights; a cross piece connecting said uprights and having a portion thereof intermediate its ends inclined in a plane substantially parallel with the incline of said depressions; adjustable guide means tapped through said inclined portion; a second frame having members pivotally and slidably mounted in said depressions; an extension on said second frame adapted to slidably engage said adjustable guide means during lateral movement of said second frame in said depressions; and levers on said members for operating said second frame and adapted to hold said extension in close engagement with said adjustable guide means during lateral movement of said second frame.

1,452,478. PROCESS OF MAKING NICKEL FORMATE. CARLETON ELLIS, Montclair, N. J. Filed Mar. 21, 1921. Serial No. 453,989. 2 Claims. (Cl. 260—11.)

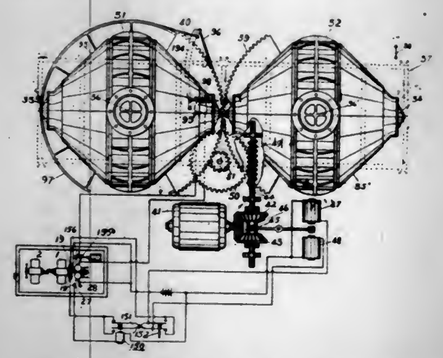


1. The process of making nickel formate adapted for use in the hydrogenation of oils which comprises forming a solution containing both nickel sulphate and sodium formate and concentrating such solution to a strength of about 37° Bé. to deposit nickel formate, in filtering and washing the latter.

1,452,479. LATCH MECHANISM. RALPH L. FORD, Chicago, Ill., assignor, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Original application filed June 20, 1918, Serial No. 240,996. Divided and this application filed May 6, 1921. Serial No. 467,293. 6 Claims. (Cl. 221—118.)

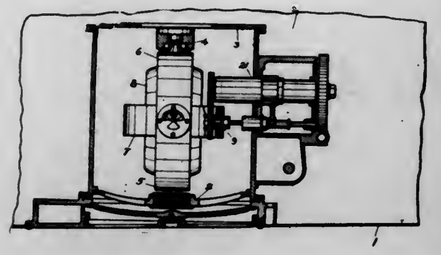
1. In a planter, a support, a hopper hinged thereon, a bottom member also hinged on said support and on which the hopper normally rests, and a single latch device including means for locking the hopper to the support when the latch is moved to one position and also means for locking the bottom member to the hopper and releasing the hopper from the support when the latch is moved to another position.

1,452,480. APPARATUS FOR CASTING METALS. NATHANIEL K. B. PATCH, Buffalo, N. Y., assignor to Lumen Bearing Company, Buffalo, N. Y., a Corporation of New York. Filed Dec. 6, 1920. Serial No. 428,452. 5 Claims. (Cl. 22—60.)



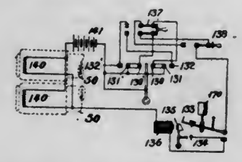
1. An apparatus for casting metals under the pressure of centrifugal force, comprising a rotatable head, and a molding flask mounted on said head to rotate therewith, said flask having a molding cavity in its upper portion and a comparatively deep well for molten metal in its lower portion communicating with said molding cavity.

1,452,481. MANUFACTURE OF 1.4 NAPHTHOL SULPHONIC ACID. JAMES BADDILEY, JOSEPH BARON PAYMAN, and ERNEST GRAHAM BAINBRIDGE, Manchester, England, assignors to British Dyestuffs Corporation Limited, Manchester, England. Filed July 27, 1922. Serial No. 577,984. 6 Claims. (Cl. 260—155.)



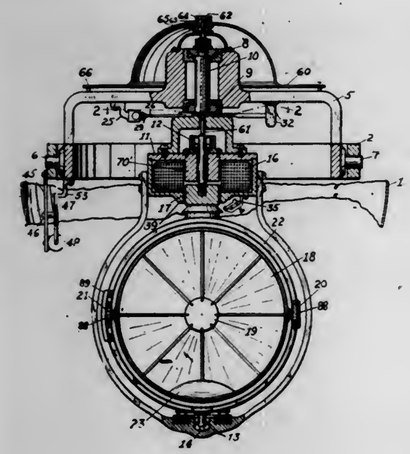
1. The process of manufacture of 1.4-naphthol sulphonic acid by acting upon alpha-naphthol with chlorsulphonic acid in the presence of a substantially inert solvent, substantially as described.

1,452,482. MEANS FOR GOVERNING THE ROLLING OF SHIPS. ELMER A. SPERRY, Brooklyn, N. Y., assignor to Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Sept. 30, 1916. Serial No. 123,155. 25 Claims. (Cl. 74—78.)



1. The combination with a ship, of means mounted thereon for maintaining a roll of predetermined amplitude and gyroscopic governing means for causing said other means to act in the natural period of the ship.

1,452,483. HORIZONTAL BEARING FOR GYROSCOPES. ELMER A. SPERRY, Jr., Brooklyn, N. Y. Filed Oct. 12, 1916. Serial No. 125,169. 9 Claims. (Cl. 74—78.)



1. In combination a gyroscope comprising a rotor, a rotor bearing frame, a supporting ring, and a bearing including an upwardly pointed knife edge carried by said frame for supporting the frame in said ring.

1,452,484. METHOD OF GUNFIRE CONTROL FOR BATTLESHIPS. ELMER A. SPERRY, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Original application filed Sept. 30, 1916, Serial No. 123,155. Divided and this application filed July 2, 1920. Serial No. 393,557. 13 Claims. (Cl. 89—28.)

13. In combination with a ship, an ordnance appliance on said ship, and means for converting the rolling movements of the ship into movements of predetermined amplitude, and for causing said appliance to be discharged at a predetrmined point in said movements.

1,452,485. GYROSCOPIC COMPASS. HARRY L. TANNER, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 8, 1917. Serial No. 200,889. 23 Claims. (Cl. 33—204.)

1. In a precission instrument, a pair of elements, a bearing for mounting said elements for relative rotation, and means for imparting to said elements a relative vibration in a plurality of planes.

Patents Nos. 1,452,486 to 1,453,259.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 309—No. 4. TUESDAY, APRIL 24, 1923. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

ADVERSE DECISIONS IN INTERFERENCE.

Design Pat. 58,997, R. E. Cartlidge, Tire tread, has been involved in an interference and a decision rendered March 17, 1923, that said patentee was not the first inventor of the subject matter covered by the claim of said patent, and no appeal having been taken such decision has become final.

Pat. 1,214,604, W. A. Smith, Drill-sharpening apparatus, has been involved in an interference and a decision rendered March 14, 1923, that said patentee was not the first inventor of the subject matter covered by claim 10 of said patent, and no appeal having been taken such decision has become final.

Pat. 1,338,956, T. A. Peebles, Regulating combustion, has been involved in an interference and a decision rendered March 16, 1923, that said patentee was not the first inventor of the subject matter covered by claims 16 and 17 of said patent, and no appeal having been taken such decision has become final.

Pat. 1,366,853, C. Wainwright, Automatic relief means for compressor regulators, has been involved in an interference and a decision rendered March 15, 1923, that said patentee was not the first inventor of the subject matter covered by claim 1 of said patent, and no appeal having been taken such decision has become final.

Interference Notices.

U. S. Patent Office, *Washington, Apr. 11, 1923.*

Austin Poor & Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Ireland Bros., Inc., of 102 Franklin Street, New York, N. Y., for registration of a trade-mark and trade-mark registered June 26, 1906, No. 54,319, to Austin, Poor & Co., of 72 Leonard Street, New York, N. Y., and a notice of such declaration sent by registered mail to said Austin, Poor & Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Austin Poor & Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the Official Gazette for three consecutive weeks.

KARL FENNING,
Assistant Commissioner.

U. S. Patent Office, *Washington, Apr. 3, 1923.*

Rex Fluid Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of The Rex Laboratories, of 2453 North Halsted Street, Chicago, Ill., for registration of a trade-mark and trade-mark registered December 4, 1906, No. 58,088, to the Rex Fluid Company, Des Moines, Iowa, and a notice of such declaration sent by registered mail to said Rex Fluid Company at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Rex Fluid Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

Notice Regarding Payment of Fees.

All fees must be paid in advance.

Payment of money required for Office fees must be made in specie, Treasury notes, national-bank notes, post-office money orders, or certified checks. Money orders and checks must be made payable to the "Commissioner of Patents." Money sent by mail to the Patent Office will be at the risk of the sender. (See Rule 194.)

Certified checks, bank drafts, express and foreign money orders must be *immediately negotiable* in this country and for the full amount of the fee required by the Patent Office. No allowance can be made by this Office for any charge for their collection or exchange. Postage stamps will not be accepted. Failure to comply with the above instructions will cause delay.

Condition of Applications Under Examination at Close of Business April 13, 1923.

(Total number of applications awaiting action, exclusive Trade-Mark Division, 73,998; Trade-Mark Division, 4,062; Oldest new case, Apr. 21, 1922; oldest amended, Apr. 22, 1922. The dates given are 1922 except where * indicates 1923.)

Room No.	Divisions, Examiners, and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action. New	Amended.	No. of applications awaiting action.
314	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders; Trees, Pants, and Flowers.	July 22	June 30	1,125
128	2. HADEN, C. F. (Acting), Bee Culture; Dairy; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco.	May 29	June 2	1,648
175	3. RICH, WM. J., Electric Heating and Rheostats; Electrochemistry; Heating; Metal Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	May 15	May 19	1,734
234	4. MERRITT, A. D., Conveyers, Chutes, Skids, Guides, and Ways; Conveyers, Fluid Current; Conveyers, Power Driven; Excavating; Handling—Hand and Hoist-Line Implements; Material or Article Handling; Pushing and Pulling Implements; Railway Mail Delivery; Traversing Hoists.	June 26	*Jan. 18	1,401
167	5. MACNAB, J. F., Bookmaking; Books, Strips, and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	May 6	June 29	1,340
318	6. LEWERS, A. M., Bleaching and Dyeing; Chemicals; Chemistry—Carbon Compounds; Explosive, Pyrotechnic, and Match Compositions; Fertilizers; Liquid Coating Compositions; Medicines; Plastic Compositions; Substance Preparation.	Aug. 7	Nov. 23	1,564
312	7. JARBOE, C. G., Games and Toys; Optics; Photography	June 21	Sept. 20	2,466
133	8. CLIFT, J. W., Beds; Chairs and Seats; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	Sept. 20	Dec. 20	1,565
221	9. TRYON, F. M., Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid Current; Pumps.	June 22	*Feb. 21	881
235	10. MITCHELL, T. H., Land Vehicles; Land Vehicles, Animal Draft Appliances; Land Vehicles—Bodies and Tops; Land Vehicles—Dumping; Land Vehicles, Wheel Substitutes; Motor Vehicles.	July 6	July 25	1,431
154	11. ARMSTRONG, H. C., Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Hides, Skins, and Leather; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus.	Sept. 15	Sept. 23	1,040
322	12. PIERCE, P. P., Machine Elements	Sept. 15	Oct. 17	1,530
329	13. NIXON, O. A., Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Working; Needle and Pin Making; Turning.	Apr. 22	*Jan. 4	1,357
323	14. BRUMBAUGH, M. J., Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal Bending; Metal Tools and Implements, Making; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire Working.	May 3	*Mar. 17	1,174
308	15. REDROW, W. L., Glass; Laminated Fabric and Analogous Manufactures; Paper Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics.	June 19	Aug. 3	2,028
112	16. BACKUS, C. D., Radiant Energy; Telegraphy; Telephony	May 4	May 3	2,529
307	17. RAFTER, G. S., Coating, Label Pasting, and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufacture; Printing; Type Casting; Sheet-Material Associating or Folding; Sheet or Web Feeding or Delivering; Type Setting.	May 12	Oct. 21	1,469
229	18. PORTER, M. E., Liquid Heaters and Vaporizers; Motors, Expansible-Chamber Type; Power Plants; Speed-Responsive Devices.	May 31	May 2	2,048
236	19. GLASCOCK, E. S., Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems; Stoves and Furnaces; Thermostats and Humidostats.	June 14	Nov. 6	816
179	20. WRIGHT, H., Artificial Body Members; Miscellaneous Hardware; Closure Fasteners; Cutlery; Dentistry; Locks and Latches; Safes; Undertaking.	Oct. 2	Oct. 12	1,923
212	21. THURBER, W. L., Textiles; Textiles, Braiding, Netting, or Lace Making; Textiles, Cloth Finishing; Textiles, Fiber Preparation; Textiles, Knitting; Textiles, Spinning; Textiles, Twisting or Twining; Textiles, Weaving; Winding and Reeling.	May 9	Nov. 3	1,026
249	22. COLWELL, J. H., Aeronautics; Firearms; Ordnance; Ammunition and Explosive Devices; Ammunition and Explosive-Charge Making; Air Guns, Catapults, and Targets; Boats and Buoys; Ships; Marine Propulsion.	July 27	Oct. 5	650
217	23. GROESBECK, W. D., Acoustics; Coin Handling; Recorders; Registers; Sound Recording and Reproducing.	May 2	Apr. 22	882
144	24. DURAS, C. O., Apparel; Apparel Apparatus; Garment Supporters; Sewing Machines	June 8	July 18	1,586
315	25. LIGHTFOOT, J. H., Agitating; Butchering; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable Cutters and Crushers; Gas Separation.	*Jan. 15	*Jan. 5	420
105	26. HODGES, J. S., Electricity, Generation; Motive Power; Prime-Mover Dynamo Plants	June 7	July 25	869
214	27. ANDERSON, L. S., Abrading; Brush, Broom, and Mop Making; Brushing, Scrubbing, and General Cleaning; Laundry; Washing Apparatus.	May 24	June 6	2,205

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

IN RE CRANMER.

No. 1,516. Decided January 2, 1923.

1. INVENTION—COMBINATION—AGGREGATION.

Where the applicant has not produced new results or old results in a new and materially better way, but has done nothing more than aggregate what others had accomplished before him, except, perhaps, in particulars too refined to support a patent, he has not invented a patentable combination.

2. APPEAL TO COURT—PRESENTATION OF SUBSTITUTE CLAIM.

Where an appellant presents a substitute claim in his brief on appeal to the court, which claim was never considered by the Patent Office, it is not properly before the court.

Mr. W. S. Cranmer pro se.

Mr. T. A. Hostetler for the Commissioner.

Before SMYTH, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

SMYTH, *C. J.:*

Cranmer's application for a patent on a device which consists of a pneumatic tire casing of the standard beaded type, having incorporated within its tread portion a transversely-arched rigid reenforcing member which is embedded therein and covered with a layer of fabric to protect the inner air tube of the tire, was rejected by the Commissioner of Patents, and he appeals. Of the three appealed claims we set out claim 1.

In a pneumatic vehicle tire curved in transverse section, having an elastic inflatable inner air tube and an outer tire casing, a rigid annular band, conforming approximately in transverse section to the curvature of the tire and having blunt rounded edges; countersunk into the inner side of the tread portion of the said tire casing.

The application was rejected on a patent to Lenihan December 20, 1898, on one to Karlstrom et al. July 6, 1909, and on one to Heina August 4, 1914. The Assistant Commissioner in his opinion analyzed these references, and compared them with the claims of the application. He found that every element covered by the application was anticipated by the references when considered as a whole. In the course of his reasoning he called attention to the specification of the applicant, wherein it said that the purpose of the invention was to prevent punctures, to increase the elasticity of the tire, and to strengthen and stiffen its outer rim so that it will stand up and run smoothly under less air pressure than is now required in the ordinary rubber automobile tire. He also noted that the application provided for an outer casing for an automobile tire associated with a metallic band resting in a cavity on the inner side of a shoe, covered with a layer of fabric within which was inserted the usual air inflated inner tube. He said that Karlstrom, having in mind to give resiliency, durability and strength to a punctureproof tire, produced one in which a metallic strip was embedded in the outer shoe; that the chief distinction between Karlstrom and applicant was that the latter's metallic strip was separated from his inner tube merely by a thick layer of canvas tube, whereas in Karlstrom's not merely the thick layer of canvas but also some of the rubber 3 of the shoe was between this metallic strip and the inner tube. Heina, he pointed out, showed a metallic strip placed at the inner side of a tire and covered by a coating of fabric 17 in the same way that applicant applied his fabric 2 to hold the metallic strip in place. He showed no inner tube within the strip, but, in the opinion of the Commissioner, it would not require invention to transfer the metallic strip of Karlstrom to the position indicated by Heina, in which event the identical structure shown by applicant would be produced. Applicant provides rounded and blunt edges for his metallic strip, but Heina, said the Commissioner, indicated in his drawing that the edges of his metallic strip are blunt, and Lenihan, the other reference, described a metallic plate having curved or rounded edges in a pneumatic tire for bicycles. If the making of such an edge be not obvious, it is suggested by Lenihan.

To the contention of applicant that the positioning of his metallic band between the outer tire casing and the inner tube would require invention, the Commissioner answered that the references negative this proposition, and added that, while applicant's band does not extend as far from side to side as does Heina's, yet it finds a prototype in Karlstrom's, and that while his band is rigid enough to stiffen the tread, Karlstrom seemed to have the same purpose in mind.

Continuing the Commissioner said that claims 2 and 3 are substantially identical; that they add to the elements of claim 1 a flexible protecting fabric extending between the inner annular band and inner air tube; that Heina, at 17, shows such a protecting fabric holding his metal strip in place, and that the obvious use of some such covering seems too slight to support a patent. He refused to allow additional claims which were suggested by the applicant, on the ground that they were based on too small a refinement to be regarded as patentable.

We agree with the Commissioner's views, and think it unnecessary to set out in detail the process by which we arrive at our conclusion.

[1] The applicant appeals with much earnestness to the principle that a combination of old elements which produces a new result, or affects an old result in a new and materially better way, is patentable. This is undoubtedly so, but we do not think it has any application here, because the applicant has not produced new results or old results in a new and materially better way. He has done nothing more than aggregate what others had accomplished before him, except, perhaps, in particulars too refined to support a patent.

(*In re Merritt*, 36 App. D. C., 122; 162 O. G., 540; *Huebner-Toledo Breweries Co.* v. *Mathews Gravity Carrier Co.*, 233 Fed., 435; 262 O. G., 313; *Edwards* v. *Dayton Mfg. Co.*, 257 Fed., 980; 266 O. G., 597.)

[2] Appellant presents a substitute claim in his brief. This claim was never considered by the Patent Office tribunals and therefore is not properly before us. We sit as a court of appeals, not as a tribunal of first instance. Even if we had power to pass upon the claim, we would have to hold it is not patentable for the same reasons as those upon which we reject the claims properly here.

The action of the Commissioner is affirmed.

Affirmed.

Court of Appeals of the District of Columbia.

THE TOURAINE COMPANY *v.* F. B. WASHBURN & CO.

No. 1,535. *Decided February 5, 1923.*

1. TRADE-MARKS—"TOURAINE"—OPPOSITION—USE OF A MARK TO INDICATE CHARACTER OF GOODS.

Where the opposers put out over two hundred pieces or mixtures of candies, but applied the unregistered word "Touraine" to only one, and on this one it was accompanied by a registered trade-mark which, according to the testimony, was used on all their goods; where for years they made no objection to the use of the word, but sold goods procured from the applicant with the mark on the packages and agreed not to apply it to any of their own goods except the one kind already mentioned; where they did not use the word alone, but in connection with the words "Chocolate Mixture"; and where it appears that they did not think of claiming the word as anything more than a grade mark until prompted to do so by a notice that the applicant had asked for its registration, *Held* that the word was used by the opposers to indicate the character of the goods, not the origin of it.

2. SAME—SAME—SAME—DAMAGE.

The mere use of a word as a trade-mark does not prove likelihood of damage to one who uses the mark in another capacity—for instance, as a grade indicator.

3. SAME—SAME—SAME—SAME.

All that the statute requires of an opposer is to prove facts which, if true, would tend to show that he would probably be damaged by the registration.

4. SAME—SAME—SAME—SAME.

While it is permissible for one who has used a word as a trade name to make opposition to its registration as a trade-mark, it does not follow that the mere fact that he has used it as a trade name establishes that he would be damaged by the registration of the same as a trade-mark. He may continue to use the word as a trade name notwithstanding its registration to another as a trade-mark.

5. SAME—SAME—SAME—SAME.

The opposer having failed to prove that it would probably be damaged by the registration of the mark, the decision of the Commissioner refusing to register the word to the applicant was reversed.

Mr. Ellis Spear, jr., for The Touraine Co.

Mr. D. P. Wolhaupter for F. B. Washburn & Co.

Before SMYTH, Chief Justice, ROBB, Associate Justice, and Judge SMITH, of the United States Court of Customs Appeals, sitting in the place of Justice Van Orsdel.

SMYTH, *C. J.*:

The Commissioner of Patents, on the opposition of F. B. Washburn & Co., refused to register to the Touraine Company the word "Touraine" as a trade-mark for candy and confections, including chocolates, etc., and the latter company brings the proceeding here for our review.

Both parties are engaged in the manufacture of candy, one in Brockton and the other in Boston, Mass., which they sell to wholesalers and jobbers. A grocery company adopted the mark in 1906, and the next year conveyed all right to it to the Touraine Company. From the time of the conveyance the latter company has used it as a trade-mark for all its products. Opposer is entitled to 1897 as the date on which it commenced the use of the mark. It was, therefore, undoubtedly the first to adopt and use it.

But was its use a trade-mark use, or only a piece or grade mark use to indicate the ingredients of the piece to which it was attached? Opposer put out over 200 different pieces or mixtures but the word "Touraine" was applied to only one, and in the following manner:

Whenever a wholesaler desired a piece of a certain kind he ordered it by its appropriate name. Opposer had two registered trade-marks, one of which, "Waleco," and a seal are displayed on the above specimen. If the word "Touraine" was used as a technical trade-mark, then there were two such marks on the package. Opposer's superintendent for twenty-five years said the word "Touraine" referred distinctly to the grade or quality of the chocolate. Another employee who had been in opposer's service for seven years and in charge of the chocolate room for about four years testified to the same effect. An employee of twenty-two years' service declared that the Waleco trade-mark was used *on all the opposer's goods* so far as she knew. The opposer at times sold goods procured from the applicant, with the mark "Touraine" on the packages. For fourteen years, with full knowledge of the use of the mark by applicant, the opposer made no objection to its use. Many years ago the applicant requested the opposer to refrain from the use of the mark. It refused to do so for the stated reason that it had been using the mark for a long time, but agreed not to apply it to any kind other than the chocolate piece. This was testified to by a witness who worked for twenty-five years for the opposer and had risen from the position of office boy to the rank of general manager. True, he had been discharged by the opposer, but this does not weaken his testimony, because he describes exactly what was done, according to the other witnesses, by the opposer so far as the use of the mark is concerned. It appears no one connected with the opposer thought of claiming the word "Touraine" as anything more than a grade mark until one Miner, who joined the company in 1916, "originated the opposition," to use his own words. He was prompted to do so by a notice in a bulletin that the applicant had asked for the registration of the word. This was about four months before he testified. The label copied above discloses that the word "Touraine" is not used alone but in connection with the two words "Chocolate Mixture." Opposer spent no money in advertising its candy under the name of "Touraine," while applicant spent over three quarters of a million in advertising its products under that name.

[1, 2] Considering all these facts we are satisfied that the opposer never used, or thought of using, the word as a trade-mark until Miner appeared upon the field, and that was many years after the applicant had adopted and applied it to its entire output. It was used by the opposer to indicate the character of the chocolate, not the origin of it. The distinction between a technical trade-mark and a device to denote style or quality is pointed out in *Lawrence Mfg. Co.* v. *Tennessee Mfg. Co.* (138 U. S., 537, 546; 55 O. G., 1528) and *Columbia Mill Co.* v. *Alcorn* (150 U. S., 460). The mere use of a word as a trade-mark does not prove likelihood of damage to one who uses the mark in another capacity, for instance, as a grade indicator. Since opposer has no other proof of probable damage its opposition should have been dismissed.

[3, 4] The Patent Office in upholding the opposition appeared to rely on our decision in *Atlas Underwear Co.* v. *B. V. D. Co.* (48 App. D. C., 425; 261 O. G., 801), but we do not think it supports the conclusion reached. Of course a trade-mark use of a mark is not necessary in a proceeding of this kind. If the opposer can show in any way that he would probably be damaged by its registration to the applicant he may do so. The trade-mark statute, section 6, 33 Stat., 726, is our chart. There is nothing in it which says that a person must own a trade-mark, registered or not, before he can oppose the registration of the mark to another person. All that the statute requires of him, according to our interpretation, is to prove facts which if true would tend to show that he would probably be damaged by the registration. (*Skene* v. *Marinello Co.*, 270 Fed., 701; *McIlhenny Co.* v. *Trappey*, 277 Fed., 615; 297 O. G., 800.) Opposer relies on *Nairn Linoleum Co.* v. *Ringwalt Linoleum Works* (46 App. D. C., 64; 237 O. G., 919), but there is nothing in it which conflicts with the views we have here expressed. It declares that it is permissible for one who has used a word as a trade name to make opposition to its registration as a trade-mark. Undoubtedly this is correct. But it does not follow that the mere fact that he has used it as a trade name establishes that he would be damaged by the registration of the same name as a trade-mark. He may continue to use the word as a trade name notwithstanding its registration to another as a trade-mark.

[5] The opposer in this case having failed to prove that it would probably be damaged by the registration of the mark, we must reverse the decision of the Commissioner, and it is so ordered.

Reversed.

ADJUDICATED PATENTS.

(U. S. C. C. A. Ill.) Robinson patent, 809,582, claims 1–4, and 942,932, claim 1, for potato-peeling mechanism, *Held* valid and infringed. *Maxim Mfg. Co.* v. *Imperial Mach. Co.*, 286 Fed. Rep., 79.

(U. S. D. C. N. Y.) Just and Hanaman patent, 1,018,502, for electric-light filament, and 1,180,159, for incandescent lamp, *Held* valid. *General Electric Co.* v. *P. R. Mallory & Co.*, 286 Fed. Rep., 175.

(U. S. C. C. A. Ohio.) Scherer patent, 1,026,607, for connection for hot-air pipe, void for lack of invention. *Excelsior Steel Furnace Co.* v. *Williamson Heater Co.*, 286 Fed. Rep., 131.

(U. S. C. C. A. Ill.) Davis patent, 1,205,124, for automobile lock, claims 3, 4, and 5, *Held* invalid. *Perry Auto Lock Co.* v. *Security Lock Co.*, 286 Fed. Rep., 101.

(U. S. D. C. N. Y.) Warren patent, 1,344,570, for wall paper, void for lack of invention. *Harmon Paper Co.* v. *Prager*, 286 Fed. Rep., 267.

(U. S. D. C. N. Y.) Warren patent, 54,152, for design for wall paper, invalid. *Harmon Paper Co.* v. *Prager*, 286 Fed. Rep. 267.

TRADE-MARKS

OFFICIAL GAZETTE, APRIL 24, 1923.

[VOL. 309. No. 4.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 118,089. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) THE MID-CONTINENT TIRE MANUFACTURING COMPANY, Wichita, Kans. Filed May 2, 1919.

No claim made to the words "Wichita, Kansas," the representation of the tires and the words "Super Service" and "Super Service Cord Tyre" apart from the mark shown.

Particular description of goods.—Rubber Tires and Inner Tubes.

Claims use since on or about Apr. 1, 1919.

The ornamental design for a harness rosette, as shown.

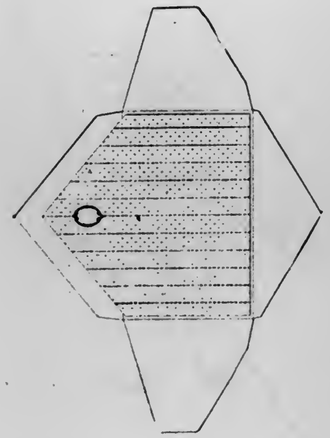
62,257. TONE ARM. AUSTIN W. HOOVER and ROBERT WINTER, Jr., Irwin, Pa. Filed July 27, 1921. Serial No. 488,023. Term of patent 3½ years.



The ornamental design of a tone arm, substantially as shown.

62,258. TONE ARM. AUSTIN W. HOOVER and ROBERT WINTER, Jr., Irwin, Pa. Filed July 27, 1921. Serial No. 488,024. Term of patent 3½ years.

The ornamental design of a tone arm, substantially as shown.

62,259. ENVELOPE. IRVING RODNEY PARSONS, Chicago, Ill. Filed Oct. 17, 1922. Serial No. 4,001. Term of patent 14 years.

The ornamental design for an envelope as shown.

62,260. TEXTILE FABRIC. PAUL REIMANN, New York, N. Y., assignor to M. Lowenstein & Sons, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 2, 1922. Serial No. 4,461. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

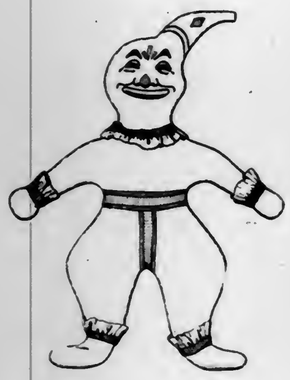
62,261. TEXTILE FABRIC. PAUL REIMANN, New York, N. Y., assignor to M. Lowenstein & Sons, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 2, 1922. Serial No. 4,463. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

62,262. TEXTILE FABRIC. PAUL REIMANN, New York, N. Y., assignor to M. Lowenstein & Sons, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 2, 1922. Serial No. 4,464. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

62,263. TEXTILE FABRIC. PAUL REIMANN, New York, N. Y., assignor to M. Lowenstein & Sons, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 2, 1922. Serial No. 4,465. Term of patent 3½ years.

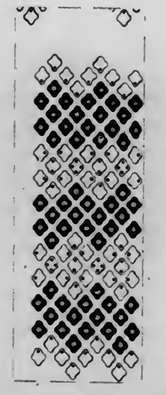


The ornamental design for a textile fabric, as shown.

62,264. SOCK. FRED D. RICKERT, Reading, Pa. Filed Oct. 24, 1922. Serial No. 4,072. Term of patent 7 years.

The ornamental design for a sock, as shown.

62,265. DOLL. RALPH RILEY, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Company of Ohio. Filed Oct. 18, 1922. Serial No. 4,020. Term of patent 14 years.



The ornamental design for a doll, as shown.

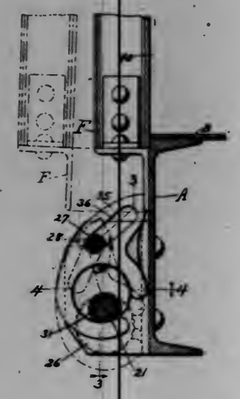
62,266. TEXTILE FABRIC. EUGENE SONNTAG, Jr., Astoria, N. Y., assignor to M. Lowenstein & Sons, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 2, 1922. Serial No. 4,466. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

62,267. TEXTILE FABRIC. EUGENE SONNTAG, Jr., Astoria, N. Y., assignor to M. Lowenstein & Sons, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 2, 1922. Serial 4,467. Term of patent 3½ years.

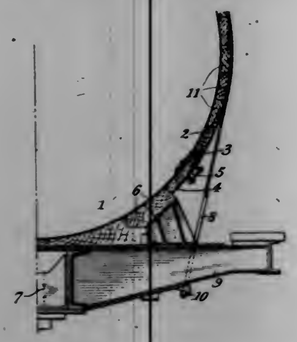
The ornamental design for a textile fabric, as shown.

62,268. JEWEL MOUNT. MORRIS J. STERN, Jamaica, N. Y. Filed Nov. 4, 1922. Serial No. 4,226. Term of patent 3½ years.



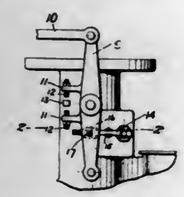
The ornamental design for a jewel mount, as shown.

PATENTS



GRANTED APRIL 24, 1923.

1,452,486. CANE CAR. LEOPOLD ALMQUIST, New York, N. Y., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed July 8, 1921. Serial No. 483,228. 9 Claims. (Cl. 105—308.)

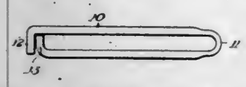


1. In a railway car, a side sill, a gate movable outwardly at its lower portion away from said sill, separable brackets carried by said sill, a cam mounted in said brackets, a shaft adapted to operate said cam, a locking member for said gate operated by said cam and a guide for said locking member mounted in said brackets.

1,452,487. TANK CAR. WILLIAM K. AUCHINCLOSS, New York, N. Y., assignor to American Car and Foundry Company, St. Louis, Mo., a Corporation of New Jersey. Filed Oct. 16, 1920. Serial No. 417,353. 7 Claims. (Cl. 220—9.)

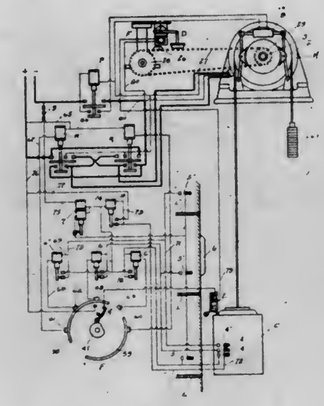
1. In a tank car, a tank, a sheathing for said tank, yielding and unyielding insulation between said tank and sheathing and bands securing said tank and sheathing to the car frame, said unyielding insulation preventing deformation of said sheathing by said bands.

1,452,488. CARBURETOR. FREDERIC E. BALDWIN, Philadelphia, Pa. Filed Apr. 16, 1921. Serial No. 461,795. 3 Claims. (Cl. 261—41.)



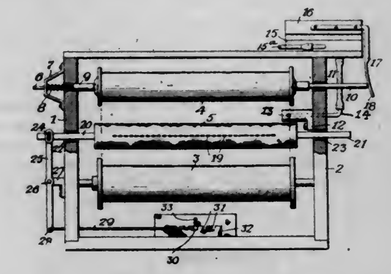
1. A carburetor having in combination a mixture passage and a throttle valve therein provided with an operating lever, an idling by-pass provided with means for admitting fuel and air thereto, and communicating with said mixture passage in advance of the throttle valve, a spring closed valve for controlling said by-pass, and a pivotal lever having one end connected with the last mentioned valve and the other end provided with a cam in range of the operating lever.

2. A carburetor having in combination a mixture passage and a throttle valve therein, an idling by-pass provided with means for admitting fuel and air therein, and communicating with said mixture passage in advance of the throttle valve, a valve for controlling said by-pass and having its stem provided with a spring, a stud projecting from the carburetor, a lever pivoted to the stud and having one of its ends connected with the stem of the last mentioned valve and the other of its ends provided with a cam, and an operating lever connected with the pintle of the throttle valve and adapted to contact with and actuate the cam.



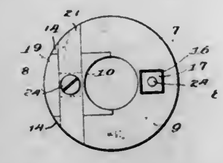
3. A carburetor having in combination a mixture passage and a throttle valve therein, an idling by-pass provided with means for admitting fuel and air thereto, and in communication with said mixture passage in advance of the throttle valve, means for operating the throttle valve, a valve for controlling the admission of fuel to said idling by-pass, a spring for closing the fuel controlling valve, a pivoted lever interposed between the fuel controlling valve and the throttle operating means and a cam carried by said throttle operating means for engaging and operating said pivoted lever to open said fuel controlling valve.

1,452,489. METHOD OF PRODUCING FULCRUMS. CARL E. BAUER, Hammond, Ind. Filed Feb. 7, 1921. Serial No. 442,921. 5 Claims. (Cl. 29—164.)



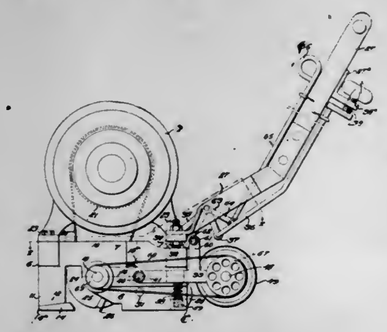
1. The method of making reversible fulcrums which consists in providing a flat blank, bending the ends thereof at right angles, then doubling the blank on itself in such manner that said bent ends are in overlapped relation, then forging said overlapped ends and welding said ends together to produce a fulcrum having an angular end adapted to be received in two positions between the flanges of a channel.

1,452,490. CORRECTING DEVICE FOR FLOOR CONTROLLERS. JOHN E. BOYCE, Yonkers, N. Y., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 14, 1921. Serial No. 461,382. 19 Claims. (Cl. 187—29.)



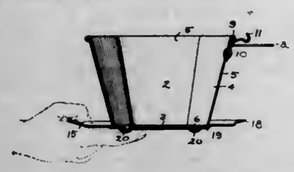
5. In an elevator having a floor controller, and means adapted to operate it, an electro-responsive apparatus adapted to be operated to correct the relative displacement between the car and controller caused by the slippage or creeping of the hoisting cable, comprising an electro-magnet and a circuit thereto, and its armature, the latter adapted, when actuated by the magnet, to arrest the movement of the said driving means of the floor controller, until the correct relation between the car and controller has been restored.

1,452,491. AUTOMATIC MUSICAL INSTRUMENT. THEODORE P. BROWN, Worcester, Mass., assignor to Simplex Player Action Company, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 5, 1916. Serial No. 118,337. 3 Claims. (Cl. 84—141.)



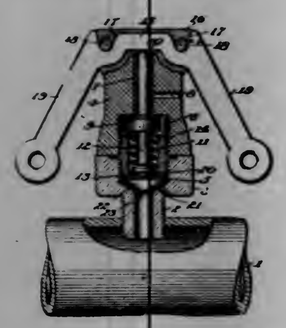
1. In an automatic musical instrument having a perforated music sheet, a longitudinally movable spool for said sheet, a tracker bar and means for moving the music sheet over the tracker bar, the combination with the movable spool of a spring to move the spool in one direction, an actuating pneumatic for moving the spool in the opposite direction, and a fixed member independent of the tracker bar provided with a single aperture communicating with the pneumatic and controlled by divergence of the music sheet from its normal path as it passes over the tracker bar.

1,452,492. WASHER. EDGAR H. CARPENTER, Yoakum, Tex. Filed July 22, 1921. Serial No. 486,692. Renewed Mar. 9, 1923. 4 Claims. (Cl. 85—51.)



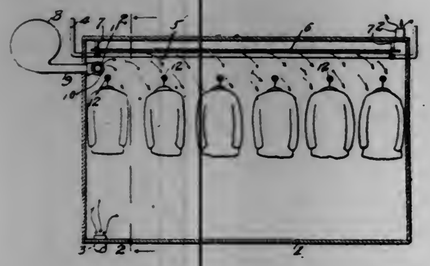
1. A washer including a plate having a raised portion, a resilient cross-bar mounted upon said raised portion and having a free end projecting beyond the raised portion, and a second plate receiving the free end of the cross-bar in locking engagement.

1,452,493. FLOOR PLANER. RALPH L. CONNER, Wilmington, Del. Filed Dec. 21, 1920. Serial No. 432,216. 3 Claims. (Cl. 144—117.)



1. A planer of the character described including a cutter having knives for initially planing a floor; an abrasive device optionally movable into engagement with the floor; and adjustable means for transversely moving said abrasive device in a plane approximately parallel with the floor and relatively to the cutter whereby the abrasive device can overlap to various extents the portion of the floor planed by the cutter; substantially as described.

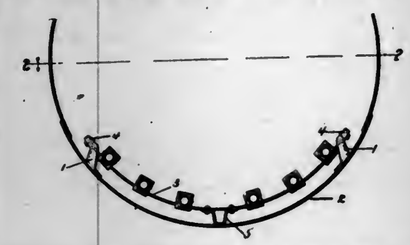
1,452,494. SINK STRAINER. HARRY DALITZ, Cleveland, Ohio. Filed Nov. 6, 1922. Serial No. 599,225. 9 Claims. (Cl. 4—35.)



1. A sink strainer or garbage receptacle having a detachable lid, the bottom of said receptacle being perforated and of smaller area than the upper portion thereof, and said lid being relatively larger than the enlarged upper portion of said receptacle and slightly dished to seat in an inverted position thereon and having a central depression corresponding in size and shape to said bottom and adapted to rest said bottom in a stable seating position.

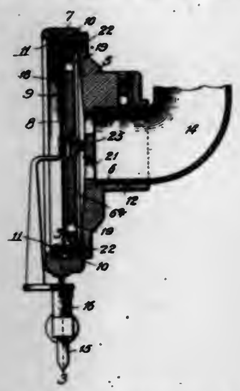
1,452,495. AIR-BRAKE-RELEASE VALVE. ANDREW A. DREES, Lewistown, Mont., assignor of one-half to Philip B. Rohner, Lewistown, Mont. Filed June 19, 1922. Serial No. 569,514. 2 Claims. (Cl. 303—80.)

1. The combination with a brake release valve including a main outlet, a valve normally seated and closing said outlet, and means for unseating said valve, of an upper port leading to said main outlet, a lower port constituting an auxiliary outlet, and a diaphragm arranged between said upper and lower ports and normally closing the lower port and having a central opening whereby when the valve is unseated suction through the diaphragm will operate the diaphragm closing the upper port and opening the lower port.



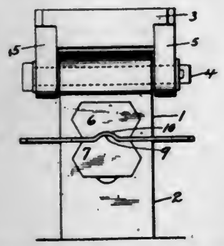
1,452,496. APPARATUS FOR DRYING CLOTHES. VINCENT FERRARA, Watertown, S. Dak. Filed Dec. 14, 1921. Serial No. 522,326. 6 Claims. (Cl. 34—19.)

2. In an apparatus of the class described, the combination of a compartment having a discharge opening in its top and a discharge opening in its bottom, a steam pipe extending through one end of the compartment and formed into coils at the top of the compartment, a metal sheet above the coils in the compartment, angle brackets fastened to the sheet and also fastened to the top of the compartment, a discharge pipe in said compartment under the coils and the sheet, said discharge pipe provided near its top with a slot extending the length of the pipe, and means for suspending clothes under the discharge pipe, coils and sheet, substantially as shown and described.



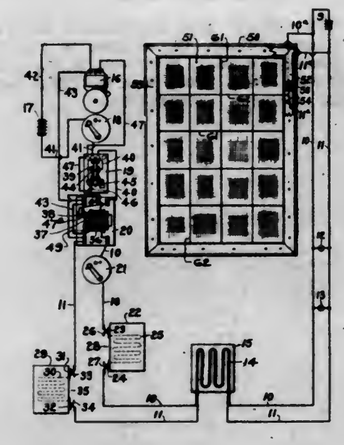
1,452,497. PIPE CLAMP FOR STEAM COILS. CHARLES C. FISCHER, Bloomfield, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed June 29, 1921. Serial No. 481,435. 7 Claims. (Cl. 248—31.)

7. A pipe anchoring means comprising a support, clamping means carried by said pipe and means on said pipe adapted, in conjunction with said clamping means, to prevent longitudinal movement of said pipe with



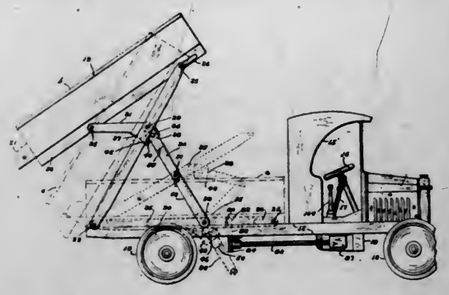
respect to said support and to force said pipe into engagement with said support.

1,452,498. SOUND BOX. ELMER FLETCHER, Chicago, Ill., assignor to Fletcher-Wickes Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 8, 1919. Serial No. 322,554. 4 Claims. (Cl. 274—27.)



3. In a sound-box, the combination of a case having a back provided with a centrally disposed sound-outlet connection, a diaphragm in the box, an intermediate wall marginally connected to the case spaced from the back and from the diaphragm having openings near the periphery to conduct the sound into the chamber between the plate and the wall, and a connection between the wall and the back for mutually supporting them.

1,452,499. METHOD OF STRAIGHTENING SHEET METAL. CHRISTOPHER FLINN, Milton, Pa., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed May 27, 1920. Serial No. 384,651. 6 Claims. (Cl. 153—76.)

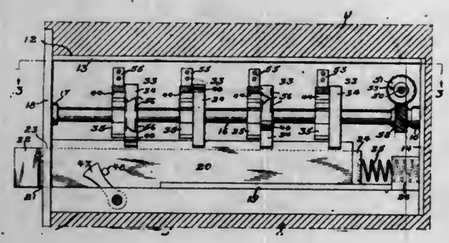


1. The method of removing the camber from a plate which consists in forming a tapered rib in the plate so as to stretch the plate and then pressing out the rib.

1,452,500. BURGLAR-ALARM APPARATUS. BENJAMIN GALERMAN, Philadelphia, Pa. Filed Oct. 15, 1918. Serial No. 258,251. 4 Claims. (Cl. 177—314.)

3. The combination in alarm apparatus, of means providing an electric circuit including a generator; an alarm device, said circuit including two members respectively connected to opposite poles of said generator, one of said members being adapted, due to its resiliency, to engage the other of said members; means for placing said resilient member under tension and holding it out of engagement with the other of said members, said resilient member being so disposed with respect to the other member that when said latter means is pulled it will engage the other of said members to close said circuit to effect the operation of said alarm device, said latter means being a conductor of electricity; and a metallic screen positioned in a plane adjacent said latter means throughout its length and in electric connection with the pole of said generator to which said latter mentioned members is connected whereby when said latter means engages said screen, the circuit will be closed through said screen and generator to effect the operation of said alarm device; substantially as described.

1,452,501. COMBINED HIGH-HOIST AND DUMP WAGON. JOSEPH GASSER, Trenton, N. J. Filed Jan. 12, 1922. Serial No. 528,634. 15 Claims. (Cl. 298—11.)



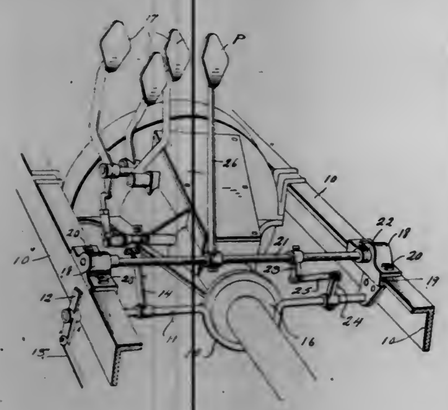
1. In a combined high-hoist and dump wagon the combination with the understructure, body and transmission thereof, of power take off mechanism actuable from the transmission, fluid controlled and actuated means operable by said power take-off mechanism for partially rotating a transverse shaft, said shaft being journaled on the understructure, rock lever mechanism adapted for oscillation by said transverse shaft to effect the raising of the body high, to discharge its contents or simply inclining the same relative to the understructure for ordinary dumping, and means for automatically shifting the power take-off mechanism into neutral as the aforesaid body reaches its limits of movement.

1,452,502. BRUSH. AUGUST GISSLER, New York, N. Y. Filed Mar. 22, 1922. Serial No. 545,746. 1 Claim. (Cl. 300—21.)

The method of making a brush from tree bark, which consists in fermenting a piece of the bark to remove the gum, dividing a portion of the piece of fermented bark into strips by slips extending from one end of said piece and then further dividing the outer portions of said strips into fibers.

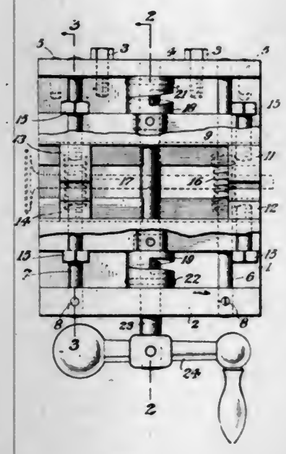
1,452,503. LOCK. WILLIAM B. GRUBB, Philadelphia, Pa. Filed Feb. 3, 1921. Serial No. 442,077. 12 Claims. (Cl. 70—54.)

1. Lock mechanism including a selective bolt; selective units for co-acting with said selective bolt; a shaft supporting said selective units and having annular grooves and a key-way interrupted in its length by said grooves, said units having lugs adapted to slide through said key



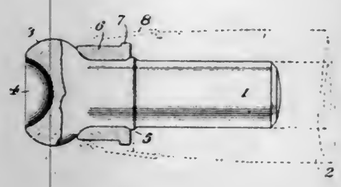
way into said grooves; a key adapted to be inserted within said key-way after the lugs of the selective units have been moved in said annular grooves out of registry with said key-way; and means for operating said selective units whereby they are moved into and out of locking engagement with said selective bolt; substantially as described.

1,452,504. BAKER'S IMPLEMENT. WALTER B. HADLEY, Grand Rapids, Mich., assignor to Carrie B. Hadley, Grand Rapids, Mich. Filed Mar. 13, 1922. Serial No. 543,216. 4 Claims. (Cl. 294—33.)



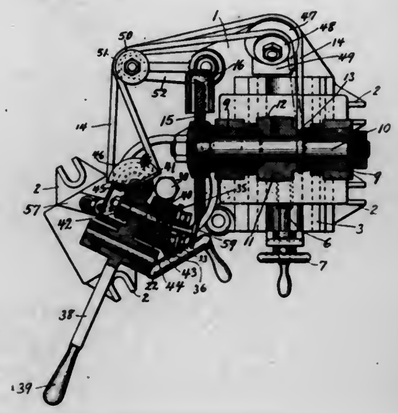
1. In a baker's implement, a shovel made of two leaves arranged for lateral adjustment, said leaves mounted upon the ends of spring constructed handles integral at the outer end and crossed midway between the outer end and the shovel leaves, and means for adjusting the width of the shovel to correspond with the width of the baking pan to be handled with the implement.

1,452,505. TRANSMISSION CONTROL. JAMES H. HAWLEY, Stockbridge, Mich. Filed Sept. 2, 1922. Serial No. 585,970. 2 Claims. (Cl. 74—89.)



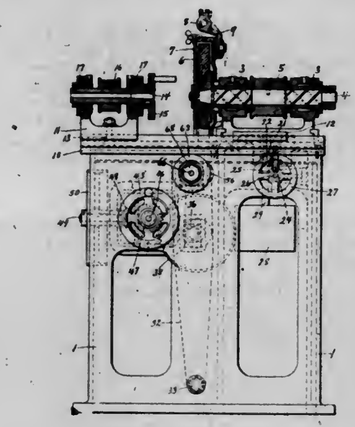
1. In combination with a vehicle frame, a shaft journaled therein, the shaft being provided with a lever whereby it may be oscillated, a clutch and brake mechanism operated from said shaft, of a second shaft mounted for oscillation upon said frame and substantially paralleling the first shaft, an arm secured to each of said shafts, a link connecting the free ends of said arms, and a pedal secured to the last named shaft substantially centrally thereof.

1,452,506. CAM CHUCK FOR CENTERING VALVES. RICHARD HERVIG, Chicago, Ill., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed June 10, 1920. Serial No. 388,051. 5 Claims. (Cl. 77—63.)



1. In a chuck, a plurality of work engaging jaws, members carrying said jaws, guides for said members, springs surrounding said guides and confined between said members to disengage said jaws from the work and means for forcing said jaws together.

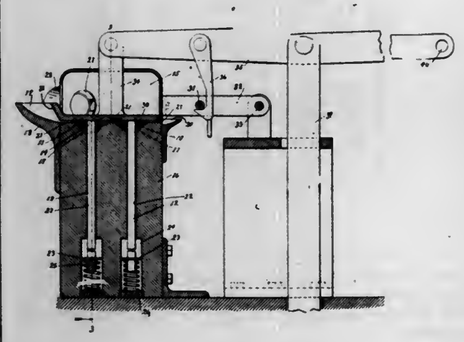
1,452,507. RIVET SET. RICHARD HERVIG, Chicago, Ill., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed June 10, 1920. Serial No. 388,052. 9 Claims. (Cl. 78—46.)



1. A rivet set having an enlarged rounded head, the surface of which is curved in two directions, a shank and a low rounded shoulder on said shank.

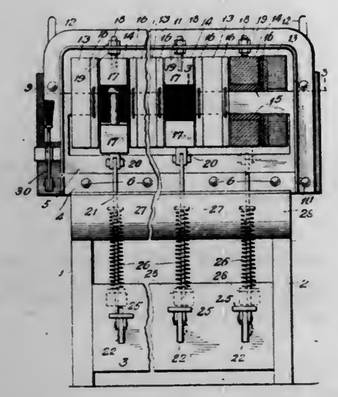
1,452,508. MACHINE FOR GRINDING VALVES. RICHARD HERVIG, Chicago, Ill., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 20, 1921. Serial No. 493,902. 12 Claims. (Cl. 51—104.)

1. In a machine of the class described, a plurality of work supporting rollers, a work engaging stop and a work driving roller adapted to force the work against the stop.



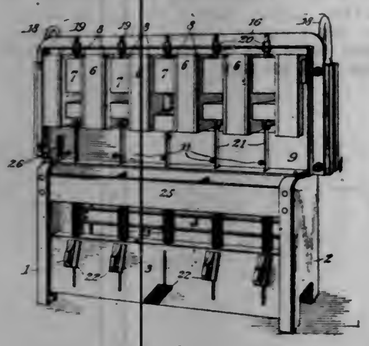
1,452,509. GRINDING MACHINE. RICHARD HERVIG, Chicago, Ill., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 21, 1922. Serial No. 545,457. 10 Claims. (Cl. 51—231.)

1. In a grinding machine, a table, a slotted oscillating lever having a uniform movement, a bearing block slidable in said slot and means carried by said table adapted to shift said block in said slot to vary the movement of said table.



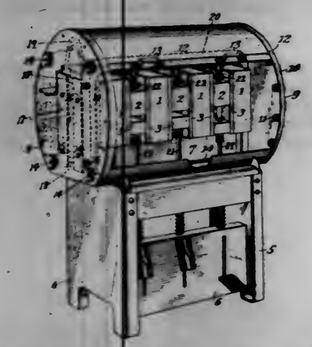
2. In a grinding machine, a reciprocating table, a slotted oscillating lever having a uniform movement, a bearing block slidable in said slot and a rotatable cam carried by said table and adapted to shift said block in said slot and to shift said table with respect to said lever.

1,452,510. APPARATUS FOR MAKING MOTOR VALVES. ROBERT JARDINE, Chicago, Ill., assignor to Rich Tool Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 20, 1920. Serial No. 431,956. 7 Claims. (Cl. 22—58.)



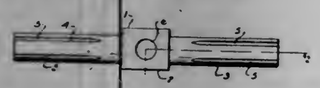
1. Apparatus for casting motor valves and the like having cast metal heads and wrought metal stems comprising in combination, a mold for the valve head having a print for receiving the valve stem to support the same within the mold, and means for heating the valve stem while so supported in advance of pouring the mold.

1,452,511. ELECTRIC RIVET HEATER. WILLIAM S. JOHNSON and JOHN W. SHEFFER, Berwick, Pa., assignors to American Car and Foundry Company, St. Louis, Mo., a Corporation of New Jersey. Filed Aug. 17, 1920. Serial No. 404,178. 18 Claims. (Cl. 219—11.)



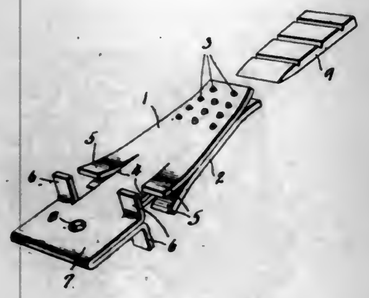
1. In an electric rivet heater, a core, a coil on said core and means mounted in said core and cooperating with said coil to form a chamber to receive the rivet.

1,452,512. ELECTRIC RIVET HEATER. WILLIAM S. JOHNSON and JOHN W. SHEFFER, Berwick, Pa., assignors to American Car and Foundry Company, St. Louis, Mo., a Corporation of New Jersey. Filed Oct. 12, 1920. Serial No. 416,395. 6 Claims. (Cl. 219—2.)



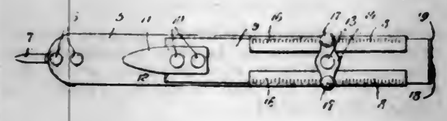
1. In an electric rivet heater, a frame comprising spaced pressed metal end members, core retaining members connecting said end members and a coil supporting member connecting the ends of said core retaining members.

1,452,513. ELECTRIC RIVET HEATER. WILLIAM S. JOHNSON and JOHN W. SHEFFER, Berwick, Pa., assignors to American Car and Foundry Company, St. Louis, Mo., a Corporation of New Jersey. Filed Mar. 21, 1921. Serial No. 454,036. 6 Claims. (Cl. 219—2.)



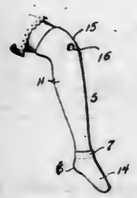
1. In an electric rivet heater, a frame, coils carried by said frame and a sectional sliding hood for said coils secured to said frame.

1,452,514. BOLT ANCHOR. JOHN KARITSKY, Garwood, N. J., assignor, by meane assignments, to Henry B. Newhall, Plainfield, N. J. Filed July 6, 1922. Serial No. 573,162. 5 Claims. (Cl. 85—24.)



1. An expansion shield formed of sheet metal having a head formed of a plurality of thicknesses of the said sheet metal and integral tines connected to the head, said tines being fluted to form longitudinal internal ribs.

1,452,515. WALL BRACKET. JAMES R. KEARNEY and HARRY L. JOHNSON, Kansas City, Mo. Filed Dec. 16, 1920. Serial No. 431,140. 6 Claims. (Cl. 72—105.)

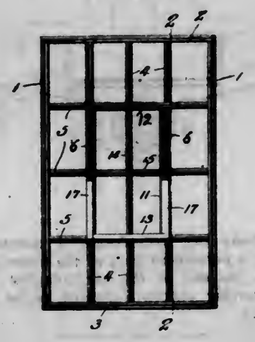


1. A wall bracket formed of a single flat piece of metal bent upon itself at its outer end and having flat inwardly extending tongues whose free ends are flared, said flaring free ends being provided with roughened outer surfaces to engage the wall into which the bracket is driven.

1,452,516. CAN OPENER. VICTOR LAMBERT, Brooklyn, N. Y. Filed Sept. 8, 1921. Serial No. 499,275. 7 Claims. (Cl. 30—3.)

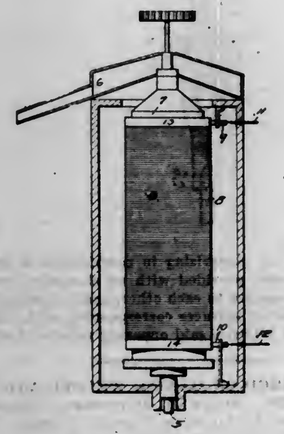
1. A can opener comprising a shank having a centering point at one end and guides near its opposite end, a cutter bar slidably mounted in said guides, and means for adjusting and fixing said cutter bar on the shank comprising a clamp pivoted on said cutter bar and having projecting edges on its inner side adapted, upon turning of the clamp, to engage the outer surfaces of said guides whereby to grip them and hold the cutter bar in operative position.

1,452,517. STOCKING. EVA LEPOW, Philadelphia, Pa. Filed Nov. 2, 1921. Serial No. 512,173. 1 Claim. (Cl. 2—23.)



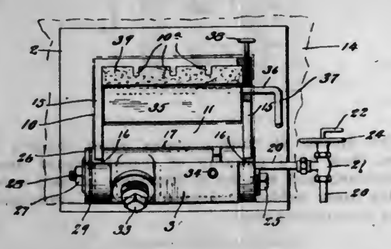
A stocking having a folded part between the heel portion and the knee portion, the fold being secured in position by a removable line of stitching, substantially as described.

1,452,518. PISTON-RING HOLDER. JOHN W. MAINWARING, Brooklyn, N. Y. Filed July 7, 1922. Serial No. 573,868. 7 Claims. (Cl. 29—76.)



1. A device for holding an article to be trimmed comprising a stock, and two spaced jaws for holding the article to be trimmed, said jaws being fixed to said stock and yieldingly resisting a separating pressure whereby they clamp and hold an article forced between them, said jaws being cut away in a manner permitting the insertion of work to be trimmed from the side of said jaws, the outer ends of said jaws determining a plane.

1,452,519. METAL WINDOW CONSTRUCTION. FRANK MESKER, CLARENCE E. SMITH, and JACOB BEUC, St. Louis, Mo., assignors to Mesker Brothers Iron Company, St. Louis, Mo., a Corporation of Missouri. Filed May 13, 1920. Serial No. 381,044. 2 Claims. (Cl. 189—69.)

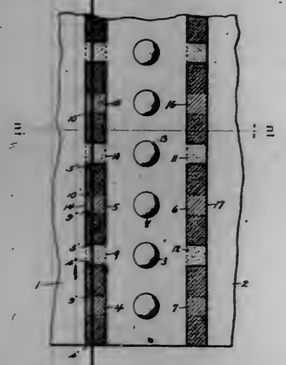


1. In a metallic window construction, a metal sash, a ventilator opening therein, an inwardly extending flange on the inner face of said sash, terminating in an upwardly facing edge intermediate the top and bottom of the ventilator opening, a ventilator frame, an outwardly extending flange on the inner face of said frame, terminating in a downwardly facing edge which is normally in substantial alignment with and resting upon the edge of said sash flange, said flanges thereby cooperating as hinged members for swinging said frame in said sash.

1,452,520. PROCESS FOR CARRYING OUT CONTINUOUS FUSIONS. WALDEMAR OSCAR MITSCHERLING, Wilmington, Del., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 21, 1922. Serial No. 545,621. 3 Claims. (Cl. 260—172.)

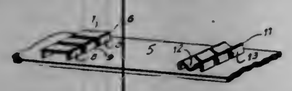
3. The herein described process for carrying out a continuous fusion which consists of passing the liquid to be treated through a rapidly rotating tube and maintaining said tube in a heated condition whereby the liquid is subjected to both heat and pressure in a continuous operation.

1,452,521. OIL BURNER. RICHARD REED MORRILL, Palo Alto, Calif., assignor to Oliver Oil-Gas Burner and Machine Company, St. Louis, Mo., a Corporation of Delaware. Filed Apr. 8, 1922. Serial No. 550,821. 10 Claims. (Cl. 158—153.)



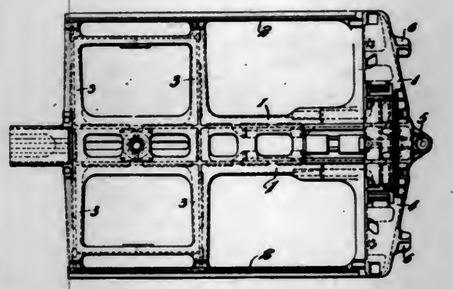
4. An oil burner comprising an open-ended housing, a burner arranged in the forward end of said housing and provided with an oil receiving trough, a vaporizer arranged in said housing rearwardly of said burner and occupying a higher horizontal plane relative thereto, there being a passageway provided between said vaporizer and said burner, an oil supply pipe connected to one end of said vaporizer, a plate detachably held in position for closing the opposite end of said vaporizer and the corresponding end of said burner, closure means adjustably mounted in the forward end of said housing for controlling the ingress of air to said housing, and means for locking said closure means in adjusted position.

1,452,522. FUSIBLE LINK. HARRY M. NACEY, Chicago, Ill. Filed May 9, 1919. Serial No. 296,036. 7 Claims. (Cl. 169—42.)



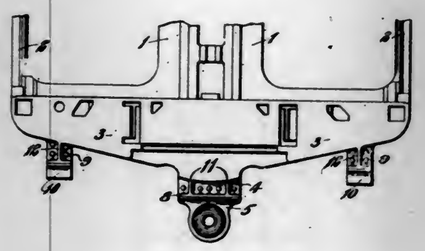
1. A fusible link, comprising in combination a pair of plate members, each provided with an elongated concave surface directly opposed to each other, and a fulcrum block provided with convex surfaces corresponding with and adjacently confined between said opposing concave surfaces.

1,452,523. METHOD OF MAKING WELDED AND RIVETED JOINTS. ALLEN E. OSTRANDER, Ridgewood, N. J., assignor to American Car and Foundry Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 5, 1921. Serial No. 442,781. 2 Claims. (Cl. 78—46.)



1. The process of uniting plates which consists in welding them at a plurality of spaced aligned areas simultaneously and forming a succession of such welds with the areas welded at successive welds overlapping to form a continuous weld.

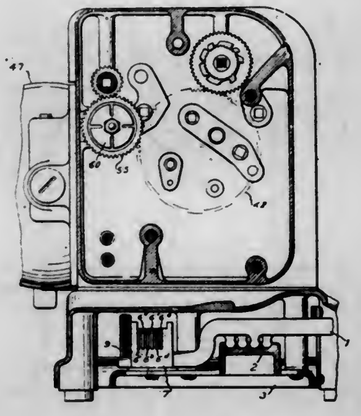
1,452,524. TRIMMER-BELT ATTACHMENT. ELISHA F. PARKS, Jr., Timonium, and PHILIP G. LANG, Jr., Baltimore, Md. Filed Sept. 10, 1920. Serial No. 409,507. 2 Claims. (Cl. 198—199.)



1. A trimmer belt attachment comprising a sinuous top, belt ends each having teeth thereon and straight edges between said teeth, said straight edges being in substantially the same plane as the lower surface of said top.

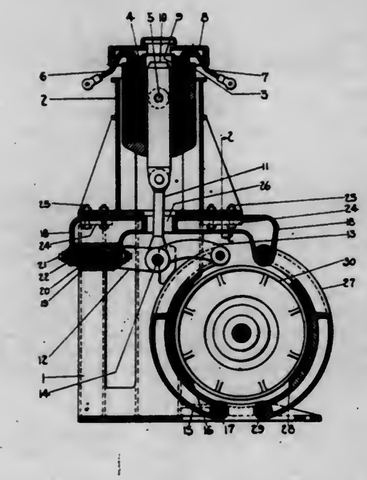
1,452,525. ARTICULATED CAR UNDERFRAME. HARRY M. PFLAGER, St. Louis, Mo., assignor to Commonwealth Steel Car Company, St. Louis, Mo., a Corporation of New Jersey. Filed Dec. 28, 1922. Serial No. 609,522. 7 Claims. (Cl. 105—4.)

3. In a one-piece platform casting for a railway car, an integral central projection on the forward end of said casting having a lower surface adapted to be seated on the center plate of a truck extending beyond the end of the car.



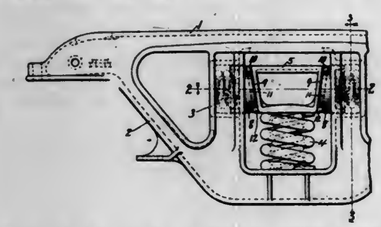
1,452,526. ARTICULATED CAR. HARRY M. PFLAGER, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Dec. 28, 1922. Serial No. 609,523. 8 Claims. (Cl. 105—4.)

1. In a railway car underframe, a member formed integrally upon a permanent part of the underframe, projecting beyond the end of the car, adapted to receive a renewable bearing element adapted to be supported upon a car truck.



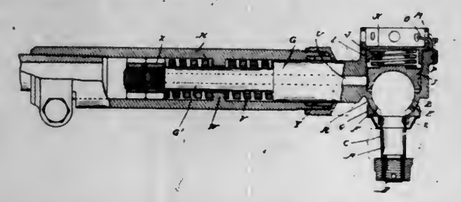
1,452,527. TRANSMITTING APPARATUS FOR ELECTRIC TELEGRAPHS. LOUIS M. POTTS, Baltimore, Md., assignor, by mesne assignments, to American Telephone and Telegraph Company, New York, N. Y., a Corporation of New York. Original application filed Dec. 14, 1915, Serial No. 66,830. Patent No. 1,370,669, dated Mar. 8, 1921. Divided and this application filed Feb. 6, 1920. Serial No. 356,615. 11 Claims. (Cl. 178—33.)

11. A telegraph transmitter comprising a plurality of selectable members, keys for moving said members in predetermined combinations, a member common to said keys and movable upon the operation of any one thereof, a single contact spring, a cam, a lever operatively associated with said contact spring and said common member and fulcrumed on said cam upon the movement of said common member for controlling the actuation of



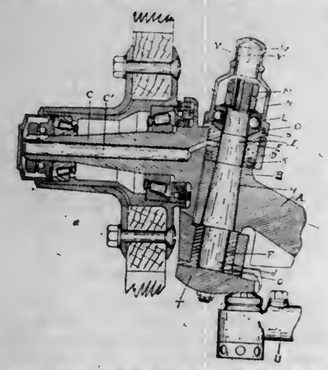
said contact spring, and mechanical means arranged to subsequently effect the movement of said lever whereby said contact spring is restored to normal.

1,452,528. BRAKE. JOHN M. ROHLFING, Plainfield, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 15, 1922. Serial No. 552,955. 10 Claims. (Cl. 188—161.)



1. In a brake, brake heads, a member connected to one of said brake heads, toggle arms connecting said member and the other brake head and means to operate said toggle arms.

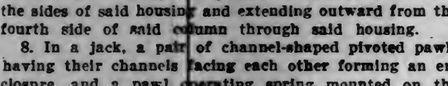
1,452,529. CAR TRUCK. ROBERT J. SCHEIBLI, Jr., St. Louis, Mo., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 4, 1921. Serial No. 512,797. 10 Claims. (Cl. 105—197.)



2. In a car truck, a bolster, yielding supporting means for said bolster and yielding means opposing transverse movements of said bolster adapted to aid in supporting said bolster.

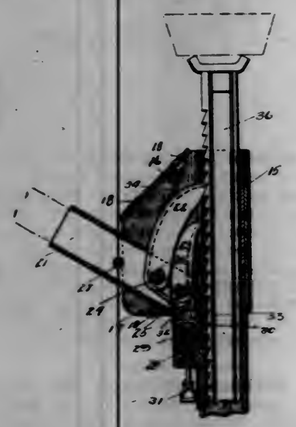
1,452,530. UNIVERSAL JOINT. EARL H. SHERBONDY, Detroit, Mich., assignor to Sidney D. Waldon, Detroit, Mich. Filed Apr. 9, 1920. Serial No. 372,643. 4 Claims. (Cl. 287—90.)

1. In a universal joint, the combination with a member having a shank and a spherical head, of a member apertured for the passage of said shank therethrough and provided with a semi-spherical socket bearing at one end of said aperture for engaging said spherical head, a bearing member for the opposite side of said head, said apertured member having an outer spherical face concentric with said head, a segmental spherical shoe sleeved on said shank and engaging said outer spherical face forming a seal therefor, and means for resiliently pressing said shoe against said outer spherical face.



1,452,531. STEERING KNUCKLE FOR MOTOR VEHICLES. EARL H. SHERBONDY, Detroit, Mich., assignor to Sidney D. Waldon, Detroit, Mich. Filed Apr. 15, 1920. Serial No. 374,047. 4 Claims. (Cl. 280—96.1.)

1. In a steering knuckle for vehicle axles, a steering axle bearing, a stub axle provided with a bifurcated pivot

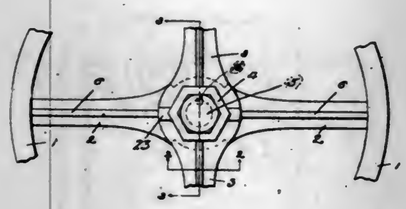


bearing embracing the steering bearing, ears on said furcations, a pivot pin connecting the bearings, a cap housing the pivot pin and having ears in registration with the ears on the furcations, means for rigidly securing said ears to each other, and a rock arm integral with said cap member.

1,452,532. VEHICLE CHASSIS. EARL H. SHERBONDY, Detroit Mich., assignor to Sidney D. Waldon, Detroit, Mich. Filed Apr. 20, 1921. Serial No. 463,004. 17 Claims. (Cl. 267—31.)

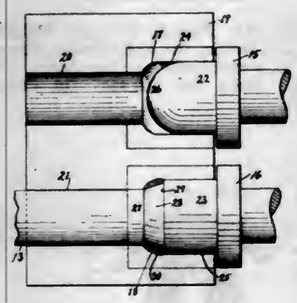
2. In a chassis, the combination with a hollow member forming a structural element of the frame, of a spring, a casing for said spring, a pivotal connection between said spring and frame, and means for feeding lubricant from said hollow member to said pivotal connection and into said casing for the spring.

1,452,533. JACK. SAMUEL A. SNELL, St. Louis, Mo., assignor to Moon Brothers Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 24, 1921. Serial No. 524,614. 8 Claims. (Cl. 254—111.)



3. In a jack, a vertical body member comprising a metal plate bent to form a hollow rectangular column, a rectangular housing for the jack operating mechanism comprising a metal plate surrounding said column and gripping three sides thereof extending laterally from the fourth side and there braced transversely at top and bottom, and an operating handle fulcrumed between the sides of said housing and extending outward from the fourth side of said column through said housing.

8. In a jack, a pair of channel-shaped pivoted pawls having their channels facing each other forming an enclosure, and a pawl operating spring mounted on the pawl pivots and wholly positioned between the channel like walls of said pawls.

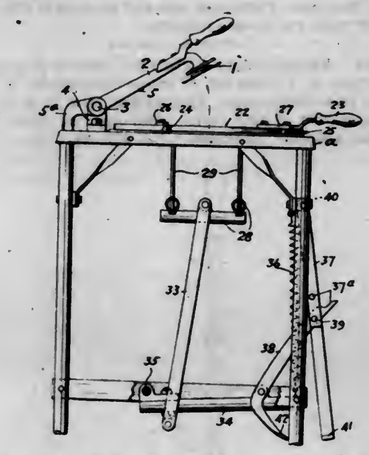


1,452,534. STEERING WHEEL. SAMUEL A. SNELL, St. Louis, Mo., assignor to Harry W. Bundy, Detroit, Mich. Filed May 18, 1922. Serial No. 561,410. 8 Claims. (Cl. 74—33.)

1. A steering wheel comprising a rim, overlapped spokes having interengaging elements at their overlapped portions and provided with non-circular bosses aligned axially of the wheel, a hollow hub fitting in said bosses,

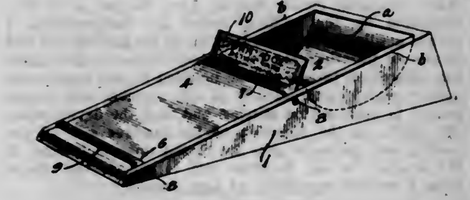
and a transverse element fixed in said hub provided with a key slot paralleling the axis of the wheel and adapted to engage a steering shaft key.

1,452,535. MANUFACTURE OF BEARING RINGS. CHARLES F. SULTEMEYER, Oak Park, Ill., assignor to Chicago Manufacturing and Distributing Co., a Corporation of Illinois. Original application filed June 23, 1919, Serial No. 306,058. Divided and this application filed Aug. 7, 1920. Serial No. 401,987. 1 Claim. (Cl. 29—156.)



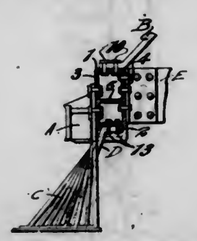
The method of forging annular high carbon steel or steel alloy machine wearing parts to substantially finished dimensions which consists in upsetting the end of a solid bar of the selected steel, punching out the central portion of the upset end of the bar while attached to the bar, radially expanding the ring thus left between punch and die members substantially conforming in shape with the interior and exterior surfaces of the part to be produced and then compressing the ring in the direction of its axis while held between the said punch and die members.

1,452,536. CREASING MACHINE. FREDERICK THOMAS, Philadelphia, Pa. Filed Apr. 20, 1922. Serial No. 555,673. 2 Claims. (Cl. 223—15.)



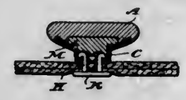
1. In a creasing machine the combination of a holding foot or plate contoured for the outline of the article to be creased, a frame having a margin contoured for cooperation with the rim of the plate or foot to receive the edge portion of the fabric therebetween and having central space for the accommodation of the body of the fabric

to protect it from being pressed, dies for creasing the edge portions of the fabric, means for shifting the dies



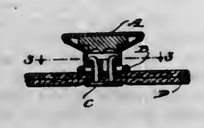
toward the center of the foot or plate and over the top thereof, and devices for pressing the dies toward the plate or foot.

1,452,537. WRITING TABLET. EDMOND J. TOAL, Minneapolis, Minn. Filed Feb. 20, 1922. Serial No. 537,916. 4 Claims. (Cl. 281—6.)



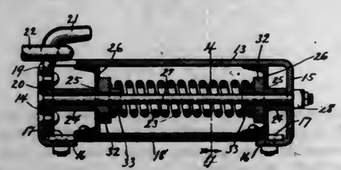
1. A writing tablet comprising a base member having its upper surface cut away to form a recess in which a roll of paper may rest, a tablet portion on the upper surface of said base member adjacent said recess and over which a strip of paper from said roll may be drawn, and means for guiding the strip from the roll over said tablet portion.

1,452,538. PILOT BEAM. CHARLES T. WESTLAKE, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Aug. 8, 1922. Serial No. 580,396. 9 Claims. (Cl. 103—173.)



8. In a one-piece pilot beam, vertical walls, horizontal walls, integral perforated bosses on the interior of said walls and spaced from the ends thereof for bolts securing extraneous members, and openings in said horizontal walls adjacent to said bosses to permit access to the latter.

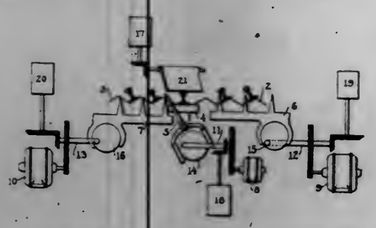
1,452,539. BUTTON. FRANKLIN R. WHITE, Waterbury, Conn., assignor to The Patent Button Company, Waterbury, Conn., a Corporation of Connecticut. Filed Mar. 23, 1922. Serial No. 545,924. 4 Claims. (Cl. 24—95.)



1. A button of the class described comprising a non-metallic body portion, a hollow hub interlocking with and carried by said body and provided with an imperforate base having a circular groove therein, a die carried by said body portion projecting within said hollow hub and having the upsetting face confronting and adjacent the said base and adapted to upset the prongs of a fastener against said base.

1,452,540. BUTTON. FRANKLIN R. WHITE, Waterbury, Conn., assignor to The Patent Button Company, Waterbury, Conn., a Corporation of Connecticut. Filed Mar. 23, 1922. Serial No. 545,925. 2 Claims. (Cl. 24—95.)

1. A button of the class described comprising a base formed with a bottom plate, a hollow upstanding shank carried by said bottom plate, said shank provided at its upper extremity with an outstanding ledge, a button head comprising a hollow hub formed with an inturned lower edge slidably engaging the shank of the base and limited in its movement with respect thereto by said bottom plate and said outstanding ledge, the head of said button above said hub outwardly flared and including a top plate, a die located within said head resting against said top plate and comprising a die head extending down through the hollow hub and held in position thereby, said die head provided with a die face having a circular groove with a central projection, said die face adapted to receive the prongs of a staple fastener thereagainst and to spread and turn said prongs down directly upon the outstanding ledge of the shank of the button base.



1,452,541. DRAFT AND BUFFING MECHANISM. VICTOR WILLOUGHBY, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 16, 1921. Serial No. 452,832. 6 Claims. (Cl. 213—7.)

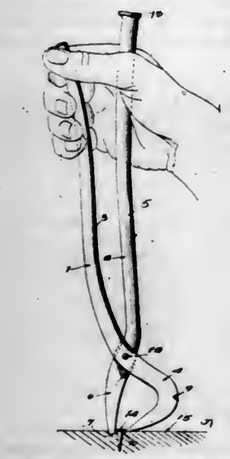
1. The combination with an end sill and adjacent crosstie member of a car underframe, of a draft and buffing mechanism comprising a yoke member having depending foot portions embracing said framing members,

guide means extending under the framing members and connecting said foot portions, and yoke anchorage means connecting said end sill and crosstie member and engaging said guide means.

1,452,542. MOTOR CONTROLLER. CHARLES W. YERGER, Washington, D. C., assignor to The Cutler-Hammer M'f'g Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 18, 1918. Serial No. 267,308. 12 Claims. (Cl. 198—20.)

1. In a controller for motor driven handling devices, in combination, means providing for cyclic operations of the controlled device including motor control means subject to control through independent sets of instrumentalities, said sets being adapted to participate successively in the control and selectively throughout equal ranges of operation of the controlled device and means to act automatically upon said instrumentalities during operation of the device for rendering effective a set for participation in the control throughout the next cyclic operation and thereafter rendering ineffective the set participating in the current operation for terminating such operation, and independently controlled means to act upon said instrumentalities for timing the initiation of the next cyclic operation.

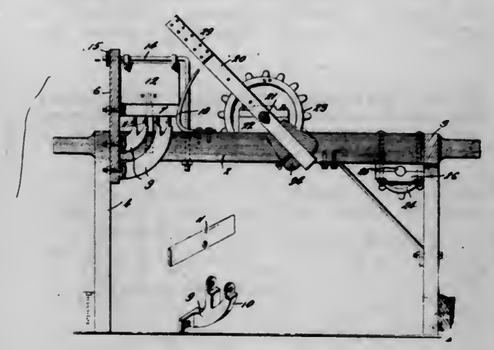
1,452,543. FIRE ESCAPE. CECIL C. ABBOTT, Harbor Springs, and WILLARD EARL BASSETT, BERT L. BASSETT, and IRVIN L. BASSETT, Detroit, Mich. Filed Feb. 24, 1921. Serial No. 447,428. 1 Claim. (Cl. 188—185.)



The combination of a main shaft, means for rotating said shaft, a governor comprising a stationary peripheral wall, a rotatable disk, gearing connecting said disk with the main shaft for rotation in one direction, governor shoes slidably mounted upon said disk and adapted to engage the peripheral wall, dogs each pivotally mounted between its ends upon said disk and pivotally attached at one end to the shank of the adjacent governor shoe, the opposite end of the dogs being free and having hooked terminals, and governor arms mounted upon the disk for rocking movement and provided with hooks engaging under the free ends of the dogs whereby to actuate the said dogs and move the shoes outwardly.

1,542,544. EMBROIDERY NEEDLE. FENNER B. BAKER, New York, N. Y., assignor, by mesne assignments, to Superior Hand Embroiderer Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 25, 1920. Serial No. 405,943. 10 Claims. (Cl. 112—80.)

1. An embroidery needle including a holding means, a fabric engaging means forming part thereof, a member supported by the holding means for reciprocation, a curved needle having a perforation at its pointed end and means on its other end for connection to the said member, whereby a thread may be inserted in said needle and upon repeated reciprocations of said member said needle caused to make tufted stitches and feed the device along the fabric in the direction of the concave side of the needle, and means to grip the thread upon movement of the member in one direction and to release the thread upon a reverse movement of said member.

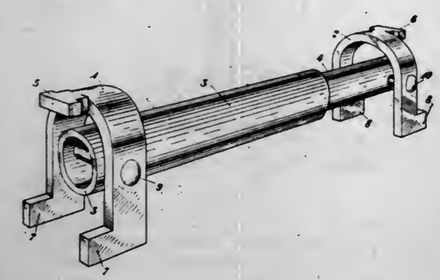


1,452,545. NAIL PULLER. JOSEPH BENSON BRADLEY, Miami, Fla. Filed Mar. 17, 1922. Serial No. 544,512. 4 Claims. (Cl. 254—22.)

1. A tool of the character described comprising two longitudinal members, each embodying a handle portion,

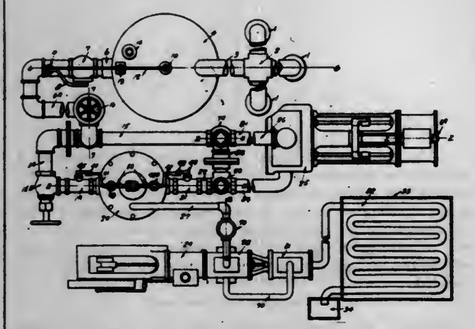
and a jaw portion, said members being pivotally connected intermediately of their ends so that the jaw portions terminate in proximity to each other, the jaw portions of one member being curved so that the middle portion thereof is relatively remote from the second jaw portion and the free end of the latter extends slightly beyond the corresponding end of the curved jaw portion.

1,452,546. VEGETABLE CUTTER. FRANK G. BREWER, Hunter, N. Dak. Filed Apr. 12, 1922. Serial No. 551,949. 3 Claims. (Cl. 146—7.)



2. A vegetable cutter including a plurality of cutter blades, disposed angularly relative to one another, a presser member adapted to co-operate therewith and including a plurality of spaced oppositely disposed blocks, all of said blocks being spaced from each other to permit the passage of said blades, and the lower faces of said blades being inclined to provide the underface of the presser member with an upwardly tapered recess adapted to engage a vegetable to center the same upon the cutter blades.

1,452,547. INSULATED WHEEL STRUCTURE. ISAAC A. CALL and JOSEPH C. CALL, New York, N. Y., assignors, by mesne assignments, to The Ideal Automatic Train Control Company, Dover, N. J., a Corporation of New Jersey. Filed June 22, 1922. Serial No. 570,090. 3 Claims. (Cl. 295—11.)

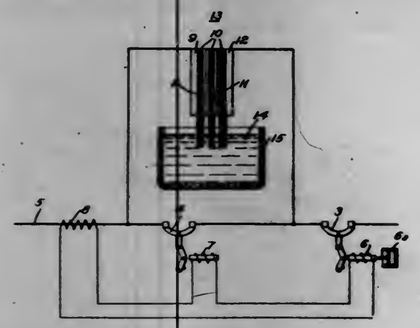


1. In a wheel, a wheel body, a tire, a suitable insulating material interposed between the wheel and the tire, a ring for securing the tire in position relative to the wheel body, and means formed integral with the wheel body and adapted to engage the ring to retain the tire in position relative to the wheel body.

1,452,548. MANHOLE-PLATFORM SUPPORT. CARLTON N. CONLEE, Chicago, Ill., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 22, 1922. Serial No. 562,929. 8 Claims. (Cl. 304—1.)

1. A manhole platform support including two identical units, each unit comprising two telescoping pipe sections and two saddles fixed one to each of said pipe sections, said saddles bearing extensions designed to engage with the manhole walls.

1,452,549. APPARATUS FOR TREATING OILS FROM FLOWING WELLS. RUDOLPH CONRADER, Erie, Pa. Filed May 20, 1920. Serial No. 382,758. 4 Claims. (Cl. 183—34.)

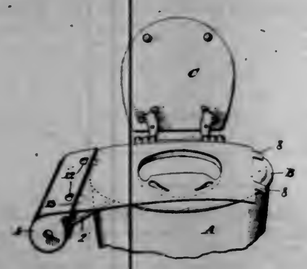


1. In an apparatus for treating oils from flowing wells, the combination of a separator taking off the free gas as the oil is delivered; a second separator operating under a partial vacuum to which the oil is delivered by the first-mentioned separator; means for taking off the gas freed from the oil under the partial vacuum; a pump for drawing oil from the second separator; and means controlling the pump to draw off the oil in proportion to the delivery of oil to the second separator.

1,452,550. CIRCUIT INTERRUPTER. OTTO H. ESCHHOLZ, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 18, 1921. Serial No. 493,238. 3 Claims. (Cl. 219—63.)

1. A resistance device comprising a pair of spaced terminal members, a plurality of spaced capillary members interposed therebetween, and corrugated members bridg-

ing the spaces between the capillary members, the capillary members being saturated with a salt solution

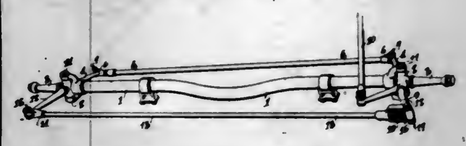


that is adapted to evaporate when current traverses the member, to thereby increase the resistance thereof to the passage of current.

1,452,551. SAW CLAMP. LOUIS BUTTERFIELD FLAGLER, Butte, Mont. Filed June 23, 1919. Serial No. 306,042. 5 Claims. (Cl. 76—78.)

1. In combination, a jaw having means for engaging a support, a movable jaw mounted parallel to said first-named jaw, spring actuated means for connecting and normally holding said jaws in saw engaging relation, a strip of deadening material located along the inner surface of one of said jaws, and removable means for securing said deadening material to the ends of the jaw by which it is carried.

1,452,552. SANITARY SEAT COVER. LEO J. FERAR, Ithaca, N. Y. Filed Apr. 12, 1922. Serial No. 551,752. 2 Claims. (Cl. 4—13.)



2. A sanitary seat cover comprising a blank having a body and an opening conforming to the opening in the seat except at its front portion where the blank has an inward extension connected at its front by a wide portion and at its rear corners by narrow strips to the main body but leaving the major part of the opening unobstructed, said extension forming an apron for the front of the seat when the narrow strips are torn in use by pressure of the body of the user.

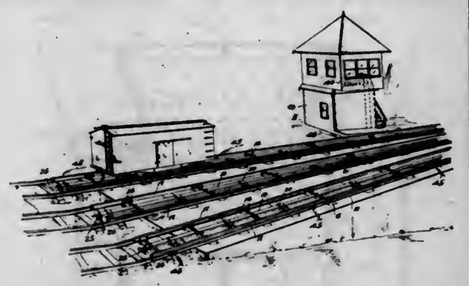
1,452,553. DECHLORINATED CHLORINATED-GLYCERIDES AND DERIVATIVES THEREFROM. HENRY A. GARDNER, Washington, D. C. Filed Aug. 31, 1920. Serial No. 407,226. 9 Claims. (Cl. 134—56.)

3. As a new composition of matter, a partially dechlorinated chlorinated-glyceride.

5. A method of treating glycerides to improve their drying properties, comprising subjecting the glyceride to halogenation, and thereafter eliminating a part at least of the halogen.

1,452,554. AUXILIARY TIE ROD. SAMUEL LYONS GARDNER, Cedar Rapids, Iowa. Filed Oct. 31, 1921. Serial No. 511,759. 1 Claim. (Cl. 280—95.)

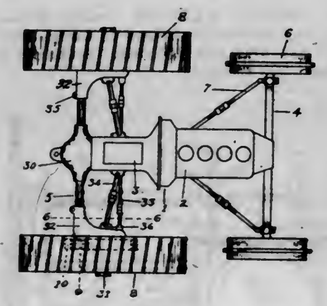
In a device of the character described, the combination with the axle, the steering knuckles, the converging knuckle arms and the tie rod inextensibly pivotally connected to said arms; of auxiliary diverging knuckle arms on the side of the axle opposite that on which the converging arms lie, and an auxiliary tie rod having a spring clevis connection to one auxiliary arm and an inextensible pivot connection with the other of said auxiliary arms, all being arranged whereby to take up slack and wear in the bearings of said rods and arms and to allow the pivotal points of the auxiliary arms and rods to separate and move together as the knuckles are turned one way or another, the pivotal points of connection between the respective tie rods and their respective arms of a knuckle lying in a straight line passing through the pivotal axis of the knuckle.



1,452,555. METHOD OF MAKING BRAKE LININGS AND THE LIKE. FREDERICK J. GLEASON, Cambridge, Mass., assignor of one-half to Max Brown, Boston, Mass. Filed Feb. 17, 1921. Serial No. 445,876. 6 Claims. (Cl. 91—70.)

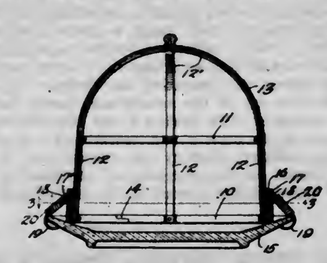
1. The herein described method which consists in impregnating a cotton fabric with a baking japan solution, and subjecting the impregnated fabric to live steam under substantial pressure for a substantial interval.

4. The herein described method which consists in impregnating a fabric of vegetable fiber with a baking japan solution composed of a minor proportion of boiled linseed oil and a major proportion of gilsonite asphaltum and both dissolved in volatile solvent, and subjecting the impregnated fabric to live steam at a substantial pressure and a temperature materially in excess of 212° F. for a substantial interval.



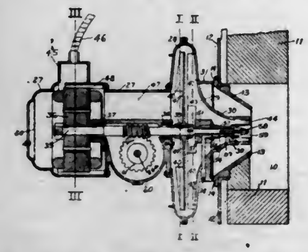
1,452,556. CAR-CONTROLLING MECHANISM. ALFRED HACKWORTH and JESSE HACKWORTH, Ironton, Ohio. Filed Feb. 24, 1921. Serial No. 447,396. 5 Claims. (Cl. 188—62.)

1. A car controlling mechanism including companion brake shoes, yokes embracing ties of a track and having upstanding end portions, rods extending through the end portions of the yokes to coact with the ties connecting the yokes therewith, rockers pivoted upon said rods and



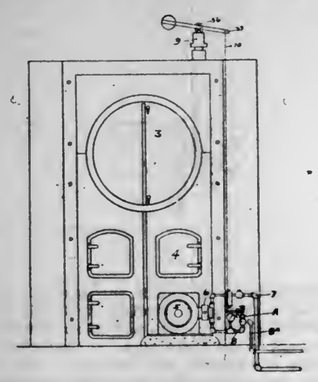
swingingly supporting the shoes between the track rails for movement to engage the wheels of a car upon said rails, and means for swinging said rockers.

1,452,557. TRACTOR. RAY HARROUN, Detroit, Mich. Filed May 21, 1920. Serial No. 383,054. 7 Claims. (Cl. 180—41.)



1. The combination with a vehicle frame, of front and rear axles upon which said frame is mounted, ground engaging wheels upon said axles, and means for varying the height of said frame relative to said wheels, including means for adjusting said front axle.

1,452,558. COVER FOR FOOD RECEPTACLES. WHITNELL HINDRIX JACKSON, Bowling Green, Ky. Filed June 15, 1922. Serial No. 568,646. 5 Claims. (Cl. 65—16.)

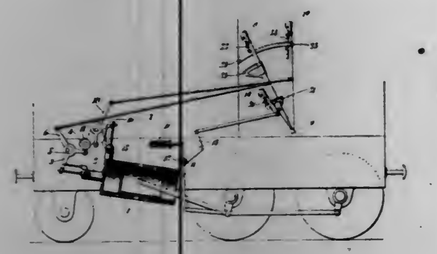


1. A dish cover comprising a frame, a covering for said frame, a band adapted to rest upon the dish and into which the lower portion of the frame is lowered, means for forcing the frame into pressing engagement with the inside face of the band, and means for securely holding the band against movement on the dish.

1,452,559. OIL-BURNER CONSTRUCTION. JESSE C. JOHNSON, San Francisco, Calif. Filed Mar. 23, 1922. Serial No. 545,989. 9 Claims. (Cl. 158—77.)

2. In an oil burner of the type specified, in combination with a pump casing provided with an opening, a driving shaft, a packing gland mounted on said shaft, a latch bar pivotally mounted on said casing, the inner end of the said latch bar being inclined and slidable over the driving shaft in spaced relation thereto, engaging the packing gland, the outer end of the latch bar extending exterior of the casing opening, means exterior of the casing for adjustment of the latch bar to the packing gland relative to the driving shaft, to prevent binding of the packing gland on the shaft and to prevent the leakage of oil.

1,452,560. PRESSURE-CONTROL VALVE. JESSE C. JOHNSON, San Francisco, Calif. Filed Apr. 17, 1922. Serial No. 554,161. 3 Claims. (Cl. 158—45.5.)



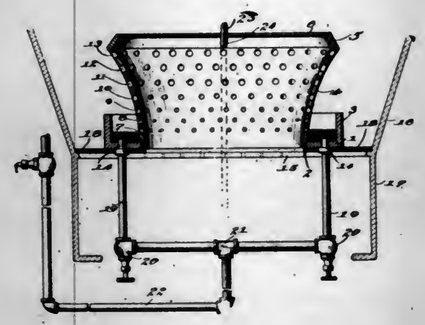
1. A control valve having a casing and a chamber therefor, a piston valve, a stem for the said valve having an annular flange integral therewith, a collar slidably mounted on the said stem, a coiled spring secured between the said flange and the said collar, normally urging the said valve stem downward to maintain the valve in its normal closed position, a sleeve slidably mounted on the said valve stem extending exterior of the said casing, of a bearing bracket carried by the said casing, a lever pivotally mounted in the said bracket adapted to urge the said sleeve downward upon the said valve stem.

1,452,561. CONTROLLING MEANS FOR INTERNAL-COMBUSTION-ENGINE PLANTS. EMIL KÖGL, Winterthur, Switzerland, assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 22, 1914, Serial No. 862,922. Renewed Aug. 3, 1917. Serial No. 184,360. 21 Claims. (Cl. 60—16.)

1. In a combustion engine plant, the combination with a fuel valve, a fuel pump, a valve for admitting com-

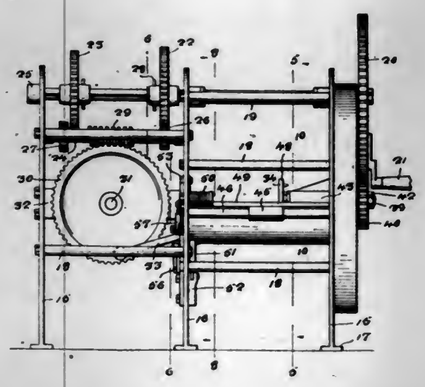
pressed air for starting and also as a supercharge during combustion running, and suitable engine-driven means for operating said valves and pump, of separate members for controlling the timing of the said valves and the

action of the fuel pump, and means for interlocking said separate members for simultaneous operation in different relative adjustments, the control members being also operable independently of each other.



1,452,562. BAIL FOR RECEPTACLES. CHARLES A. KRAUSS, Philadelphia, Pa. Filed Aug. 22, 1921. Serial No. 494,253. 4 Claims. (Cl. 220—91.)

3. In combination, a receptacle having a bail receiving ear, said ear including a straight vertically disposed radially extending body portion having an elongated way therein disposed at an acute angle to the vertical, said way inclining downwardly and outwardly from the receptacle, the ear at the lower end of the way being provided with a laterally extending notch and a bail having a depending loop provided with an upper restricted open throat, said loop being slidably associated with the way to permit the loop to be moved downward on the ear in engagement with the notch and to permit the open restricted throat portion of the loop to frictionally engage the upper edge of the ear.

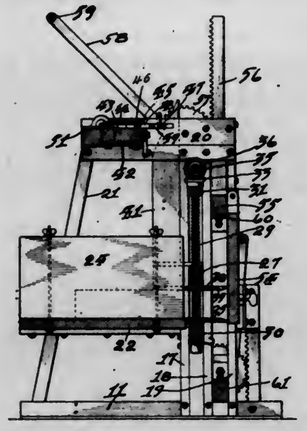


1,452,563. OIL BURNER. WILLIAM KARL LEWIS, Omaha, Nebr. Filed Feb. 13, 1922. Serial No. 536,127. 7 Claims. (Cl. 158—91.)

4. In a burner, a base comprising a flat bottom having a relatively large central opening formed therethrough and having an upstanding marginal flange at its outer edge, and a hollow body upstanding from the central opening through the bottom of the base and being formed to flare outwardly toward its upper end, said hollow body being closed at its upper end and having a plurality of spaced peripheral series of openings formed through its walls, the openings of certain of said series being larger than the openings of other series, the uppermost of said series comprising openings of the

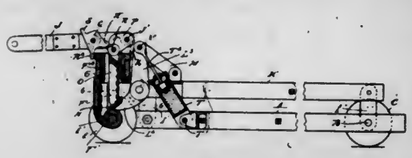
largest size and the lowermost of said series comprising openings of the smallest size, said openings being directed downwardly and outwardly toward their outer ends.

1,452,564. SLICING MACHINE. GEORGE LYESO, Simpson, W. Va., assignor of one-half to George Hrib, Simpson, W. Va. Filed Oct. 25, 1922. Serial No. 596,807. 5 Claims. (Cl. 146—11.)



1. A vegetable cutting machine embodying a frame, a horizontally disposed feed trough, a cutter at one end of the trough, a feeding member movable longitudinally of the trough, means for operating the cutter, means including a pitman for operating the feeding member, a closure for the top of the trough and means including a pitman operated slide having a slot therethrough for the passage of the pitman and operatively connected to the feeding member, whereby the closure will be automatically closed at the beginning of the feeding movement and automatically opened at the end of said movement.

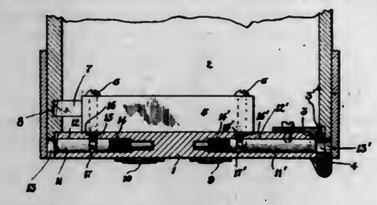
1,452,565. BINDING MACHINE. CHARLES F. MCBEE, Athens, Ohio, assignor to The McBee Binder Company, Athens, Ohio. Filed Dec. 30, 1918. Serial No. 269,010. 4 Claims. (Cl. 1—1.)



4. In a binding machine designed to employ nails as a securing medium for the volume, presser plates with orifices therein designed to contact with the upper and

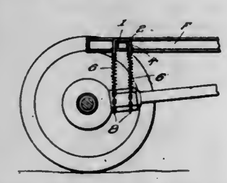
lower surfaces of the volume, said presser plates having their forward ends beveled outwardly from the volume to receive the flanges of the back over the covers to a point beyond the line of the orifices in the presser plates, and means to drive binding nails downwardly through

the orifices in the upper presser plate and means to drive binding nails upwardly through the orifices in the lower presser plate, all of said nails passing through their respective side of the back and their respective cover and more than half way through the volume, substantially as shown and described.



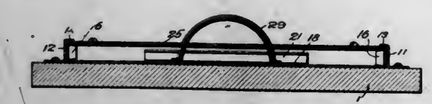
1,452,566. LIFTING TRUCK. HENRY F. MARTIN, Detroit, Mich., assignor to Detroit Hoist and Machine Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 14, 1921. Serial No. 507,619. 7 Claims. (Cl. 254—10.)

1. A lifting truck comprising a wheeled frame having a steering wheel, a loading frame adjustable vertically upon said wheeled frame, a mounting for said steering wheel having a tubular upper portion swiveled in the wheel frame, a handle for said truck pivoted upon said swiveled member, a thrust bar arranged within said tubular portion of the swivel member, a connection between said thrust bar and the handle for actuating the former downwardly through downward swinging of the latter, and a mechanism for elevating the loading frame actuable by said thrust bar including an element upon which the thrust bar bears freely and a connection between said element and said loading frame.



1,452,567. AUXILIARY LOCKING BOLT. CHARLES HENRY MILLER and ALEXANDER N. SCOTT, Canton, Ohio, assignors to The Diebold Safe & Lock Company, Canton, Ohio, a Corporation of Ohio. Filed Sept. 9, 1921. Serial No. 499,392. 6 Claims. (Cl. 109—3.)

1. A spring actuated auxiliary locking bolt on a safety deposit box door or the like and having a recess therein, an ordinary lock secured to the door and having means fixed thereon normally engaging in the recess to hold

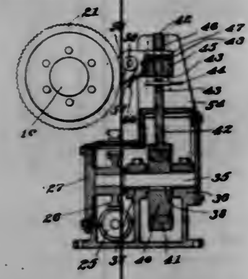


the bolt in retracted position and arranged to release the bolt when the lock is displaced.

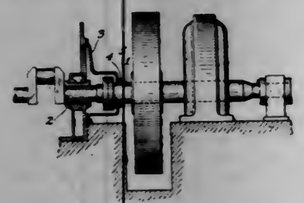
1,452,568. SHOCK ABSORBER. WILLIAM R. MORTON, Havre, Mont., assignor of one-half to Victor R. Griggs, Havre, Mont. Filed Nov. 4, 1921. Serial No. 512,792. 1 Claim. (Cl. 267—60.)

A shock absorber for motor vehicles comprising a transversely extending bar adapted to be connected with the chassis of a vehicle forwardly of and in close proximity to the differential housing of the vehicle, a pair of spaced inverted yoke-shaped suspension elements fixed to said bar, a pair of expansible and contractile members depending from and having their upper ends connected to the legs of each of said elements, and a pair of spaced flexible members adapted to extend around the housing of the drive shaft of the vehicle and each having one end connected to the lower end of one of the expansible and contractile members depending from a suspension element, and its other end connected to the lower end of an expansible and contractile member depending from the other suspension element.

1,452,569. LUBRICANT DEMONSTRATOR. HENRY A. NEALLEY, Newton, Mass. Filed June 1, 1922. Serial No. 565,277. 4 Claims. (Cl. 35—16.)



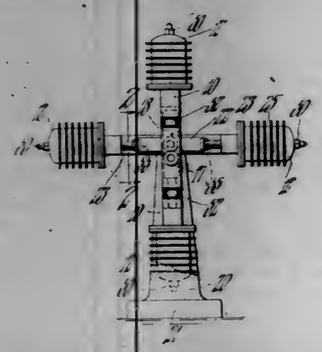
1. A lubricant demonstrator for graphite, greases, oils and the like comprising a base provided with a plurality of channels having closed ends, and a freely slidable member positioned in each channel, and having manually graspable means for sliding said member, and adapted to receive a slight charge of lubricant between its under surface and the surface of the channel, whereby the lubricating quality of the applied lubricant may be tested by such manual manipulation.



1,452,570. DRIVING MECHANISM. OSCAR O. NYGAARD, Milton, Mass. Original application filed June 15, 1918, Serial No. 240,160. Divided and this application filed Feb. 25, 1919, Serial No. 279,057. Renewed Sept. 22, 1922. Serial No. 589,904. 3 Claims. (Cl. 74—54.)

1. A pawl and ratchet driving mechanism consisting in a reciprocable member, a cross-head through which

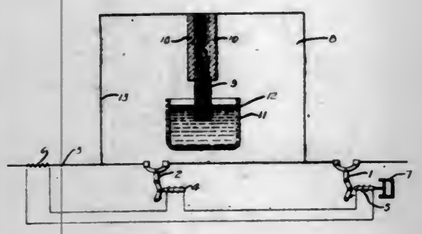
said member slides, adjustable means to effect a lifting of the cross-head, and a driving pin carried by the reciprocable member to effect a driving of the pawl and ratchet equal to the distance said cross-head is lifted.



1,452,571. MEANS FOR CHECKING THE WEAR OF SHAFT BEARINGS. OSCAR W. PFEFFER, St. Louis, Mo., assignor to Busch-Sulzer Bros.-Diesel Engine Co., St. Louis, Mo., a Corporation of Missouri. Filed Jan. 14, 1920. Serial No. 351,504. 4 Claims. (Cl. 33—168.)

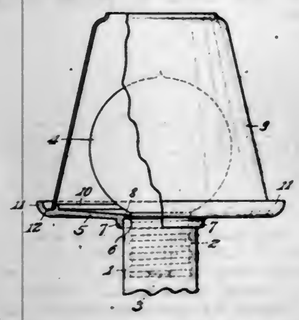
1. The combination with a machine comprising a rotary shaft and a bearing therefor, of an index means set in a fixed position proximate to a part of the shaft adjacent the bearing and in the line of the bearing wear, the surface of the index proximate to the shaft being spaced from the shaft a distance suited for measurement by flat feeler gauges.

1,452,572. ENGINE. HAROLD T. PROSSER, Chicopee Falls, Mass. Filed Jan. 21, 1922. Serial No. 530,959. 12 Claims. (Cl. 121—59.)



1. An engine comprising two rotors, one mounted eccentrically relatively to the other, cylinders carried by each of said rotors, pistons in said cylinders, and means constructed and arranged to convert relative radial movement of said cylinders and their respective pistons into rotary movement of said rotors.

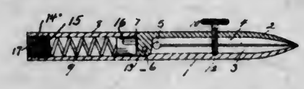
1,452,573. ELECTRODEPOSITION OF TIN. LOUIS D. SIMPKINS, Brooklyn, N. Y., assignor to National Lead Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 10, 1922. Serial No. 535,591. 8 Claims. (Cl. 204—17.)



1. An electrolytic bath for depositing tin, containing a tin-salt solution and small amounts of beta-naphthol and a colloid.

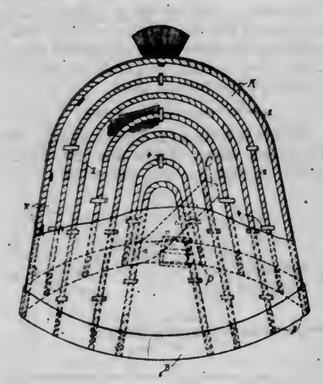
1,452,574. CIRCUIT INTERRUPTER. JOSEPH SLEPIAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 29, 1918. Serial No. 242,625. 10 Claims. (Cl. 219—63.)

1. A current-limiting device comprising two spaced conductor members, a vessel containing a body of conducting fluid, and a member interposed between the conductor members and having one of its portions extending into the fluid, the said interposed member being of fluid-absorbing material.



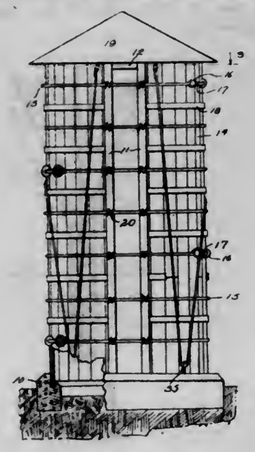
1,452,575. HOLDER FOR CANDLE SHADES. MORGAN OTT TAYLOR, Wheeling, W. Va., assignor to H. Northwood Company, Wheeling, W. Va., a Corporation of West Virginia. Filed Aug. 21, 1922. Serial No. 583,205. 3 Claims. (Cl. 240—111.)

1. A support for candle shades, comprising, in combination with a candle having a lamp socket therein, a centrally apertured glass member provided with a shade seat thereon, means integral with said member for preventing lateral shifting of the seated shade, and an integral collar formed on the under side of said member for embracing the upper end portion of the candle, said collar being concentric with and spaced from said aperture to provide a ledge for seating upon the candle.



1,452,576. DRAWING PEN. CHARLES W. THOMAS, Cleveland, Ohio. Filed June 2, 1919. Serial No. 301,344. 2 Claims. (Cl. 120—100.5.)

2. In a drafting pen, a stationary blade having a threaded bore in its butt end, a swinging blade pivotally connected with said stationary blade adjacent said bore and provided adjacent its pivot with a cam face, a member mounted within the bore, a compression spring



within the bore projecting said member for engagement with said cam face and means engaging the thread of said bore for adjusting the compression of said spring.

1,452,577. DEVICE FOR PRODUCING WAVES IN THE HAIR. GEORGE W. TURPIN, Cleveland, Ohio. Filed Feb. 20, 1922. Serial No. 537,915. 3 Claims. (Cl. 132—31.)

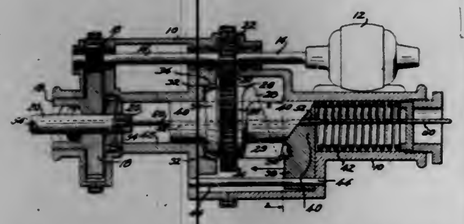
1. A head gear, a flexible body, and a series of flexible cords distributed along the inner side of the body whereby waves may be impressed on the hair.

1,452,578. SILO STRUCTURE. FRANK J. VAN COTT, Unadilla, N. Y. Filed Mar. 20, 1922. Serial No. 545,117. 7 Claims. (Cl. 20—1.4.)

1. A silo structure including a base, a door frame thereon, a plurality of wooden staves arranged on said base to form a circular wall structure, means for preventing the expansion of the wall structure, means arranged on the interior of silo wall for preventing inward movement thereof, including a number of filler members arranged to have their ends abut against each other, rods extended through the wall, flexible elements connecting the inner ends of the rods together and means, rotatable on said flexible elements, for drawing the rods towards the vertical center of the silo structure.

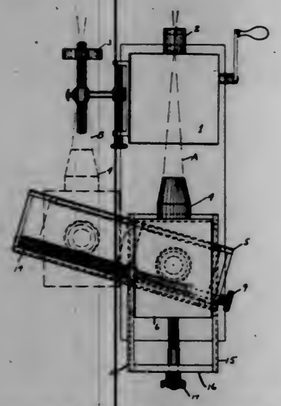
1,452,579. PUMP. CHARLES A. WAITZ, Rouseville, Pa. Filed Feb. 16, 1920. Serial No. 359,112. 10 Claims. (Cl. 103—179.)

1. In a pump, the combination of a tubing; a working barrel within the tubing; a plunger within the barrel; a cap on the barrel with lateral openings discharging into the tubing, said cap having clutch elements on its upper surface; a rod secured to the plunger and extending through the cap, said rod having an enlargement with a clutch element adapted to operate on the clutch element on the cap.



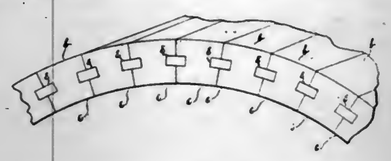
1,452,580. PUMP. CHARLES A. WAITZ, Rouseville, Pa. Filed Jan. 3, 1921. Serial No. 434,475. 2 Claims. (Cl. 103—220.)

1. In a pump, the combination of a working barrel; a tube larger than the working barrel within which the



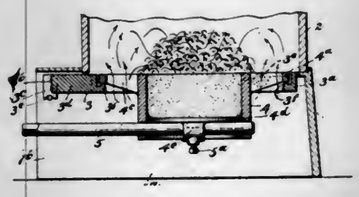
working barrel is placed, said tube extending below the working barrel and being of a size providing a space between the barrel and the tube; a pipe smaller than the barrel extending downwardly from the bottom of the barrel and delivering oil to the barrel, the tube protecting the barrel, and the space within the tube below the barrel forming a sand trap for sand settling past the barrel; and means for centering the barrel relatively to the tube.

1,452,581. ROCK DRILL. CLARENCE R. WELCH, Denver, Colo. Filed Jan. 17, 1920. Serial No. 352,116. 1 Claim. (Cl. 255—42.



In a rock drill, a casing, a drill chuck rotatably mounted in one end thereof, a hammer slidably mounted in said casing, a cam member rotatably mounted on a cylindrical portion of said hammer, a lateral extension on said hammer adapted to be engaged by the cam, means cooperating with said extension to prevent rotation thereof, a gear on said cam, means for simultaneously rotating said gear and said chuck, and a spring within the casing and cooperating with said hammer, whereby said hammer will move quickly when released by said cam.

1,452,582. COMBINATION LAMP-HOUSE SUPPORT. WILLIAM WENDEHOLD, New York, N. Y., assignor, by mesne assignments, to Edwin J. Banzhaf, New York, N. Y. Filed Apr. 13, 1917. Serial No. 161,923. 2 Claims. (Cl. 88—24.



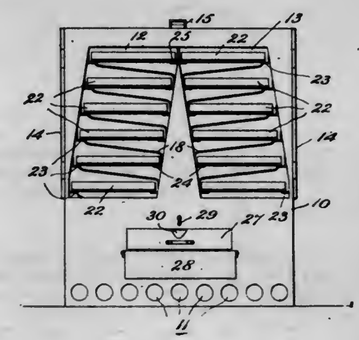
1. In combination with a picture projecting apparatus having a plurality of optical axes, a supporting structure, a slidable base and a slidable support, a lamp house revolubly mounted in said slidable support, a worm gear mounted on the lamp housing engaging a worm mounted in the slidable support, a gear on a common axis with the worm, another gear meshing therewith and having a common axis with a second worm and mounted in the supporting structure of the slidable support, the last named supporting structure being revolubly mounted in a slidable base, a worm gear on said base engaging the aforementioned second worm, and a knob on the shaft of one of the worms to operate the entire device, as and for the purpose described.

1,452,583. INTERLOCKING FIRE BRICK FOR ARCHES. WALTER J. WILLIAMS, Binghamton, N. Y. Filed May 9, 1921. Serial No. 468,006. 1 Claim. (Cl. 72—55.)

An arch for furnaces and the like, having vertical side walls and arcuate top wall, said arch being formed of wedge shaped bricks having locking recesses in each opposite side face, the vertical walls of the arch being formed by arranging each alternate brick of a row with its narrow face toward the interior of the arch, locking keys for engaging the recesses in the bricks the said keys breaking joint intermediate the ends of the brick, and means for securing the keys in place.

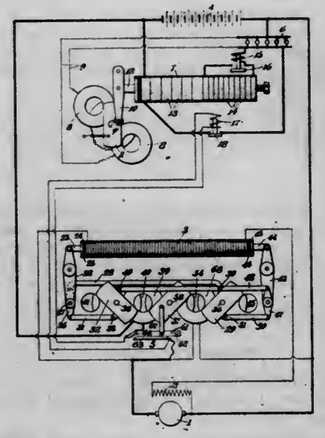
1,452,584. FURNACE-GRATE STRUCTURE. THEODORE ABEL, Cleveland, Ohio. Filed Nov. 29, 1921. Serial No. 518,500. 3 Claims. (Cl. 126—152.)

1. In a furnace grate structure, a shaker grate comprising an annular grate portion and a normally closed ash receiving receptacle.



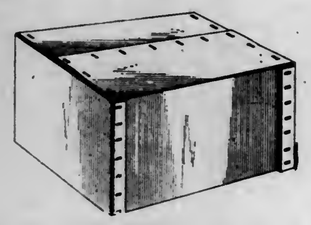
1,452,585. FEED FOR POWDER IN AUTOMATIC PACKAGING MACHINES. BENJAMIN F. ADAMS, Tenafly, N. J., assignor to American Machinery Company, Philadelphia, Pa., a Corporation of Delaware. Filed Dec. 7, 1920. Serial No. 428,897. 2 Claims. (Cl. 226—25.)

1. An apparatus for transferring powder from a hopper to a package with no agitation or aeration whereby the mix and density of the powder are unchanged, comprising



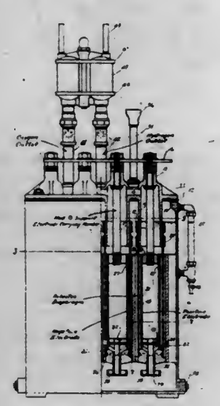
a drive shaft extending down into the hopper, a vertical feed casing of substantial length at the lower end of the hopper, an auger feed mounted in said feed casing and detachably engaging with the said drive shaft, and means for detachably securing the feed casing to the lower end of the hopper, whereby the auger feed and feed casing may be changed at will according to the height of the package being filled.

1,452,586. APPARATUS FOR DESICCATING FOOD. AGNES LOUISE ANDREA, New York, N. Y., assignor to Nichols Dehydrator Corporation, a Corporation of Delaware. Filed July 1, 1920. Serial No. 393,246. 6 Claims. (Cl. 34—39.)



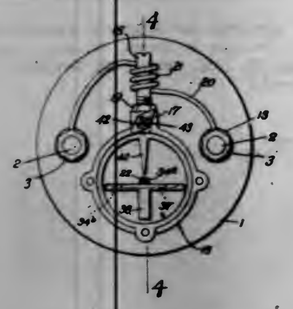
1. Apparatus for the purpose described comprising a casing having separate drying passages leading from a single main inlet flue, trays for the material located in said passages, and a water reservoir located under the inlet flue.

1,452,587. REGULATING AND CIRCUIT-CONTROLLING APPARATUS. ELI J. BLAKE, Buffalo, N. Y., assignor to Gould Coupler Company, a Corporation of New York. Filed Oct. 14, 1920. Serial No. 416,855. 18 Claims. (Cl. 171—313.)



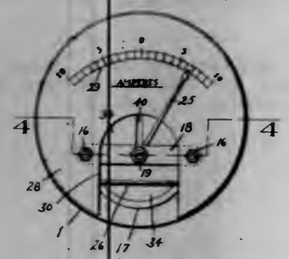
1. In apparatus of the class described, a resistance variable with its length, a lever fulcrumed between its ends and operating through one end upon said resistance, an equalizing member centrally pivoted to the other end of said lever, two links parallel with said resistance connected to the ends of said member, and an electro-responsive device connected to each of said links.

1,452,588. METHOD OF SEALING FIBER SHIPPING CASES. HERBERT R. BLISS, Niagara Falls, N. Y. Filed Sept. 19, 1921. Serial No. 501,620. 8 Claims. (Cl. 229—45.)



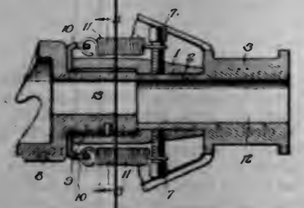
1. The method of sealing a shipping case having flaps on the side and end walls, which consists of turning in one pair of opposed flaps, overlapping the other pair of opposed flaps over the first-mentioned flaps and each other, and taking a T arrangement of stitches with the stem of the T along the line of overlap of the overlying flaps and the bar of the T at one end of the case where the overlying flaps overlap the underlying flap, the opposite end of the case having the overlying flaps stitched to the underlying flap along the end of the case, whereby the entire stitching forms an H.

1,452,589. ELECTROLYTIC CELL. DENNIS A. BRADING, Chicago, Ill. Filed Sept. 23, 1922. Serial No. 590,043. 5 Claims. (Cl. 204—5.)



1. In an electrolytic cell for generating hydrogen and oxygen, the combination of a casing, a plurality of electrodes arranged in pairs positioned vertically in said casing, each electrode being cylindrical and each pair thereof arranged concentrically with respect to each other, a cylindrical diaphragm between each pair of electrodes and spaced apart therefrom, an insulating member in the inner electrode, a tubular member supported on said insulating member and being in open communication with the interior of the casing.

1,452,590. ELECTRICAL MEASURING INSTRUMENT. IVAR W. BROGGER, Newark, N. J., assignor to Standard Electric Manufacturing Company, a Corporation of New Jersey. Filed Apr. 26, 1919. Serial No. 292,994. 17 Claims. (Cl. 171—95.)

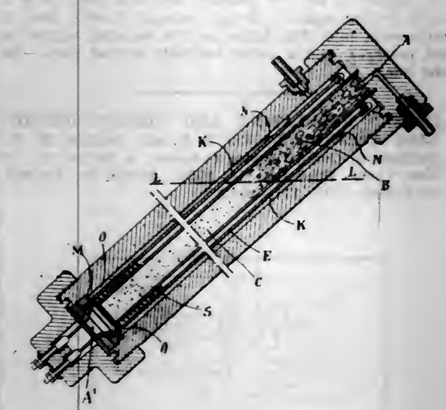


1. In a current measuring instrument, a solenoid through which the current to be measured passes, a core for said solenoid, a moving member in the field of said solenoid, and a flux directing member for said core adjustable laterally with respect thereto.

1,452,591. ELECTRICAL MEASURING INSTRUMENT. IVAR W. BROGGER, Newark, N. J., assignor to Standard Electric Manufacturing Company, a Corporation of New Jersey. Filed Apr. 26, 1919. Serial No. 292,995. 12 Claims. (Cl. 171—95.)

12. In a current measuring instrument, the combination of a base plate, a field coil in the form of a rectangular loop secured to said base plate in upright edgewise position, and a cylindrical damping box secured to said base plate with its longitudinal axial line perpendicular thereto and one side portion of itself projecting into said looped field coil, said damping box and field coil being independently secured to the base plate and independently removable therefrom.

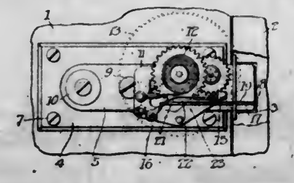
1,452,592. ENGINE-CRANKING DEVICE. EMIL CAPOUCH, Cicero, Ill. Filed June 23, 1921. Serial No. 479,873. 6 Claims. (Cl. 74—33.)



1. In a clutch device for cranking internal combustion engines, the combination of a clutch member, means to support said member for axial displacement to close the clutch, and a crank insertable in said member and removable therefrom after starting the engine, and springs to hold said member in normal position, said member having a sleeve fixed thereon and a yoke held in place on said member by said sleeve and the ends of the yoke being attached to said springs.

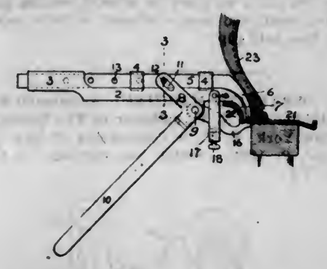
1,452,593. FLY FOR FLY FISHING AND SIMILAR USES. HORACE B. CHASE, Jr., Paris, France. Filed Aug. 4, 1922. Serial No. 579,946. 1 Claim. (Cl. 43—48.)

A fly comprising a hook and resilient wing members made to simulate the wings of an insect attached to the hook at their inner ends only and weighted at their outer ends.



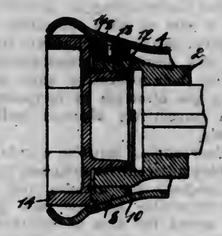
1,452,594. THERMALLY-INSULATED APPARATUS AND METHOD OF INSULATING THE SAME. GEORGES CLAUDE, Paris, France, assignor to Societe l'Air Liquide Societe Anonyme pour l'Etude et l'Exploitation des Procedes Georges Claude, Paris, France. Filed Aug. 13, 1919. Serial No. 317,322. 13 Claims. (Cl. 23—21.)

1. The method of thermally insulating the pressure-sustaining wall of a chamber wherein an exothermic chemical reaction at high temperature and pressure is conducted, which comprises applying against the inner surface of the wall a medium possessing a low heat conductivity and maintaining the medium in a substantially liquid state during the reaction.



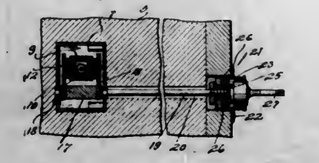
1,452,595. BURGLAR ALARM. JOSEPH I. CONNELLY, Chicago, Ill. Filed May 13, 1922. Serial No. 560,627. 6 Claims. (Cl. 116—8.)

4. The combination with a keeper of a locking and alarm device comprising a support, a locking bolt arranged on said support and movable relative thereto so as to be shiftable into and out of coacting relation with the keeper, an alarm including a spring motor and escapement detent, a hammer actuated by said detent, a shoulder formed on said detent, and a dog pivotally mounted on said locking bolt, one end of said dog being



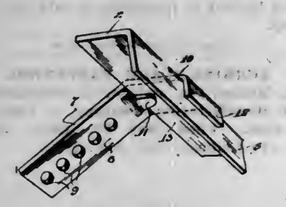
arranged to coact with said shoulder for normally locking said detent against operation, the other end of said dog being arranged to form a tripper movable transversely to said locking bolt.

1,452,596. TIRE TOOL. LEON DE FERNELMONT, Paterson, N. J. Filed Sept. 10, 1921. Serial No. 499,790. 8 Claims. (Cl. 157—6.)



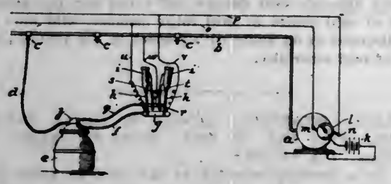
1. In a tire tool, the combination of two bars having an adjustable union whereby one may be adjusted longitudinally with respect to the other, said bars each provided with laterally extending jaws turned in the same direction and adapted to be brought together or separated according to the adjustment of the bars, a suitable clamp having a connection with one of the bars and its free end adapted to be brought into substantially alinement with the jaws when brought together, means for holding the clamp in relative position with respect to the jaws, and manually operated means having a connection with both of the bars for insuring a relative longitudinal adjustment thereto.

1,452,597. DEMOUNTABLE WHEEL. GEORGE E. GODDARD, Detroit, Mich., assignor to Dodge Brothers, Detroit, Mich., a Corporation of Michigan. Filed Sept. 3, 1919. Serial No. 321,336. 6 Claims. (Cl. 301—9.)



6. In a demountable wheel construction, the combination with an inner hub member and an outer hub member mounted thereon, of a locking ring for holding said hub members for rotation together, said locking ring comprising a two part piece, one of said parts keyed to said inner hub member and having a surface engaging said outer hub member, said other part screw threaded into said inner hub member but out of contact with said outer hub member and engaging, when in home position, said first mentioned part, and a hub cap also screw threaded into said inner hub member but out of contact with the screw threaded part of said locking ring when the hub cap is in home position.

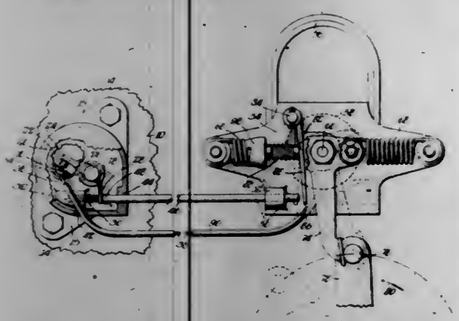
1,452,598. SASH FASTENER. HIRAM C. GRAY, Bucyrus, Ohio. Filed Apr. 3, 1922. Serial No. 549,015. 2 Claims. (Cl. 292—169.)



1. In a sash fastener, the combination with a casing for attachment to a window frame, of a hollow post located in the casing, a bolt slidably engaged in the post, said bolt having arms carried thereby, said arms being provided with lips, a head journaled transversely in the casing and having pins for slidably engaging said lips, a rod associated with the head, and means for rocking the rod to impart similar movement to the pins to cause the bolt to slide in said post.

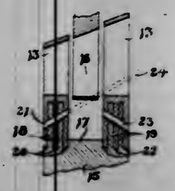
1,452,599. ROOF LUG. HARRY C. HAMES, Columbus, Ohio, assignor to F. O. Schoedinger, Columbus, Ohio. Filed Mar. 24, 1922. Serial No. 546,259. 2 Claims. (Cl. 108—18.)

1. A roofing lug comprising an integral relatively angularly disposed arm and plate, a tongue located at the juncture of the arm and plate, and a lip carried by the free end of said plate.



1,452,600. ACTUATING MEANS FOR MILKING-MACHINE PULSATORS. CYRUS HOWARD HAPGOOD, Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 17, 1922. Serial No. 529,845. 4 Claims. (Cl. 31—101.)

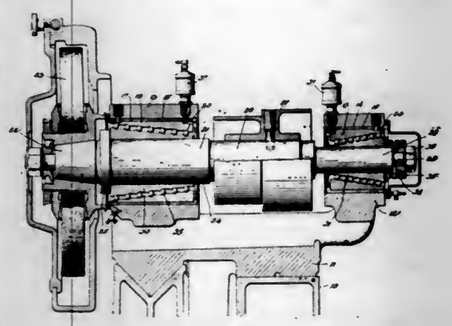
1. In a milking machine, the combination with the teat cups, of a pulsator valve adapted in its reciproca-



tions to produce pulsations in the teat cups, means whereby pneumatic forces tend to shift the valve, and electro-magnetic means adapted to resist such forces until a predetermined instant.

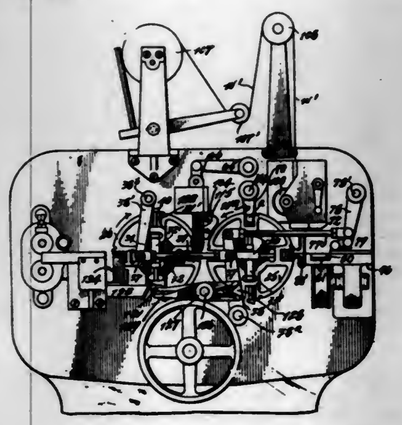
1,452,601. IGNITION SYSTEM FOR COMBUSTION ENGINES. WILLIAM C. HEATH, Beloit, Wis., assignor to Fairbanks, Morse & Co., Chicago, Ill., a Corporation of Illinois. Filed May 14, 1920. Serial No. 381,505. 1 Claim. (Cl. 123—149.)

In mechanism of the class described, a front frame of an oscillating magneto mechanism, arms extending forwardly from opposite sides of said frame, an armature shaft extending thru said frame, oscillating mechanism for said shaft detachably secured thereto, a cam mounted on the shaft between the front plate and the oscillating mechanism and detachably adjustably held in place by the oscillating mechanism, and means for firing an engine cylinder remote from the magneto said means being located in proximity to said cam and actuated thereby.



1,452,602. TURBINE-BLADE FASTENING. HERBERT T. HEAA, Merion, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 10, 1921. Serial No. 468,412. 14 Claims. (Cl. 253—77.)

1. In a turbine blade structure, a rotor disc provided with annular radial flanges, blade members provided with tangs adapted to seat within said flanges, and pins passing through said flanges and tangs for the attachment of said blades to said rotor member, said pins being disposed at an angle with respect to the axis of rotation of said rotor disc.

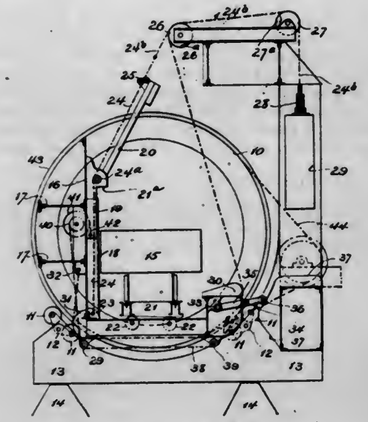


1,452,603. BEARING. HOWARD P. HIMES, Detroit, Mich. Filed Mar. 19, 1921. Serial No. 453,667. 3 Claims. (Cl. 64—38.)

3. In a grinding machine or the like, an arbor provided with means for attaching a grinding wheel thereto, a bearing for said arbor adjacent to the said means comprising a cone fixed to said arbor, said cone having a plurality of races, the successive races being of gradually increasing diameter from one end of the cone to the other, a cup having complementary races and sets

of antifriction members in said races, and spring means carried by the arbor on the side of said bearing opposite to said first mentioned means adapted to force said cone resiliently into said cup.

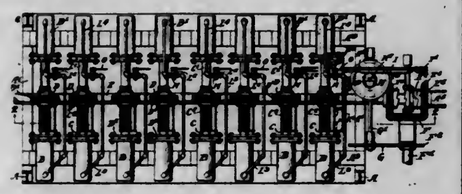
1,452,604. WRAPPING MACHINE. ARCHIBALD E. HOPKINS, Middletown, N. Y., assignor to The Borden Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 2, 1920. Serial No. 370,738. 8 Claims. (Cl. 93—7.)



1. In a machine for wrapping an article of truncated-pyramidal form, a pair of alike oppositely disposed pivoted tucking fingers; means to reciprocate them relatively to the article, and means to simultaneously, progressively, impart to their operative ends movements in paths inclined to the direction of reciprocation, and in parallelism with respectively adjacent inclined opposite sides of the article.

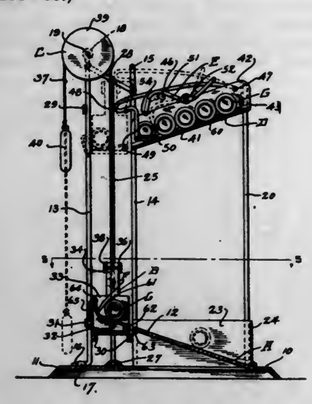
5. In an article-wrapping machine a rotatory member, or turret, containing adjacent its periphery a pair of oppositely disposed pockets for articles and carrying an article-ejector reciprocable between said pockets in a path extending across the axis of rotation of the turret, and also carrying a plate extending radially from opposite sides of said axis in parallelism with said path, and means to constantly yieldingly press said plate into simultaneous frictional contacts with surfaces of the ejector which are located on opposite sides of said axis.

1,452,605. ARSENICAL COMPOUND. LINDLEY M. HUSSEY, Philadelphia, Pa., assignor to Joseph Philip Harmer, Philadelphia, Pa. Filed June 21, 1920, Serial No. 390,313. Renewed Aug. 23, 1922. Serial No. 583,936. 9 Claims. (Cl. 260—14.)



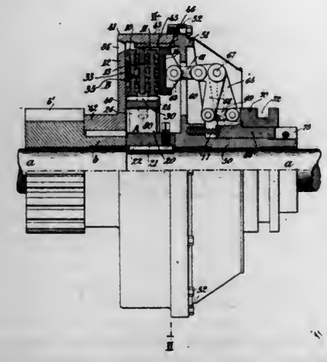
1. A non-poisonous compound suitable for therapeutical uses and herein identified as di-sodium monothyl arsonate, said compound characterized as a white deliquescent crystalline salt soluble in water forming substantially stable solutions, and which, when in solution and exposed to the air for a long period of time eventually decomposes into sodium carbonate and ethylarsonic acid.

1,452,606. CAR-DUMPING MACHINE. MILTON DAVID JONES, Cleveland, Ohio. Filed Oct. 20, 1921. Serial No. 508,950. 13 Claims. (Cl. 214—52.)



1. In a car dumping apparatus, the combination of a cylinder, means for turning the same, gravity clamps carried by the cylinder, each clamp having a shoulder to overlap the top edge of one side of the car body, means for automatically elevating the clamps as the cylinder approaches its normal position, automatically operating means for locking the clamps in their lowered position while the cylinder is turned to a position to dump the car and means for shifting the car laterally away from the clamp as the cylinder is turned to its normal position after having dumped the load.

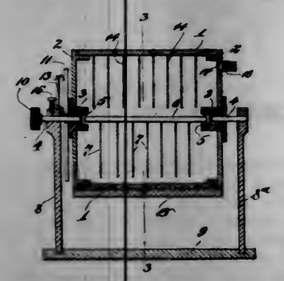
1,452,607. ARTIFICIAL-SILK-SPINNING MACHINE. GEORGE JUER, Hopewell, Va., assignor to Tubize Artificial Silk Company of America, Wilmington, Del., a Corporation of Delaware. Filed Dec. 30, 1920. Serial No. 434,000. 14 Claims. (Cl. 18—8.)



1. In a machine for forming artificial silk filaments, the combination with a supply conduit for the fluid to be formed into filaments of a series of spinneret headers each having a group of spinnerets equal in number to the number of filaments to be formed into a single yarn or thread and a series of pumps, one for each header, arranged to draw fluid from the supply conduit and force it into the connected headers.

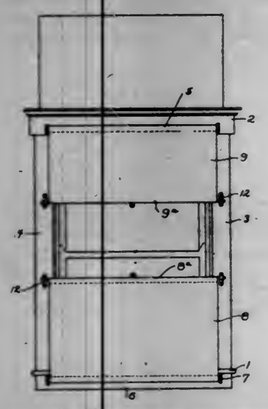
1,452,608. TOY ELEVATOR. JOHN P. KIRST, Ohio, Ill. Filed Feb. 20, 1922. Serial No. 537,957. 6 Claims. (Cl. 214—99.)

1. In an elevator, an elevator shaft, an elevator car slidably mounted in the shaft, a cable connected to the car and trained about the pulley, a weight connected to the cable for normally holding the car in a raised position, a releasing means including a pair of arcuate arms, and a downwardly extending U-shaped member normally disposed in the path of the weights, the forward terminals of the arcuate arms being disposed in the path of the elevator car, means pivotally securing the rear ends of the arms to the loading platform, a weight checking means including a pair of levers pivotally secured intermediate their ends to the loading platform, forwardly and downwardly extending members formed on the forward ends of the lever for engaging one of the weights in rear of the weight engaged by the releasing member, and outwardly extending arms formed on the rear ends of the levers for engaging the arcuate portions of the arms of the releasing member.



1,452,609. FRICTION CLUTCH. WILLIAM KLOCKE, Woodhaven, N. Y., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of West Virginia. Filed July 25, 1921. Serial No. 487,460. 1 Claim. (Cl. 192—69.)

A clutch comprising interposed friction disks, and carriers for said disks, one of said carriers being a central

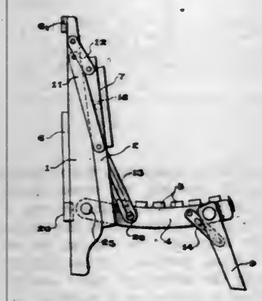


hub-member having a rim, an inner bearing part adapted to be fixed to a shaft and an intermediate web connecting said rim and bearing part, said rim having an opening therein for permitttting flow of a current of air to the inner faces of said disks, said other carrier being a drum having an opening therein to permit the outflow of air from the vicinity of the outer edges of said disks, and having a bearing at one side of said first-named carrier, a bearing sleeve at the opposite side of said first-named carrier having a flange, and means connecting said flange to said drum, and means mounted on said sleeve for pressing said disks together, said means comprising a toggle, a bracket on said sleeve adjustable toward said disks, said toggle being pivoted at one end to a disk, and at its other end to said bracket, an operating arm connected to said toggle, and a sleeve for moving said operating arm.

1,452,610. ELECTRICAL CONDENSER. MORRIS KLOSNER, New York, N. Y. Filed Sept. 2, 1920. Serial No. 407,740. 4 Claims. (Cl. 250—41.)

1. A variable condenser comprising a set of stationary leaves and an adjacent set of turnably adjustable leaves, and an air-tight casing for said sets and a weight for automatically maintaining said sets normally in non-interleaved relation, and means for adjusting said last named set whereby the pressure may be varied, the apparatus adapted to be interposed in an electrical circuit.

1,452,611. WINDOW SHADE. EDMUND H. LUNKEN, Cincinnati, Ohio. Filed June 17, 1919. Serial No. 304,829. 6 Claims. (Cl. 156—24.)

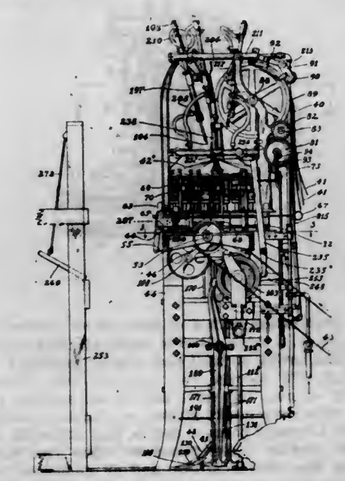


4. In a window shading device the combination with a lower and upper shade under constant tension, of stiffening bars in the free ends of the shades, and retaining hooks mounted at the sides of the window, said stiffening bars having extending pins at the sides of the shades and said hooks being open upwardly and downwardly, and the hook portions both upward and downward opening being of at least twice the width of the extending pins.

1,452,612. MOUNT FOR VEHICLE CURTAIN WINDOWPANES. JOHN M. MCCLOUD, Brooklyn, N. Y. Filed June 2, 1921. Serial No. 474,333. 3 Claims. (Cl. 296—145.)

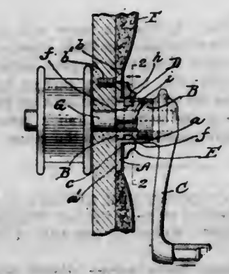
1. In combination with a curtain of the character designated, a window mount therefor, comprising a tubular encasement frame formed with an insert slot on the inner side thereof and attached to an inturned marginal edge of said curtain, an elastic resilient window pane the edge of which is positioned in said encasement frame, and a gasket inserted in said frame and bearing against the edge of the pane, for the purpose described.

1,452,613. COMBINED SETTEE AND TABLE. JOSEPH N. MILLER, Brainerd, Minn. Filed Sept. 13, 1922. Serial No. 587,879. 3 Claims. (Cl. 155—43.)



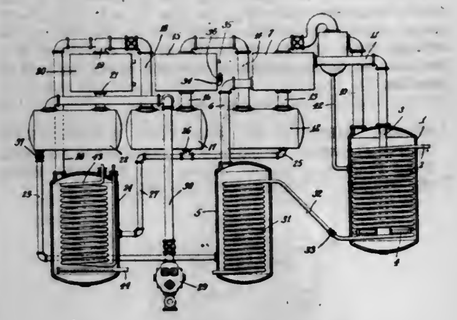
1. A foldable combined settee and table comprising spaced major members having dowel sockets, a leaf arranged at right angles to the major members and permanently connected to the outer edges thereof, swinging members pivotally connected to the inner or opposed sides of the major members, means connecting the swinging members together and adapted to form a seat, legs pivotally connected to the swinging members, slotted straps connecting the major members and the swinging members, slotted straps connecting the swinging members and their legs, legs associated with the major members and having dowel sockets in their outer edges, swinging links connecting the major members and said legs, and a shiftable leaf provided with dowel pins complementary to said sockets and adapted for use on the outer edges of the major members to form part of a table top and for use on the outer edges of the last mentioned legs to form a settee back.

1,452,614. SHOE POLISH. JULIUS H. T. OLSEN, New York, N. Y. Filed Dec. 3, 1921. Serial No. 519,657. 4 Claims. (Cl. 134—7.)



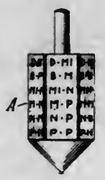
4. A white shoe polish consisting substantially of two ounces of gum arabic dissolved in two quarts of water, mixed with 12 ounces of zinc white.

1,452,615. WIRE-ASSEMBLING MACHINE. ERNEST A. PIGEON, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed May 8, 1920. Serial No. 379,806. 74 Claims. (Cl. 173—244.)



65. In a wire-covering machine, the combination of a group of wire-feeding cylinders and pistons, a controlling valve therefor, a group of wire cutters, a braider, a wire gatherer adapted to be opened and closed, a set of wire guides adapted to enter the braiding shed when said gatherer is open, a set of hooks adapted to draw the posterior ends of the wires out through the braiding shed, operating pistons and cylinders for said hooks, a controlling valve for said cylinders, a work feeder, and a rotary shaft having cam devices adapted to coordinate the action of the several-said instrumentalities substantially in the following order of operations from the braiding of the connecting sheath between adjacent units, viz: (1) stop work feed, (2) stop braiding, (3) project wire guides into operative position, (4) elevate wires, (5) retract wire guides, (6) close wire gatherer, (7) start braiding, (8) start work feed, (9) retract wire-feeding pistons, (10) stop work feed, (11) stop braiding, (12) cut wires, (13) open gatherer, (14) project hooks, (15) retract hooks, (16) start braiding and (17) start work feed.

1,452,616. OPERATING MEANS FOR SASH ADJUSTERS. LOUIS ROTH, New York, N. Y., assignor to Sterling Bronze Company, New York, N. Y., a Corporation of New York. Filed Dec. 16, 1921. Serial No. 522,868. 5 Claims. (Cl. 292—347.)

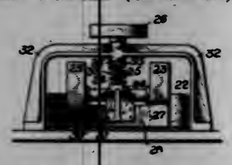


1. In an operating device of the class described, the combination of a fixed member provided with a male thread and a retainer aperture, a shaft actuator provided with a grooved bushing adapted for free rotation within the fixed member, a retainer in contact with the fixed member and fitting said groove in the bushing, and a collar screwed on the fixed member and concealing the retainer.

1,452,617. PROCESS OF AND APPARATUS FOR DISTILLING LIQUIDS. WALTER E. SANGER, New York, N. Y., assignor to William Garrigue & Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 9, 1921. Serial No. 450,998. 9 Claims. (Cl. 87—4.)

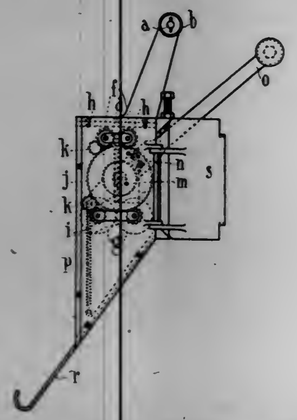
1. In distilling apparatus, the combination of a still, a concentrator, an evaporator, a vacuum pump connected to said evaporator, a superheater condenser, a cooler condenser, connections for passing water vapors from said evaporator through said superheater condenser and into said still, means for passing vapors of distilling liquid from said still through said superheater condenser, to superheat said water vapors and partly condense said liquid vapors, means for passing the uncondensed liquid vapors into said cooler condenser, to condense a further fraction of said liquid vapors, a third condenser, connected to said cooler condenser for condensing water vapor uncondensed in said first two condensers, connections for leading condensed liquid from said superheater and cooler condensers to said concentrator and a connection for leading condensed water from said third condenser to said evaporator.

1,452,618. GAME. WILLIAM L. SAYERS, Brooklyn, N. Y. Filed July 17, 1922. Serial No. 575,458. 2 Claims. (Cl. 46—56.)



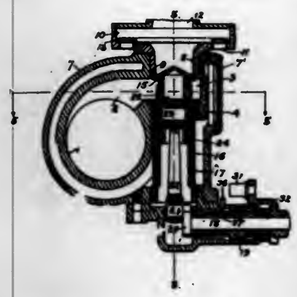
1. A device for use in playing an imaginary game of golf consisting of a polygonal body of the kind described, on the faces of which are arranged in two parallel columns characters which in the first column are in the same order and indicate the clubs used in playing the game and characters which in the second column are arbitrarily selected to indicate different clubs, and various data characteristic of a golf game.

1,452,619. COMPRESSION OF GASES. JAMES BUCKNER SPEED, New York, N. Y. Filed Apr. 27, 1920. Serial No. 376,979. 10 Claims. (Cl. 230—11.)



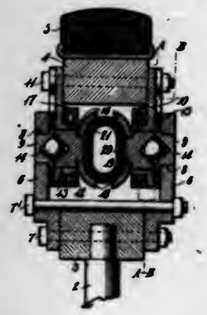
1. A method of augmenting the pressure of a gas, which comprises subjecting the gas to successive increments of pressure resulting from the application of centrifugal force thereto, while the gas is travelling in a plurality of paths oppositely directed about an axis of rotation.

1,452,620. METHOD OF TREATING WHITE LEAD. ELMER A. SPERRY, Brooklyn, N. Y., assignor to Anaconda Lead Products Company. Filed Nov. 20, 1919. Serial No. 339,300. 7 Claims. (Cl. 134—67.)



6. The process of producing commercial white lead for paint which consists of electrolytically depositing the salt in a highly pulverulent state, washing and drying the same, dry grinding the same until the oil absorbing capacity is substantially reduced, and finally grinding in oil in substantially the same manner as white lead produced non-electrolytically is ground.

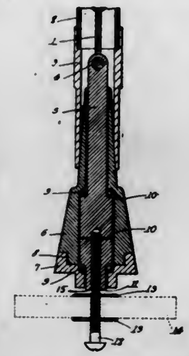
1,452,621. MEANS FOR DETACHING AND DELIVERING LENGTHS OF PAPER. EDWARD STEPHEN, Manchester, England. Filed Sept. 14, 1922. Serial No. 588,251. 5 Claims. (Cl. 211—33.)



1. Means for detaching and delivering lengths of paper or the like from a roll, comprising two pairs of rollers, means for rotating the same with differential surface speeds, one pair of the rollers drawing the roll and the other pair separating the individual lengths and delivering the same, as set forth.

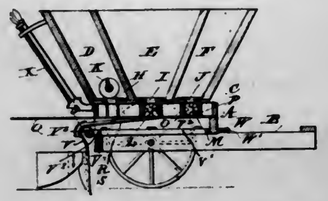
1,452,622. VALVE FOR INTERNAL-COMBUSTION ENGINES. ALFRED C. STEWART, Los Angeles, Calif. Filed May 3, 1920. Serial No. 378,499. 2 Claims. (Cl. 123—79.)

1. In combination with a cylinder of an internal combustion engine, a valve chamber communicating with said cylinder and having an inlet and exhaust passage, a valve controlling said passage and provided with operating means for opening the valve during the exhaust stroke and the succeeding intake stroke, an exhaust passage opposite the aforesaid passage and in line therewith to receive the exhaust gases therefrom when the valve is opened in the exhaust stroke, and an admission means for admitting air to said inlet and exhaust passage, said air admitting means being arranged to deliver the air laterally with respect to the said inlet and exhaust passage means, so that the incoming air is not interfered with by the outgoing exhaust gases.



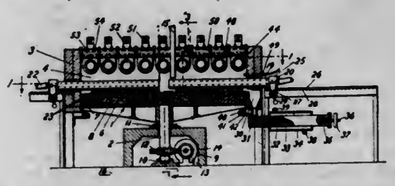
1,452,623. SPRING WHEEL. FREDERICK STITZEL, Louisville, Ky. Filed Oct. 13, 1922. Serial No. 594,287. 4 Claims. (Cl. 152—35.)

1. A spring wheel, having an inner rim and an outer rim, and flexible connections for these rims, consisting of overlapping housings extending toward each other from the inner and outer rim, bearings carried by said housings, rings carried by one of these sets of bearings, and interposed between the housings, and a non-metallic resilient medium interposed between the rings.



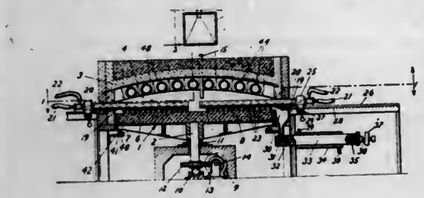
1,452,624. ATTACHMENT FOR ROTARY CLIPPER MACHINES. FREDRICK GORDON STUART, Washington, D. C. Filed Apr. 2, 1921. Serial No. 458,154. 2 Claims. (Cl. 51—241.)

1. An attachment for a rotary clipper machine, comprising a revolvable head engageable to the end of the flexible rotating chain of the clipper machine, a casing member and bearing for the revolvable head, said casing member being of frusto-conical shape and slidably detachable from and frictionally engageable on the collar of the rotary clipper machine, a collar secured to the end of



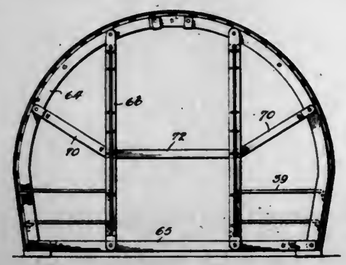
the casing, the revolvable head projecting slightly beyond said cap, and means for attaching a suitable operating member such as a buffing wheel to the end of the revolvable head.

1,452,625. COMBINED SEEDING MACHINE AND MANURE SPREADER. PETER TARGOSKY, Cleveland, Ohio. Filed Aug. 23, 1920. Serial No. 405,268. 4 Claims. (Cl. 111—8.)



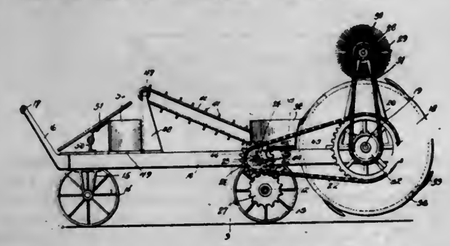
4. A machine of the class described comprising hoppers and a chute, a longitudinal slidably removable frame carrying a pivoted extension at one end thereof, a drill, supporting means including a spring for the drill, the said chute resting on the spring and mounted for pivotal movement, and means for raising and lowering the drill whereby the chute will be raised and feeding of the material therefrom arrested.

1,452,626. APPARATUS FOR THE PRODUCTION OF SPONGE IRON AND OTHER METALLIC PRODUCTS. EDWIN B. THORNHILL, Hurley, N. Mex. Filed Jan. 21, 1921. Serial No. 438,956. 12 Claims. (Cl. 263—21.)



1. An apparatus for reducing metals from ores, or other material, comprising a hearth provided with an ore supporting bed of material non-adherent to the heated ore, or reduced material, a reducing chamber extending over said bed, and heating means extending over said bed and adapted to heat the material thereon by radiation.

1,452,627. PROCESS FOR THE PRODUCTION OF SPONGE IRON AND OTHER METALLIC PRODUCTS. EDWIN B. THORNHILL, Hurley, N. Mex. Filed Jan. 21, 1921. Serial No. 438,957. 15 Claims. (Cl. 75—77.)

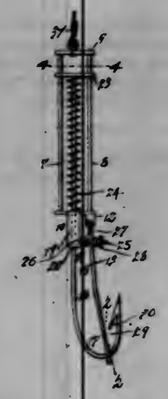


1. The process of producing sponge iron which consists in passing iron ore mixed with carbonaceous material over a non-heating supporting bed, in a reducing chamber and heating the mixture by heat radiated thereto from a source of heat out of contact with the mixture.

1,452,628. CONCRETE FORM. DAVID E. TINGLEY, Marshall, Ill. Filed Feb. 4, 1922. Serial No. 534,058. 3 Claims. (Cl. 25—131.5.)

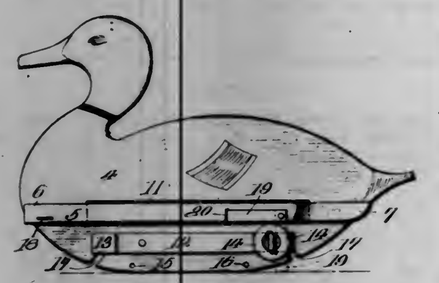
3. A concrete form comprising, in combination, a closed figure formed of flat bars each having a plurality of holes therein some of which are adapted to be brought into registry, readily removable connecting means spanning said bars and having perforations, a pin passing through said means and registering openings whereby the size of the figure may be modified by bringing chosen holes in said bars into registry, form boards supported by said closed figure, flanges upon said boards, each flange forming an acute angle with the plane of the board whereby the boards may be used for internal or external forms, loops secured to certain of said boards, and rods having hooks engaging said loops to retain said boards in place.

1,452,629. BERRY-PICKING MACHINE. PETER Y. VREDER, Toms River, N. J. Filed Aug. 8, 1917. Serial No. 185,124. 9 Claims. (Cl. 56—330.)



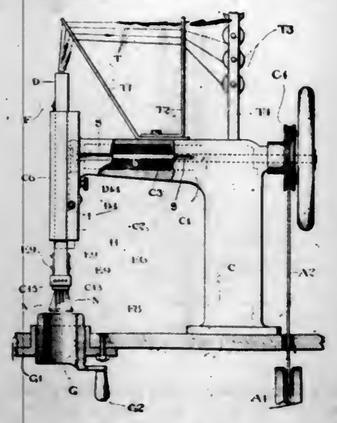
1. A cranberry harvester comprising a receiver, a rotary frame, one or more picker scoops mounted on said

frame so as to strip berries from vines and deliver the berries into said receiver when the frame is rotated, and means for delivering berries from said receiver while the harvester is in operation.



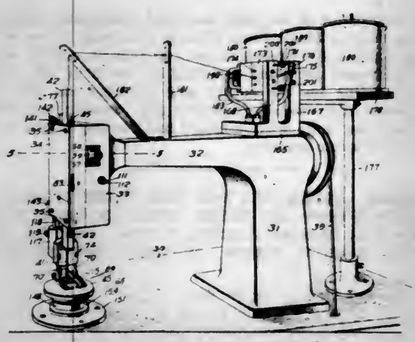
2. A cranberry harvester comprising a rotary drum, a plurality of sets of picker teeth mounted along the periphery of the drum so as to strip berries from vines when rotated therethrough, and a rotary brush for cleaning said teeth at each revolution.

1,452,630. FISHING HOOK. DAVID WALKER, New York, N. Y. Filed Jan. 14, 1922. Serial No. 529,154. 3 Claims. (Cl. 43—34.)



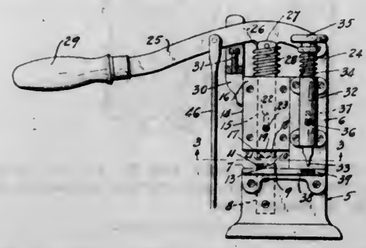
1. In a fishing device, a frame member, a hook slidably mounted thereon, a latch pivotally connected thereto arranged to latch the hook in extended position, a spring to force the latch outwardly after it has been released, a spring to return the hook to normal position after the latch has been released, and means to adjust the movement of the latch.

1,452,631. DECOY. GEORGE E. BARKER, Aberdeen, S. Dak. Filed Sept. 20, 1922. Serial No. 589,368. 4 Claims. (Cl. 43—3.)



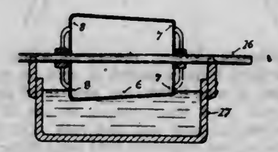
4. A decoy, comprising a profile, having an elongated slot and a float provided with slotted ends, said float insertible through the slot of the profile and the ends of the profile received in the slots of the float and a weighted arm pivotally connected to the profile beneath the float adapted to have one of its ends received between the float and profile for fastening the profile and float together.

1,452,632. SEWING MACHINE. WILLIAM H. BARNETT, Knoxville, Tenn. Filed Sept. 13, 1920. Serial No. 410,039. 28 Claims. (Cl. 112—79.)



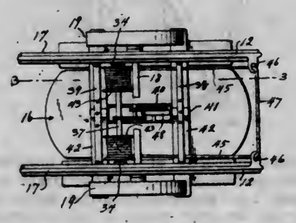
1. In a sewing or embroidering machine, the combination of a fixed framework including an overhanging machine-head, a work support beneath said head, a needle-bar movably mounted and supported upon said head in an upright position a tubular needle carried by said needle-bar point downward and through which thread or the like is delivered and applied to the work, driving connections reciprocating said needle-bar endwise in its bearings on the head of the machine thereby actuating the needle to project loops of thread or the like through and leave said loops projecting from the surface of fabric or other material upon the work support, and means also reciprocating said needle-bar and needle sidewise.

1,452,633. SEWING MACHINE. WILLIAM H. BARNETT, Knoxville, Tenn. Filed Jan. 3, 1921. Serial No. 434,537. 20 Claims. (Cl. 112—79.)



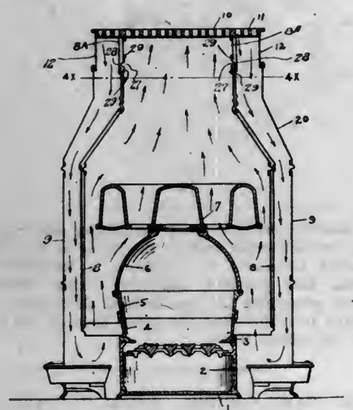
1. In a sewing or embroidering machine, the combination of a work support, a needle bar and feed-bar above the work support, a tubular needle carried by said needle-bar and through the interior of which thread or the like is to be conducted and loops thereof projected by the needle through work on the work support, means imparting to the needle-bar and feed-bar endwise reciprocation toward and from the work and sidewise backward and forward movement, and a feed-member pivotally supported from said feed-bar for engagement with the upper surface of the work on the work support.

1,452,634. WIRE-INSULATION CUTTER AND STRIPPER. BENJAMIN FRANK T. BELL, Taunton, Mass. Filed Aug. 23, 1922. Serial No. 583,813. 1 Claim. (Cl. 81—9.5.)



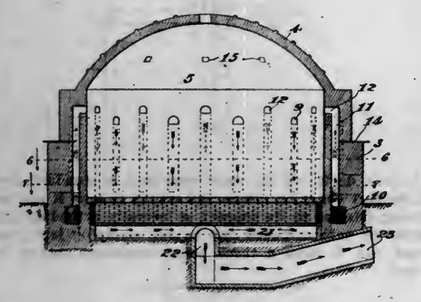
A wire insulation cutter and stripper comprising a base member having a socket in its upper portion, a stationary cutter mounted in said socket, a bracket carried by the base and extending over a portion of the top of the base, said bracket being provided with a socket, said socket terminating above the stationary cutter, a movable cutter slidable in said socket, the confronting edges of said cutters being sharpened, the central portion of each cutter being provided with a recess, said recesses coacting to receive a wire, an operating lever pivoted to the bracket, the opposite end of said movable cutter being pivotally connected to the lever, and means carried by the bracket for limiting the movement of the lever and the movable cutter.

1,452,635. METHOD OF ENAMELING. EUGENE BERNINGHAUS, Cincinnati, Ohio. Filed June 10, 1918. Serial No. 239,243. 3 Claims. (Cl. 91—73.)



2. The method of producing enameled chair sections which comprises applying an annular coating of fused enamel to the exterior of an annular sheet metal chair section having inwardly turned opposite edges by rotating said section with its exterior surface including portions of said inwardly turned edges in contact with a bath of fused enamel.

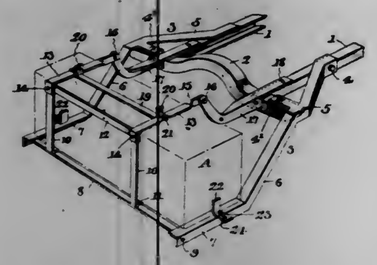
1,452,636. TOY VEHICLE. THOMAS BOWDEN, Forest City, Pa. Filed Aug. 26, 1922. Serial No. 584,469. 2 Claims. (Cl. 280—8.)



1. In combination with a vehicle embodying a dirigible steering element, of a tow rope mounting for the vehicle including a shaft extending transversely of the dirigible element having its ends rotatably mounted in bearings carried thereby, a spring motor engaged with said shaft, drums carried by said shaft adjacent the ends thereof, a flexible towing element having its ends secured to said drums, and means for supporting the flexible element at spaced points spaced forwardly of said shaft.

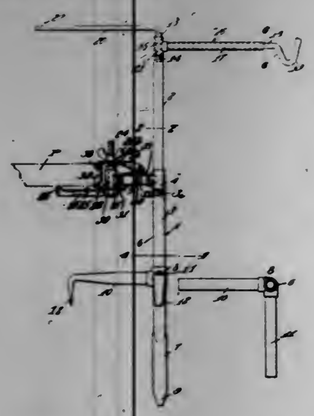
1,452,637. CONVERTIBLE ONE-PIPE FURNACE. JOHN DE VRIES, Geneva, N. Y., assignor to Phillips & Clark Stove Co., Inc., Geneva, N. Y., a Corporation of New York. Filed Apr. 13, 1921. Serial No. 461,047. 3 Claims. (Cl. 126—90.)

1. In a furnace the combination of an inner and an outer shell, said inner shell having double walls, an annular strip having a bead formed thereon overlapping the upper ends of the double walls of said inner shell, an upwardly projecting flange formed by said annular strip, an extension casing adapted to engage said flange and extend said inner casing, a register supported above said inner extension casing and a removable extension adapted to be mounted on said outer shell and extending to said register.



1,452,638. KILN. ROBERT J. DYER, Oakland, Calif. Filed July 11, 1921. Serial No. 483,735. 1 Claim. Cl. 25—135.)

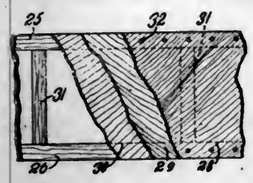
A cylindrical kiln comprising a main wall having a smooth inner surface, a dome supported thereby, said main wall provided interiorly with a plurality of vertical flues each communicating at its upper end with the interior of the kiln, said wall being formed interiorly of its base with an annular duct with which the lower



ends of alternate flues connect, said wall being further provided interiorly with a plurality of firepots opening at the exterior of the wall and one associated with alternate flues, and an outlet beneath said kiln connecting with said duct.

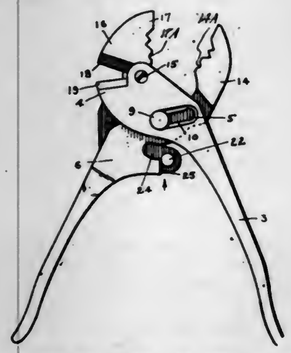
1,452,639. VEHICLE TRUNK RACK. ORLANDO G. HOLWAY, Chippewa Falls, Wis. Filed Feb. 9, 1922. Serial No. 535,176. 7 Claims. (Cl. 224—29.)

4. A vehicle article support comprising side members attached at their front ends to the frame of the vehicle, and having horizontal rear portions, a transverse bar connecting said portions, standards rising therefrom, means for connecting the standards at their upper ends, and means for connecting the upper ends of the standards to the vehicle frame.



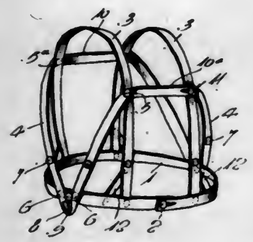
1,452,640. CAMP COOKER. SAMUEL C. HULICK, Spokane, Wash. Filed May 6, 1922. Serial No. 558,949. 3 Claims. (Cl. 126—30.)

1. In a device of the class described, a standard having support engaging means and means to hold it against turning relative to its support, a laterally extending arm carried by said standard and having clamping jaws, and a pan rest to form a three point suspension means for a pan.



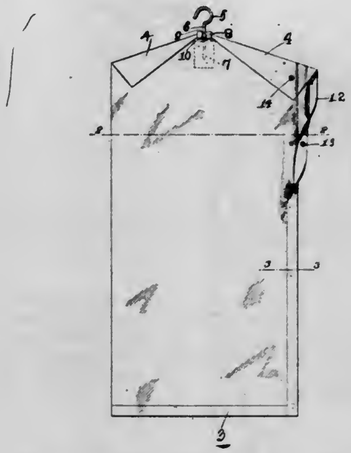
1,452,641. AEROPLANE WING. JAMES M. H. JACOBS, Dayton, Ohio, assignor, by mesne assignments, to Dayton-Wright Company, Dayton, Ohio, a Corporation of Delaware. Filed Sept. 20, 1918. Serial No. 254,952. 6 Claims. (Cl. 244—31.)

1. In an aeroplane wing frame, a wing spar comprising top and bottom sections spaced apart by struts, side sections cooperating therewith, said side sections consisting of a plurality of veneers, the grain of the



veneers running at an angle with the axis of the spar, whereby the veneer fibers act after the manner of brace wires in a simple truss.

1,452,642. COMBINATION PLIERS. FRANK J. KRATING, Rochester, N. Y. Filed Apr. 6, 1921. Serial No. 459,145. 11 Claims. (Cl. 7—3.)



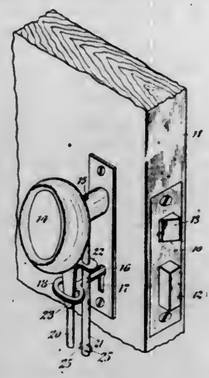
3. In combination pliers, the combination of a pair of levers, a third lever mounted to rock on one of said pair of levers, a cam formed on said third lever, a pin carried on said third lever, means on one of said pair of levers to engage said cam and rock said third lever in one direction, and means on said same lever to engage said pin and move said third lever in the other direction.

1,452,643. SUSPENDERS FOR CHILDREN'S CLOTHES. CORA ETHEL KELLER, Springfield, Mo. Filed Oct. 24, 1921. Serial No. 509,827. 4 Claims. (Cl. 241—12.)

1. A garment supporter of the class described comprising a waist-encircling band, shoulder straps connected to said band, and weight-distributing strap members connected to the shoulder straps at points adjacent the upper portions of the back and chest of the wearer, said strap-members being connected to said band intermediate their ends at points substantially diametrically opposite one another.

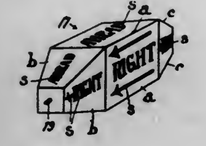
1,452,644. GARMENT BAG. FREDERICK W. KENNEDY, Shelbyville, Ind., assignor to The Kennedy Car Liner & Bag Co., a Corporation of Indiana. Filed Dec. 12, 1921. Serial No. 521,793. 3 Claims. (Cl. 206—7.)

1. The combination with a bag, of means for supporting the bag comprising a hook the shank whereof passes through the top of the bag, a loop at the end of the shank within the bag, reinforcements on the walls of the bag opposite the loop, and means passing through said reinforcements and straddling the shank to prevent lateral displacement.



1,452,645. PISTON RING AND METHOD OF MAKING SAME. PAUL M. KLEIN, Cedarhurst, N. Y. Filed Dec. 26, 1918. Serial No. 268,437. 24 Claims. (Cl. 29—156.6.)

1. A double piston ring contacting under tension coinically between its faces for almost its entire circumference and expanding evenly under tension in radial direction.



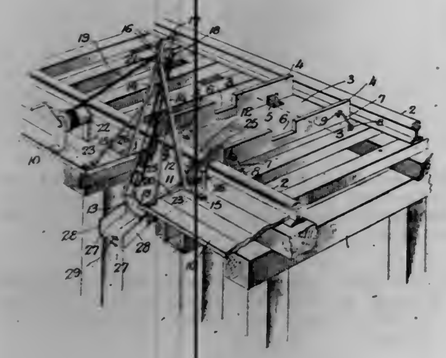
1,452,646. KEY FASTENER. CLYDE B. LOVELAND, Buffalo, N. Y. Filed Mar. 5, 1923. Serial No. 622,761. 2 Claims. (Cl. 70—65.)

1. A key fastener comprising a carrier constructed of spring wire in the form of an inverted U and adapted to engage its bow with the top of the shank of a door knob while the legs of the same hang on opposite sides of said shank, the lower end of one of said legs being provided with a stop while the lower end of the other leg is unprovided with a stop, and a keeper slidable vertically on said carrier and having an upper horizontal head which is provided with openings receiving said legs and a tongue projecting downwardly from one edge of said head and adapted to engage with the eye of a key for preventing the latter from turning, one end of said head being adapted to engage said stop and prevented from being moved downwardly off the same and the

other end of the head being free to be slipped off and on the lower end of the other leg for the purpose of enabling the carrier to be applied to and removed from said shank.

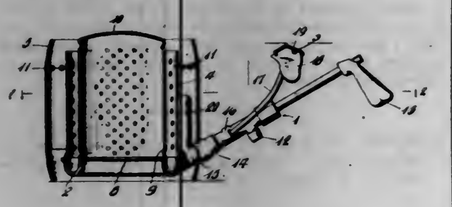
1,452,647. SAFETY SIGNAL FOR VEHICLES. CHARLES M. MEAD, Los Angeles, Calif. Filed May 17, 1921. Serial No. 470,407. 13 Claims. (Cl. 116—48.)

1. A safety signal for vehicles comprising front and rear signal boxes; tumblers revolvably mounted in the front and rear signal boxes having center faces parallel to the axes of the tumblers and other faces inclining from the center faces toward the tumbler axes; a shaft housing connecting said boxes; a rock shaft in said housing; means connecting said shaft and said tumblers; a sector attached to said housing and having notches; a lever for actuating said rock shaft to move said tumblers; and means on said lever adapted to engage the notches on said sector to hold the tumblers in predetermined positions.



1,452,648. NECKTIE HOLDER. JAMES S. MEAD, Cincinnati, Ohio. Filed Mar. 22, 1920. Serial No. 367,741. 3 Claims. (Cl. 2—84.)

1. In a device of the character described, the combination with a plate formed to present the facial contour of a four-in-hand knot, of a tongue secured to the upper portion of said plate and spaced therefrom



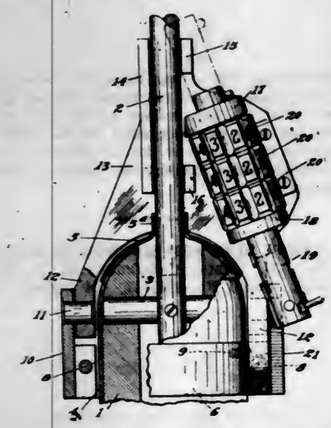
to extend downwardly behind the plate and free therefrom below, whereby when the four-in-hand knot of the tie is formed, the tongue may be inserted into the side loop of the tie and the fabric folded over, the opposite side loop of the knot secured over the free edge of the facial contour member, and the free end of the tie secured under the tongue.

1,452,649. UNLOADING MECHANISM FOR FREIGHT CARS. CHARLES H. MONTGOMERY, Fredericksburg, Va. Filed May 20, 1922. Serial No. 562,329. 5 Claims. (Cl. 193—17.)

1. The combination with a freight-car trestle having openings at the sides thereof and carrying two parallel railroad rails, of discharge-chutes tiltably disposed in said openings, a platform-trough disposed transversely on said trestle between said railroad rails and having its ends disposed adjacent the inner ends of said chutes, and flexible guard strips secured to the adjacent ends of said platform-trough and chutes.

1,452,650. BURNER. CLYDE W. MUMMERY, Richmond, Mich. Filed Nov. 2, 1922. Serial No. 598,578. 2 Claims. (Cl. 158—86.)

1. A burner comprising a vaporizing trough, spaced perforated walls mounted thereon and forming a combustion chamber above the trough, an inlet pipe to the trough, and a rod projecting upwardly from the inlet pipe, beside the outer of said walls, and serving to conduct heat to said inlet pipe.

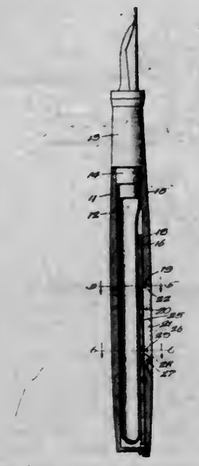


1,452,651. TARGET FINDER FOR FIREARMS. CHARLES H. NORBLIN, New York, N. Y. Filed Oct. 15, 1921. Serial No. 507,904. 9 Claims. (Cl. 240—8.4.)

1. A target finder for fire arms, consisting of a clamping plate, a rod having sliding connection with same, means yieldingly holding the rod against sliding move-

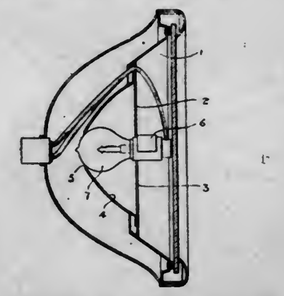
ment in the clamp, and an electric flash lamp or light secured to and carried by the rod.

1,452,652. PERMUTATION LOCKING MECHANISM FOR GEAR-SHIFTING LEVERS. JOHN PFEIFER, Springfield, Ohio, assignor to The Springfield Auto Lock Company, Springfield, Ohio, a Corporation of Ohio. Filed Dec. 5, 1921. Serial No. 520,099. 9 Claims. (Cl. 70—128.)



1. In a device of the character described, the combination, with a gear shifting lever, of a movable support having embracing parts for said lever when aligned therewith, and mechanism carried entirely by said support for locking the same to said lever.

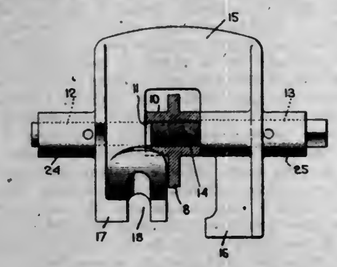
1,452,653. FOUNTAIN PEN. ARTHUR F. POOLE, Kenilworth, and GEORGE B. VERNIER, Jr., Chicago, Ill., assignors to The Wahl Company, Wilmington, Del., a Corporation of Delaware. Filed June 11, 1920. Serial No. 388,140. 1 Claim. (Cl. 120—46.)



In a fountain pen, a casing forming a hollow handle and having an opening therein, an ink sack within said casing, a presser bar for compressing said ink sack, a flanged lever pivotally mounted on said casing so as to lie within said opening when said ink sack is in normal condition, and means for maintaining said lever in the above mentioned position, said means including a locking element consisting of a unilinear bar supported by said casing so that it lies within said opening with its sides parallel to the sides of the opening, inwardly projecting bosses oppositely arranged on the flanges of said lever, said bosses acting in conjunction with the bar to spread the flanges of the lever when the lever is forced

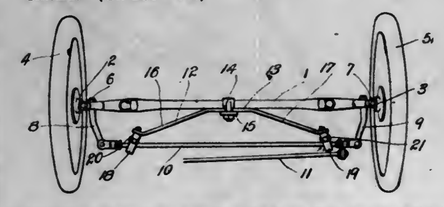
toward its closed position within the opening, the bar having a detent portion located in the path of movement of said bosses so as to allow the flanges of said lever to press said bosses inwardly toward each other

and lock them behind said bar when the lever has reached its closed position, the lever with its flanges and bosses substantially enclosing the detent portion of said bar when the lever is in said closed position.



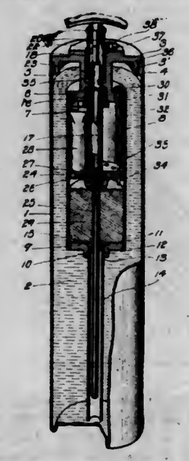
1,452,654. AUTOMOBILE LAMP. ALBERT H. REEKS, Toronto, Ontario, Canada. Filed May 23, 1921. Serial No. 471,964. 1 Claim. (Cl. 240—41.)

In an automobile headlight, the combination with the lamp casing, of a deep convergent rim extending inwardly from the glass, a rigid circular plate secured at the inner edge of said rim, said plate having a semicircular opening in the lower half, a reflector arranged back of said plate, and a lamp supported from the upper portion of said plate and extending into close proximity to said reflector.



1,452,655. FILLING-CARRIER SUPPORT FOR LOOMS. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Apr. 18, 1922. Serial No. 554,789. 4 Claims. (Cl. 139—85.)

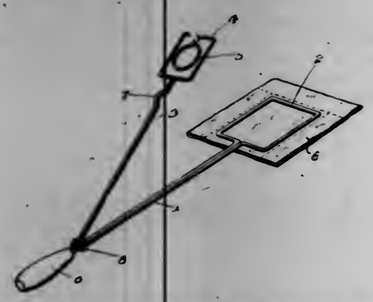
1. In an automatic filling replenishing loom a hopper plate having an internal threaded boss, a journal shaft having end bearing sections and an intermediate threaded section fitting the threaded boss, the diameter of one bearing section being less, and the diameter of the other bearing section being greater, than the internal diameter of the threaded boss whereby when the shaft is screwed into the boss it is locked in place, and a yoke-shaped frame, one arm of which constitutes the filling carrier



support, the said frame straddling the hopper plate boss and provided with aligned bearings on its arms journalled respectively on the bearing sections of the journal shaft.

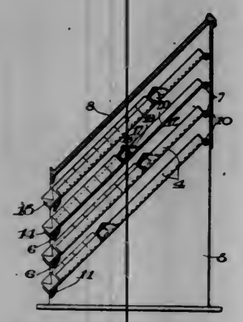
1,452,656. STEERING - MECHANISM - STABILIZING DEVICE. WILBER D. RICHARDSON, Rosedale, Kans., assignor of one-half to Ralph Bryant, Kansas City, Mo. Filed Dec. 12, 1921. Serial No. 521,709. 5 Claims. (Cl. 280—94.)

5. A stabilizer for steering devices for motor vehicles comprising a bar having oppositely disposed, inclined, yielding arms, and means on the arms for direct frictional engagement with the side of the connecting rod of the steering mechanism to exert pressure thereagainst in a direction at right angles to the length of the rod.



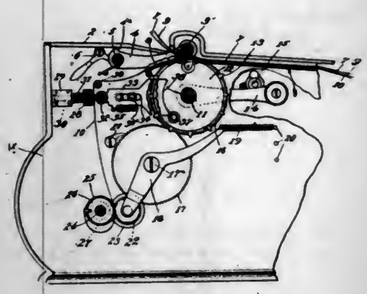
1,452,657. FIRE EXTINGUISHER. LUTHER ROBINSON, Eldorado, Kans. Filed Apr. 1, 1921. Serial No. 457,629. 1 Claim. (Cl. 169—32.)

A fire extinguisher comprising a liquid container, a gas generating chamber rigid with the container and



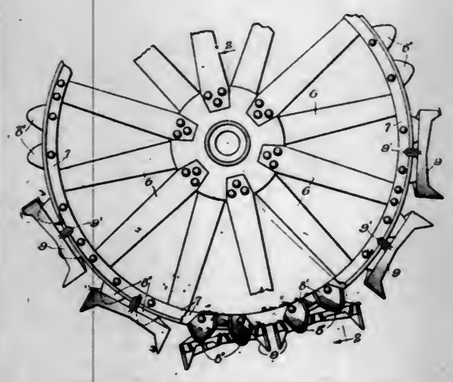
provided with a stuffing box, a longitudinally movable tube in the stuffing box having one end accessible from the exterior of the container and the other end extending into the chamber, a piston carried by the tube within the chamber, a liquid-containing envelope normally located between the piston and one end of the chamber whereby a movement of the piston in one direction will disrupt the tube to discharge its contents into the chamber, a second chemical within the chamber adapted to combine with the first to generate gas, the chamber being adapted to communicate with the main body of the container through an opening therein whereby the generated gas can exert pressure against the liquid in the container, a tube effecting communication between one end of the first named tube and the main portion of the container outside of the chamber, and a nozzle connected to the other end of the tube for discharging the liquid from the container to atmosphere.

1,452,658. BATH BRUSH. PAUL SCOTT, Waynoka, Okla. Filed Dec. 12, 1921. Serial No. 521,746. 1 Claim. (Cl. 15—147.)



A cloth holder comprising wire elements bent to provide rectangular loops centrally of their ends, one of said wires being further bent to provide a circular loop within one of the rectangular loops, a support holding the free ends of the wire elements, the free ends of said elements being curved at the lower end, a ring member slidably mounted on said wire elements for locking and releasing said loops.

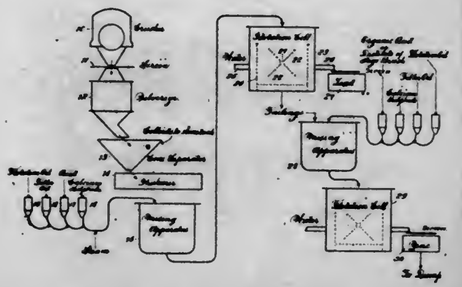
1,452,659. DISPENSING DEVICE. JOHN J. SEELMAN, Milwaukee, Wis. Filed Jan. 30, 1922. Serial No. 532,786. 4 Claims. (Cl. 211—9.)



1. In a dispensing device, the combination, of a chute arranged to permit the removal of an article from a stack of articles therein, a follower for feeding the articles along the chute to a position for removal, and means operated by the movement of the follower for producing a warning signal.

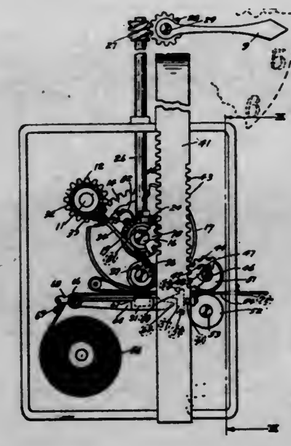
1,452,660. MANIFOLDING REGISTER. JOHN Q. SHERMAN, Dayton, Ohio. Filed Jan. 21, 1921. Serial No. 438,983. 10 Claims. (Cl. 282—16.)

1. In a manifolding register or the like, the combination with a writing table, a single means for feeding a plurality of webs of paper over said writing table, said means being adapted to feed all of said webs alike, an operated roll for storing one of said webs, said roll operatively connected to said feeding means, and an element adapted to clamp and hold said record strip against movement at a point between the feeding means and the operated roll.



1,452,661. METAL WHEEL. LOUIS E. SLAUSON, Rock Island, Ill., assignor to Grid-Iron-Grip Company, Rock Island, Ill. Filed Dec. 11, 1920. Serial No. 429,846. 3 Claims. (Cl. 305—13.)

1. A wheel comprising a hub, a pair of rings spaced apart, spokes secured at their inner ends to the hub and at their outer ends to the rings, outwardly projecting teeth located between and connecting the rings at intervals, and traction shoes loosely engaged with said rings in cooperative relation with the teeth.



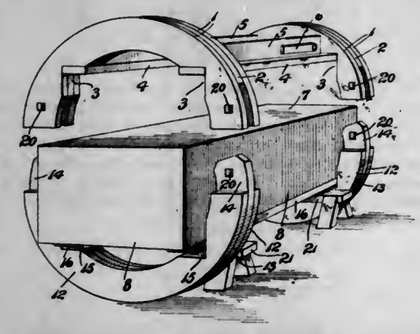
1,452,662. METHOD OF RECOVERING ZINC FROM LEAD-ZINC ORES. REINOLD V. SMITH, Eureka, Utah. Filed Mar. 28, 1918, Serial No. 225,294. Renewed July 22, 1922. Serial No. 576,866. 9 Claims. (Cl. 83—85.)

1. The method of separating and recovering lead and zinc from lead zinc ores consisting in sulphidizing the crushed ore in a slightly alkaline pulp, treating the same to recover the lead, resulphidizing the tailings in a

pulp rendered acid by an organic acid and recovering the zinc by flotation.

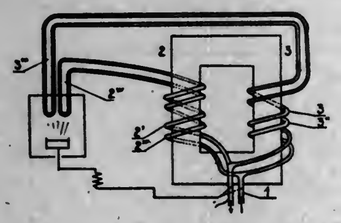
1,452,663. RECORDING DEVICE FOR LIQUID PUMPS. ATHERTON B. SNYDER, Grass Valley, Calif. Filed Oct. 20, 1921. Serial No. 508,952. 4 Claims. (Cl. 234—34.)

1. A recording device for a machine dispensing liquid through a faucet comprising a valve for the faucet, a control lever for the valve extending within operative proximity of the mouth of the faucet tending to normally close it but adapted to open it when struck by the receptacle receiving the oil, a recording wheel, means actuated by the dispensing mechanism for disposing the wheel in an active position and means actuated by the control lever for causing the record to be printed when the lever closes the valve and for returning the recording wheel to its initial position when it opens the valve.



1,452,664. CABLE CHAIR. CALVIN E. STROUT, Portland, Me. Filed Oct. 21, 1921. Serial No. 509,450. 1 Claim. (Cl. 105—150.)

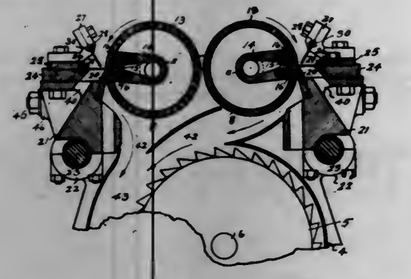
A trolley chair for telephone or other line men consisting of a flat elongated seat, a suspending frame secured to each end of said seat, said frame being composed of an upright strap secured to the seat, the lower end having an offset for enclosing and journalling the lower truck, the upper end of the frame being bent over to enclose and form a journal recess for the upper truck, the central portion being swelled or bent outward to



form a stiffening projection and the strip terminating in a lateral hook, a brace secured to the bottom and to the top and to said stiffening projection.

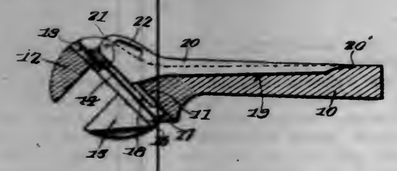
1,452,665. MOLD-HANDLING APPARATUS. JOSEPH S. TINDALL, Cedar Springs, Mich. Filed Aug. 14, 1922. Serial No. 581,688. 6 Claims. (Cl. 25—130.)

1. In a construction of the character described, two semi-circular segments spaced apart, members connecting the segments and holding them in spaced apart relation, said segments and members being adapted to hold a concrete receiving form, two additional semi-circular segments, means for detachably connecting said additional segments, one to each of the first segments to complete the circle and make rollers for traversing a plane surface, substantially as described.



1,452,666. DEVICE FOR THE COOLING OF ELECTRIC APPARATUS BY THE CIRCULATION OF LIQUID THROUGH THE CONDUCTORS. PIERRE MARIE GABRIEL TOULON, Paris, France, assignor to Bureau d'Organisation Économique, Paris, France. Filed May 2, 1922. Serial No. 558,031. 2 Claims. (Cl. 175—363.)

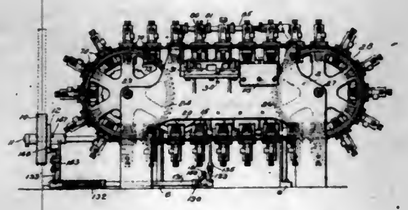
2. The combination with a transformer core, of a winding inductively related thereto, said winding com-



prising a two-part hollow conductor having a plurality of points of like potential located intermediate its length, a vapor rectifier unit connected between said points of like potential and points of opposite potential on said winding, and common cooling means including said hollow conductor for said transformer and said rectifier.

1,452,667. COTTON GIN. HENRY E. WERNER, Houston, Tex. Filed May 24, 1921. Serial No. 472,220. 14 Claims. (Cl. 19—51.)

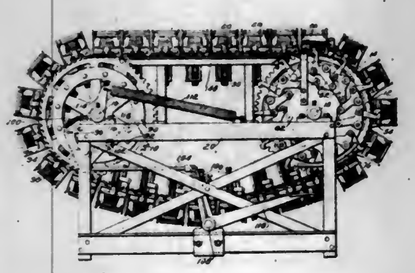
2. A cotton gin, including a supporting frame, a rotatable roller mounted thereon, an unyielding, but adjustable stripper bar arranged to co-operate with the roller, a reciprocating finger bar, and fingers carried by said bar and arranged to force the cotton seed from the lint held between the roller and bar, said fingers forming a griddle through which the freed seed may fall.



1,452,668. WRENCH. ARTHUR H. WETTWER, Rice Lake, Wis. Filed Dec. 12, 1921. Serial No. 521,821. 1 Claim. (Cl. 81—151.)

A wrench comprising a shank having a head on one end formed with a stationary jaw, said shank having a longitudinal groove formed in one of the narrow faces thereof, said groove being enlarged at one end and entering the stationary jaw, a channel formed longitudinally in the outer face of the head, said channel intercepting the enlarged end of the groove at an angle thereto, a movable jaw slidable in said channel, and a tapered lever movably supported in the groove of the shank, the lower face of the lever snugly fitting the bottom of the groove, the upper face of the lever being slightly above the edges of the groove to be gripped with the shank to engage the lever with the movable jaw.

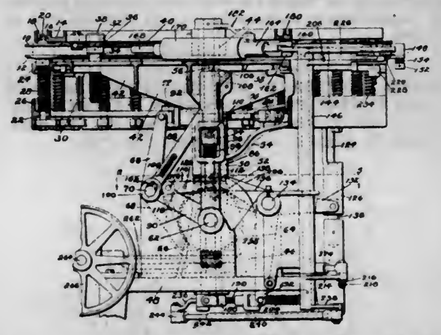
1,452,669. HEEL-BUILDING MACHINE. ERASTUS E. WINKLEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 20, 1915, Serial No. 67,814. Renewed July 10, 1922. Serial No. 573,917. 50 Claims. (Cl. 12—50.)



1. A machine of the character described, having in combination, a traveling carrier, devices, for operating upon heel blocks, sustained by said carrier, means, constantly presented in receiving position, on which lifts are assembled into heel blocks and operative to transfer each block as assembled to one of said devices on the carrier, and means to operate the carrier to present new devices to said means for each operation thereof.

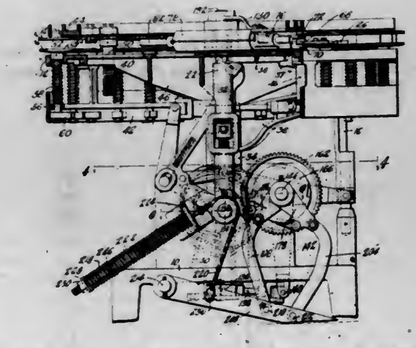
13. A heel building machine having, in combination, an endless series of heel block presses arranged for simultaneous, intermittent travel, and means for loading a plurality of said presses with heel blocks during an interval of rest.

22. An automatic heel block pressing machine having, in combination, an endless series of heel block presses arranged to be moved simultaneously in intermittent steps, means for loading a press of the series, and means for concurrently unloading the next following press.



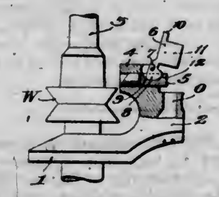
1,452,670. HEEL PRESS. ERASTUS E. WINKLEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 19, 1916, Serial No. 137,837. Renewed July 10, 1922. Serial No. 573,918. 29 Claims. (Cl. 12—48.)

1. A press having, in combination, a plurality of clamps comprising each a relatively stationary member and a relatively movable member; means for supporting and moving the clamps, as an endless series, past a work-receiving point, each clamp, when at said point, being positioned with its relatively movable member below said stationary member and in position to have an article laid upon its face; and means for opening and closing each clamp in turn when adjacent said point, by movement of the relatively movable clamp-member from and towards the relatively stationary clamp-member.



1,452,671. HEEL PRESS. ERASTUS E. WINKLEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 23, 1917, Serial No. 156,824. Renewed July 10, 1922. Serial No. 573,919. 73 Claims. (Cl. 12—48.)

1. A heel-press having, in combination, a carrier rotatable about a vertical axis; a series of heel clamps supported at the periphery of the carrier and each comprising an upper member and a lower member between which a heel may be introduced in horizontal position, and means

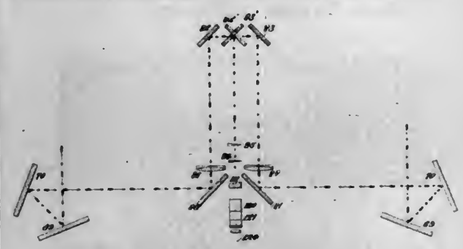


movable in substantially the horizontal plane of the carrier for introducing heels to the clamps and ejecting them therefrom.

1,452,672. HEEL-PRESS. ERASTUS E. WINKLEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 27, 1918. Serial No. 231,160. 20 Claims. (Cl. 12—48.)

10. A heel-press having, in combination, a heel-clamp for engaging the tread face and heel seat face of a heel, an ejector for discharging a heel laterally from said clamp, means for advancing and retracting said ejector, and auxiliary means, set during the retracting movement and released during the advancing movement of said ejector, for quickly ejecting a heel therefrom.

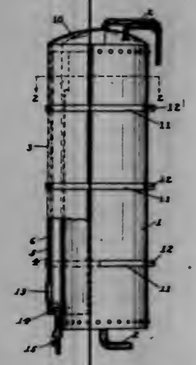
1,452,673. COMBINED DOFFER GUARD AND OIL-WELL COVER. WILLIAM ADKINSON, Providence, R. I., assignor to H. & B. American Machine Company, Pawtucket, R. I. Filed June 28, 1922. Serial No. 571,509. 10 Claims. (Cl. 118—65.)



1. In combination with a bolster having a spindle therein and an upright post having an oil duct for the spindle bearing, a housing on the upper end of the post, a horizontal latching pin slidable in the housing to have its free end disposed over the spindle whirl, said pin having a groove, a member hinged to the housing and having a depending part forming a cover which engages on the upper end of the post to cover the oil duct, and a cam on the member engaging in the groove of the latching pin to move the latter to unlatched position, the depending part of said member engaging the inner end of the pin to move the latter to laching position.

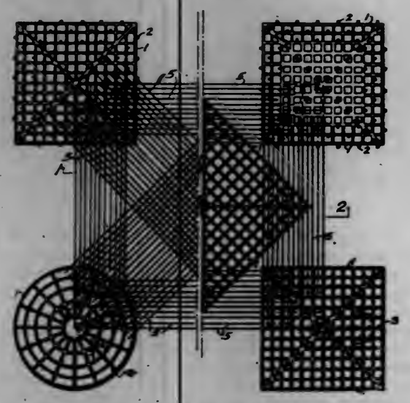
1,452,674. CHECK PROTECTOR. ALBERT EDMUND BARNES, Chicago, Ill., assignor, by mesne assignments, to Kritikson Bros., Inc., Chicago, Ill., a Corporation of Illinois. Filed Mar. 22, 1919. Serial No. 284,464. 7 Claims. (Cl. 120—7.)

1. A fountain pen cap having a roller provided with mutilating elements carried by the cap, means whereby the roller may be exposed or enclosed and a clip provided upon said means.



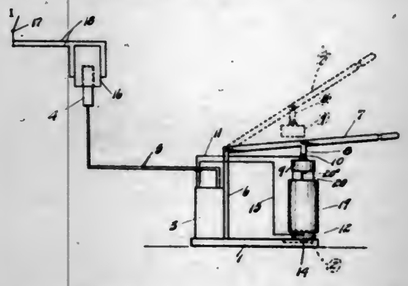
1,452,675. OPTICAL INSTRUMENT. FELIX H. CARSSOW, Vallejo, Calif. Filed Mar. 20, 1919. Serial No. 283,719. 24 Claims. (Cl. 88—2.7.)

1. In a range finder, a pair of optical squares spaced apart from each other a distance representing the base line of the instrument, an eye-piece located between the same, said optical squares receiving light rays from an observed object and reflecting the same at right angles to their original directions and toward each other along the base line, two oppositely tilted 90° reflectors arranged to change the course of the light rays received from the optical squares to separate paths lying in vertical and substantially parallel planes and extending away from the observer and inclined in opposite directions from the horizontal, objective lenses adjacent to the 90° reflectors and through which said light rays pass, double reflecting



surfaces located in the path of the light rays from the 90° reflectors for changing the directions of the separate sets of light rays through 180° and causing the same to travel in separate superimposed paths toward the observer, an adjusting prism in the path of travel of one of the sets of light rays from the double reflecting surfaces, a measuring prism in the path of travel of the other set of light rays from the double reflecting surfaces, halving and erecting prisms in front of the eyepiece and through which the two sets of light rays separately pass to form two complementary image fields in the focal plane of the eye-piece.

1,452,676. HOT-WATER-TANK HEATER. CLIFFORD E. COLE, Birmingham, Ala. Filed June 4, 1921. Serial No. 474,972. 3 Claims. (Cl. 263-5.)



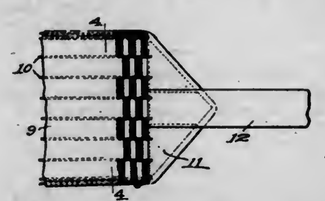
1. A heating attachment for hot water boilers, comprising a concavo-convex jacket, means to attach said jacket to the side of a hot water boiler, flame leak prevention pockets extending along the vertical side edges of said jacket, and a gas burner to deliver products of combustion into the flue space between the jacket and boiler.

1,452,677. REENFORCEMENT FOR REENFORCED-CONCRETE FLAT-SLAB CONSTRUCTION. LOUIS DAVIDSON, New York, N. Y. Filed June 9, 1919. Serial No. 302,946. 2 Claims. (Cl. 72—15.)

1. A flat plate with perforations consisting of holes for use over columns in reenforced concrete flat slab construction, perforated radial and circumferential web members perpendicular to said plate, and a bulb like projection at the edge of said perforated radial member, forming a complete unit for taking the tension in the top of the slab, and increasing the compressive capacity in the bottom of the slab.

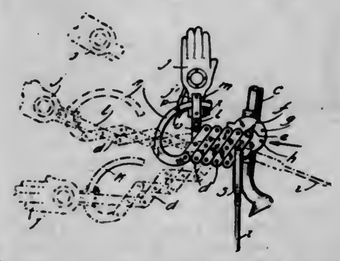
1,452,678. APPARATUS FOR REMOVING THE DIVISION PLATES FROM ICE-CREAM RECEPTACLES. HARRY DILAS, Bay City, Mich. Filed Jan. 12, 1922. Serial No. 528,874. 5 Claims. (Cl. 219—19.)

1. In combination with an ice cream container having a metal division plate therein, and means for directing a flow of electric current through the plate.



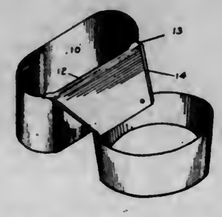
1,452,679. RETRIEVER FOR GOLF BALLS. HENRY W. FISHER, Perth Amboy, N. J. Filed Feb. 21, 1922. Serial No. 538,188. 3 Claims. (Cl. 46—4.)

1. A golf ball retriever including in its structure opposite relatively movable ball-engaging jaws, a spring tending to hold the jaws in proximate ball-engaging position, and a toggle member pivoted at its opposite ends to said jaws and adapted when extended and holding the jaws in remote position, to be swung by pressure exerted upon the ball to be retrieved, allowing said spring to swing the jaws to proximate ball-engaging position.



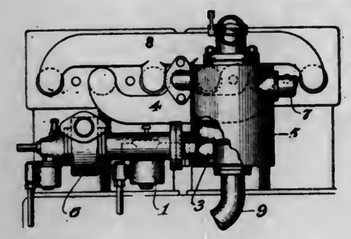
1,452,680. SPIRAL PUTTEE. HORACE M. FOXON, Brockton, Mass., assignor to Lapworth Webbing Company, Stoughton, Mass., a Corporation of Maine. Filed Sept. 28, 1922. Serial No. 591,173. 1 Claim. (Cl. 36—2.)

As an article of manufacture, a woven puttee in which elastic warp threads are woven in it in a stretched condition and spaced at distances apart all the way across the fabric, whereby when the tension is removed these



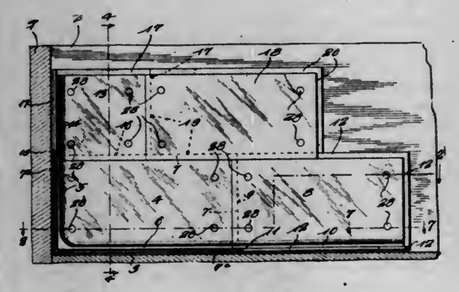
warp threads will contract and gather or shirr the rest of the fabric up between them, said puttee being transversely non-elastic.

1,452,681. AUTO SIGNAL. MOTOZO FUJIMOTO and TETSUJI OKAWA, Portland, Oreg. Filed May 21, 1920. Serial No. 383,279. 2 Claims. (Cl. 177—327.)



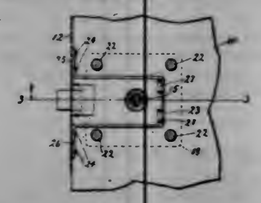
1. In a signal of the character described, a supporting bracket, lazy tongs pivoted to such bracket, a pair of parallel arcuate guide arms carried by the extremity of one member of said lazy tongs, a hand carried by the extremity of the other member of said lazy tongs, guide elements affixed to the wrist of said hand in which said guide rods slide, an electric light carried by said hand, the circuit wires of which are connected to a make-and-break, one element of which has a piece sliding on said guide arms, and a stop for the latter element provided on said guide arms whereby the relative movement of the hand in the latter in one direction closes the electric circuit of said light, and movement in the opposite direction opens said circuit.

1,452,682. DETACHABLE, SWINGING, WASHBOILER APRON. EDGAR GEYER, Silver Creek, Nebr. Filed Sept. 21, 1922. Serial No. 589,591. 1 Claim. (Cl. 68—30.)



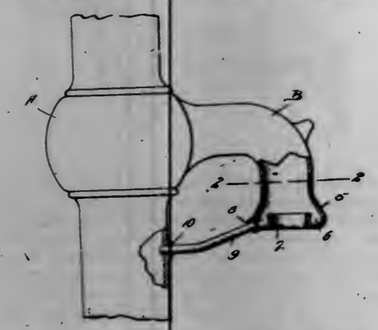
An apron for wash boilers comprising a flat sheet metal body portion having converging opposite lateral edges, the wider end of said body portion having a short extension adapted to engage across the upper edge of a wash boiler, said extension being curved to provide a flange adapted to seat over the upper edge of the wash boiler and to present a rounded deflecting head for preventing the catching thereon of articles being removed from the boiler and the displacement of the apron when in use, said curved flange extending from one curved end of the boiler to the other and terminating in ears which are substantially perpendicular to the plane of the body portion of the apron, said curved flange and ears also being adapted to suspend the apron against the side wall of the boiler when not in use and to engage between the body and the cover of the wash boiler when not in use.

1,452,683. ENGINE-FUEL VAPORIZER. JOHN GOOD, Brooklyn, N. Y., assignor to Good Inventions Co., Brooklyn, N. Y., a Corporation of New York. Filed Oct. 30, 1917. Serial No. 199,262. 9 Claims. (Cl. 48—107.)



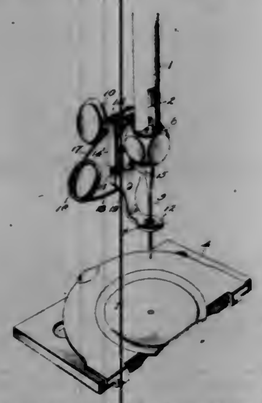
1. Vaporizing apparatus comprising a helical vaporizing passage and means for producing a flow of mixed air and liquid fuel therethrough, said passage having a curvilinear cross-section, the length of the passage and the velocity of flow being such that the liquid fuel separates from the air and travels along the inner side of the passage, and means for applying heat to the inner walls of the helix to directly heat the collected liquid flowing therein to vaporize the same.

1,452,684. GLASS FACING. DAVID HAMILTON, Greensburg, Pa. Filed Aug. 18, 1921. Serial No. 493,470. 7 Claims. (Cl. 72—19.)



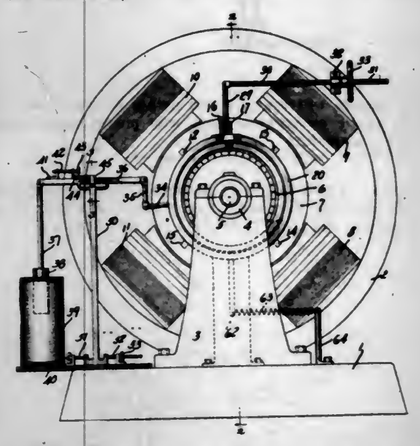
1. A lower corner plate having a laterally extending vertical flange extending throughout the height of one of its ends in a plane at right angles to the sides of the plate, the lower edge of said plate being provided throughout its length with a base flange in a horizontal plane co-extensive in width with and integrally joined to said vertical flange, all edges of said plate, except the relatively long edges of said flanges having tongues extending longitudinally of said edges and integrally joined to each other, said relatively long edges having longitudinal grooves.

1,452,685. DOOR. WILLIAM S. HAMM, Hubbard Woods, Ill., assignor to The Adams & Westlake Co., a Corporation of Illinois. Filed Sept. 4, 1920. Serial No. 408,285. 6 Claims. (Cl. 189—46.)



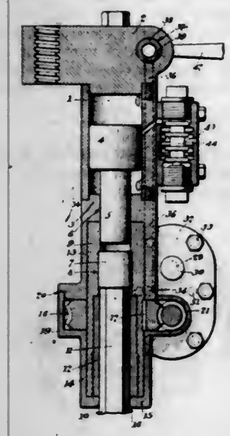
1. A hollow door adapted to receive a mortise-latch casing, and having a shelf within its chamber for supporting such casing.

1,452,686. ANTIDRIP PUMP. HENRY HARMAN and FERRIN C. HARMAN, Custer City, Okla. Filed Jan. 2, 1923. Serial No. 610,134. 2 Claims. (Cl. 103—217.)



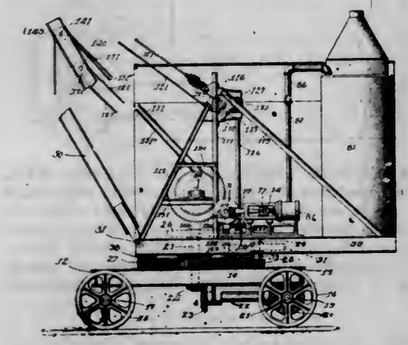
1. The combination with a pump outlet nozzle, of a channel within the outlet end thereof for receiving the pump drippings and means for conveying the said drippings from this channel to the interior of the pump casing.

1,452,687. EMBROIDERING ATTACHMENT FOR SEWING MACHINES. MARTIN HEMLEB, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Apr. 10, 1920. Serial No. 372,759. 5 Claims. (Cl. 112—236.)



5. An embroidering attachment including in combination, a needle-clamp having a lateral boss, a guide-block secured to said clamp and formed with a guideway, a needle stripper slidingly mounted in said guideway in engagement with said boss by which it is maintained in the guide-way, and a spring for yieldingly holding said stripper depressed relatively to the needle-clamp.

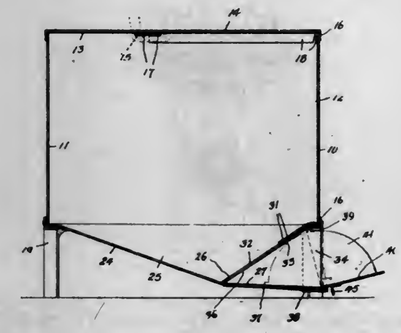
1,452,688. VOLTAGE-CONTROLLING DEVICE FOR DYNAMOS. GROVER C. HUBBLE, Bonners Ferry, Idaho. Filed Dec. 2, 1921. Serial No. 519,493. 6 Claims. (Cl. 171—221.)



2. An adjusting means for regulators of dynamos, which comprises a brush, a brush support, a rocking lever associated with said support to move the same, means for rocking the lever, an adjustable fulcrum connected to said lever, and a pedestal having an elongated slot in its upper end to receive the adjustable fulcrum.

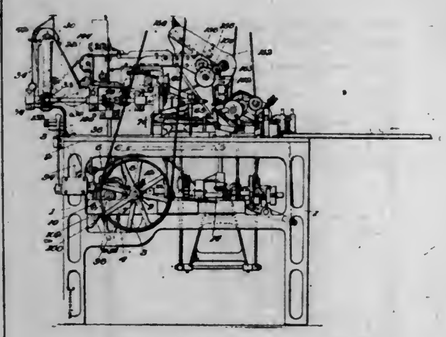
1,452,689. FLUID-OPERATED DRILL. CHARLES A. HULTQUIST, Los Angeles, Calif. Filed Apr. 21, 1919. Serial No. 291,510. 1 Claim. (Cl. 121—7.)

In a drill, the combination of a cylinder, heads closing the opposite ends of the cylinder, one of the heads having an opening, a plunger in the cylinder having a portion of reduced diameter passing through the opening, a bearing formed integral with the head having the opening, a tubular shaft having one end journaled in said bearing, an anvil reciprocatively mounted in the bore of the tubular shaft, the reduced plunger portion projecting into the bore of the shaft when the plunger is moved toward said anvil, a bushing screw threaded into the shaft and having a bore of angular cross section for the reception of a drill steel, a worm gear secured to the shaft, a housing for the worm gear fitting gainst the bearing, a second shaft journaled in the housing, a worm on the shaft in mesh with the worm gear, a spur gear on the second shaft inside of the housing, a third shaft journaled in the housing, a spur gear on the third shaft in mesh with the first spur gear, the housing having a port to admit an operating fluid, one of the heads having a throttle valve chamber and there being a duct connecting the port with said chamber, a throttle valve in the chamber having ports, a second valve chamber, and a fluid operated valve in the second valve chamber controlling the flow of operating fluid to and from the cylinder, there being a duct connecting the two valve chambers, the throttle valve ports being positioned so that when the throttle valve is in one position both ducts will be closed and so that when the throttle valve is in a second position the second duct will communicate with one of the valve ports and so that when the throttle valve is in a third position the second duct will communicate with the last mentioned valve port and the first duct will communicate with the other valve port.



1,452,690. POWER-OPERATED CRANE. EDMUND JOSEPH KANE, Chicago, Ill. Filed Nov. 1, 1920. Serial No. 420,976. 14 Claims. (Cl. 212—38.)

1. In a locomotive crane, the combination with a truck body, of a swing body pivotally connected therewith, and means for operating the swing body in relation to the truck body, comprising a gear rigidly connected to the truck body, a shaft journalled in the swing body and carrying a gear engaging the aforesaid gear on the truck body, a second shaft extending on the axis of the pivotal connection between the swing body and the truck body, a power shaft, a shaft carrying a plurality of cable drums operatively connected with said power shaft, a shaft operatively connected with said power shaft, and a shiftable gear on the last said shaft adapted to engage in different positions of adjustment a gear on the aforesaid shaft on the pivotal axis of the swing body or a gear on the aforesaid shaft which carries the gear for operating the swing body in relation to the truck body gear.



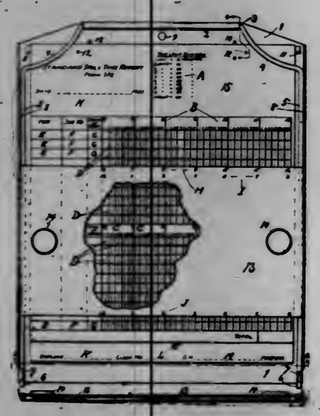
1,452,691. DISPENSING RECEPTACLE. OTTO KARTZMARK, West Haven, Conn. Filed June 21, 1922. Serial No. 569,890. 10 Claims. (Cl. 126—283.)

4. In a dispensing receptacle, the combination of a bottom structure including a plate and a chute, a reinforcing frame bounding the mouth portion of the chute, the front end of the bottom plate resting upon the frame, the frame being provided with a pair of ears adjacent to said bottom plate, and a closure for the chute comprising

a plate portion whose lower corners are interengaged with said ears and whose lower edge bears consequently upon the upper surface of the plate.

1,452,692. MACHINE FOR PACKAGING ARTICLES. IGNACIO LAZAGA, Salem, Va. Filed Dec. 19, 1918. Serial No. 267,511. 17 Claims. (Cl. 93—4.)

7. In a wrapping machine, the combination of a device for counting the articles to be wrapped, an inside wrapper feeder, an outside blank feeder, supports for holding said inside wrapper and said outside blank after they are fed, folding devices between said supports for folding the inside wrapper, means for transferring the counted charge from the counting device to a position in front of the inside wrapper as it is located on its support, and a plunger comprising a pair of plates arranged to receive a charge laterally between them, said plates moving with said counted charge against the inside wrapper to partially fold the latter around the charge and to then move the partially wrapped charge against the outside blank to fold the latter around it.



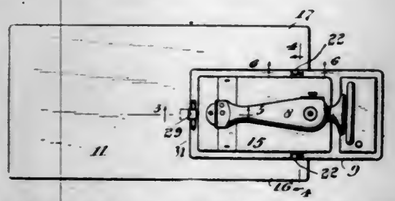
11. A wrapping machine including in combination, an opened side plunger, means for charging said plunger through an open side, means for feeding wrappers into the path of the plunger, means for moving the plunger with the articles to be wrapped successively against said wrappers, means for stopping the plunger after the wrappers have been folded therearound, and means within and forming part of the plunger for ejecting the contents of the plunger which means continues to move after the open sided part of the plunger has stopped.

1,452,693. OSCILLATING JOINT. HUGH C. LORD, Erie, Pa. Filed Nov. 17, 1920. Serial No. 424,788. 33 Claims. (Cl. 267—54.)

12. In a spring point, the combination of a spring bolt; a spring eye; and a rubber joint member arranged between the spring bolt and spring eye, said rubber member being locked with the spring bolt and with the spring eye and sustaining the thrust on the joint and through its distortion the relative movement of the spring bolt and spring eye.

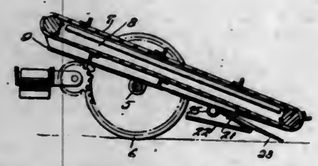
1,452,694. RECORD-SHEET HOLDER AND PROTECTOR. ANDREW G. LUND, St. Paul, Minn. Filed Dec. 2, 1921. Serial No. 519,545. 6 Claims. (Cl. 129—1.)

6. In a device of the class described, a body plate adapted to support paper sheets to be written on, means for holding the paper in place on the plate, a resilient guard plate for the hand to rest on while writing said guard plate extending across the body plate and means fixed on the body plate for guiding said guard plate in a vertical movement on the body plate.



1,452,695. SOLE PLATE FOR GOLF CLUBS. GEORGE W. MATTERN, Dayton, Ohio, assignor to The Crawford, McGregor and Canby Company, Dayton, Ohio, a Corporation of Ohio. Filed Nov. 27, 1920. Serial No. 426,704. 6 Claims. (Cl. 46—4.)

1. The combination with a golf club head, of a rearwardly convergent sole plate of trapezoidal form extending substantially from the face to the rear edge of the club, the club head being recessed for the reception of said sole plate whereby the lateral converging edges of the plate have a seating engagement with the lateral

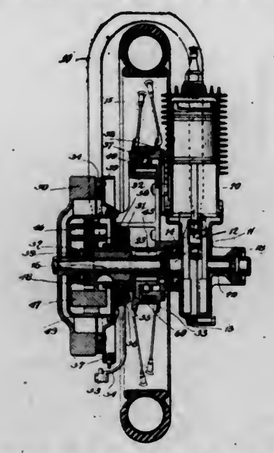


shoulders of the recess by which rearward impact shocks are laterally transmitted to the club head through substantially the full fore and aft extent of the club head.

1,452,696. SUPPLEMENTAL WORK SUPPORT FOR PORTABLE SEWING MACHINES. GEORGE R. MOCK, Chicago, Ill., assignor of one-third to Robert L. Campbell, Chicago, Ill. Filed June 28, 1920. Serial No. 392,316. 3 Claims. (Cl. 45—47.)

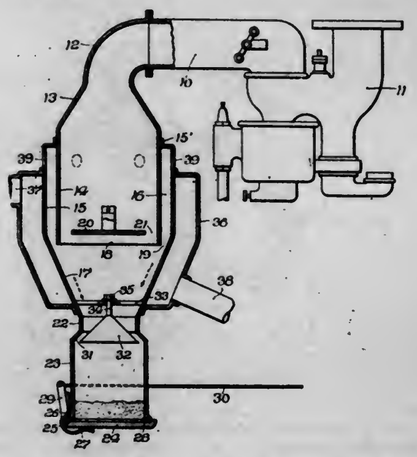
1. A detachable work support for a portable sewing machine, consisting of a table, provided with edges adapted to oppose one end edge and the side edges of the bedplate of the machine, said end edge having secured thereto a plate provided with a hook-shaped arm adapted to overlap the adjacent surface of the bed-plate and thereby furnish a support accordingly for the supplemental table.

1,452,697. AGRICULTURAL MACHINE. JOHN E. MULLEN, New Duluth, Minn. Filed Nov. 21, 1919. Serial No. 339,567. 6 Claims. (Cl. 55—17.)



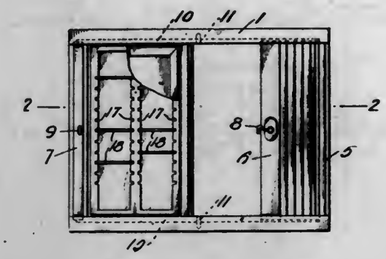
3. In a machine of the character described, the combination of a wheeled frame, a picking element pivotally joined at the bottom of said frame, a plate bent rearwardly from the picker forming a scraper, substantially as described.

1,452,698. MOTOR VEHICLE. ALDEN E. OSBORN, New York, N. Y. Filed Sept. 18, 1920. Serial No. 411,347. 14 Claims. (Cl. 180—33.)



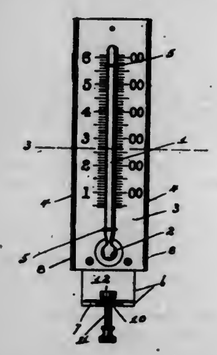
1. In a motor vehicle the combination of a traction wheel, a propelling motor, a main shaft having connection with said motor at one side of said wheel and passing

thru said wheel, a friction clutch on the opposite side of said wheel from said motor connection and having connection with said shaft, a driven member of said clutch



rotatably mounted on said shaft, and a gear on said driven member and a coacting gear on said wheel meshing directly with the first named gear.

1,452,699. CARBURETING APPARATUS FOR INTERNAL-COMBUSTION ENGINES. WILLIAM L. O'NEILL, Chicago, Ill., assignor to Stromberg Motor Devices Company, Chicago, Ill., a Corporation of Illinois. Filed June 27, 1917. Serial No. 177,160. 15 Claims. (Cl. 183—42.)

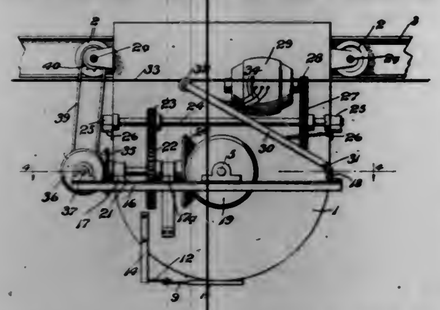


1. The combination with a carburetor having an inlet pipe and adapted to be connected to an internal combustion engine so that air will be caused to pass through said pipe in response to the suction of the engine, of a casing connected with said pipe and embodying a separating compartment and a dead air compartment for the reception of solid impurities, an outlet for said dead air compartment, a normally closed valve for said outlet, and means between said compartments permitting the passage of impurities to said dead air compartment when said valve is closed and automatically operable when said valve is opened to prevent the return of said impurities to said separating compartment.

1,452,700. DEVICE FOR STORING AND DISPLAYING SMOKERS' ARTICLES. RUDOLF PEYER, St. Gallen, Switzerland. Filed May 18, 1921. Serial No. 470,599. 3 Claims. (Cl. 217—7.)

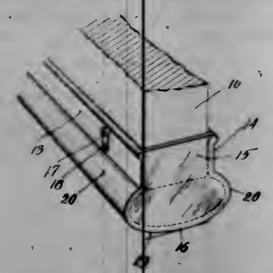
1. A device for storing and displaying articles, such as cigars and other smokers' articles, characterized by a case to be locked having a slidable cover of roll-top shape, in a plurality of sections, and also having a drawer to be inserted within the case, the opposite side walls of said case being provided with guides and stops for the cover sections, and a double bottom opposite said guides so that when the case is opened the cover parts enter between the double bottom parts.

1,452,701. THERMOMETER. SENECA MORRIS PIKE, Troy, N. Y., assignor to Wilder-Pike Thermometer Co., Inc., Troy, N. Y., a Corporation of New York. Filed July 12, 1922. Serial No. 574,428. 2 Claims. (Cl. 73—119.)



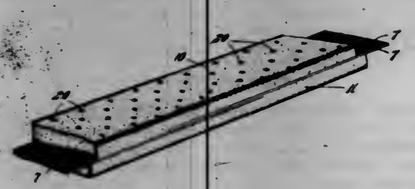
1. A thermometer having a liquid-containing tube mounted within a channeled frame formed with alined notches in its side walls at one end, and screw mechanism mounted upon the frame in position to engage a rod seated in said end notches in the side walls of the frame.

1,452,702. STUCCO-MIXING MACHINE. EDWARD H. PIPE, St. Louis, Mo., assignor to Acme Cement Plaster Company, St. Louis, Mo., a Corporation of Illinois. Filed June 28, 1920. Serial No. 392,510. 5 Claims. (Cl. 83—73.)



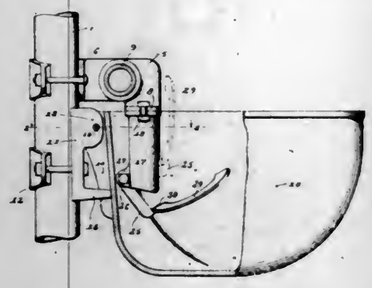
1. A mixing machine comprising a receptacle open at its upper end, tracks one at each side of the upper part of the receptacle between which said receptacle is located and below which it depends, cross rods connected one at each end of the receptacle, rollers on the ends of the rods run-

ning on the tracks, a shaft extending through the receptacle parallel to and below the rods, mixing members at-



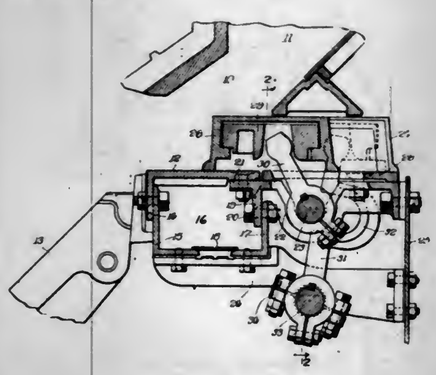
tached to the shaft, means for driving the shaft, and means for driving one of said cross rods in either direction from said shaft, substantially as described.

1,452,703. THRESHOLD ELIMINATOR. HENRY V. POLLARD, Somerville, Mass. Filed June 23, 1920. Serial No. 391,040. 2 Claims. (Cl. 20—68.)



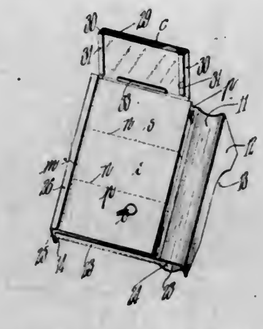
1. A device for closing the space between the lower end of a door and the floor comprising a rigid member having side walls and a bottom wall, said side walls having a space between them to receive the lower end of the door, and having vertically arranged elongated slots therein, adapted to receive fastenings passing into the door in positions enabling the member to hang normally close to the floor and to rise for clearing a floor covering; the said bottom wall being inclined upwardly from an intermediate longitudinal line toward and beyond the side walls, and being joined to said walls by outwardly bulged portions.

1,452,704. BELT AND PROCESS OF MAKING SAME. HECTOR L. POULIN and ULRIC A. POULIN, Anthony, R. I., assignors to The Rosella Mills Inc., a Corporation of Rhode Island. Filed May 6, 1922. Serial No. 558,863. 2 Claims. (Cl. 154—4.)



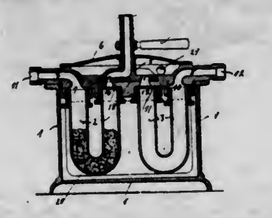
2. The process of forming a belt consisting in overlapping the ends of a base strip, applying layers of batting to the opposite sides of the strip over the ends, and forcing portions of the batting layers through the base strip.

1,452,705. STOCK-WATERING DEVICE. ROBERT F. RASMUSSEN, Oshkosh, Wis., assignor to C. A. Libbey Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed Dec. 26, 1919. Serial No. 347,277. 3 Claims. (Cl. 119—75.)



1. In a stock watering device the combination wtih a bowl and a supply pipe of a substantially vertically disposed nozzle adapted to discharge from said pipe into said bowl, said nozzle being provided with a plurality of alined slots; a valve within said nozzle adapted to control fluid flow therethrough; and a stock operated valve actuating member provided with a lever one end of which is pivotally secured to said nozzle and an intermediate portion of which is adapted to enter said slots to engage a portion of said valve to open the same.

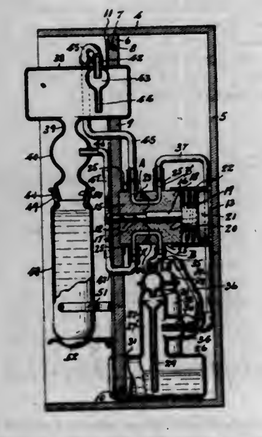
1,452,706. FURNACE STOKER. ROBERT SANFORD RILEY, Worcester, Mass., assignor to Murphy Iron Works, Detroit, Mich., a Corporation of Michigan. Filed June 11, 1920. Serial No. 388,240. 4 Claims. (Cl. 110—109.)



1. In a fuel-stoking mechanism of the character described, the combination of a fuel-magazine, a coking-plate beneath said magazine adapted to receive the fuel therefrom, an inclined grate adjacent to said coking-plate, a plurality of stoker-boxes arranged directly adjacent to one another endwise in a row and adapted to feed the fuel from the coking-plate to the grate, a shaft disposed longitudinally of such row, operating means connecting said shaft to the alternate stoker-boxes of the row to effect similar simultaneous movements of such stoker boxes, a second shaft parallel to the first shaft, operating means connecting said second shaft to the remaining alternate stoker-boxes of the row to effect similar simultaneous movements of such stoker-boxes, and means to rock said shafts to alternately advance the two sets of stoker-boxes.

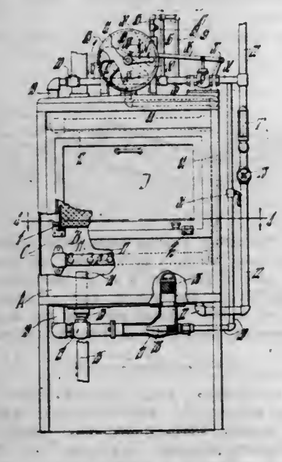
1,452,707. HOLDER FOR MEMORANDUM PADS AND THE LIKE. ARCHIE D. ROBINSON, Westfield, Mass. Filed Sept. 19, 1921. Serial No. 501,718. 4 Claims. (Cl. 40—120.)

1. A holder for memorandum pads and the like, comprising a base member to support the pad, a portion of said member extending beyond one edge of the pad and bent transversely to form a tray for the reception of pencils, pens and the like, means for supporting said base and tray in inclined position, a jaw provided along one edge of said base between which and the latter, one edge of the memorandum pad may be inserted and frictionally held to the base member with all the upper surface of the pad except that immediately adjacent said edge completely exposed, and a lip bent upwardly from the lower edge of the base member to engage the lower edge of said pad and to close the lower end of said tray.



1,452,708. DEVICE FOR CLEANING PIPES. HENRI RUPRATI, Hamburg, Germany, assignor to Johannes Heydt, Albrechts, Germany. Filed June 24, 1920. Serial No. 391,557. 2 Claims. (Cl. 225—12.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

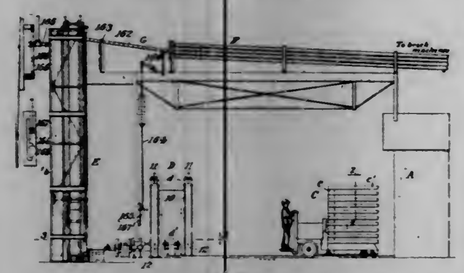
1. A device for cleaning pipes by means of a pressure-medium, particularly for beer pressure-apparatus, comprising, in combination, two U-shaped glass-containers inserted in the piping to be cleaned for a passage of the pressure-medium therethrough, and a hand-operated reversing-slide to connect said containers for a control of the passage of the pressure-medium therethrough, substantially as and for the purpose set forth.



1,452,709. APPARATUS FOR PREPARING ARTIFICIAL RADIOACTIVE WATER. HERBERT F. SAVOYE, Hackensack, N. J., assignor to American Radium Appliance Company, Morristown, N. J., a Corporation of New Jersey. Filed Feb. 8, 1922. Serial No. 534,900. 6 Claims. (Cl. 167—7.)

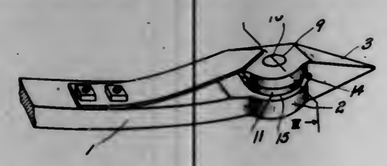
1. In an apparatus for charging a fluid with radium emanation, a means for holding a radium solution, a pair of containers arranged one above the other to receive the fluid to be treated, means for reversing the relative positions of said containers whereby the fluid may be caused to alternately flow from one to the other thereof, an air conveying means interconnecting said containers with said radium solution holding means, and said air conveying means including a reversing valve, all whereby the fluid in flowng from one contaner to the other will displace air from the latter and circulate the same through said radium solution for return to the former after bubbling through the fluid for the purposes described.

3. In an apparatus for charging a fluid with radium emanation, a container holding caustic alkali, a container holding a solution of radium salt, a reversible two compartment container for holding the fluid to be treated, and an air circulating means including a reversing valve, all whereby the flow of fluid from one compartment to the other of said fluid container will circulate air successively through said caustic alkali, the radium salt solution and said fluid to be treated.



1,452,710. WASHING MACHINE. ANTON C. SCHMELZER, Springfield, Mass., assignor, by mesne assignments, to Century Machinery Corporation, Holyoke, Mass., a Corporation of Delaware. Filed Aug. 29, 1919. Serial No. 320,717. 11 Claims. (Cl. 141—9.)

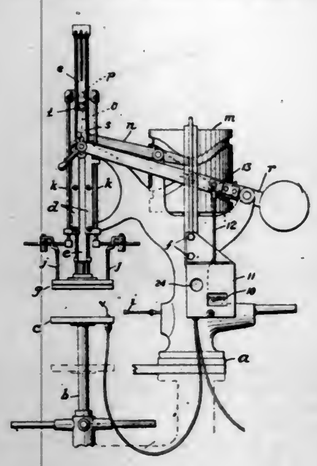
1. In a washing machine, a washing compartment, sprinklers located in said compartment, separate means



to deliver washing and rinsing water to said sprinklers, a self-closing valve associated with each of such means, means actuated by the flow of water to control the closing of the washing water valve and the opening and closing of the rinsing water valve, and manually operable means to open the washing water valve and start said mechanism in operation.

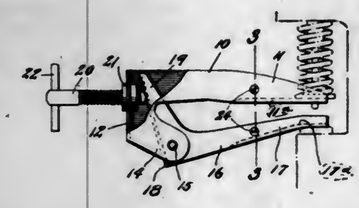
1,452,711. BRICK-HANDLING APPARATUS. FREDERICK A. SCHROEDER, Bogota, N. J., and HERMAN R. SMITH, Brooklyn, N. Y., assignors to Raymond Concrete Pile Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 23, 1920. Serial No. 432,685. 8 Claims. (Cl. 214—1.)

1. In an apparatus for the purpose described, in combination, a vertical conveyer adapted to receive brick-laden pallets, a horizontal conveyer arranged to receive the brick-laden pallets from the vertical conveyer, means cooperating with the pallets to loosen the bricks thereon while the pallets are being transported by the said horizontal conveyer, a conveyer adapted to receive the loosened bricks, a conveyer adapted to receive the unloaded pallets and carry the same away, means for cleaning the pallets while in transit on the latter conveyer, an elevator to receive the cleaned pallets and carry the same to an elevated position, automatic driving mechanism for operating said conveyers and elevator to operate in harmony with each other, and a gravity conveyer to receive pallets at said elevated position and deliver the same to a reloading point.



1,452,712. BALING-WIRE NEEDLE. WILLIAM A. SEYMOUR, Leavenworth, Kans. Filed Aug. 30, 1920. Serial No. 406,817. 1 Claim. (Cl. 100—20.)

A needle for baling presses comprising a bar having a recess, the head having a hooked end, the recess being open at one edge of the bar, a roller insertable through the open portion of the recess, and a roller-carrying rivet connected to the hooked end and the floor of the recess to maintain the roller in functional position.

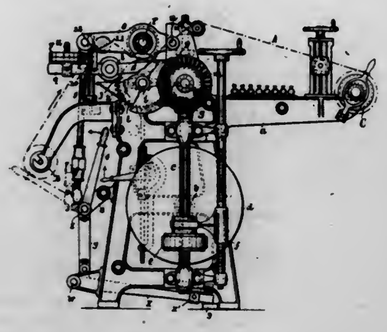


1,452,713. COUNTING AND REGISTERING DEVICE FOR BOX WRAPPING AND SIMILAR MACHINES. JOHN H. STORTZ, Philadelphia, Pa. Filed Nov. 19, 1920. Serial No. 425,054. 9 Claims. (Cl. 235—91.)

1. In a box wrapping or similar machine, the combination with a counter, of a reciprocating member of the machine, a box support adapted to be moved by said member, normally inoperative connections from said member to operate the counter, and means, controlled

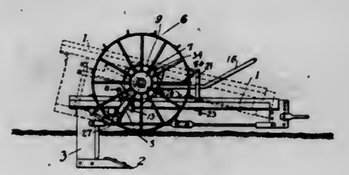
by a box between said member and the support during the reciprocation of the support, to render said counter operating connections operative.

1,452,714. VALVE LIFTER. JOSEPH SUNNEN, St. Louis, Mo. Filed Aug. 9, 1921. Serial No. 490,968. 4 Claims. (Cl. 29—863.)



4. A valve lifter comprising a pair of U-shaped members pivotally connected adjacent to their base portions, means for adjusting said U-shaped members relative to their pivotal connection, a rotatably threaded member extending inwardly from one end of each jaw member, and an internally threaded sleeve adapted to receive the threaded end of said rotatable member and provided with a shank portion non-circular in cross section which engages a non-circular seat formed in the opposite end of each jaw member.

1,452,715. MANGLE OR QUETCH. CLAUDIUS UGNON, JERRY GALOPPA, and CHARLES SALDARINI, Paterson, N. J., assignors to Riverside Engineering Co. Inc., Paterson, N. J., a Corporation of New Jersey. Filed June 14, 1921. Serial No. 477,423. 4 Claims. (Cl. 91—51.)



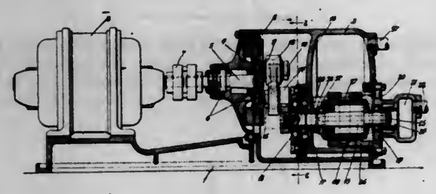
1. A machine for treating fabrics with liquid including, in combination, a supporting structure, three members two of which are coacting, fabric-pressing rolling members and the third of which is a squeegee member which bears against one of the first two members, and

means to supply the liquid of treatment to the periphery of one of the first two members, said structure having

means to separate the first two members and at the same time the squeegee member and the member against which it bears.

1,452,716. POWER LIFT FOR GROUNDWORKING IMPLEMENTS. DANIEL M. WATTERS, Los Angeles, Calif., assignor to Killefer Manufacturing Company, Los Angeles, Calif., a Corporation of California. Filed Nov. 15, 1920. Serial No. 424,083. 3 Claims. (Cl. 97—72.)

1. In an implement, the combination of a frame, a crank axle supporting the frame, ground wheels journaled on the axle, ground working tools supported by the frame, a ratchet wheel operated by one of the ground wheels, an arm mounted on the crank axle, a link pivoted to said arm and provided with a shoulder, a stationary element mounted on the frame to engage the shoulder when the crank axle is turned to a predetermined position, means to limit rearward motion of the link when the link is released from said shoulder-engaging element, a lever fulcrumed on the crank axle and having a detent and a shoulder, manually operated means to engage the last shoulder to cause the lever to move its detent into engagement with the ratchet wheel, and an abutment on the frame adapted to engage the last shoulder when the crank axle is turned to said predetermined position to retract the lever from ratchet wheel-engaging position.

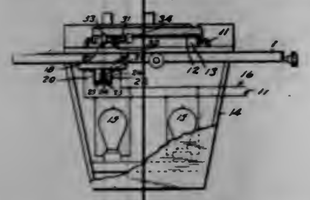


1,452,717. SCAFFOLD JACK. HARVEY C. WERTZ, Homestead, Pa. Filed Feb. 20, 1922. Serial No. 537,824. 11 Claims. (Cl. 304—18.)

1. A scaffold jack, comprising a pair of triangular supporting frames, each consisting of a base bar and a side bar of fixed length pivotally connected together at one end and a two part telescopic brace pivotally connected to the free ends of the base and side bars, the brace bar of one of said triangular frames being formed to fit telescopically over the side bar of the other triangular frame; means for securing said telescopically connected

side bars in different adjusted positions; and means for securing the telescopic parts of said braces in different adjusted positions.

1,452,718. COMPRESSOR. EDWARD WILSON, St. Louis, Mo., assignor to Wilson Engineering Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 14, 1921. Serial No. 500,534. 27 Claims. (Cl. 230—29.)

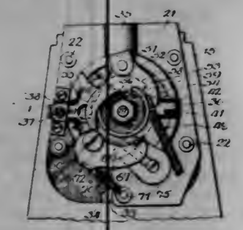


1. A compressor, comprising a cylinder, radial sectors extending inwardly from the cylinder, pistons within the cylinder between the radial sectors, and mechanism for imparting relative rocking movement between the cylinder and the pistons; in combination with end walls for the cylinder secured to the rocking part, air inlet passages through the end walls for admitting air into the cylinder between said pistons and said sectors, air outlet passages from the cylinder formed in part in the end walls and in part in said sectors, and valves in said outlet passages in the sectors permitting compressed air to pass from the cylinder through said passages.

1,452,719. LIGHT-CONTROLLING DEVICE FOR PHOTOGRAPHIC-PRINTING MACHINES. WILLIAM D. WOOD, Seattle, Wash., assignor to Specialty Manufacturing Company, Seattle, Wash., a Corporation of Washington. Filed Oct. 12, 1920. Serial No. 416,467. 2 Claims. (Cl. 95—73.)

1. In apparatus of the character described, a casing, a frame hinged to the top of said casing, a switch disposed below said frame, a vertically movable post extending through said casing, means connected with the said post for closing the switch when said post is moved

downwardly, springs urging said post upwardly, and a trip member on said frame arranged to engage with and

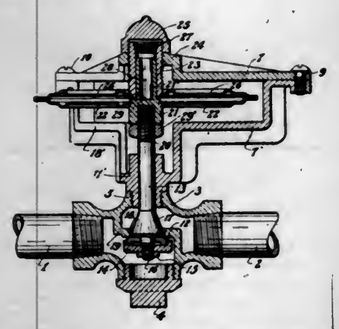


depress said post when the frame is lowered, said trip member being arranged to be manually moved independently of said frame to release said post.

1,452,720. BOX-COVERING MACHINE. ALBERT WORCESTER, Los Angeles, Calif. Filed Sept. 1, 1922. Serial No. 585,649. 14 Claims. (Cl. 93—54.)

1. In a box covering machine, a pivotally mounted cutter carrier, means for pressing the carrier to its effective cutting stroke, means for retracting the carrier, and overbalance weights operative to continue the retracting movement of the cutter carrier when it has been released by the retracting means.

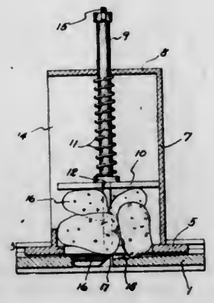
1,452,721. CHECK-CONTROLLED MACHINE. ALFRED D. ANTOINE, Chicago, Ill., assignor to Advance Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 28, 1921. Serial No. 456,109. 13 Claims. (Cl. 194—63.)



1. Check controlled mechanism embodying a check carrier having a forward and backward movement, a rotatable ratchet disc, a ratchet element co-operating with the disc for maintaining the latter in its adjused position, a check support for receiving the check from the carrier, a portion of the said ratchet element co-operating with the said seat and spaced therefrom a distance less than the diameter of the check, a portion of the check carrier operating on its retrograde movement to force the check between the said seat and the said portion of the ratchet element to shift the latter to release the disc, and means operating upon the disc when the latter is released to rotate the same with the check carrier, another portion of the check carrier operating upon the check to force the check from the support to release the said ratchet element to permit the latter to become active with respect to the said disc.

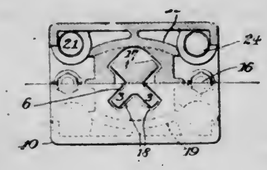
1,452,722. NECKTIE HOLDER. HERMAN ARVIDSON, Minneapolis, Minn. Filed Mar. 10, 1922. Serial No. 542,558. 4 Claims. (Cl. 24—49.)

1. A necktie holder comprising, a narrow frame having a widened portion at its upper end, the top part of which is adapted to be spaced from and above the collar button, said portion being flat and adapted to be disposed in the knot of the tie to engage a fold at the top thereof to hold the tie in position, and means adjacent the bottom of said frame for holding the same in position adapted to engage the tie and shirt.



1,452,723. THERMOSTATIC VALVE. CHARLES H. ATKINS, Palmer, Mass., assignor to Phoenix Sprinkler Company, Springfield, Mass., a Corporation of Massachusetts. Filed May 13, 1920. Serial No. 381,104. 7 Claims. (Cl. 169—19.)

1. In a mounting for a double walled expansible diaphragm chamber, a fixed sleeve to which the outer wall of the chamber is secured, and a movable sleeve to which the other wall is secured, the latter sleeve being slidably located within the fixed sleeve for the purpose of furnishing means for aligning the latter sleeve and for filling the space between the diaphragm.



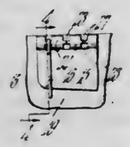
6. In a thermostatically controlled valve structure, the combination, of a double walled expansible diaphragm, one wall of the same being fixed and the other movable, a casing in which the valve is located, supply and discharge pipes connected to the casing, a valve seat having an opening therethrough, a single conical shaped valve supporting member with its base part located in the opening when the valve is in its closed position, to close the opening, a valve stem which is connected to the movable wall of the diaphragm, the construction and arrangement being such that upon the outward movement of the movable wall the valve is moved away from its seat against the incoming pressure, and upon the inward movement of the wall the valve is moved to its seat and the conical shaped member will gradually close the opening to prevent hammer action.

1,452,724. VEGETABLE SLICER. JOSE M. BLANCO, Newark, N. J. Filed July 25, 1922. Serial No. 577,350. 1 Claim. (Cl. 146—7.)

A slicing device of the class described comprising an angular slotted platen, a slicing knife mounted in said angular slot, plate members covering the ends of said slot having projections formed thereon, ears on said cutting knife, threaded screws connecting said plate projections and ears of said knife, said screws adapted to lift or lower said slicing knife, and means urging the vegetables into contact with the cutting edge of the knife.

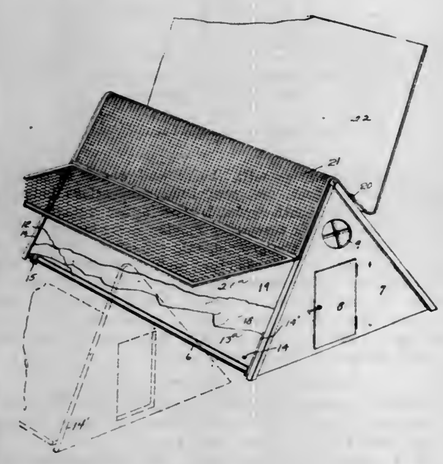
1,452,725. SHOCK-ABSORBING MECHANISM. CHESTER K. BROOKS, Mentor, Ohio, assignor to The National Malleable Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 28, 1922. Serial No. 547,358. 5 Claims. (Cl. 213—36.)

1. In frictional shock absorbing mechanism, a longitudinally-extending included friction member having a plurality of radially disposed arms, certain of the spaces between the arms having diverging longitudinally extending laterally tapered friction faces, a friction shoe in each such space engaging such faces, each shoe having an inclined wedging face, and a wedge member engaging the wedging face of each shoe and being capable of expansion under pressure from the shoes as the shoes move longitudinally and laterally along the said tapered friction faces and having an elastic grip upon said shoes, said wedge having reinforcing webs arranged under tension in buffing and pulling to be deformed and to resist expansion of the wedge.



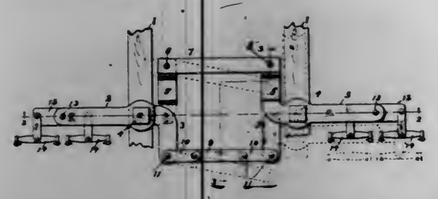
1,452,726. PAD FOR PRESSING MACHINES. OSCAR E. W. BRUNK, St. Louis, Mo., assignor to Joseph J. Marx, St. Louis, Mo. Filed June 14, 1920. Serial No. 388,753. 2 Claims. (Cl. 68—1.)

1. An elastic and flexible pad for pressing machines, comprising a mass of felted spring metal shavings, in combination with a flexible reticulated side member on one side of the mass of shavings conforming to the shape of said mass, and binding elements binding the edges of the reticulated side member and the mass of shavings together, and leaving the intermediate portion



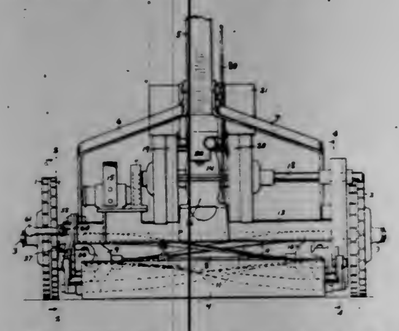
of the mass of felted shavings free as to their resiliency, said pad being a unit that is applicable to and removable from the pressing machine as such.

1,452,727. KEY-CASE HOLDER. WARNER R. BUXTON, Longmeadow, Mass., assignor to Buxton, Incorporated, a Corporation of Massachusetts. Filed June 8, 1922. Serial No. 566,869. 4 Claims. (Cl. 150—40.)



2. A key case holder, comprising, a sheet metal plate having a plurality of slots therein adjacent one edge thereof and an integral part connected to and extending from one side wall of the slot across the latter and terminating adjacent but not connected to the opposite wall of the slot.

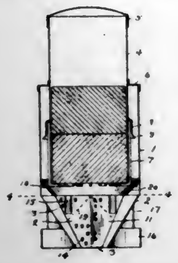
1,452,728. CHICKEN COOP OR BROODER. CHARLES WATTS CAROL, Globe, Ariz. Filed Apr. 19, 1922. Serial No. 555,592. 2 Claims. (Cl. 119—19.)



1. A coop of sheet metal having ways formed in its end walls for the reception of lining sections of wood and sheets of paper disposed between the sheet metal coop and the wood said lining sections of wood and paper being equal in area to the side of the coop.

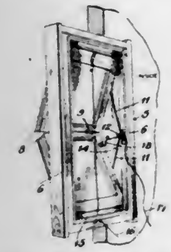
1,452,729. FOUR-HORSE EVENER. RALPH DE BOER, Sheldon, Iowa. Filed Jan. 27, 1922. Serial No. 532,207. 3 Claims. (Cl. 278—9.)

1. In an apparatus of the class described, the combination of a pair of cultivator beams, a pair of upper, L-shaped lever arms resting on said beams, the inner ends of said lever arms extending inwardly between the beams, a pair of lower, L-shaped lever arms against the beams, the inner ends of said lever arms extending outwardly between the beams, an upper link provided with bifurcations in its ends, the inner ends of said upper lever arms in said bifurcations, means pivotally connecting the inner ends of the upper lever arms and the ends of said connecting link, a lower link against the inner ends of the lower lever arms between the beams, plates on said lower link and said inner ends of the lower lever arms, fastening means connecting the lower lever arms, lower link and plates together, and draft animal connecting means pivotally secured between the outer ends of said upper and lower lever arms.



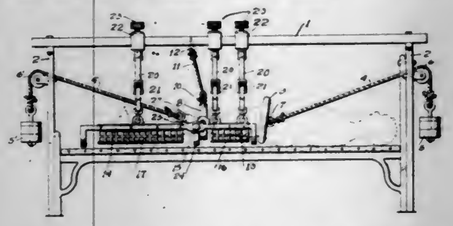
1,452,730. MOTOR-DRIVEN LAWN MOWER. ALBERT J. DREMEL, Racine, Wis. Filed Nov. 1, 1920. Serial No. 421,106. 4 Claims. (Cl. 56—26.)

1. The combination with the ground wheels of a lawn mower, of a motor, and propelling connections between the motor and both ground wheels for rotating the ground wheels in a forwardly moving direction with uniform velocity over the ground, said propelling connections including separate pawls for each ground wheel for transmitting power from the motor thereto, the pawls being so arranged as to permit either or both of the ground wheels to be rotated in a forwardly moving direction at greater velocity than the velocity being imparted thereto by the motor.



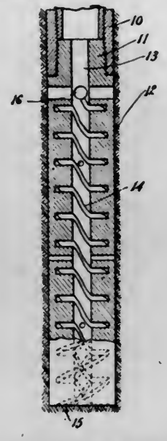
1,452,731. PORTABLE GAS GENERATOR. DAVID C. DUNCAN, Duluth, Minn. Filed Nov. 24, 1919. Serial No. 340,382. 2 Claims. (Cl. 48—22.)

1. A combined carbide holder and water-controlling device therefor, comprising a cylindrical casing surrounding the holder having a frustro conically shaped extension upon the bottom thereof below the holder, vertically disposed baffles within the extension, a concentric vertically disposed baffle within the first mentioned baffles, a frustro conically shaped baffle surrounding the lower end of the holder above the baffles, the upper end of said frustro conically shaped baffle being the full size of the inside diameter of the casing, and carried thereby, said



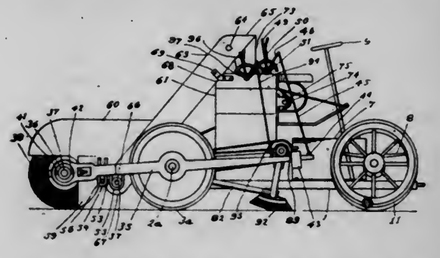
casing having vent holes therethrough below the upper end of the frustro conically shaped baffle, substantially as and for the purpose described.

1,452,732. WINDOW CONSTRUCTION. FRANK DUTCHER, Los Angeles, Calif. Filed May 20, 1921. Serial No. 471,106. 7 Claims. (Cl. 20—42.)



1. In combination with a window frame and a pair of sashes hingedly connected at their meeting ends and having their other ends mounted in the frame for pivotal and vertical sliding movement; means centrally pivoted to each side of the window frame and operatively connected to each of the sashes to counterbalance said sashes against each other and permit the same to simultaneously move from their closed to substantially fully open position.

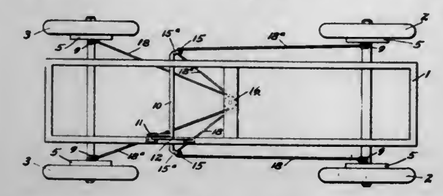
1,452,733. SURGICAL APPARATUS. WILLIAM HENRY GARLOCK, Seattle, Wash. Filed Dec. 8, 1921. Serial No. 521,010. 4 Claims. (Cl. 128—85.)



1. In a surgical apparatus of the class described, the combination of a frame disposed above the couch of the patient, means for supporting the upper portion of the injured limb, means for supporting the lower portion of the injured limb, hinged means hingedly connecting said upper and lower supporting means, adjustable means suspended from the frame member and by which the limb supporting means in turn are adjustably suspended, and means for securing said adjustable means in the desired adjusted position longitudinally of the frame member.

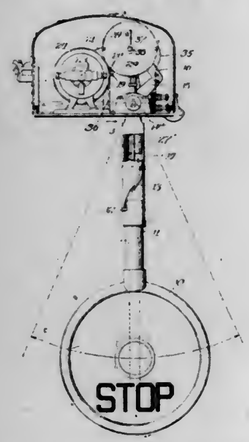
1,452,734. ROCK DRILL. GUSTAV GRIESCHE, Berkeley, Calif. Filed Aug. 23, 1921. Serial No. 494,661. 8 Claims. (Cl. 255—61.)

1. A boring tool comprising a substantially cylindrical bit, a longitudinal bore therethrough, and a plurality of internal helical threads within the bit, communicating with the cutting face thereof and radiating from the longitudinal bore of the bit.



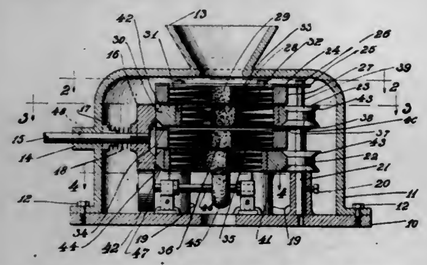
1,452,735. STREET-SWEEPING MACHINE. HENRY G. HAWORTH, Leavenworth, Kans., assignor of one-half to Benjamin F. Samuels, Leavenworth, Kans. Filed May 7, 1919. Serial No. 295,443. 3 Claims. (Cl. 15—84.)

1. In a street-sweeping machine, the combination of a frame, a receptacle on the frame, an axle shaft on the frame near the rear end of the same, supporting arms pivotally mounted intermediate their ends on the ends of the axle shaft, counter-weights on the front ends of said arms, journal boxes pivotally secured in the rear ends of said arms, a rotary broom journaled in said boxes, open top bearings carried by said arms intermediate said broom and axle shaft, an inclined elevator having a lower shaft removably journalled in said open top bearings and its upper end supported against the top of said receptacle, an apron carried by said arms between the elevator and the rotary broom, and means for driving said broom and the elevator from the axle shaft.



1,452,736. BRAKE. JOHN A. HEYSER, Los Angeles, Calif. Filed Feb. 3, 1921. Serial No. 442,233. 3 Claims. (Cl. 188—204.)

3. The combination with a vehicle having front and rear wheels, of brakes upon the respective wheels, a brake shaft, central pulleys, side pulleys on said brake shaft set in advance of the central pulleys, and flexible operating connections extending from the respective front wheel brakes around said central pulleys and thence forwardly to the side pulleys on said brake shaft at the

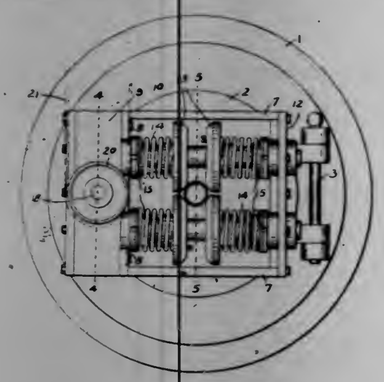


opposite sides of the vehicle and thence to the rear wheel brakes at the same sides of the vehicle as said respective side pulleys.

1,452,737. SIGNALING DEVICE. FREDERICK M. HILL, Chicago, Ill. Filed Oct. 1, 1917. Serial No. 194,122. 23 Claims. (Cl. 177—339.)

1. In a waving signal, a signal device having an oscillating support on which it is mounted and through which it receives a continuing waving movement to express a signal, said signal having a connection with said support through which it moves independently of its signaling movement, to and from signaling position on said support.

1,452,738. ABRASIVE DEVICE. WILLIAM J. HOBERG, Jersey City, N. J. Filed Aug. 11, 1922. Serial No. 581,189. 10 Claims. (Cl. 146—14.)



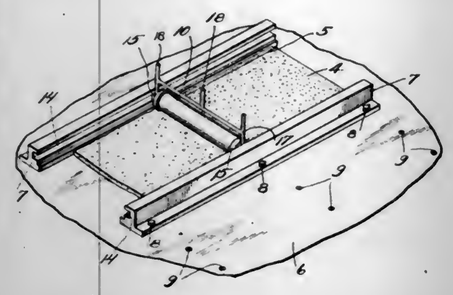
1. A machine, comprising a plurality of abrasive elements, including stationary and rotary elements, the latter disposed eccentrically relative to the former.

1,452,739. DECOLORIZING AND PURIFICATION OF SACCHARINE MATERIALS. JOHN JAMES HOOD, London, JOHN CLARK, Hutton, and PERCY GEORGE CLARK, London, England. Filed Nov. 4, 1919. Serial No. 335,618. 5 Claims. (Cl. 127—15.)

1. The process of decolorizing saccharine liquid which comprises filtering it through ignited aluminum hydrate which has been cooled.

1,452,740. FEED MECHANISM FOR SWAGING MACHINES. CLARE S. JACOBS, Detroit, Mich., assignor to Tube Products Company, Detroit, Mich., a Corporation of Michigan. Filed June 20, 1921. Serial No. 478,878. 6 Claims. (Cl. 78—97.)

1. In a rod or tube feed mechanism, the combination with two parallel shafts, of two opposed pairs of feed rollers respectively splined upon said shafts, springs urging the rollers of each pair toward each other, and a common driving means for said shafts.



1,452,741. STYLUS GUIDE FOR PSYCHIC GAMES. FRANK C. JENNESS, Los Angeles, Calif., assignor of one-half to Elias H. Grove, Los Angeles, Calif. Filed May 11, 1921. Serial No. 468,480. 5 Claims. (Cl. 46—41.)

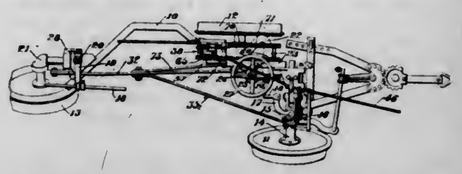
2. In combination, a planchette, a stylus movably sustained on the planchette to occupy active and inactive positions, and means for urging the stylus to the active position.

1,452,742. APPARATUS FOR MANUFACTURE OF WALL BOARD. ROBERT J. JOHNSTON, Kansas City, Mo., assignor of one-half to George F. Rogge, Corder, Mo. Filed Feb. 6, 1922. Serial No. 534,454. 3 Claims. (Cl. 25—21.)

1. In apparatus for making sheets of wall board having a marginal shouldered lip, a bed providing a supporting surface for receiving the wall board material in plastic condition, a roller adapted for travel across said supporting surface for spreading said material into a layer of uniform thickness, the opposite ends of said roller being provided with guide projections, and parallel frame members formed with guideways for receiving said guide projections and operating therethrough to maintain said roller at a constant distance above said supporting surface, one end of said roller being formed with

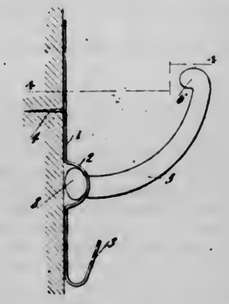
an annular enlargement operative to produce said shouldered lip by depressing the material along a continuous line running in the direction of travel of the roller.

1,452,743. SEPARABLE FASTENER. MORRIS KEIL, New Orleans, La. Filed May 3, 1922. Serial No. 558,083. 4 Claims. (Cl. 24—288.)



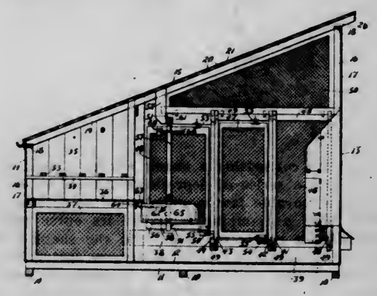
1. A separable apparel fastener comprising, in combination, an elongated element, means on said element whereby it may be secured to a fabric, a fastener comprising two members, readily separable means for securing said members together, means on one of said members embracing said element to slidably mount said member thereon, the second member adapted to be fixedly secured to fabric to be secured to said first named fabric.

1,452,744. PLOWLIFT. HORACE G. KNAPP, San Jose, Calif., assignor to Knapp Plow Co., Inc., San Jose, Calif., a Corporation of California. Filed Feb. 9, 1921. Serial No. 443,534. 5 Claims. (Cl. 97—72.)



4. In combination with the main frame of a plow having front, rear and side wheels, lifting mechanisms associated with each of said wheels, said mechanisms being operatively connected, an operating shaft, an arm secured thereon and connected to said mechanisms whereby turning movement of the shaft will operate the same, a disk having diametrically opposed notches secured on the shaft, a lock lever pivoted to the frame and having

means normally in engagement with one of said notches whereby to maintain the shaft stationary, an operating lever pivoted to the shaft, internal ratchet teeth formed

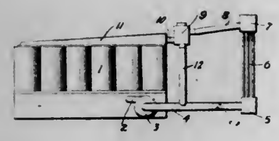


in said disk, a pawl on said lever adapted to cooperate with the teeth when the lever is oscillated to rotate the shaft when said lock lever is disengaged from the disk.

1,452,745. GARMENT HANGER. JOHN A. LANDAN, New York, N. Y. Substitute for application Serial No. 442,643, filed Feb. 5, 1921. This application filed Oct. 10, 1921. Serial No. 506,611. 4 Claims. (Cl. 248—24.)

1. A method of making a garment hanger or the like, which consists in making a body portion provided with a slit and in forming a hanger portion having an enlarged point adapted to pass through the said slit only when the said hanger portion is laterally bent with respect to the said body portion, the said hanger portion being formed in such laterally bent condition, inserting the point of the said hanger portion through the said slit so as to connect the said body portion and the said hanger portion, and then straightening the said hanger portion so as to prevent the removal thereof from the body portion.

1,452,746. POULTRY HOUSE. PETER R. LYDING, Sacramento, Calif. Filed Oct. 19, 1920. Serial No. 418,042. 9 Claims. (Cl. 119—21.)

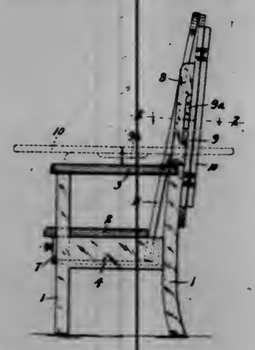


1. A poultry house having a longitudinal runway and provided with longitudinal roost bars located at one side of the runway, permanently mounted partitions extending across the roost bars from the runway to the adjacent side of the poultry house, removable partitions cooperating with the permanently mounted partitions extending to the opposite side of the poultry house, and having automatically closing doors extending across the runway and adapted to be operated by a car, and a roost floor located beneath the roost bars and having a longitudinal car guide.

1,452,747. SAFETY PIN. GUS W. MARKOS, Columbus, Ohio. Filed Aug. 21, 1922. Serial No. 583,073. 2 Claims. (Cl. 24—158.)

1. A safety-pin, comprising a U-shaped pin member having a point at one end and screw-threaded at its other end, a head having a screw-threaded opening at one end adapted to travel on the screw-threads of the pin member, and a guard-member loosely mounted between shoulders on the head member in a manner to travel longitudinally therewith and provided at its free end with a guard adapted to engage over the point of the pin member.

1,452,748. AUTOMATIC TEMPERATURE-CONTROLLING MEANS. HARRY C. MALLORY, Bellport, N. Y. Filed Feb. 17, 1916. Serial No. 78,825. 7 Claims. (Cl. 123—178.)

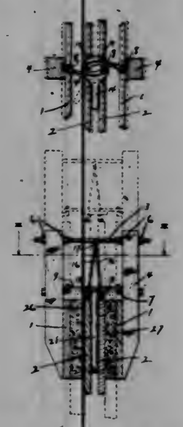


1. In an internal combustion engine cooling system the combination with a radiator and an engine cooling space having its inlet and outlet for cooling fluid connected to said radiator to form a permanently open fluid circulating system, of a conduit connection between said inlet and outlet forming a by-pass about the radiator, a valve controlling flow through said by-pass, and thermostatic actuating means for the valve subjected to a temperature which is approximately that of the cooling fluid when the latter passes out of said cooling space.

1,452,749. CONVERTIBLE CHAIR, IRONING BOARD, AND TABLE. JAMES D. MAYBERRY, Minneapolis, Minn. Filed Mar. 4, 1922. Serial No. 541,039. 4 Claims. (Cl. 155—43.)

1. A combination article of furniture comprising a chair having rigid seat and leg portions, the rear leg portions being extended upwardly to form spaced back portions, rigid arms connected thereto, upper back portions forming continuations of said spaced back portions hinged to said arms, a panel secured to said upper back portions extending therebetween and having transverse members secured thereto, sections hinged to each side of said panel and adapted to swing into the plane thereof and form a table therewith, said table and said hinged upper back portions adapted to swing forwardly and downwardly and be supported on said arms and a member

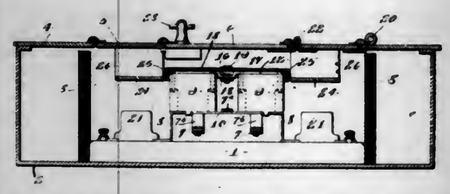
adapted normally to be supported in front of said panel to form an auxiliary back rest but being adapted to be



supported in a horizontal position in front of said panel in contact with one of said transverse members to form an ironingboard.

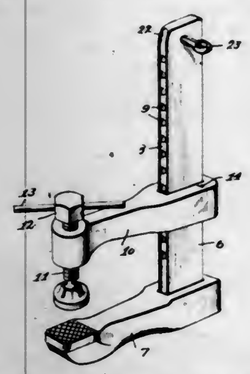
1,452,750. READILY FUSIBLE ALLOY. ARTHUR DE WOLF MULLIGAN, London, England. Filed Nov. 9, 1921. Serial No. 514,032. 1 Claim. (Cl. 75—1.)

Fusible alloys melting between about 155° F. and 320° F. possessing strength, ductility and unaffected by weak acids or alkalies, comprising a mixture of between 0.8% and 2.5% of antimony, between 12% and 29.6% of tin, between 12% and 61% of lead, between 6.6% and 18% of cadmium and between 3% and 50% of bismuth.



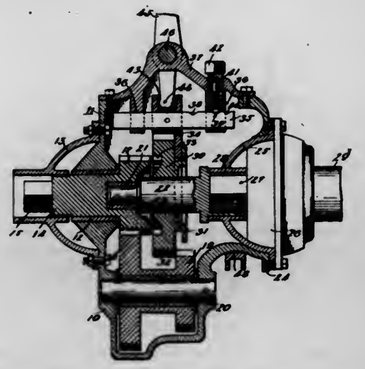
1,452,751. CONCRETE-WALL CONSTRUCTION. AXEL HERMAN NELSON, Turlock, Calif. Filed Sept. 17, 1921. Serial No. 501,378. 6 Claims. (Cl. 25—131.)

1. A form for constructing a hollow concrete wall, comprising a set of exterior planks having uprights extending therefrom, a rod for joining corresponding uprights at the top in spaced relation, a set of interior planks loosely supported between the exterior planks, and a lever having two links associated therewith engaging corresponding uprights at a lower point for forcing the same apart or together, and means associated with the lever for simultaneously actuating the interior planks in an opposite sense.



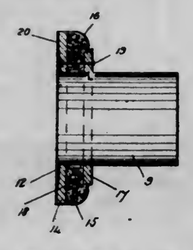
6. In a device of the character described, means for simultaneously spacing an inner set and an outer set of form members, comprising two curved links pivotally engaging the outer form members in corresponding places and extending inwardly, a lever disposed with its fulcrum between the two points of engagement, means for engaging the inner ends of the links with the lever so that the links passing around the fulcrum are locked on the centerline when the lever is in its form holding position, and a cam member extending downwardly from the lever between the inner form members for spacing the same in a direction opposite to that of the outer members.

1,452,752. PANEL-BOARD CONSTRUCTION. EDWIN A. OLLEY, Syracuse, N. Y., assignor to Crouse-Hinds Company, Syracuse, N. Y., a Corporation of New York. Filed June 13, 1918. Serial No. 239,723. 11 Claims. (Cl. 247—10.)



11. In a panel board, a base, a cabinet having a top including a door, circuit controlling devices within the cabinet and opposed to the door and having operating parts exposed when the door is open, and a guard comprising a plate, carried by and spaced apart from the top and arranged substantially parallel thereto and arranged between the door opening and the edges of the top and thereby covering the area of the base around the circuit controlling devices, and the space below the margins of the top around the door opening, substantially as and for the purpose set forth.

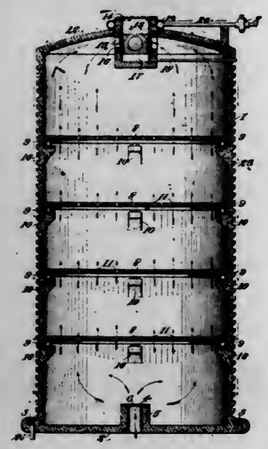
1,452,753. CLAMP. WILLIAM H. OTTO and WILLIAM ULRICH, Cincinnati, Ohio. Filed Mar. 9, 1922, Serial No. 542,426. Renewed Feb. 24, 1923. 3 Claims. (Cl. 144—303.)



1. A clamp comprising a shank having a fixed jaw at one end, and a series of depressions formed in the edge of shank, a movable jaw mounted to slide on the shank, provided with a clamping screw at its outer end, and formed with a cavity openings into the shank opening thereof, a lock-ball in said cavity, a spring in said cavity for forcing said ball into engagement with the depression in the edge of the shank, said cavity being formed with a shoulder to engage the lock-ball when the movable jaw is tilted and thereby lock the ball in the depression.

1,452,754. SLIDING-GEAR TRANSMISSION FOR FORD AUTOMOBILES. FRED PAEDERSEN, Oakland, Minn. Filed Feb. 4, 1920. Serial No. 356,187. 1 Claim. (Cl. 74—58.)

A sliding gear transmission for Ford automobiles, which consists of a gear case, a transmission pinion shaft journaled therein, having a transmission drive pinion at its inner rear end and also having an axial bore and a counter bore, a sliding gear shaft also journaled in the gear case, axially alined with said transmission pinion shaft and having a reduced end within the said bore and a thrust ring within the said counter bore, said shafts having respectively male and female knuckle members at their outer ends, a sliding gear on the last mentioned shaft having an internally geared portion on one side to engage the transmission pinion, a counter shaft, and connected gears on the counter shaft, one of which is permanently in mesh with the transmission pinion, and with the other of which said sliding gear is detachably engageable, means for shifting the sliding gear between the transmission pinion and the last mentioned counter shaft gear, and into and out of engagement therewith, and means for holding the sliding gear in shifted position, said transmission pinion being of sufficiently greater thickness than its respective counter shaft gear to receive the internally geared portion of the sliding gear in operative engagement therewith at one side of its said counter shaft gear.

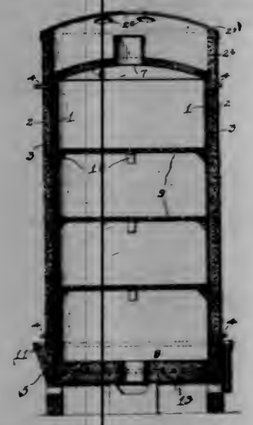


1,452,755. GREASE RETAINER. MARTIN W. PAULING, Dover, Mo. Filed May 5, 1922. Serial No. 558,725. 2 Claims. (Cl. 286—7.)

1. The combination, with a bearing, a tubular housing secured thereto, and an axle journaled in the bearing; of a grease retainer interposed between the bearing and the end of the housing and comprising a sleeve mounted on the axle and having a flange at one end, a large washer of flexible material bearing against the said flange, a felt washer interposed between the large washer and the end of the housing, a relatively small washer of flexible material secured to the felt washer and fitting inside the housing, and a metallic washer mounted on the axle and arranged between the said flange and the axle bearing and bearing against the outer side portion of the large washer.

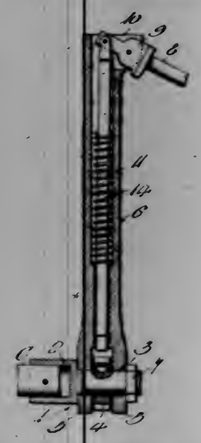
2. The combination, in a grease retainer, of a supporting sleeve having a flange at one end, a large reinforcing washer arranged on the sleeve against the said flange and projecting beyond it, a felt washer arranged against the large washer, and a relatively small reinforcing washer secured to the said washers and arranged on the other side of the felt washer from the large washer leaving the outer portion of the felt washer exposed on one side.

1,452,756. REFRIGERATOR. WILLIAM M. RAPP, San Francisco, Calif., assignor, by direct and mesne assignments, to Vapo Corporation, a Corporation of California. Filed June 21, 1920, Serial No. 390,556. Renewed Dec. 21, 1922. 1 Claim. (Cl. 62—90.)



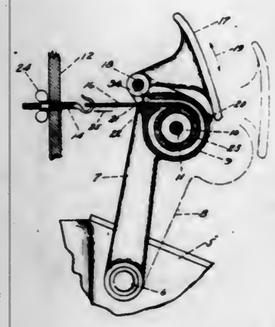
A refrigerator of the class described, comprising a moulded receptacle including a dome shaped top and a closed bottom, a multiplicity of circumferential channels formed in the outer surface of the receptacle, and a trough at the end of said channels, a ventilator in the top of the receptacle, shelves within the receptacle each of which being perforated to permit a circulation of air through the receptacle, the ventilator in the top of the receptacle comprising a casing extending within the receptacle and above the top thereof, said casing having a screened opening above the receptacle and a plurality of openings in the sides thereof, which extend within the receptacle, the bottom of the casing having a sump with a discharge pipe communicating therewith, means for distributing the liquid over the top of the receptacle with the said liquid adapted to gravitate over the outer surface of the receptacle, and in and out of said circumferential channels, said liquid distributing means comprising a distributing manifold surrounding that part of the ventilator casing, extending above the top of the receptacle, said manifold distributor having a series of perforations and a liquid supply pipe communicating therewith.

1,452,757. COOLER. WILLIAM M. RAPP, San Francisco, Calif., assignor, by direct and mesne assignments, to Vapo Corporation, a Corporation of California. Filed Dec. 4, 1920, Serial No. 428,361. Renewed Dec. 21, 1922. 4 Claims. (Cl. 45—134.)



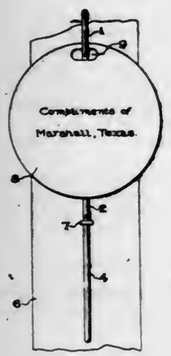
1. A cooler of the class described, including a receptacle having double walls with a space there between,

a top and bottom for the receptacle and a ventilator in both the upper and lower part of the receptacle; the outer wall being higher than the inner wall and consisting of a porous cementatory composition, and the inner wall as well as that of the top and bottom consisting of a moisture resisting cementatory composition,



the said top being molded to the inner surface of the outer wall to terminate the said space at the top of the receptacle and providing a water reservoir above the receptacle, and the said bottom terminating the opposite end of the space and including a waste trough around the receptacle with the material composing the outer wall molded to the bottom above said trough.

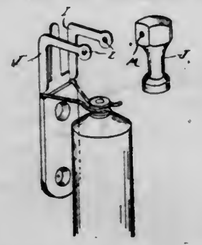
1,452,758. SAFETY CRANK FOR AUTOMOBILES. GEORGE F. RAUCH, Pukwana, S. Dak. Filed Oct. 27, 1921. Serial No. 510,787. 3 Claims. (Cl. 74—33.)



1. A safety crank for automobiles comprising a ratchet member adapted to be fixedly connected with a part of the existing crank shaft, and a hand operated crank including an arm loosely mounted around said ratchet member, a hand grip pivotally mounted at an intermediate point thereof to said arm, and a pawl associated with said crank and cooperable with said ratchet, said pawl being pivotally connected to one free end of and controlled by said hand grip.

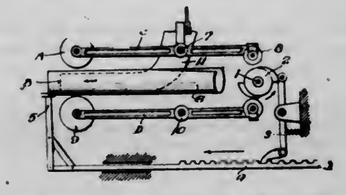
1,452,759. FOOT LEVER. JOHN J. REINHOLD, Marietta, Pa. Filed May 20, 1922. Serial No. 562,507. 1 Claim. (Cl. 74—81.)

In a device of the class described, the combination of a foot lever, a foot pedal pivoted on the end thereof, a flexible belt the one end being fixed to a stationary element, means for maintaining said belt taut, and means adapted to lock said foot lever to said belt through the manipulation of said foot pedal.



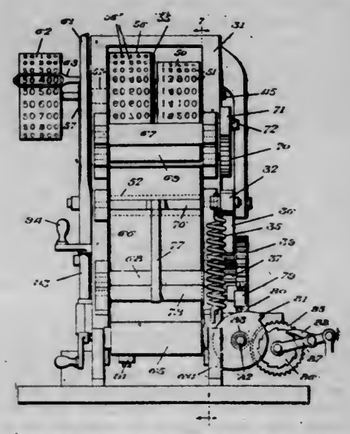
1,452,760. SIGN. FLETCHER S. RIGGS, Marshall, Tex. Filed July 1, 1922. Serial No. 572,207. 1 Claim. (Cl. 40—128.)

In a device for the purpose set forth, a wire member having one of its ends bent to provide a ring, a leg extending from the ring, an angle portion at the end of the leg, a straight extension on the angle portion terminating in a prong designed to be forced into a support, a staple around the said extension also entering the support, and indicia bearing disks arranged on the ring swingable therearound to disclose one face thereof and to be supported in such position by contact with the leg and with each other, as and for the purpose set forth.



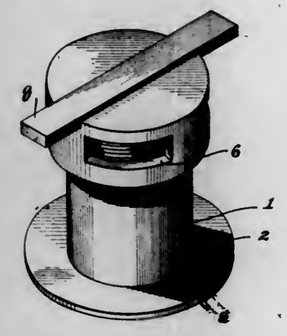
1,452,761. COLLAPSIBLE TUBE HOLDER. WILLIAM H. ROBERTS, Detroit, Mich., assignor to Detroit Stamping Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 8, 1921. Serial No. 490,463. 4 Claims. (Cl. 248—20.)

3. A holder for collapsible tubes comprising a sheet metal stamping apertured for engagement with securing means, a member having a portion engaging said stamping and provided with arms for engaging the nipple



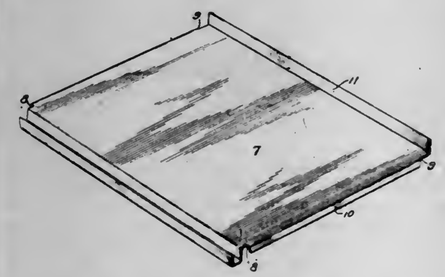
of the tube, and a member detachably secured to said stamping for capping said nipple while in engagement with said arms.

1,452,762. ELECTRIC SEAM-WELDING MACHINE. EDMUND SCHRÖDER, Berlin, Germany. Filed Mar. 15, 1920. Serial No. 366,177. 5 Claims. (Cl. 219—6.)



3. In an electric seam welding machine, the combination of a roller electrode, a mandrel-shaped electrode, and a circuit for the two, with a main shaft, a lever carrying the said roller electrode, a rack adapted for attachment to the work piece, a pawl engaging such rack, a lever carrying this pawl, means on the said main shaft for operating both said levers, means geared to this main shaft for sustaining the work piece seated on the mandrel electrode, and means for closing the said circuit while the work piece is at rest, substantially as set forth.

1,452,763. WEIGHING MECHANISM. STEPHEN W. SMUFORD, Woodlawn, N. C. Filed Apr. 13, 1920. Serial No. 373,482. 3 Claims. (Cl. 265—9.)

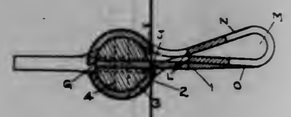


1. A weighing apparatus embodying a yieldable platform, a recording device operatively connected to the platform to be set by the depression thereof, tread members located at opposite ends of the platform, and means for alternately operatively connecting said members with said device for operating same to produce a record.

1,452,764. VALVE. WALTER ROBERT SMITH, Lompoc, Calif. Filed Mar. 24, 1921. Serial No. 455,076. 1 Claim. (Cl. 137—13.)

In a valve of the class described, a pipe section having a flange at one end adapted to be embedded in a cement base with the pipe section in alinement with a water distributing pipe, the opposite end of said pipe section being threaded, a cap closure for said threaded end including a plurality of openings in its sides, said cap closure adapted to be turned up and down on said threaded end for regulating the effective discharge area of the openings in the sides thereof in respect to the opening in the top of the pipe section, a radial slot in the top of said cap closure and a key in said slot providing means for rotating the cap closure, substantially as and for the purpose described.

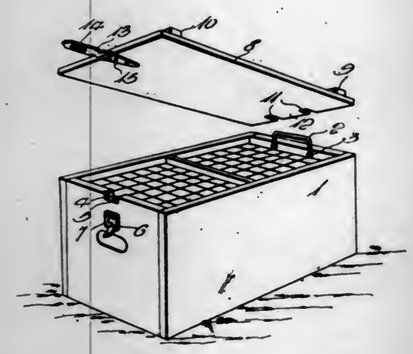
1,452,765. SHELF. WILLIAM J. STATLER, Buffalo, N. Y., assignor to The Jewett Refrigerator Company, Buffalo, N. Y., a Corporation of New York. Filed Jan. 30, 1920. Serial No. 355,221. 1 Claim. (Cl. 211—27.)



As an article of manufacture, a shelf comprising a body portion, parts of opposite side edges of said body portion being bent downwardly, another side of said body portion being bent upwardly to form an abutment and stiffening rib, the side of said shelf opposite the upturned side being bent downwardly and then upwardly to form a trough and the extreme edge of said side forming the trough being folded down upon itself to form a smooth rounded edge.

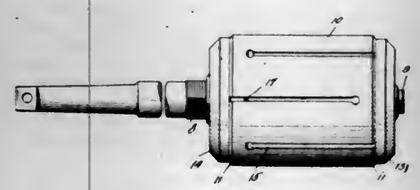
1,452,766. FENCE. JACOB STEFAN, Jr., Chicago Heights, Ill., assignor, by mense assignments, to Inland Steel Company, Chicago, Ill., a Corporation of Delaware. Filed Mar. 8, 1922. Serial No. 542,101. 1 Claim. (Cl. 256—48.)

A clip for fencing in which there is a T bar post and a horizontal fence wire passing across its front face, said clip being of stout, bendable wire having a hook at one end adapted to engage one of the post flanges, a flatly bowed section adapted to extend across the face of the post, and a backward reaching section bent in such direction that the included angle, relatively to the front section, is approximately 60 degrees, the backward reaching section extending to and considerably beyond the rear flange, whereby it may be bent around said rear flange and the resistance for producing the bend be furnished by said flange.



1,452,767. SAFETY RAZOR. ANTON P. STIANSEN, Brooklyn, N. Y. Filed Dec. 23, 1920. Serial No. 432,827. 7 Claims. (Cl. 30—12.)

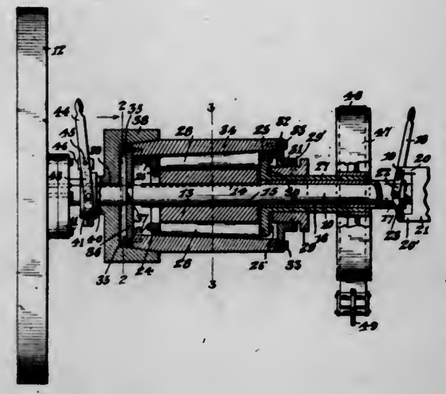
1. The combination, in a safety razor, of the blade 1 fastened to the holder 3 and provided with notches A, B and C, a guard 2, provided with a loop M having notches therein and oscillatably mounted on said holder by means of bearings D, E and F, said bearings having a gap G for said blade to slide in on removal and replacement of said guard and the middle bearing E extended longitudinally to form edges H and J providing means for engaging said blade and holding it against either side of said guard; substantially as specified.



1,452,768. SHIPPING CONTAINER. WALTER TRIBBLE, Oakland, Calif. Filed June 22, 1922. Serial No. 570,131. 5 Claims. (Cl. 217—56.)

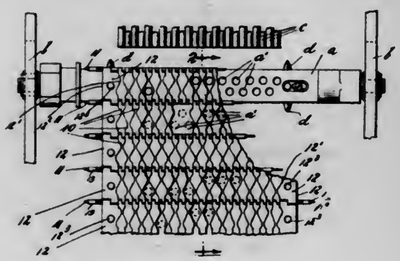
1. A shipping container or the like comprising a box-like receptacle, a lid therefor, an upstanding loop carried by one end of said receptacle, a tongue projecting longitudinally from one end of said lid and adapted to be inserted through said loop for detachably fastening

one end of said lid to said receptacle, and means for releasably fastening the other end of said lid to the other end of said receptacle.



1,452,769. LAPPER. LORING V. WARNER, Fostoria, Ohio. Filed Mar. 6, 1922. Serial No. 541,429. 2 Claims. (Cl. 51—206.)

1. A cylinder lapping device comprising a body portion, said body portion having tapered walls, a sleeve positioned on the body portion and having tapered walls cooperating with the tapered walls of the body portion to cause the sleeve to expand and contact upon movement of the sleeve with respect to the body portion, said sleeve having slotted portions and having tapered end portions, said slotted portion permitting expansion and contraction of the wall of the sleeve, and means cooperating with the tapered end portions of the sleeve for moving the sleeve longitudinally of the body portion.

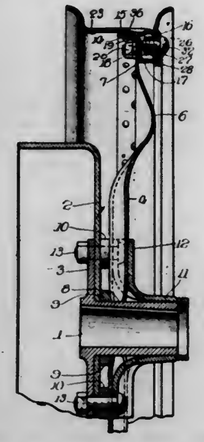


1,452,770. POWER-TRANSMITTING MECHANISM. BENJAMIN F. WEBB, Sistersville, W. Va., assignor of nine-twentieths to Andrew J. Karl and one-eighth to Fred Appel, both of Sistersville, W. Va., and one-tenth to Paul Engle and William H. Carter, both of Middlebourne, W. Va. Filed Feb. 14, 1922. Serial No. 536,433. 4 Claims. (Cl. 74—26.)

1. In a power transmission mechanism, a power shaft, a driven element loosely mounted on said power shaft, friction means including a longitudinally shiftable element operating with the drive shaft and a support provided with a plurality of driving elements operated from said shiftable element for connecting said driven element with said power shaft for rotation in the same direction therewith, means effecting a braking action on said support to arrest movement thereof whereby said driving elements will cause a reversed direction of rotation to said driven element, and means for connecting

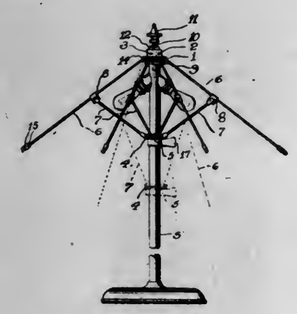
said driven element to said power shaft for rotation in the same direction therewith whereby said first mentioned means may be rendered inoperative.

1,452,771. JACQUARD MECHANISM FOR WEAVING MACHINES OR THE LIKE. RUDOLPH HERMAN WEBER, New York, N. Y. Filed Jan. 31, 1922. Serial No. 532,976. 8 Claims. (Cl. 139—42.)



1. In a jacquard mechanism for weaving machines, or the like, the combination with the jacquard cylinder having holes or bores, of an adjustable endless jacquard band composed of flexibly connected rows of removable individual solid members, each to fit over and when removed to expose a single hole in said cylinder.

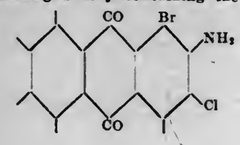
1,452,772. STEEL WHEEL FOR AUTOMOBILES. WILLIAM ERASTUS WILLIAMS, Chicago, Ill. Filed Sept. 8, 1919. Serial No. 322,388. 7 Claims. (Cl. 301—11.)



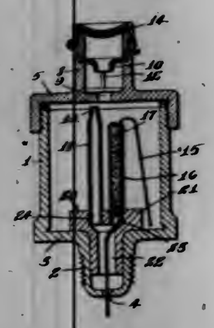
1. In a wheel of the class described, the combination with a disk having an annular member secured to the marginal portion of its outer face and provided at its own inner margin with an annular laterally projecting flange, of a rim body member encircling said annular member and having at one margin an annular flange

extending toward the center of the wheel and provided with a lateral groove engaging the margin of said later-

ally projecting flange, and means for rigidly connecting said disk, annular member and rim body member.



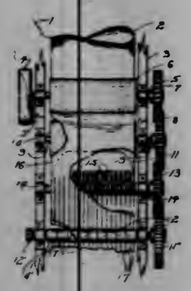
1,452,773. DETACHABLE AND FOLDABLE LAMP SHADE. ROSA M. AMORES, Washington, D. C. Filed Aug. 29, 1922. Serial No. 584,957. 3 Claims. (Cl. 240—117.)



1. As a new article of manufacture, a collapsible shade holder comprising an upper ring member, a lower ring member comprising two parts hinged together and spring pressed to form a clamp, shade supporting arms pivotally connected at their ends to the upper ring, and braces having their opposite ends pivotally connected to the lower member and to said arms intermediate their ends.

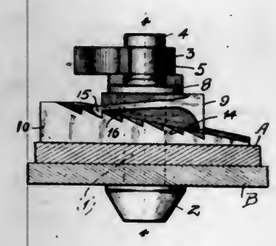
1,452,774. INTERMEDIATES AND DYESTUFFS OF THE ANTHRAQUINONE SERIES. FREDERICK WILLIAM ATACK, Manchester, England, and CHARLES WILLIAM SOUTAR, St. Andrews, Scotland. Filed June 3, 1921. Serial No. 474,757. 4 Claims. (Cl. 260—31.)

4. The process of preparing a new dyestuff which consists in condensing a body containing the grouping



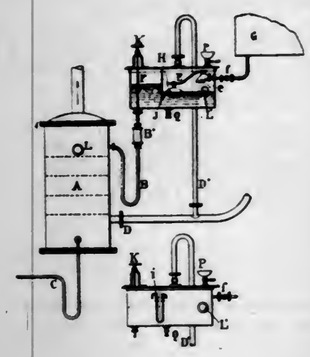
1,452,775. LUBRICATING DEVICE. CHESTER A. BACON, Auburn, N. Y., assignor to Bowen Products Corporation, Auburn, N. Y., a Corporation of New York. Filed Sept. 20, 1921. Serial No. 501,902. 3 Claims. (Cl. 184—65.)

1. A lubricating device comprising a normally closed receptacle for receiving a lubricant under pressure, slow feed and fast feed outlet conduits arranged to convey a lubricant from the receptacle, the fast feed conduit terminating and opening into the receptacle near the upper wall of the receptacle in order to convey the lubricant therefrom when the receptacle is full and the lubricant is under pressure, the fast feed conduit being tapered at its upper end and arranged to conduct the oil from the receptacle under the pressure of the lubricant in the receptacle, substantially as and for the purpose described.



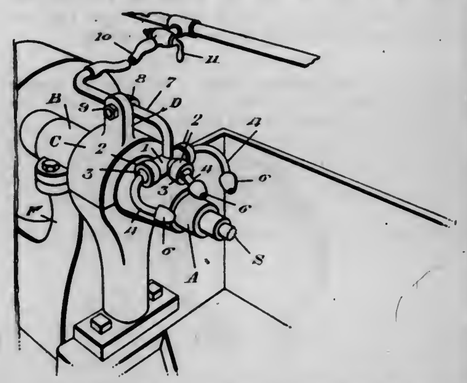
1,452,776. RUG MANUFACTURE. CHARLES F. BACON, Toledo, Ohio, assignor to The Bacon Bros. Co., Toledo, Ohio, a Corporation of Ohio. Filed Mar. 13, 1922. Serial No. 543,194. 17 Claims. (Cl. 28—1.)

1. In the production of a flat textile material of heavy body, the knitting of a strip, multiplying the strip into a plurality of longitudinal sections by slitting, extending by stretching a continuous section thereof to effect a closing in of the fabric to determine its body and automatically minimize marginal fraying, and assembling into a flat product.



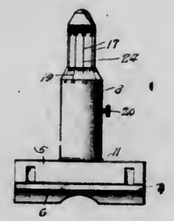
1,452,777. LOCKING BOLT. STEPHEN W. BAND, San Francisco, Calif., assignor of one-half to William Hackett, Oakland, Calif. Filed Mar. 14, 1922. Serial No. 543,694. 1 Claim. (Cl. 85—8.)

A locking bolt provided with a shank having a head at one end with its opposite end made to co-operate with a locking element, said shank adapted to be passed through two or more plates to be clamped together with said plates confined thereon by said locking element, a block having an opening, said shank adapted to be passed through said opening for confining the block on the shank, and a slotted wedge having teeth on opposite sides of the slot, said wedge adapted to straddle the shank of the bolt between said block and said plates, with spring fingers on said block engaging the teeth of the wedge



for maintaining the wedge in clamping relation with the plates, said spring fingers being cut as integral parts of the block and formed on opposite sides of the block and embodying in their construction headed ends made to engage the teeth of the wedge, a pair of parallel inverted V-shaped grooves on the block on opposite sides of the slot therein, and a pair of inverted V-shaped tracks on the wedge made to cooperate with said V-shaped grooves on the block to guide the block on the wedge.

1,452,778. PROCESS AND APPARATUS FOR THE RECOVERY OF THE VAPORS OF VOLATILE LIQUIDS FROM AERIFORM MIXTURES. EMILE AUGUSTIN BARBET, Paris, France. Filed Aug. 2, 1920. Serial No. 400,781. 9 Claims. (Cl. 252.)

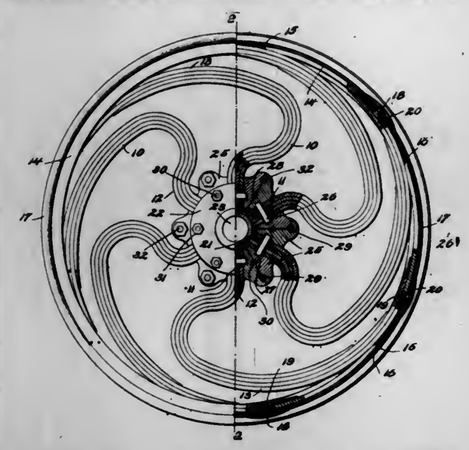


1. A process for recovering petroleum, petrol, benzol, alcohol, ether and other volatile vapors from aeriform mixtures arising in reservoirs containing substances from which said vapors are formed, consisting in discharging the aeriform mixture containing the vapors to be recovered from the reservoir containing the same, passing the mixture into a column containing a suitable absorbent, feeding additional absorbent to said column as the aeriform mixture passes through the same, regulating the absorbent feed automatically and proportionally to the quantity of vapor passing through the column and distilling the vapor from the absorbent.

1,452,779. WATER-JET HEAD ATTACHMENT FOR BUTTON-BLANK-CUTTING MACHINES. NICHOLAS BARRY, Muscatine, Iowa, assignor to Barry Company, Muscatine, Iowa, a Corporation of Iowa. Filed Jan. 2, 1920. Serial No. 348,851. 8 Claims. (Cl. 79—16.)

1. A water jet attachment for a button blank cutting machine and the like; comprising a hollow T, and a plurality of jet tubes respectively connected with the ends and the side member of the T by ball and socket joints; substantially as described.

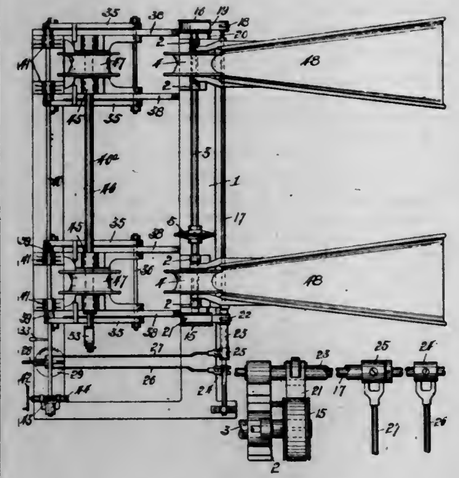
1,452,780. MICROMETER CALIPER. LAWRENCE O. BEARD, Lancaster, Pa. Filed June 24, 1922. Serial No. 570,664. 3 Claims. (Cl. 33—178.)



1. A micrometer-caliper comprising an inverted U-shaped plate, a calipering block adapted to fit movably within said plate, a sleeve mounted on said block and extending slidably through said plate, means for preventing the withdrawal of said block and said sleeve from said plate, means for cushioning the movement of said block towards said plate, and a measuring spindle rotatably mounted for relative longitudinal movement in said sleeve, said sleeve and spindle having cooperating graduations thereon.

1,452,781. WELDING ROD. FREDERICK M. BECKET, Niagara Falls, N. Y., assignor to Union Carbide & Research Laboratories, Inc., a Corporation of New York. Filed June 28, 1921. Serial No. 481,078. 7 Claims. (Cl. 219—12.)

1. A welding rod or the like consisting of an iron alloy containing carbon and substantial amounts of manganese and silicon.

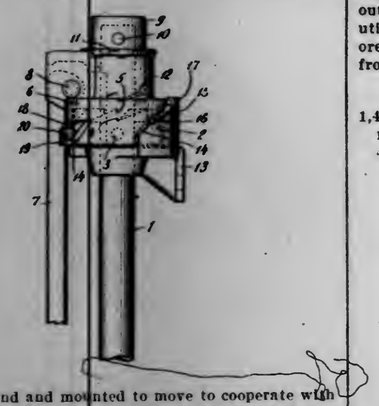


1,452,782. SPRING WHEEL. WILLIAM JAKOB BEISEL, Port Richmond, N. Y. Filed June 28, 1921. Serial No. 481,047. 11 Claims. (Cl. 152—50.)

1. A vehicle wheel embodying a series of similar laminated leaf spring spokes curved transversely of radial planes through the axis of the wheel, the outer layers or leaves of adjacent spokes overlapping around the circumference forming a continuous circular rim surface, a

rim fitting said rim surface, secured to the outer leaf of each spring, and an outer tire receiving rim secured to said first mentioned rim.

1,452,783. AUTOMOBILE TESTING APPARATUS. JOSEPH T. BISHOP, Toledo, Ohio. Filed Dec. 27, 1920. Serial No. 433,249. 16 Claims. (Cl. 73—51.)

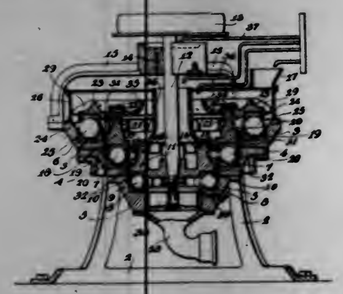


1. An apparatus of the class described having relatively rotatable members for engaging the different brake wheels of an automobile, and means actuated by a relative movement of the members to indicate any relative movement thereof.

1,452,784. RATCHET-BRAKE MECHANISM. ROBERT H. BLACKALL, Pittsburgh, Pa., assignor to Ratchet Brake Company, a Corporation of New York. Filed May 5, 1922. Serial No. 558,606. 4 Claims. (Cl. 74—116.)

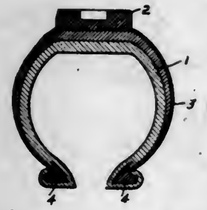
1. In a mechanism of the class described, the combination with the brake-staff and the operating lever, of

oppositely arranged ratchet-toothed clutch sections fixed to the staff and spaced apart from each other, a movable section between said fixed sections having a set of ratchet



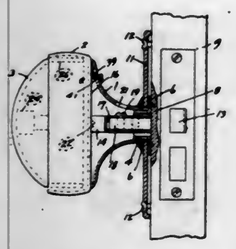
teeth on each end and mounted to move to cooperate with the sections in alternation, thereby to move the staff in either direction, and means for oscillating the movable section.

1,452,785. PROCESS FOR THE PRODUCTION OF SENSITIVE FILMS FOR PHOTOGRAPHIC PURPOSES. JAQUES EDWIN BRANDENBERGER, Paris, France, assignor to La Societe la Cellophane, Paris, France. Filed Mar. 7, 1921. Serial No. 450,398. 5 Claims. (Cl. 95—7.)



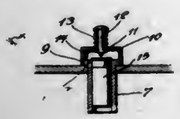
1. The process for producing a sensitive film for photographic purposes, which consists in treating the film successively with two liquids, the first liquid consisting of an aqueous solution of one of the substances which is intended to enter into reaction with a substance contained in the second liquid, said second liquid containing a percentage of the said substance at least equal to the chemically equivalent percentage of the substance present in the first liquid.

1,452,786. BALL PULVERIZING MILL. FRANK A. BREWER and GEORGE W. BRANSTON, Vancouver, British Columbia, Canada; said Brewer assignor of his entire right to Frank A. Brewer, jr., Vancouver, British Columbia, Canada. Filed Aug. 11, 1921. Serial No. 491,414. 10 Claims. (Cl. 83—45.)



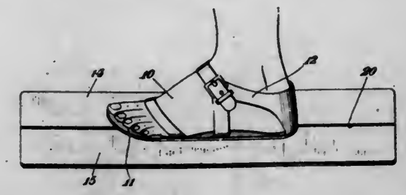
1. A ball pulverizer, comprising the combination with a suitable base, of a series of concentrically grooved rings supported in stepped relation thereon, balls in the grooves of the several rings, a driving head grooved to rest on the balls in the innermost ring, a shaft secured to that driving head by which it is rotated, a grooved driving ring separately mounted on each other ring of balls, each of which driving rings except the bottom one is in driving connection with the one next smaller in diameter but is independent of direct attachment to the driving shaft, means for delivering the rock to be crushed outside the outermost ring of balls, means for distributing it around the ring, and means for delivering the ore as crushed in one ring to the next inner ring and from the innermost ring to the delivery outlet.

1,452,787. PNEUMATIC TIRE. WILLIAM R. BUSENBARK, Akron, Ohio. Filed Nov. 13, 1920. Serial No. 423,813. 4 Claims. (Cl. 152—13.)



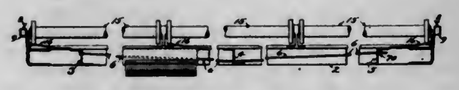
1. A pneumatic tire containing rubber and having an integral tread member, and a thin flexible sheet united to the tire so as to form a part thereof, said sheet extending underneath said tread member and inwardly over the sides of the tire toward the inner diameter.

1,452,788. COMBINATION DOORKNOB AND RINGING DEVICE. EARL B. CALDERWOOD, Oakland, Calif. Filed June 12, 1922. Serial No. 567,799. 4 Claims. (Cl. 116—10.)



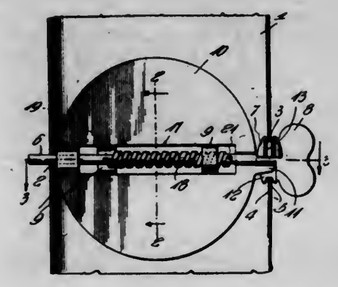
3. A device of the character described, comprising a shaft centrally supported therein having a bell, a bell ringing mechanism and disc with a peripheral notch mounted thereon, spring means for operating the ringing mechanism, a locking member normally engaging the notch so as to render the ringing device inactive having a curved flange thereon and a stationary element engaging the flange when the knob is turned so as to lift the locking member out of its engagement with the disc and to allow the ringing device to become active.

1,452,789. PORTABLE AIR-STORAGE TANK. CHARLES C. CAREK, Touhy, Nebr. Filed Mar. 20, 1922. Serial No. 545,135. 4 Claims. (Cl. 220—1.)



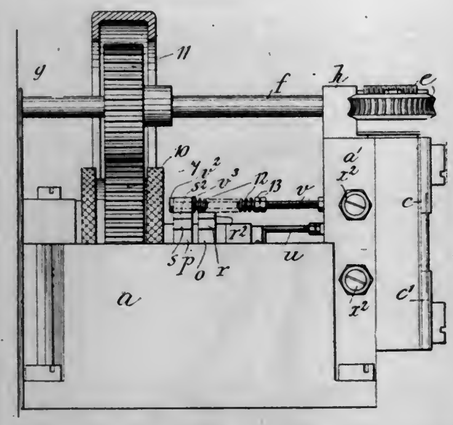
1. A portable air supply tank comprising a charge-holding barrel extending through one wall thereof, a locking cap detachably secured to said barrel, a firing pin slidably carried by said locking cap, and an outlet from said tank adapted to be connected to a tire or tube.

1,452,790. SWIMMING DEVICE. WILHELM F. CLAUPIN, Attleboro, Mass. Filed Mar. 17, 1922. Serial No. 544,435. 1 Claim. (Cl. 9—21.)



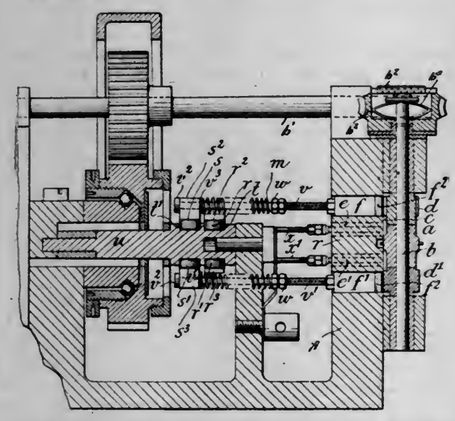
A swimming device, comprising a pair of articulated plates hinged to sandal members, said plates being adapted to open and close according to the direction of motion, and strips of buoyant material embedded longitudinally in each plate.

1,452,791. TUBE FRAME FOR AXMINSTER LOOMS. CHARLES H. COLLINS, West Albany, N. Y. Filed Jan. 12, 1922, Serial No. 528,637. Renewed Dec. 16, 1922. 7 Claims. (Cl. 139—66.)



5. A tube-bar for a tube-frame for Axminster looms, comprising a hollow tube with a truss rod attached inside thereof the ends at a point near the top, and the center at a point near the bottom of said tube, so that it will strengthen said tube against vertical downward pressure applied between the ends thereof the ends being supported.

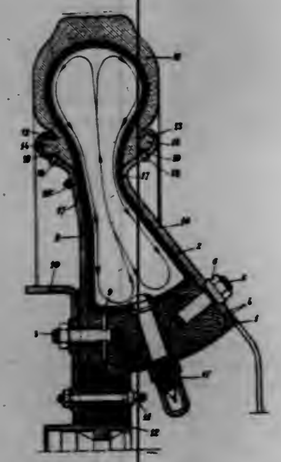
1,452,792. AUTOMATIC DAMPER. THOMAS S. COOPER, Jr., Charleston, W. Va., assignor to Kooper Damper Co., Philadelphia, Pa. Filed Sept. 9, 1921. Serial No. 499,364. 7 Claims. (Cl. 236—93.)



7. The combination with a shaft having a handle, and a damper on said shaft; of a head on one end of said shaft adapted to be rotatably received in an opening in the pipe in which the damper is used, said head having a circumferential groove to receive the metal at the edge of the opening and said head being provided with cam means for frictionally engaging metal of the pipe about the opening and yieldably holding the shaft against rotation.

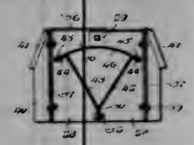
1,452,793. TELEGRAPHIC RECEIVING APPARATUS. FREDERICK GEORGE CREED, Croydon, England. Filed Mar. 15, 1920. Serial No. 366,006. 18 Claims. (Cl. 164—89.)

1. In perforating apparatus of the type herein referred to, the combination with the punches for perforating a tape, of actuating means connected to said punches and adapted positively to move them into both their operative and inoperative positions so that they are constrained to move in the required manner and at the required times, and mechanically operated means adapted to operate said actuating means in an intermittent and positive manner in accordance with the perforations to be made in a tape by said punches.



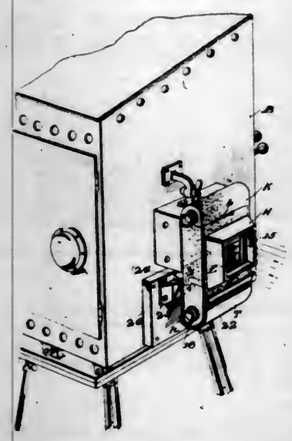
1,452,794. TELEGRAPHIC RECEIVING APPARATUS. FREDERICK GEORGE CREED, Croydon, England. Filed Mar. 15, 1920. Serial No. 366,007. 7 Claims. (Cl. 164—89.)

1. In tape perforating apparatus, the combination with a tape feed wheel, a punch, means for reciprocating said punch, a toothed correcting wheel adapted to adjust said feed wheel in a rotary direction and a correcting device adapted to co-act with said correcting wheel before said punch completes its operative stroke, of mechanically operated driving mechanism and actuating means positively moved by said driving mechanism and adapted to cause said correcting device to make its operative stroke,



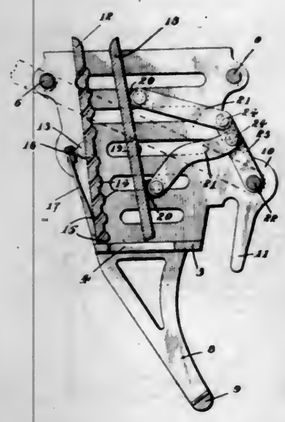
said actuating means being adapted to yield in the event of said correcting device fouling the top of a tooth of the correcting wheel when making its operative stroke, substantially as described for the purpose set forth.

1,452,795. WHEEL WITH IMPROVED PNEUMATIC TIRE FOR MOTOR VEHICLES. HENRY DE HOOYDONCK, Biarritz, France. Filed Oct. 15, 1921. Serial No. 507,819. 4 Claims. (Cl. 152—13.)



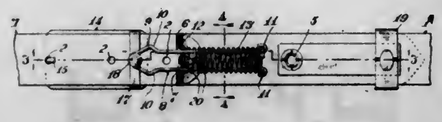
2. An improved combination wheel and pneumatic tire including a hollow hub, side cheeks removably connected thereto, a casing supported by the cheek at the peripheral edges thereof, an air tube occupying the entire space between the hub, casing and cheeks, an inflation valve mounted through the inner periphery of the hub and communicating with the tube and the outer portions of the cheeks being extended laterally from the plane of the thread of the casing, substantially as and for the purposes set forth.

1,452,796. CULVERT. THOMAS DE LA MARE, Tooele, Utah. Filed Mar. 11, 1921. Serial No. 451,428. 1 Claim. (Cl. 61—16.)



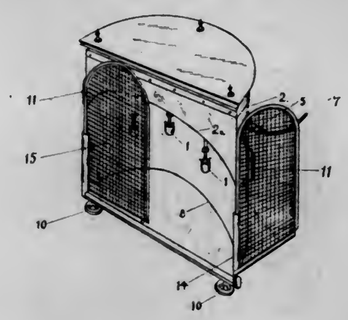
In a device of the class described, an end wall comprising plates having notches provided at their upper outer corners with extensions, the notches cooperating to define an opening, and a body including a trough-like bottom comprising side walls provided at their upper edges with outstanding flanges having overhanging lips, the body including a top, the longitudinal edges of which are received between the flanges and the lips of the bottom, the bottom being received in the opening, and the flanges, the lips and the longitudinal edges of the top being received in the extensions, the plates being overlapped above the top to reinforce the end wall above the opening, the plates being provided adjacent to their lower edges with outstanding lugs engaging the bottom adjacent to the longitudinal center thereof, a securing element uniting the overlapped parts of the plates, and a securing element uniting the lugs.

1,452,797. STEREOPTICON DEVICE. WILLIAM H. C. DUDLEY, Americus, Ga. Filed July 26, 1921. Serial No. 487,735. 2 Claims. (Cl. 88—28.)



1. A stereopticon device comprising a casing having light openings formed therein, a flexible transparent film supported within the casing for movement across the light openings, and a bracket adapted to support the casing so that the light openings register with the lens opening of the lamp housing, said bracket comprising a clip adapted to receive one end of the casing, and means for adjustably supporting the clip.

1,452,798. MOP WRINGER. FRED A. EATON, South Stukely, Quebec, Canada. Filed Apr. 10, 1922. Serial No. 551,341. 2 Claims. (Cl. 15—261.)

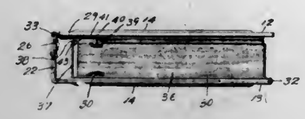


1. A mop wringer comprising a frame including a base, a pair of sides and a front, a shaft journalled in said frame, a back slidably supported with relation to the sides, a pair of links secured to the shaft, a link secured to the upper portion of the back and pivoted to one of the first named links, and a link secured to the lower part of the back and pivoted to the free end of the other of said first named links.

1,452,799. BELT BUCKLE. THEODORE C. ERFENBECK, Chicago, Ill. Filed Sept. 14, 1921. Serial No. 500,708. 3 Claims. (Cl. 267—72.)

1. A tension device for belt buckles comprising a belt having one end folded back upon itself and provided with an opening, a U-shaped plate having spaced apertures therein registering with the opening in the belt and lying within the folded portions thereof, a wire loop having an enlarged head and hooked free ends constructed to project through the apertures of the plate, the said enlarged head contacting with the plate, a flat coiled spring encircling both free ends of the loop and disposed between the plate and the hooked ends, and means for securing the folded portion of the belt.

1,452,800. HEATING AND LIGHTING RADIATOR. HENRY GINGER, Waltham Cross, England. Filed Aug. 21, 1922. Serial No. 583,404. 4 Claims. (Cl. 126—92.)



1. A combined portable heating and lighting radiator comprising a casing, a source of heat and light suspended therewithin, an adjustably mounted reflector lodged at the bottom of the casing, and air distributing plates above the casing.

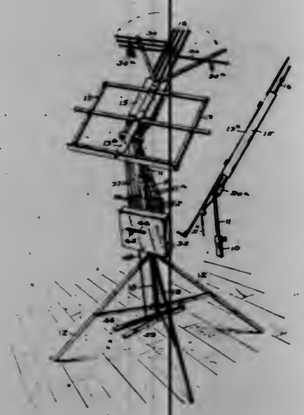
1,452,801. MANUFACTURE OF CAPILLARY CONTAINERS AND DISPENSERS. WALTER GOODCHILD, Oakland, N. J., assignor to "Nips" Incorporated, Hoboken, N. J., a Corporation of New Jersey. Filed Feb. 25, 1921. Serial No. 447,856. 6 Claims. (Cl. 215—1.)

1. As a new article of manufacture, a container and dispenser for perfumes, consisting of a tubular receptacle with capillary ends hermetically sealed, the connecting portion between the latter being of such size that the contents will not spontaneously flow out of the tube when it is held in a substantially vertical position with its said ends open in normal condition.

1,452,802. METAL BOOK COVER. FREDERICK HACHMANN, St. Louis, Mo., assignor to William H. Gregg, St. Louis, Mo. Filed Mar. 12, 1921. Serial No. 451,930. 3 Claims. (Cl. 129—1.)

2. A device of the class described comprising a cover, a back integrally formed therewith, a second cover hingedly secured to said back, a spring clamp secured to the back for securing a tissue book thereto, a plate hingedly secured to the free end of the first mentioned cover, a clamp hingedly connected to said plate for securing a sales ticket book thereto, and projections formed integral with said clamp, said projections extending beyond the side edges of the cover.

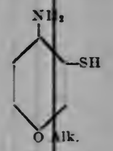
1,452,803. RACKET FOR TENNIS AND LIKE GAMES. ARTHUR HARRIS, Romford, England, assignor of one-half to Percy Newland Eve, Upminster, England. Filed Sept. 2, 1921. Serial No. 497,948. 4 Claims. (Cl. 46—24.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A racket having a frame comprising a hollow metallic member bent in the required form and the ends of which form handle portions, said member presenting a channel on its inner side, a handle fitted between said handle portions, and a wedge at the inner end of the handle and fitted in said inner side channel of said handle portions of the said member.

1,452,804. DEVICE FOR TURNING MUSIC. FRANK E. HARTUP, Indianapolis, Ind., assignor of one-half to William M. Kunkel, Indianapolis, Ind. Filed Mar. 4, 1922. Serial No. 541,018. 4 Claims. (Cl. 84—5.5.)

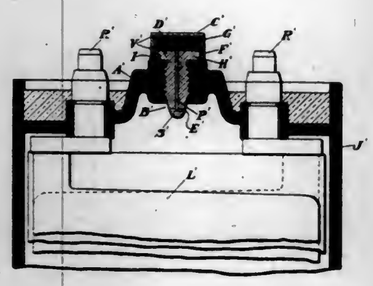
1. A device for turning leaves of music comprising a plurality of oscillating shafts, arms on the shafts to provide means for attaching the leaves containing the musical composition, a pair of longitudinally movable spirally slotted sleeves arranged on each shaft, pins



carried by each shaft for engaging the slots in its associated sleeves, and an actuator means progressively actu-

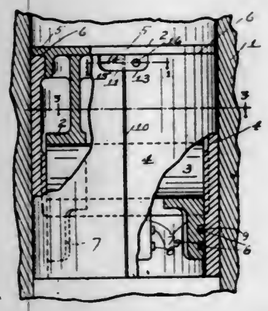
ating one sleeve on each shaft for independently oscillating the shafts in one direction.

1,452,805. DYESTUFFS CONTAINING SULPHUR AND DYEING VEGETABLE FIBERS WITHOUT A MORDANT AND PROCESS OF MAKING SAME. RICHARD HERZ, Frankfort-on-the-Main, and HANS BALHORN, Hochst-on-the-Main, Germany, assignors to Leopold Cassella & Co. Gesellschaft mit beschränkter Haftung, a Corporation of Germany. Filed July 25, 1922. Serial No. 577,427. 4 Claims. (Cl. 260—22.)



4. As a new article of manufacture, the new fast cotton dyestuff derived from the product of condensation of chloranil with p.alkyloxy-o.aminothiophenol of the following formula.

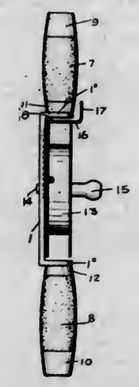
by subjecting the same to the action of a sulfurizing agent, containing in its molecule very probably the residue of the benzolquinone nucleus, a thiazine nucleus and besides the sulfur of the thiazine ring chemically bound sulphur, being in a dry state a reddish-brown powder, soluble in concentrated sulfuric acid with a blue color and dyeing cotton in an alkaline sulfide bath or in the vat claret red shades which are distinguished by their fastness to washing, chlorine and light.



1,452,806. STORAGE-BATTERY VENT. NEVIL MONROE HOPKINS, New York, N. Y., assignor to National Carbon Co. Inc., a Corporation of New York. Filed May 31, 1921. Serial No. 473,723. 2 Claims. (Cl. 204—29.)

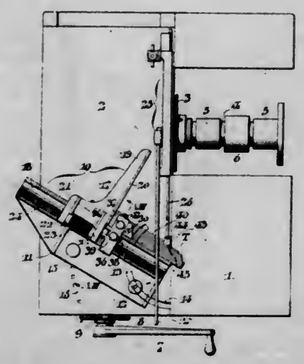
1. A storage battery vent comprising a base having threads whereby the same may be attached to a cell cover and also having a gas escape passage the entrance of which is not directly in the axis of the main portion of such passage, a vented cap secured to the end of said base opposite such entrance, and chemically inert loose

material in said cap between the vent thereof and the outlet end of said gas escape passage.



1,452,807. PISTON. CHARLES E. JOHNSON, Muskegon, Mich., assignor to The Piston Ring Company, Muskegon, Mich., a Corporation of Michigan. Filed Sept. 1, 1922. Serial No. 585,587. 1 Claim. (Cl. 74—108.)

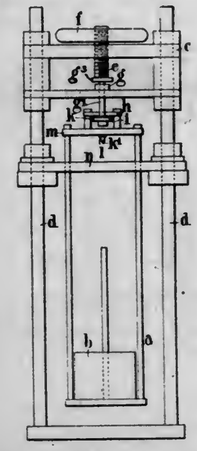
In a piston; a body member having a radially-extending flange; a sleeve member surrounding the body member and having a longitudinally-disposed slit, and a recess extending across the slit and inwardly from the sleeve member's outer side to the bottom wall of the recess and from an end of the sleeve member to the side wall of the recess; a dam plate in the recess extending across the slit and tightly fitting the bottom wall and the side wall of the recess, and being slidable in the recess on at least one side of the slit in a direction transverse to the slit; means for holding the body member's flange in tightly fitting contact with said end of the sleeve member and with the outer edge of the dam plate.



1,452,808. FISHING-ROD HANDLE. FREDERICK CHARLES LEE, Toronto, Ontario, Canada. Filed Nov. 9, 1922. Serial No. 599,922. 1 Claim. (Cl. 43—20.)

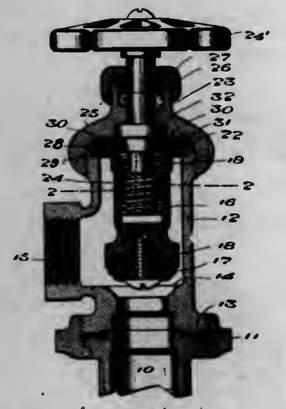
A fishing rod handle comprising a broad U-shaped central member having short arms, a tubular portion carried by one of said arms and a stud by the other of said arms, said portions extending laterally outward from each arm in central alignment one with the other, handle grips secured upon each of the said portions, and a reel

mounted within the bracket between the handle grips and arms so as to be in central alignment with the handle grips.



1,452,809. WORKHOLDING AND POSITIONING DEVICE FOR RULE AND BORDER TYPE OR SLUG-CUTTING MACHINES. JOHN LOGUE, Philadelphia, Pa. Filed Aug. 5, 1921. Serial No. 489,960. 8 Claims. (Cl. 29—69.)

1. The combination with a type cutting machine having a cutting tool, a work supporting table movable with respect to said tool, and a gauge member pivotally mounted to said table, of a work holding and positioning device for use in mitering affording abutting surfaces for the ends of the rule or border slugs disposed at substantially right angles to the latter and adapted to position their abutting ends at the angle to which the miter is to be cut so that a number of the rule or border slugs may be cut to uniform length while being mitered.



1,452,810. APPARATUS FOR TESTING THE HARDNESS OF METALS AND OTHER MATERIALS. HAROLD MOORE and RICHARD MATHER, Woolwich, England. Filed Sept. 29, 1920. Serial No. 413,655. 5 Claims. (Cl. 265—12.)

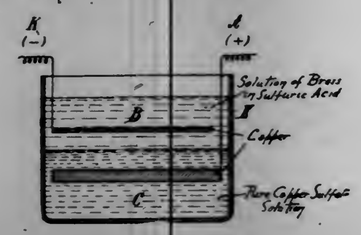
1. Apparatus for testing the hardness of materials comprising a support for the specimen to be tested, a hardened steel ball arranged above said support, a stirrup carrying said hardened steel ball and adapted to

carry a known weight, and means for lowering said stirrup so that said ball is pressed into contact with said specimen under said known load.

1,452,811. COMPRESSION COCK. PHILIP MUELLER, Decatur, Ill., assignor to Adolph Mueller, trustee, Decatur, Ill. Filed Apr. 12, 1920. Serial No. 373,209. 2 Claims. (Cl. 251—48.)

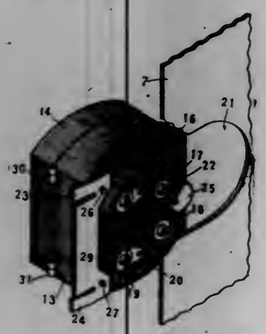
1. In a cock or faucet, the combination of a body portion having an inlet and an outlet, a valve-seat, a vertically movable valve, a valve-operating stem having a collar thereon, a body-cap having a recess to receive said collar, a collar-supporting washer having a depending nipple, and a packing between said nippled washer and said valve-body.

1,452,812. LOCK. EUGENE O. MURMANN, Glendale, Calif. Filed May 2, 1922. Serial No. 557,946. 5 Claims. (Cl. 70—46.)



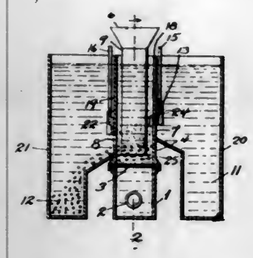
1. In a lock, the combination of a casing, a movable plate-tumbler having an opening comprising a circle intersected by a rectangle, a plug rotatable when centered

in the circular part of said opening and non-rotatable when disposed in the rectangular part and eccentric to the circular part of said opening, key operated means



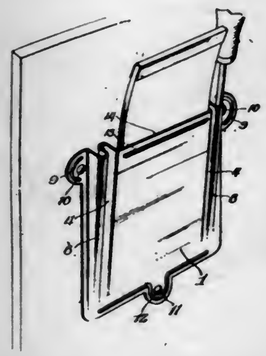
for moving said tumbler to align the circular part of said opening to permit rotation of said plug, and means tending to move said tumbler out of alignment.

1,452,813. METHOD OF DECOMPOSING MIXED METAL-SALT SOLUTIONS. HARRY PAULING, Berlin-Grunewald, Germany. Filed Aug. 3, 1921. Serial No. 489,635. 6 Claims. (Cl. 204—1.)



1. The herein-described method, comprising the step of passing an electric current through a mixed metal salt solution in a vessel provided with electrodes of the more conductive metal contained in the solution, to electrolytically decompose said solution.

1,452,814. INCLOSED-SWITCH CONSTRUCTION. CLARENCE D. PLATT, Bridgeport, Conn. Filed June 27, 1922. Serial No. 571,289. 10 Claims. (Cl. 247—2.)



1. In a fuse receptacle, an insulating body, appurtenant fuse terminals mounted on the body, a cover hinged to the body and having a shoulder, a projecting flange on the body for engagement with the edge of an opening in a switch-box, a catch on said body for engagement with said shoulder on the cover, and means for connecting said catch and said flange and securing them on opposite surfaces of the said body.

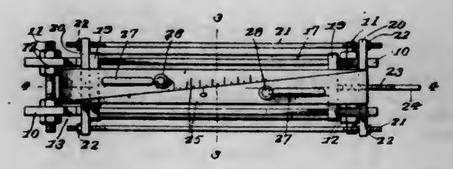
1,452,815. PROCESS OF AND APPARATUS FOR GRADING SOLID MATERIALS. CHARLES J. REED, Glenside, Pa. Filed Apr. 25, 1919. Serial No. 292,718. 13 Claims. (Cl. 83—82.)

1. The process of grading solid particles, which consists in holding a mixture of the solid particles in a suspension zone of a suspension medium in a condition of stratified suspension and withdrawing particles from different strata out of the suspension zone into separate zones of relative quiet in the suspension medium.

1,452,816. HOLDING DEVICE. GEORGE H. REIMER, Fulton, Ill., assignor to Patent Novelty Company, Fulton, Ill., a Corporation of Illinois. Filed Feb. 23, 1922. Serial No. 538,491. 4 Claims. (Cl. 248—20.)

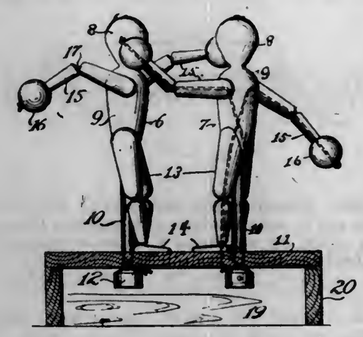
1. In a device for holding an ice-pick and a coupon book or other articles, the combination of an outwardly inclined front wall of sheet metal, with downwardly tapered side walls forming with said front wall a relatively wide pocket, and other downwardly tapered side walls connected by narrow outer front walls to form relatively narrow pockets forming hollow rounded outer stiffening ribs at each side of said wide pocket, with outwardly open narrow spaces forming narrow vertical open grooves on the outer face of the device between the middle pocket and the two narrow pockets, marginal attaching portions for the upper corners of the device, adapted to engage a wall or other flat surface, when the device is attached in position for use, and inner narrow walls unattached to said surface and forming hollow rounded inner stiffening ribs between said pockets to merely engage said flat surface, so that outward pressure on the front wall of said wide pocket is resisted entirely by said outer attached corner portions, and whereby said pockets are all closed at the back of said device by said flat surface and are each separately formed and open only at the upper edge of said device.

1,452,817. LINK. VALENTIN BETTERATH, Dresden-Cossebaude, Germany, assignor to the Firm: Deutsche Werke Aktiengesellschaft, Berlin, Germany. Filed June 30, 1920. Serial No. 393,219. 5 Claims. (Cl. 64—30.)



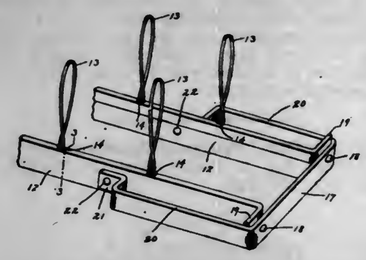
5. A ball-and-socket joint comprising a member provided with parallel flanges and a spherical surface located between said flanges and integral therewith, and another member provided with jaws having opposing spherically curved socket surfaces adapted to engage said ball, said members being provided with recesses adjacent to said spherical surfaces to provide clearance for said flanges and jaws when said members are angularly inclined to each other.

1,452,818. BELT BUCKLE. SAMUEL M. RIKER, Chester, N. J. Filed Aug. 15, 1922. Serial No. 581,996. 5 Claims. (Cl. 24—194.)



1. A belt buckle comprising a face plate, transversely slotted adjacent to its respective ends for threading the free end of a belt adjustably therethrough, a post projecting inwardly from the inner face of said face plate intermediate said slots, a clamp plate detachably engageable with said post and longitudinally slidable relative to said face plate and its post, mutually cooperative means on said post and said clamp plate for retaining the latter in operative attached relation to said face-plate, and means for attaching the fixed end of a belt to said clamp plate.

1,452,819. BABBITTING AND BRASSING MACHINE. WILLIAM GILES THOMAS, Victoria, Va. Filed Mar. 8, 1922. Serial No. 542,187. 2 Claims. (Cl. 22—123.)



1. A machine for molding Babbitt linings in channel members cross-head gibs comprising a frame for supporting a channel member, the frame having notches for reception of the battered ends of a channel member, transverse blocks disposed on the frame and against the ends of the channel member to prevent escape of the molten Babbitt-metal, a frame including a pair of transverse end bars supported on the frame with one of the bars against one of the blocks, tie members adjustably connecting corresponding ends of the bars, a clamping screw engaged through the other of the transverse bars and bearing against the other transverse block to maintain the latter in position against the end of the gib, and a core comprising a pair of longitudinally adjustable and graduated wedge blocks disposed in spaced relation to the sides of the channel member and supported on the transverse blocks in spaced relation to the bottom wall of the channel member.

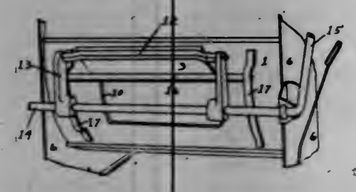
1,452,820. FIGURE TOY. DANIEL F. WHITCOMB and KARL R. COOLIDGE, Los Angeles, Calif. Filed Nov. 30, 1921. Serial No. 518,754. 2 Claims. (Cl. 46—40.)

1. A figure toy comprising a platform, a body having a head and four jointed members, two being upper members and two being lower members, said body terminating in a pedestal rotatively mounted in the platform; cords connected to the platform and each cord passing through the lower jointed members thence through the body, thence through the upper jointed members on the opposite side of the body and secured to the outer ends of said upper members.

1,452,821. ENAMELING RACK. WILL DEAN ALLEN, Farmington, N. H. Filed Feb. 25, 1922. Serial No. 539,125. 3 Claims. (Cl. 91—60.)

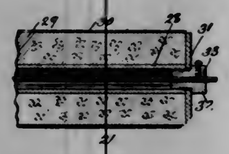
1. An enameling rack comprising bent metal strips, constituting widened rack-ends, adapted to bear on a horizontal support; and article-holding means including a thin-edged flat-sided bar fixed to and extending between said strips; and holders fixed to said bar and projecting from an edge thereof, the arrangement being such that the said strips are adapted to maintain the bar with its flat sides vertical and the said holders projecting upward from the bar, in position to hold articles overhanging the flat sides, so that enamel may drip from the major portions of the articles without contacting with the bar, said strips being formed to constitute spacing members, adapted to abut against spacing members on other racks, to prevent contact between articles stored on contiguous racks.

1,452,822. ATTACHMENT FOR TYPEWRITING MACHINES. JOHN H. ANANSON, Stirling, N. J. Filed Jan. 21, 1922. Serial No. 530,766. 3 Claims. (Cl. 197—153.)



1. In a typewriting machine having a frame, a paper feed carriage and feed roll thereon, ribbon spools supported on said frame and having an ink ribbon thereon, a second set of ribbon spools on said frame operatively

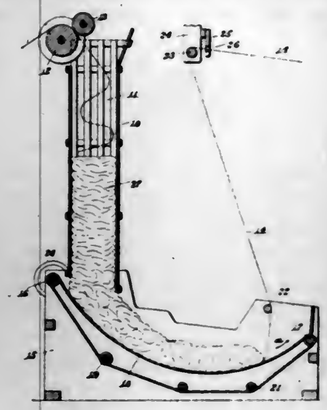
connected to said first named spools and having an auxiliary ink ribbon thereon, means for supporting said auxiliary ribbon in the rear of said first ribbon, and means on



said frame, disposed beyond the limits of travel of said carriage and in alinement with said auxiliary ribbon supporting means for supporting a length of auxiliary ribbon beyond the ends of the carriage.

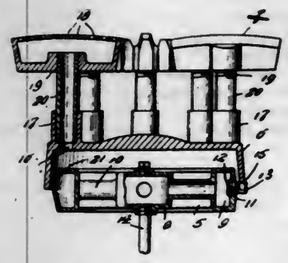
1,452,823. DOOR FOR MIXING MACHINES. HERMAN BESSER and JESSE H. BESSER, Alpena, Mich. Filed May 23, 1921. Serial No. 471,795. 2 Claims. (Cl. 220—32.)

1. In a mixing machine, the combination of a stationary cylindrical drum, a discharge opening at one side of said drum, a removable door for said opening, guides engaging the lower part of said door, pivoted rocker arms connected to the upper end of said door, and a rockshaft supporting said arms.



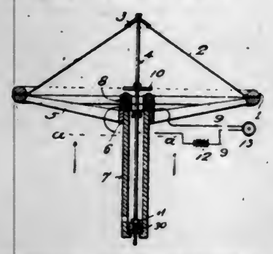
1,452,824. ROLLER. WILLIAM G. BOSWORTH, New York, N. Y. Filed Dec. 2, 1919. Serial No. 341,872. 7 Claims. (Cl. 197—147.)

1. A roller comprising a baked, compressed-cork, cylindrical member having an outer cover of hard, finely divided material.



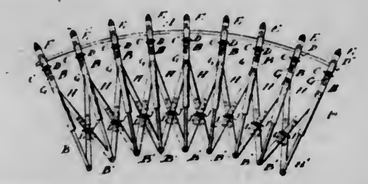
1,452,825. CLOTH-PILING MACHINE. JOSEPH F. BRINDLEY, East Dedham, Mass., assignor to Hodges Finishing Company, East Dedham, Mass., a Corporation of Massachusetts. Filed Feb. 21, 1922. Serial No. 538,395. 5 Claims. (Cl. 26—2.)

1. A long frame work having vertical side walls and provided with parallel rollers at opposite ends, one of which is higher than the other; an endless one-piece conveyor belt on these rollers between which the upper portion is adapted to sag; intermediate rollers above the lower portion of the belt and free from contact with the upper portion of said belt; and a hopper above said conveyor with its lower end between said side walls and near the highest roller adapted to deliver cloth to a steeply inclined part of the conveyor, and thereby, by the weight of the cloth, cause the portion of the belt beneath said



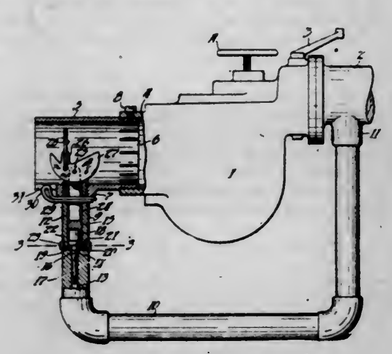
hopper to move downwardly with the cloth thereon for a considerable distance beyond said hopper and toward the delivery end of the frame work.

1,452,826. GAS AND VAPOR BURNER. EUGENE ORA DANIELS, Toledo, Ohio. Filed Feb. 19, 1923. Serial No. 619,865. 4 Claims. (Cl. 158—104.)



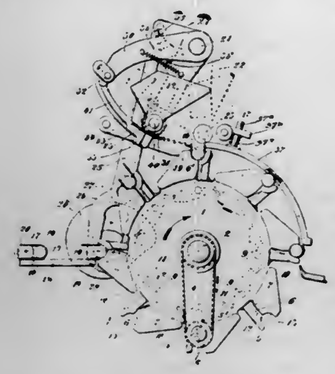
1. In a burner of the class described, a manifold having a gas inlet pipe communicating therewith, a dome supported upon the said manifold in spaced relation thereto, burner heads carried by the dome and removable therefrom, the said manifold being formed with out let openings and means upon said maniofld for supporting said dome.

1,452,827. TELEPHONE DEVICE. LEE DE FOREST, New York, N. Y. Filed Nov. 22, 1919. Serial No. 339,807. 4 Claims. (Cl. 179—114.)



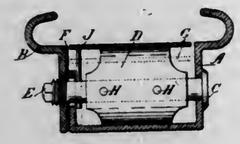
4. The combination with a substantially cone-shaped diaphragm freely exposed on opposite sides to the atmosphere, of an axially extending rod operatively associated at one end with the approximate apex of said diaphragm for maintaining said diaphragm taut, a support for said rod, means for mounting said rod in said support to permit free longitudinal vibratory movement of said rod relative to said support, an armature rigidly carried by said rod for vibratory movement therewith and positioned at a point intermediate its ends, and a magnet for said armature located in a fixed position relative to said support substantially as and for the purpose set forth.

1,452,828. ADJUSTABLE SPACING TOOL. FRANK W. DEITZ, Cleveland, Ohio. Filed May 2, 1921. Serial No. 466,120. 3 Claims. (Cl. 33—192.)



1. In a device for spacing and ruling parallel lines, the combination with an elongated scale member, of spaced bars slidably movable thereon, crossed links pivoted together in pairs, and adjustably connecting said bars and adapted to retain the same in parallel relation to each other, and drafting means adjustably secured to said bars adjacent to said scale member.

1,452,829. AIR AUXILIARY SUPPLY MEANS FOR INTERNAL-COMBUSTION ENGINES. THOMAS A. EDISON, Jr., Orange, N. J. Filed Mar. 4, 1919. Serial No. 280,526. 2 Claims. (Cl. 261—46.)

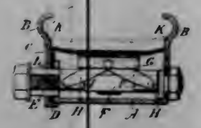


2. The combination of a carburetor of an internal combustion engine, the fuel supply conduit leading therefrom and provided with an auxiliary air inlet having a valve seat, and a device comprising a valve member movable with respect to said seat for controlling the admission of air through said auxiliary air inlet and a member mounted in the main air inlet of the carburetor and movable therein to control the effective area thereof, either of said members being adapted by movement thereof to effect movement of the other member, and said device being arranged to be maintained in balanced position by the effect of the air entering the carbureter on the member in said main air inlet and by the effect of the vacuum in the fuel supply conduit on said valve, substantially as described.

1,452,830. LABEL-AFFIXING APPARATUS. MILFORD B. FERGUSON and EDWARD HAAS, Brooklyn, N. Y. Filed Mar. 7, 1919. Serial No. 281,146. 23 Claims. (Cl. 216—9.)

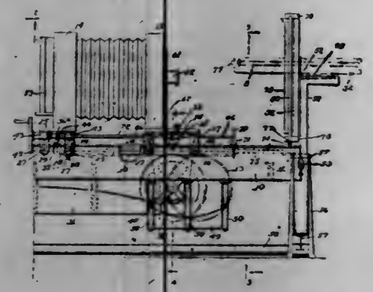
1. In a wrapping machine or the like, in combination, a work carrier having a plurality of supports, each adapted to hold an article to be wrapped and a wrapper therefor, means for causing said carrier to move intermittently and to carry therewith an article and its wrapper, means operative at each stoppage of said carrier to tuck a wrapper about its associated article and means operative at said stoppage for applying paste to said wrapper.

1,452,831. RIM FOR WHEELS OF VEHICLES. LÉON JEAN BAPTISTE FOURNIAUD, Marseille, France. Filed Aug. 24, 1921. Serial No. 494,780. 3 Claims. (Cl. 152—21.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



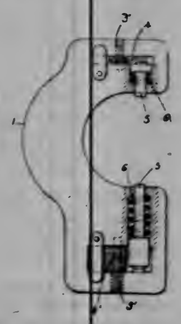
1. A rim for tired wheels of vehicles, comprising a ring with means for holding one edge of the tire, a second ring with means for holding the other edge of the tire, a plurality of segments arranged with their ends overlapping to form a ring of variable diameter substantially concentric with the tire holding rings, a plurality of springs located in the annular space between the variable diameter ring and the tire holding rings, means for expanding and contracting the variable diameter ring, fastenings extending through the said anular space for uniting the tire holding rings, and means for preventing relative rotation between the variable diameter ring and the tire holding rings.

1,452,832. RIM FOR WHEELS OF VEHICLES. LÉON JEAN BAPTISTE FOURNIAUD, Marseille, France. Filed Aug. 24, 1921. Serial No. 494,781. 3 Claims. (Cl. 152—21.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



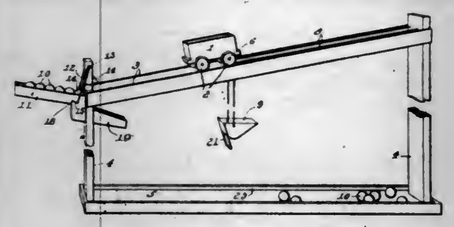
1. A rim for tired wheels of vehicles comprising, a ring with means for holding one edge of a tire, a second ring with means for holding the other edge of the tire, a plurality of segments arranged with their ends overlapping to form a ring of variable diameter concentric

to the tire holding rings, means for expanding and contracting the variable diameter ring, a plurality of bolts extending through the annular space between the ring of variable diameter and the tire holding rings, nuts



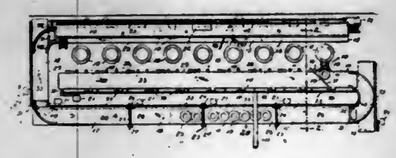
for said bolts, the bolts and nuts being fastenings for uniting the two tire holding rings, and connections between the ring expanding means and the bolts and nuts whereby screwing and unscrewing of the latter causes expansion and contraction respectively of said ring.

1,452,833. APPARATUS FOR AUTOMATICALLY FOCUSING MULTIPLE-EXPOSURE CAMERAS. WENZEL FRITSCHE, New York, N. Y. Filed Mar. 11, 1920. Serial No. 364,909. 5 Claims. (Cl. 88—24.)



1. An apparatus as characterized, comprising an elongated supporting frame; a plurality of camera supporting trucks movably mounted on said frame; a rocking member pivotally mounted on one of said trucks and operatively connected with the other of said trucks; an elongated cam mounted on said supporting frame for actuating said rocking member in correspondence with the movement of the truck supporting said rocking member lengthwise of said supporting frame.

1,452,834. MEASURING INSTRUMENT. ERNEST FUCHS, Paris, France, assignor to Louis Renault, Billancourt, Department of Seine, France. Filed Apr. 25, 1918. Serial No. 230,821. 3 Claims. (Cl. 33—143.)



1. A measuring instrument, having a pair of oppositely disposed and spaced apart feelers and a step by step spacing means pivoted to the instrument to be turned between an end of one of the feelers and an abutment on the instrument for moving one of said feelers relatively to the other to regulate the distance between the same.

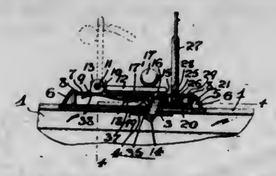
1,452,835. MECHANICAL TOY. WILLIAM L. GOLDMAN, Los Angeles, Calif. Filed Aug. 16, 1922. Serial No. 582,185. 3 Claims. (Cl. 46—37.)

1. A mechanical toy comprising an inclined elevated track; a car adapted for operation on said tracks and having a drum on an axle thereof; a bucket so suspended from said drum that operative elevational changes in said car will result in inverse elevational changes in said bucket; and automatic means for alternately loading and discharging said bucket in cycles to cause elevational changes therein.

1,452,836. CONVEYER SYSTEM. HOMER J. HOYT, Detroit, Mich., assignor to Morgan & Wright, a Corporation of Michigan. Filed Aug. 8, 1917. Serial No. 185,027. 23 Claims. (Cl. 198—19.)

1. In a system of the class described, a row of mold treating stations, and a mold conveyer having spaced runs arranged adjacent the row of stations, and a third run connecting the spaced runs whereby separate stations may be simultaneously charged with or discharged of a plurality of molds independently and without interference.

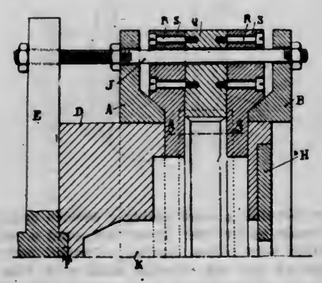
5. The combination with a station, of a continuous conveyer system for advancing sectional molds, said system having a portion leading from said station and a portion leading to said station, means for separating said sectional molds in transit, and means for transferring said molds to said station from said last-mentioned portion of the conveyer system and to said first-mentioned portion of the conveyer system from said station.



9. Apparatus of the class described, including a row of mold treating stations, a continuous conveyer system having loading and unloading runs on opposite sides of the row of mold treating stations, and a loop interconnecting the loading and unloading runs, said loading run being arranged at an elevation above the mouths of the treating stations for facilitating transfer of molds to the stations.

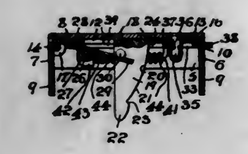
13. The combination with a stationary mold-treating means, of a continuously moving conveyer system leading from and returning to a station point, a series of sectional molds adapted to be transferred to and from said conveyer at said station point, and means operating

on said molds in transit for separating and reuniting the sections thereof to permit of emptying and filling.



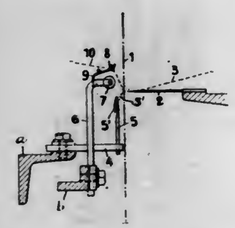
14. Apparatus for curing rubber tires in sectional molds, including in combination, a row of stationary vulcanizing presses having relatively movable platens for clamping a plurality of molds therebetween, a conveyer for carrying molds containing uncured tires in a path adjacent each vulcanizer in the row, and means cooperating with the conveyer for successively and automatically transferring any desired number of molds from the conveyer into any one of said vulcanizers and stacking them therein, while one of its platens is being lowered.

1,452,837. BAG-FRAME FASTENER. JOSEPH S. ISIDOR, Newark, N. J., assignor to The R. Neumann Hardware Co., a Corporation of New Jersey. Filed Dec. 14, 1921. Serial No. 522,267. 2 Claims. (Cl. 70—2.)



1. A bag-frame fastener comprising a casing provided in its top with a bolt-receiving opening and also with a key-receiving opening, a bolt-carrying plate upon the said top and hinged thereto, a bolt extending downwardly from said plate and into and through the bolt-receiving opening in said top, a plate within said casing, said plate being provided with an extension, a key-receiving post extending upwardly from said extension, connecting members between said plate and said extension, providing an opening in alinement with said bolt-receiving opening and into and through which the said bolt also extends, laterally extending ribs upon said connecting members, a key-operated slide movably disposed upon the extension of said plate, said plate having a portion adapted to be brought into engagement with said bolt, for locking the bolt carrying plate and its bolt against movement, and fingers extending from said slide, said fingers being provided with retaining members adapted to engage said laterally extending ribs.

1,452,838. ROTARY MOLD FOR MOLDING MILLING CUTTERS BY CENTRIFUGAL FORCE. MARTIAL JOSEPH LOEHLER, Asnieres, France. Filed Feb. 3, 1922. Serial No. 535,788. 5 Claims. (Cl. 22—65.)

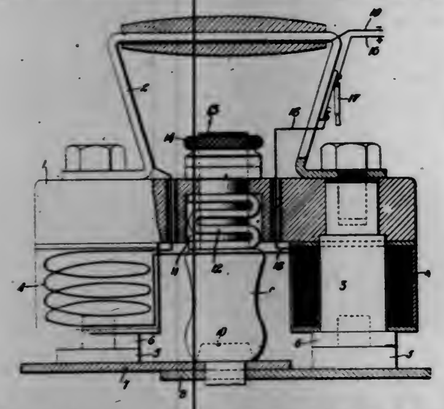


1. In a rotary mold for molding steel milling cutters the combination with a central member whose inner wall reproduces in intaglio the profile of the teeth of the cutter of a pair of cones for centering the member, a driving member upon which one of said cones is centered, and an inlet for metal formed in the other said cone.

1,452,839. BAG-FRAME FASTENER. WILLIAM A. LOTZ, Newark, N. J., assignor to The R. Neumann Hardware Co., a Corporation of New Jersey. Filed Apr. 22, 1921. Serial No. 463,498. 12 Claims. (Cl. 292—175.)

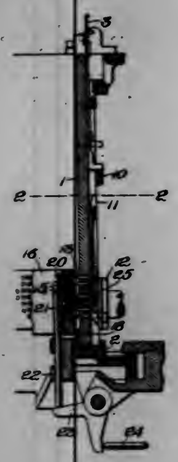
1. A bag-frame fastener comprising a casing provided in its top with a bolt-receiving opening and a lock-stud receiving opening, a bolt and lock-stud carrying plate upon the upper surface of said casing and hinged thereto, a bolt extending downwardly from said plate and through said bolt-receiving opening, a lock-stud also extending downwardly from said plate and through the lock-stud receiving opening, a manually operated means connected with said casing adapted to be brought into retaining engagement with said lock-stud to maintain a closed and locked relation of said plate and bolt with relation to said casing, but being adapted when operated to bring said plate and bolt into released relation, and means within said casing and co-operating with said bolt for automatically raising said plate and bolt.

1,452,840. DEVICE FOR THE PRODUCTION OF CROCHET SEAMS AND PATTERNS IN EMBROIDERY MACHINES. AUGUST HERMANN MEYER, Plauen, Germany. Filed Sept. 22, 1921. Serial No. 502,507. 5 Claims. (Cl. 112—93.)



1. In a device for the production of crochet seams and patterns in embroidering machines, the combination with an embroidering needle for introducing a continuous front thread into the fabric, of a hook shaped catch for locking the front thread by a continuous back thread and means for closing the hook of said catch, said latter means being formed with thread guiding means.

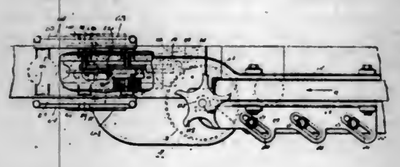
1,452,841. MAGNETIC HOLDER-ON. WALDEMAR MEYER, Woodhaven, N. Y. Filed Apr. 16, 1920. Serial No. 374,437. 9 Claims. (Cl. 78—50.)



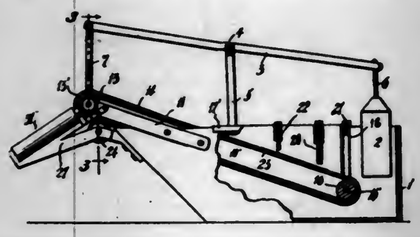
1. A holder-on comprising a bar, a plurality of electromagnets secured to the bar, a holder carried by the bar

and adapted to engage a rivet head, and means between said electromagnets and the work for adjusting the

distance between a magnet coil and the work to conform to the contour of the work.



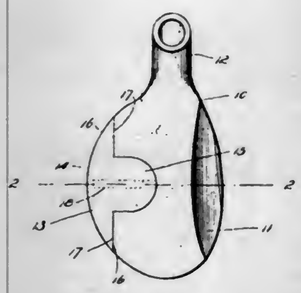
1,452,842. NEEDLE-CONTROLLING MECHANISM FOR KNITTING MACHINES. MAX C. MILLER, Cumberland Hill, R. I., assignor to Jenckes Knitting Machine Company, Pawtucket, R. I., a Corporation of Rhode Island. Filed Mar. 13, 1919. Serial No. 282,409. 16 Claims. (Cl. 66—21.)



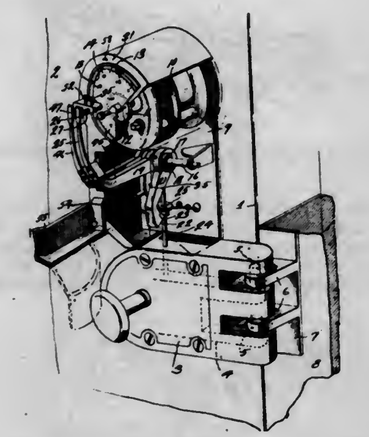
1. A knitting machine having, in combination, a series of needles, a series of needle advancing packs arranged to act on needles distributed among the needle series, a corresponding series of deflectors arranged to act on the jacks, means for progressively actuating the series of deflectors and the series of jacks deflected thereby during the knitting of successive courses.

1,452,843. MACHINE FOR FEEDING VESSELS. ELOF NORDSTROM, Newark, N. J., assignor, by mesne assignments, to American Can Bottle Seal Corporation, a Corporation of Delaware. Filed Oct. 10, 1919. Serial No. 329,806. 11 Claims. (Cl. 198—22.)

1. In a vessel feeding machine, the combination with a travelling conveyer for vessels, of a guide extending longitudinally of said conveyer, a vessel conveying wheel journalled in said guide, flexible driving means for positively rotating said wheel, and means for adjusting said guide towards and away from the central plane of said conveyer.

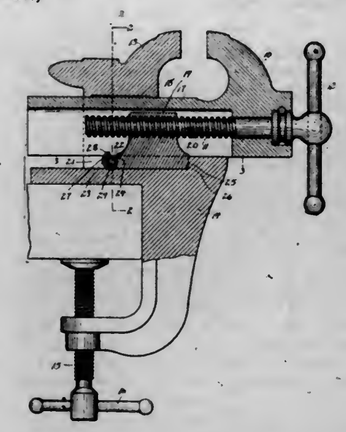


1,452,844. BERRY AND FRUIT WASHING MACHINE. JOHN STONE OGBURN, Lindale, Tex. Filed July 29, 1922. Serial No. 578,412. 3 Claims. (Cl. 146—14.)



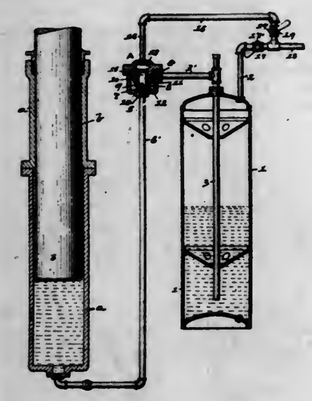
1. A berry cleaning and washing machine comprising a tank, a traveling and oscillating conveyer screen inclined therein; an agitator; screen gates controlling the outward movement of the berries; a brush co-acting with the conveyor screen to clean the screen, and a belt means adapted to travel in a direction at an angle to that of the conveyor screen for collecting leaves and trash from the berries or fruit, on final delivery thereof.

1,452,845. GOLF CLUB. ROBERT D. PRYDE, Orange, Conn. Filed May 21, 1921. Serial No. 471,406. 5 Claims. (Cl. 46—4.)



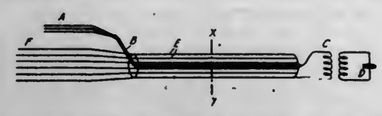
1. In a golf club, a head having a wooden body portion, with a recess in its rear upper face, and a weight secured within said recess, having a central portion that approaches at the top of said head very near to the striking face thereof, and two substantially flat faces that project laterally therefrom and terminate at the outer edge of the head, all of the weight added to said head being at the top and rear thereof.

1,452,846. TIME RECORDER FOR LOCKS. GEORGE PULLMAN, New York, N. Y. Filed Dec. 21, 1921. Serial No. 524,049. 3 Claims. (Cl. 234—1.)



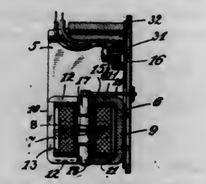
1. A time recording device located adjacent a lock, said time recording device comprising a clock rotated disc having time scales thereon, lever means actuated by the lock upon an operation of the lock whereby the time of actuation of the lock will be recorded on one of the scales of the disc and key actuated lever means whereby the time may be recorded on one of the scales independent of the lock actuated means, and without actuating the locks.

1,452,847. BENCH VISE. JAMES A. QUINLAN, Southington, Conn., assignor to The Peck, Stow & Wilcox Company, Southington, Conn., a Corporation. Filed Sept. 9, 1922. Serial No. 587,094. 5 Claims. (Cl. 81—17.)



1. In a bench-vise, the combination with a frame having a nut-receiving groove, the side-walls of which are formed with upwardly-opening notches, of a fixed jaw, a movable jaw, an operating-screw for the latter, a nut entered into the said groove and receiving the said screw, and a transversely-arranged locking-pin positioned in the said notches for engagement with the rear end of the nut, to hold the same against endwise displacement.

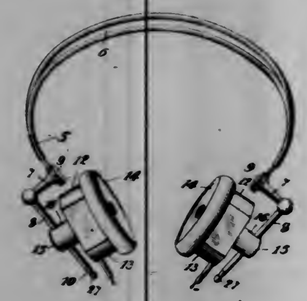
1,452,848. CONTROL VALVE. ROBERT F. RINGLE, Zelienople, Pa., assignor to Herman Pneumatic Machine Company, Zelienople, Pa., a Corporation of Pennsylvania. Filed July 25, 1919. Serial No. 313,233. 10 Claims. (Cl. 121—46.)



1. In a molding machine operating device of the class described, comprising a cylinder having a fluid actuated plunger therein for raising and lowering the mold and pattern, a fluid reservoir containing fluid under pressure for operating said plunger, valve means between said cylinder and reservoir and partially operated by said fluid for permitting the mold to be withdrawn from the pattern by a slow movement of said plunger, and other fluid operated means for partially controlling the valve means.

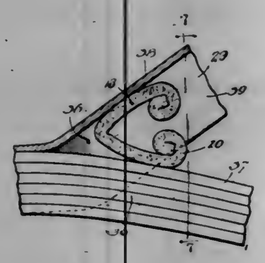
1,452,849. WIRELESS TRANSMITTING STATION. HENRY JOSEPH ROUND, London, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Dec. 13, 1921. Serial No. 522,122. 17 Claims. (Cl. 250—17.)

1. In a wireless transmitting station the combination of an aerial, a distant generator, a cable between the aerial and the generator and a system of wires shielding the cable from the earth.



1,452,850. TELEPHONE APPARATUS. LAMBERT SCHMIDT, Brooklyn, N. Y., assignor to Radiotive Corporation, Brooklyn, N. Y., a Corporation of New York. Filed June 26, 1922. Serial No. 570,869. 23 Claims. (Cl. 179—108.)

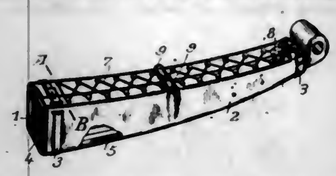
1. In telephonic apparatus, a magnet coil, an armature extending through the bore of said coil and an automat-



ically balanced suspension means for the armature having a part stationary with respect to the armature and frictionally engaged with the surface of the coil bore, said means normally maintaining the armature in coinciding axial relation with the coil.

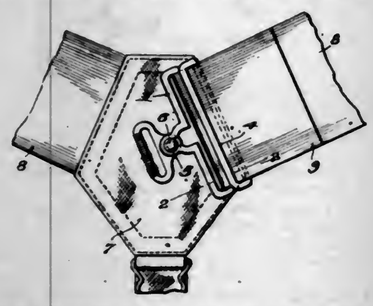
1,452,851. HEAD RECEIVER FOR TELEPHONES. LAMBERT SCHMIDT, Brooklyn, N. Y., assignor to Radiotive Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Sept. 30, 1922. Serial No. 591,455. 16 Claims. (Cl. 179—156.)

1. In a head receiver for telephones, a head band, a cylindrical rod fixed to one end of said head band, a telephone receiver, and two members carried by said receiver, each movable about its own axis and applicable as a unit with the receiver to applied position upon said rod, said members coacting with the rod at opposite sides thereof to yieldingly resist movement of the receiver with relation to the rod and maintain the receiver in adjusted position thereon.



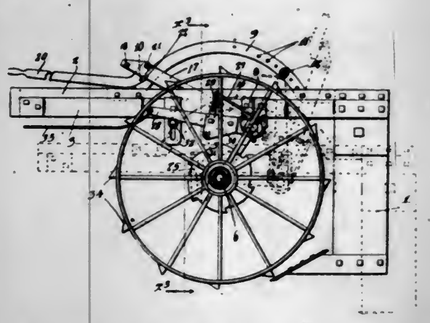
1,452,852. SPRING OILER. CLARENCE R. SIGWALT, Chicago, Ill. Filed June 28, 1920. Serial No. 392,167. 17 Claims. (Cl. 184—1.)

1. The combination in an automobile of a transverse frame member, a spring rigidly connected to the under side of a part of said member and diverging therefrom, and means for oiling said spring on the upper surface thereof beneath said frame member adjacent the point of connection of said spring and said member.



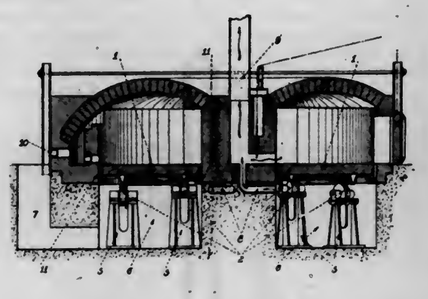
1,452,853. GAITER OF SPRINGS. HENRI STAUB, Manoir du Cygne, Coppet, Switzerland. Filed Aug. 1, 1922. Serial No. 578,949. 2 Claims. (Cl. 267—37.)

1. A new article of manufacture comprising a protective cover for leaf springs, and insertions provided at the corners formed by the springs in cross-sections and adapted to keep the cover at a distance from the spring so



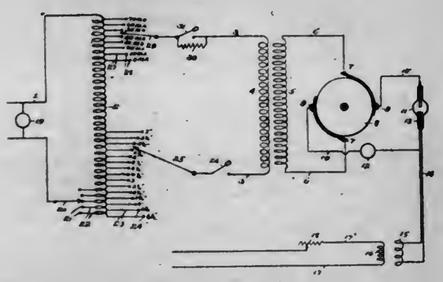
that the former encloses a chamber for the reception of a lubricant.

1,452,854. ADJUSTABLE GARTER BUCKLE. HENRY H. TAYLOR and MYRON B. HAMMOND, Bridgeport, Conn., assignors to The Thomas P. Taylor Co., Bridgeport, Conn., a Corporation of Connecticut. Filed July 12, 1922. Serial No. 574,529. 2 Claims. (Cl. 24—200.)



1. In a combined buckle and clasp, an integral blank having four spaced parallel bars, a clasp member formed integral with and extending outwardly from one of the bars, said blank being bent to form two jaws, and webbing looped around one of the bars of one jaw and having superimposed parts extending through the space between the bars of the other jaw, the jaws resiliently clamping the webbing therebetween.

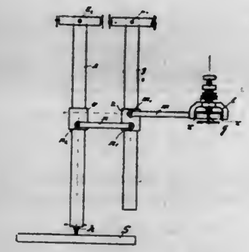
1,452,855. SELF-LIFT FOR AGRICULTURAL IMPLEMENTS. HEBER F. TOWNER, Santa Ana, Calif. Filed May 2, 1921. Serial No. 466,188. 7 Claims (Cl. 97—73.)



5. A crank-shaft for a self-lift agricultural implement, having a neck at each end to receive the ground wheels, a crank pin portion adapted to support the frame, with crank arms connecting the same with the necks, and a crank-pin spur on the outer side of one of the crank arms, substantially aligning with the said crank-pin portion for carrying clutch mechanism to connect the shaft to the adjacent wheel.

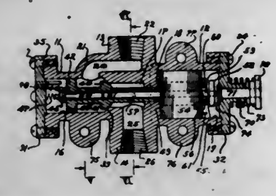
1,452,856. HEATING FURNACE. WILLIBALD TRINKS, Pittsburgh, Pa., assignor to Tate-Jones & Co., Inc., Leetsdale, Pa., a Corporation of Pennsylvania. Filed Apr. 12, 1920. Serial No. 373,445. 4 Claims. (Cl. 263—35.)

1. In a heating furnace with an annular, horizontal, rotating hearth table, independent vertically adjustable supports for said table, an enclosed inspection pit below said table, sand seals between the heating chamber and the inspection pit, a plurality of regulable air admission openings at the outer circumference of the inspection pit, and a plurality of ducts leading from said pit to a central stack.



1,452,857. SYSTEM OF VOLTAGE CONTROL. LESLIE S. UPHOFF, U. S. Army, assignor to the Secretary of War of the United States of America, trustee. Filed June 26, 1919. Serial No. 306,996. 2 Claims. (Cl. 175—364.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A system of voltage control, including a main line, a voltmeter in the main line, an auto-transformer in the main line, means for selectively varying the number of turns of the auto-transformer connected in the main line, a transformer connected to the auto-transformer, means for selectively varying the milliamperes of current supplied from the auto-transformer to the transformer, means graduated in terms of spark gap for selectively varying the voltage supply from the auto-transformer to the transformer, and a rectifier connecter to the transformer.

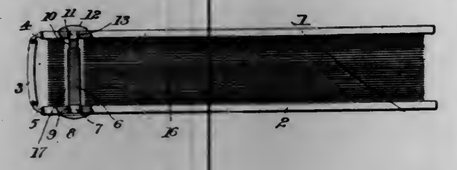


1,452,858. ENGRAVING MACHINE. RUDOLF WETZER, Pfronten, and CURD NUBE, Offenbach-on-the-Main, Germany. Filed Aug. 11, 1921. Serial No. 491,357. 5 Claims. (Cl. 33—24.)

1. An engraving machine, including a pair of normally parallel freely movable suspended members, one of said members adapted to carry a tracing point, a tool holder movably connected to the other of said members, and

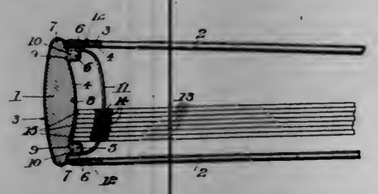
means interconnecting said members and adjustable to vary the relative position of said members to one another.

1,452,859. VALVE-OPERATING DEVICE. BERNHARD WICHSER, Brooklyn, N. Y. Filed Aug. 4, 1920. Serial No. 401,247. 7 Claims. (Cl. 137—139.)



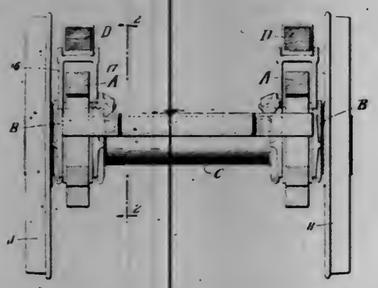
1. A device of the character described comprising in combination, a casing formed with aligned chambers and a compartment, one of the chambers and said compartment having their opposite outer ends open, a main valve intermediate of said chambers adapted to interrupt the flow of fluid therethru, a piston of larger area than said valve movable coincidentally therewith, means permitting the fluid to flow on both sides of said piston so that a preponderance of pressure on one side thereof will tend to keep the valve closed, the piston being provided with a passage of greater capacity than said means designed to establish a communication between the chambers, a pilot-valve arranged to follow movements of the piston serving to maintain said passage shut, an element for opening said pilot-valve to allow the fluid that has passed the means named to escape through the passage in the piston faster than what is supplied thereto, whereby the latter will act to move the main valve to produce a direct flow from one chamber to the other, an electromagnet lodged in said compartment, an armature also contained therein capable of controlling said element thru said magnet, and covers effecting fluid tight closures for the outer ends of one of the chambers and the compartment, while permitting removal of the operating parts of the device without disturbing said casing.

1,452,860. BINDING POST FOR LOOSE-LEAF BOOKS. WILLIAM WILBURGER, Brooklyn, N. Y. Filed Nov. 14, 1921. Serial No. 515,012. 4 Claims. (Cl. 129—13.)



1. A binding post for loose leaf books having its shank composed of two sections of coiled resilient wire, one section having screw connection with the other.

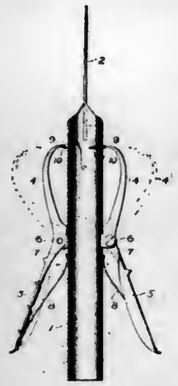
2. A binding post for loose leaf books having its shank formed of coiled wire, and a head fitted over the



end of said shank and secured in place by having portions thereof bent inward between adjacent coils of the wire.

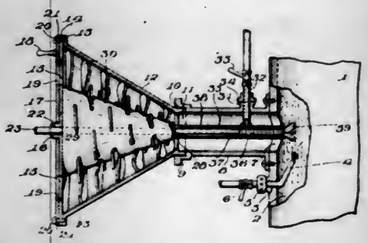
1,452,861. ALBUM FOR DISK RECORDS. WILLIAM WILBURGER, Brooklyn, N. Y. Filed Dec. 12, 1921. Serial No. 521,780. 8 Claims. (Cl. 192—1.)

1. The combination with a back having a convex inner face, of detachable leaf-retaining members having curved portions parallel to said inner face of the back for the purpose specified.



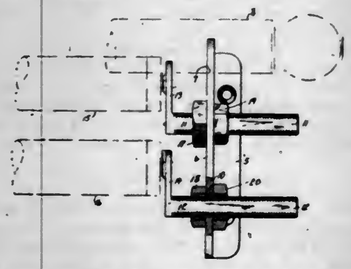
1,452,862. LATERAL-MOTION DEVICE FOR DRIVING BOXES. WILLIAM E. WOODARD, Forest Hills, N. Y., assignor to Franklin Railway Supply Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 6, 1920. Serial No. 422,248. 21 Claims. (Cl. 105—80.)

1. In a railway vehicle, the combination of an axle box having lateral motion, a load transmitting means, and a leverage means interposed between the box and the load transmitting means offering resistance to the lateral motion of the box.



1,452,863. CANNULA AND CLAMP. FRANCIS C. ATWOOD, Newton, Mass., assignor to Kalmus, Comstock & Westcott, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Jan. 24, 1921. Serial No. 439,340. 12 Claims. (Cl. 128—347.)

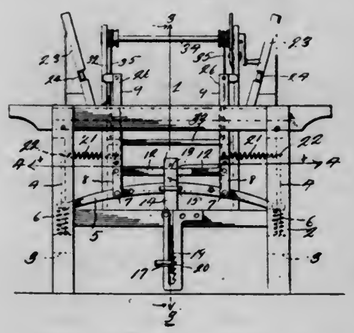
1. A cannula for use in withdrawing blood from cattle comprising a hollow body portion capable of being inserted into an incision in the skin and tissues of the animal and having jaws capable of engaging and grip-



ping the skin and tissue forming the lips of the incision between the jaws and the body portion.

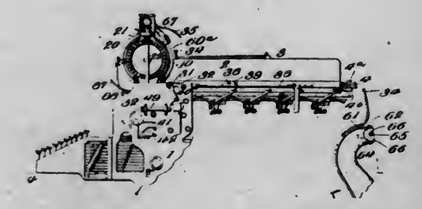
1,452,864. HEATING APPARATUS. RAYMOND A. BALCOM, Akron, Ohio. Filed Mar. 3, 1921. Serial No. 449,583. 3 Claims. (Cl. 158—77.)

1. A fuel feeding mechanism, comprising a conical casing, a conical drum within and substantially uniformly spaced from the sides of said casing throughout its axial extent, air-propelling means carried by said drum, means to rotate said drum to force air towards and from the smaller end of said casing, and means adjacent to the outlet end of said casing operative to mix a liquid fuel with the air passing therefrom.



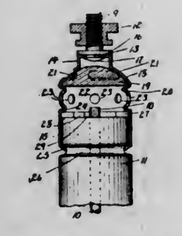
1,452,865. COMBINED WINDOW-SHADE BRACKET AND CURTAIN-POLE SUPPORT. GENNARO BASILIO, New Haven, Conn. Filed Jan. 30, 1922. Serial No. 532,648. 1 Claim. (Cl. 156—24.)

In a combined double window-shade bracket and curtain-pole support, the combination with a plate formed



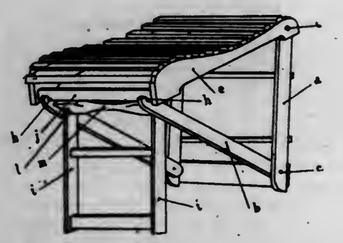
upon its inner edge with an integral flange standing at a right angle to it and adapting it to be secured to a window casing, and the said plate being formed in its upper edge with a seat for a curtain-pole and below the said seat with two non-circular holes; of two shade-mounting brackets having shade-mounting arms, and non-circular threaded shanks adapted to pass through the respective non-circular holes of the bracket in which they are held against rotation, and two nuts located upon each of the said shanks on opposite sides of the plate, whereby the shanks are firmly supported therein with a capacity for endwise adjustment.

1,452,866. FRUIT-PRESS CRATE AND CLEAT-POSITIONING MACHINE. GEORGE CARL BOLLER and WARREN BIGFORD BOLLER, Loomis, Calif. Filed Jan. 18, 1921. Serial No. 438,234. 4 Claims. (Cl. 100—57.)



1. A fruit crate cover press and cleat positioner, said press comprising a bed plate supported on a frame, and adapted to have placed thereon a fruit crate having a cover, cleat magazines adjacent the ends of the bed plate, and means whereby cleats will be simultaneously removed from the magazines moved inwardly and downwardly to positions adjacent the ends of the cover of the crate and the cover pressed downwardly on the crate at its ends.

1,452,867. FEEDING AND IMPRINTING MECHANISM FOR MAIL AND OTHER UNITS. ARTHUR J. BRIGGS, Syracuse, N. Y., assignor to The Auto Mail Distributer, Inc., Syracuse, N. Y., a Corporation of New York. Original application filed May 23, 1913, Serial No. 769,438. Divided and this application filed Aug. 13, 1914, Serial No. 856,605. Renewed July 17, 1922. Serial No. 575,638. 41 Claims. (Cl. 271—28.)

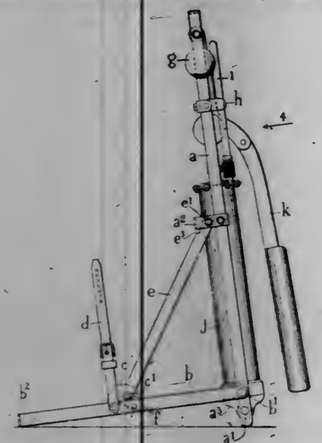


10. In combination a letter way provided with spaced fingers forming the front end wall thereof and having mechanism for maintaining letters or the like arranged on edge face to face together in a pile, said way also provided with means to hold back the lower longitudinal portions of the letters in rear of said fingers, a periodically movable feeder to successively move the foremost letters in said way forwardly past said means and their lower portions into engagement with said fingers, and a rotary turret having means for successively removing said foremost letters in engagement with said fingers and for displaying the addressed faces of the letters at an inspection station and for depositing the letters at a discharge station.

1,452,868. VISIBLE SPARK PLUG. WILLIAM H. BURT, Waterbury, Conn., assignor to The Chase Companies Inc., Waterbury, Conn., a Corporation. Filed Feb. 16, 1921. Serial No. 445,352. 7 Claims. (Cl. 123—169.)

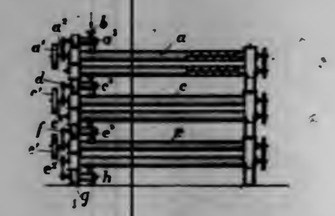
1. A visible spark-plug having a sparking-chamber, a lens-chamber located directly above the said sparking-chamber and provided with observation-openings arranged to permit an observer to look downward through them into the said sparking-chamber, and a lens located in the said lens-chamber the said observation-openings whereof are located at one side of the vertical axis of the plug.

1,452,869. PORTABLE FOLDING SEAT. RAYMOND EUGÈNE CATTIER, Paris, France. Filed Jan. 30, 1922. Serial No. 532,812. 5 Claims. (Cl. 155—154.)



1. A portable folding seat comprising a seat member, having an abutment piece at one extremity in combination with a trestle composed of a pair of struts, the upper ends of which are pivotally connected with the other extremity of the seat member, a pair of supports pivotally connected at one end with the lower end of said struts and engaging at their other ends the abutment piece of the seat member, and a second pair of struts pivoted to the supports near their place of engagement with the abutment piece.

1,452,870. TIRE-INFLATING PUMP. THOMAS MORRIS DAVIS, Llanelly, Wales. Filed Apr. 20, 1922. Serial No. 555,668. 4 Claims. (Cl. 230—27.)

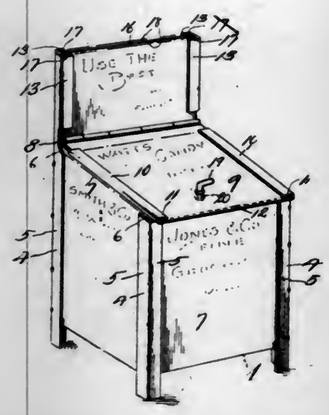


1. An improved air pump having in combination a standard, a pump barrel pivoted at its lower end to the standard, a hand lever pivoted at its upper end to the standard and connected intermediate of its ends to the pump rod, a base pivoted to the standard, plates carried

by the sides of the base, a slot in each of said plates, a bridge piece carried by the standard, stay rods pivoted to

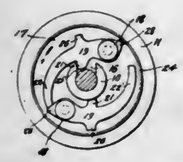
said bridge piece and pins, carried by the lower end of the stay rods, adapted to enter the slotted plates carried by the base, substantially as set forth.

1,452,871. PROCESS FOR STERILIZING FLOUR AND GRITS MADE FROM CEREALS. KARL DIENST, Charlottenburg, near Berlin, Germany. Filed Apr. 19, 1921. Serial No. 462,779. 1 Claim. (Cl. 83—42.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



In a process for sterilizing flour or grit made from cereals and simultaneously increasing its baking capacity, the combination of drying the flour or the like under exclusion of atmospheric air and under constant agitation in a known manner under vacuum at a temperature of about 45° centigrade, then heating the flour to about 80 degrees centigrade and more, and subsequently subjecting it likewise under vacuum to rapid and strong cooling.

1,452,872. METHOD OF PRODUCING PHONOGRAPH RECORDS. VICTOR H. EMERSON, New York, N. Y., assignor, by mesne assignments, to Metal Recording Disc Company, Inc., a Corporation of New York. Filed Apr. 20, 1920. Serial No. 375,242. 3 Claims. (Cl. 18—48.4.)

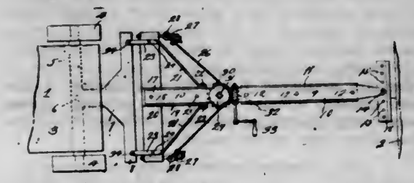


1. A method of forming sound records which comprises the following steps; preparing a thin metal disk, roughening the surfaces of the disk and applying a mass of thermo-plastic record material to each of said surfaces at substantially the centers thereof, applying heat to render said masses plastic and then pressing the sound record grooves into said record material by means of matrices as said matrices spread said record material upon the surface of the disk.

1,452,873. SIGN EXHIBIT. ZENAS A. GIFFORD, Lockport, N. Y. Filed Nov. 2, 1922. Serial No. 598,559. 1 Claim. (Cl. 40—63.)

The combination with a rectangular shaped receptacle, of reinforcing and sign holding means carried thereby, said means comprising angle bars disposed in the corners of the receptacle, an angle bar disposed on the outer sides of the corners, angle bars disposed on the last named angle bars and having their flanges wider thereby forming channels for the reception of signs, the rear outer angle bars extending upwardly above the receptacle and provided with oppositely disposed inwardly extending flanges thereby forming sign receiving channels.

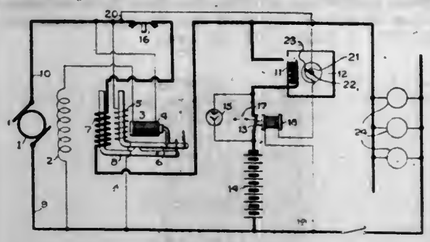
1,452,874. CURTAIN ROLLER. FRANKLIN H. HART, New Haven, Conn., assignor to C. Cowles and Company, New Haven, Conn., a Corporation of Connecticut. Filed Sept. 19, 1921. Serial No. 501,533. 9 Claims. (Cl. 156—35.)



7. A curtain roller comprising rotary and stationary elements, means tending to rotate the rotary element in one direction, a plurality of separate relatively movable pawls carried by the rotary element and provided with shoulders, said stationary element being provided with a shoulder adapted to coact with the shoulder on any of the pawls to prevent turning of the element under the action of said means, and means carried by each pawl adapted when the pawl is in holding position to engage the adjacent free pawl and retain the same stationary to prevent rattling thereof.

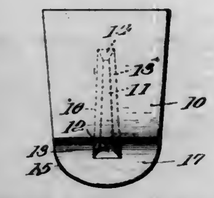
1,452,875. STREET SAFETY ZONE. GEORGE E. HEALY, Buffalo, N. Y. Filed Mar. 22, 1920. Serial No. 367,610. 6 Claims. (Cl. 256—1.)

1. A safety zone device rigidly mounted in a concrete base and having a metalic portion consisting of vertical tubular posts carrying a plurality of tubular railing members in parallel relation with the base and a plastic portion extending at an oblique angle from said metallic portion and cooperating therewith for the purpose set forth.



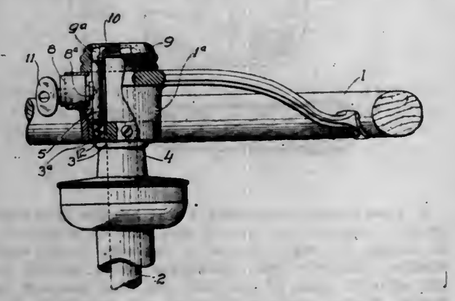
1,452,876. VEHICLE TONGUE. WILLIAM B. HUGHES, Newcastle, Ind. Filed Mar. 29, 1922. Serial No. 547,761. 1 Claim. (Cl. 280—33.6.)

A towing bar for threshing machines, said bar being formed from spaced plates, a spacing member between said plates and terminating spaced from the ends of the plates, an arm pivoted between said plates adjacent their rear ends and extending forwardly, means passing through the plates and preventing movement of the arm, a transversely disposed bar pivoted to the underside of the lower plate, braces connecting the transversely disposed bar and the forward end of the arm, a gear pivotally mounted on the upper side of the upper plate, a pulley carried by the upper side of said gear, a cable extending entirely around said pulley and having its ends connected to the transversely disposed bar adjacent its ends, a worm meshing with the gear and a crank carried by said worm.



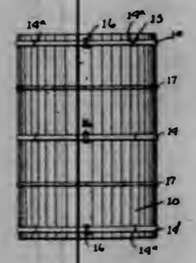
1,452,877. SYSTEM OF DISTRIBUTION. GEORGE E. HULSE, Newark, N. J., assignor to Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed Dec. 9, 1918. Serial No. 265,823. 18 Claims. (Cl. 171—313.)

5. In a system of the character described, in combination, a generator, a storage battery connected to be charged thereby, and a plurality of independent means each of which independently of the other is adapted to reduce the charging current upon said battery reaching full charge, one of said means including a voltage responsive coil connected to register charging voltage and an ampere hour meter connected to register full charge of said battery and to affect the operation of said voltage responsive coil upon said meter indicating full charge



of said battery, and the other of said means including and being controlled by a voltage responsive coil connected to register charging voltage.

1,452,878. ARTIFICIAL TOOTH. MICHAEL KARMANN, Highland Park, Mich. Filed May 26, 1922. Serial No. 563,875. 2 Claims. (Cl. 32—9.)

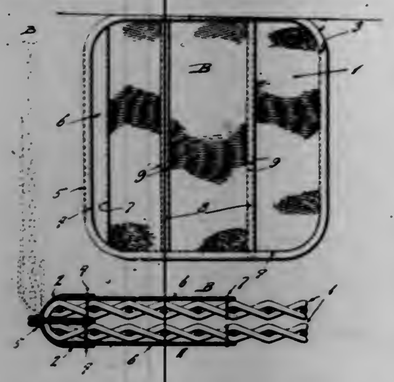


1. The combination with an artificial tooth having a plane back face with a groove therein and a beveled base intersecting said back face, of a plate-like backing plate covering the back face of the tooth and having a tenon on its front face complemental to said groove, the base end of said tenon projecting beyond the plane of the base edge of said plate and also beyond the plane of the beveled base of the tooth.

1,452,879. AUTOMOBILE LOCK. JAMES D. KING, Chicago, Ill. Filed Jan. 26, 1920. Serial No. 354,090. 2 Claims. (Cl. 70—129.)

1. In a steering wheel lock, in combination with the post and wheel, a pair of bolts longitudinally slidable in the wheel hub, a cap covering the top of said post and wheel and having internal sockets for the upper end of said bolts, a collar rigid on said post and provided with internal sockets for the lower end of the bolts, a cross bar combining said bolts, said bar having a transverse slot, and a key operated lock having a driving pin engaging said slot.

1,452,880. KNOCKDOWN BARREL. GEORGE A. LE FEVRE, Richmond Hill, N. Y., assignor to Paxfiat Barrel & Crate Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 5, 1922. Serial No. 527,085. 1 Claim. (Cl. 217—44.)

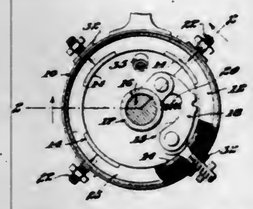


A flexible body blank for knock down barrels comprising staves placed together edge to edge and transverse flexible members lacking the functional characteristics of a hoop secured to the staves to hold them in the right relation.

1,452,881. FAT-SPLITTING REAGENT AND METHOD OF MAKING THE SAME. LELAND J. LEWIS, New York, N. Y., assignor of one-half to Ralph H. McKee, New York, N. Y. Filed Apr. 14, 1921. Serial No. 461,387. 3 Claims. (Cl. 260—159.)

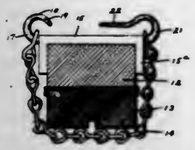
1. Cymenestearosulfonic acid.

1,452,882. SEAT COVER. JOHN J. LOESCH, St. Louis, Mo., assignor to Evr Klean Seat Pad Co., St. Louis, Mo., a Corporation of Missouri. Filed Oct. 24, 1921. Serial No. 509,902. 2 Claims. (Cl. 155—182.)



1. A seat cover, comprising a seat member of woven fabric, a separate back member also made of woven fabric having one edge adjacent to one edge of the seat member, relatively wide reinforcing strips secured to the adjacent edges of said seat and back members, a flexible binding strip surrounding and embracing the marginal edge of each of said members and also embracing the marginal edges of said reinforcing strips, stitches securing said binding strips to said members respectively and the adjacent portions of said binding strips being extended beyond the woven fabric at the adjacent edges of said seat and back members, and means securing the extended portions of said binding strips together to form a hinge uniting said seat and back members.

1,452,883. VAPORIZER FOR COMBUSTION ENGINES. MILTON C. LOESCH, Cincinnati, Ohio, assignor of one-half to William F. Ryan, Cincinnati, Ohio. Filed Apr. 28, 1920. Serial No. 377,297. 1 Claim. (Cl. 219—38.)

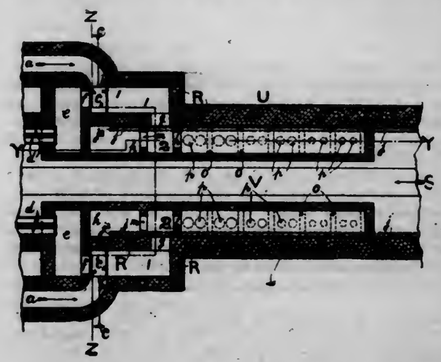


A device of the class described comprising an electrical heating element, means to mount the heating element transversely of the bore of an intake manifold, and a heat radiating, fluid absorbing, electrically insulating cover for the heating element.

1,452,884. TIMER. ALBERT P. MCCULLOCH, Dorchester, Mass. Filed Feb. 7, 1919. Serial No. 275,639. 7 Claims. (Cl. 200—19.)

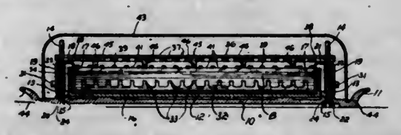
1. A timer comprising a housing, a series of relatively thin contact plates, a fiber insulating ring of substantially greater depth than the thickness of the contact plates and consisting of a plurality of sections corresponding in number to the plates and each having shouldered portions formed in the inner face at opposite ends to receive the contact plates when the sections of the ring are assembled therewith and provide a continuous, smooth, circular track, and terminal screws connected with the contact plates for securing the plates and insulating ring within the housing.

1,452,885. FELLY-ENGAGING ANTISKID-CHAIN-ANCHORING MEANS. GEORGE P. MACINTOSH, Wakefield, Mass. Filed Oct. 10, 1921. Serial No. 506,585. 1 Claim. (Cl. 152—14.)



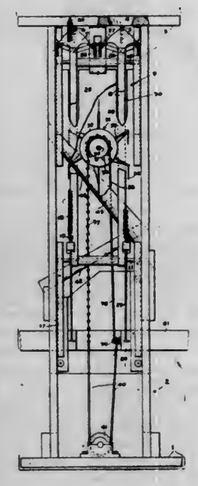
An anti-skid-chain anchoring means, adapted to hold a chain in the form of a loop extending across the tread of a wheel tire and across the opposite sides of the felly, comprising a base adapted to be secured to the inner face of the felly, said base being provided with hooks coextensive therewith and projecting therefrom to project outward from the opposite sides of the felly, so that the end portions of chains whose terminal links are engaged with said hooks extend substantially straight from the hooks across the sides of the felly, each hook being connected with the body of the base by a curved neck whereby the hook is directed backward and overhangs the base, said means including oppositely directed laterally extending flukes so arranged that a terminal link of the chain can only be engaged with the flukes by being arranged in a position substantially at right angles to that occupied by it after being passed onto said curved neck.

1,452,886. SPOKE-ENGAGING ANTISKID-CHAIN-ANCHORING MEANS. GEORGE P. MACINTOSH, Wakefield, Mass. Filed Oct. 10, 1921. Serial No. 506,586. 1 Claim. (Cl. 152—14.)



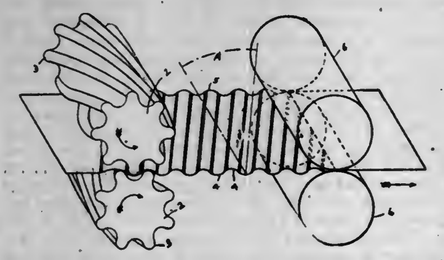
The combination with a spoked wheel, an elastic tire and an anti-skid chain adapted to be looped across the sides of the wheel felly and the tread face of the tire; of a pair of guarded hooks, and means securing said hooks to a spoke of the wheel, the hooks projecting from opposite sides of the spoke, each hook including a curved neck portion projecting from one side of the spoke and centrally thereof, a terminal portion overhanging the base of the neck portion, and flukes on the terminal portion projecting in opposite directions from the plane of the neck portion, said flukes having inclined outer link-guiding edges formed to permit the passage of terminal chain links across the said terminal portions and onto the neck portions, when the links are held in abnormal positions, and shoulder-forming inner edges formed to prevent the removal of said links when they are in their normal positions, said neck portions supporting the looped chain in its operative position.

1,452,887. GAS-FIRED OVEN OR KILN. JOHN HENRY MARLOW, Stoke-upon-Trent, England. Filed May 17, 1921. Serial No. 470,265. 6 Claims. (Cl. 25—142.)



1. A tunnel oven or kiln provided on opposite sides with combustion chambers and air supply pipes, passages communicating with the combustion chambers, said passages decreasing in area towards the front of the oven or kiln, and a series of orifices which communicate with said passages.

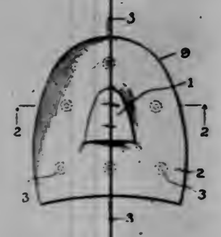
1,452,888. GLUING MACHINE. CLIFFORD W. MARSH, Bridgeport, Conn. Filed Aug. 23, 1920. Serial No. 405,350. 11 Claims. (Cl. 91—47.)



1. In a gluing machine, a glue pot, a sliding frame therein, a glue depositing comb provided with teeth carried by said sliding frame, and means for causing said teeth to be moved upwardly in said glue pot, said means comprising a hand lever adapted to have a sliding engagement with said sliding frame and provided with a stop for limiting the upward movement thereof.

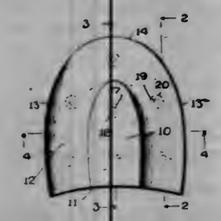
1,452,889. FRUIT-PITTING MACHINE. SOICHI NAKASHIMA, Livingston, Calif. Filed June 20, 1922. Serial No. 571,044. 5 Claims. (Cl. 146—6.)

1. A fruit pitting machine comprising a frame having a table at its upper end provided with openings through which pieces of fruit to be pitted are dropped, means located immediately beneath the openings for engaging and releasably supporting pieces of fruit dropped through the openings, fruit gripping members mounted in the frame so as to be movable towards one another on opposite sides of the fruit supporting members and into engagement with which said fruit is moved, means for moving said fruit gripping members downwardly to move the fruit into contact with and beneath said knives, a rotating member beneath the knives having striker members pivoted thereon and arranged to engage pits of the fruit as the fruit is moved downwardly and means causing rotation of said rotary member coincident with the downward movement of the fruit past the knives.



1,452,890. METHOD OF OPENING SHEET AND TIN-PLATE PACKS. WILLIAM NEWBY, Youngstown, Ohio. Filed May 23, 1921. Serial No. 471,840. 4 Claims. (Cl. 29—19.)

1. The method of opening sheet and tin plate packs by rolling corrugations into the pack, each corrugation be-

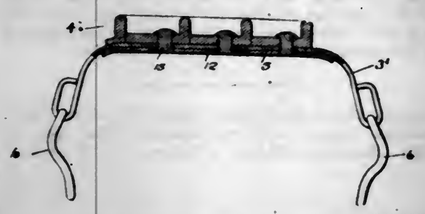


ing thus rolled gradually from one side toward the other transversely of the direction of movement of such pack through the rolls, and then passing the corrugated pack through flattening rolls.

1,452,891. RUBBER-HEEL LIFT. CLIFFORD H. OAKLEY, Trenton, N. J. Filed Mar. 27, 1919. Serial No. 285,469. 2 Claims. (Cl. 36—35.)

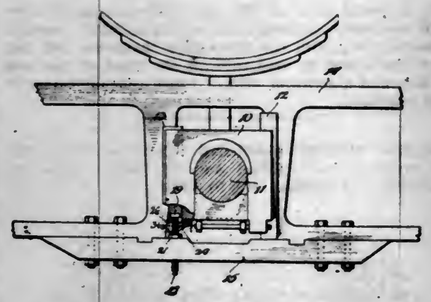
1. A resilient heel lift comprising a central core having parallel flat top and bottom surfaces, the top surface being of a sufficient area to form a stable base to support the lift when resting thereon and a deformable portion of uniform width surrounding said core and having a top surface normally concave when undistorted with the outer edge in the plane of the flat top surface forming a peripheral heel engaging rim, and a convex bottom surface corresponding to the concave top surface, said deformable portion being arranged to be deformed upon attachment to a heel to bring portions of the concave top surface into contact with the bottom heel surface without displacement of the central core substantially as described.

1,452,892. RESILIENT HEEL LIFT. LAURENCE M. OAKLEY, Trenton, N. J., assignor to Clifford H. Oakley, Trenton, N. J. Filed Feb. 5, 1920. Serial No. 356,374. 3 Claims. (Cl. 36—35.)



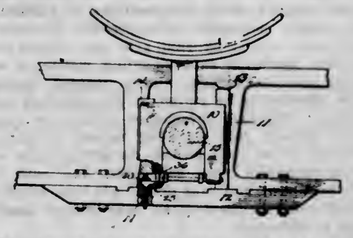
1. A deformable resilient heel lift of uniform thickness throughout, the upper surface of said lift having a central flat portion of a width equal to approximately one-third of the width of the lift and of substantial area disposed in a plane passing through the outer edges of the lift and a groove of uniform width throughout substantially its entire length; terminating at the breast edge of the lift and extending around said flat portion; the tread surface of the lift having a corresponding flat portion and a ridge of uniform width throughout substantially its entire length terminating at the breast edge and extending around said flat portion; the said lift being provided with nail holes positioned in said central flat portion and along the median line of said ridge and groove and disposed at right angles to the plane of said flat portion, whereby the lift when attached to a shoe heel may be deformed to produce a substantially uniform pressing contact from one breast corner along the side and rear edges of the heel to the other breast corner.

1,452,893. ATTACHMENT FOR SKINNING KNIVES. HARRY W. L. PORTH, Chicago, Ill., assignor to Swift & Company, Chicago, Ill., a Corporation of Illinois. Filed May 10, 1922. Serial No. 559,891. 5 Claims. (Cl. 17—21.)



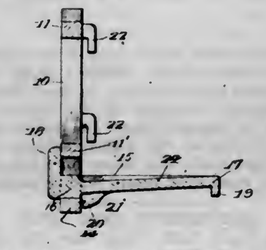
1. An attachment for skinning knives comprising a guard hinged to the knife, automatic means for locking said guard adjacent the blade of the knife, and means for swinging said guard away from the face of the blade when the locking means is released.

1,452,894. TREAD FOR AUTO TIRES. JOHN B. POUK, Streator, Ill., assignor of one-half to Benjamin D. Roberts, Streator, Ill. Filed Jan. 21, 1919. Serial No. 272,302. 1 Claim. (Cl. 152—16.)



In a tread for vehicle wheels, the combination of identically constructed tread units consisting essentially of plates formed of flexible material adapted to bear and rest upon the tread portion of a tire casing, rivets permanently secured in the flexible material, plates formed of metal superimposed on the first-named plates and having inwardly extending tongs that terminate in hooks; said second-named plates having apertures in their body portions through which the rivets of the first-named plates pass by which the plates are fixedly secured to each other, and angle-iron plates superimposed on the second plates and secured thereto by the rivets.

1,452,895. LOCOMOTIVE DRIVING BOX. EDWARD W. RAWDON, Akron, Ohio. Filed July 20, 1922. Serial No. 576,358. 11 Claims. (Cl. 105—81.)

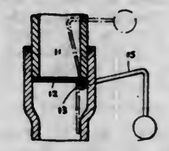


1. The combination with a journal box, a pedestal operatively supporting the box, and means interposed between the box and pedestal and adjustable for taking up forward and rear play of the box, of means operable by the box for adjusting the first means.

1,452,896. LOCOMOTIVE DRIVING BOX. EDWARD W. RAWDON, Akron, Ohio. Filed Oct. 6, 1922. Serial No. 592,755. 9 Claims. (Cl. 105—81.)

1. In a journal box, a box body, a pedestal operatively supporting the box body, means interposed between the box body and the pedestal adjustable for taking up forward and rear play of the box body, means for adjusting said first-mentioned means including a pawl and ratchet, and an operative connection between the box body and said pawl adapted to accommodate vertical movement of the box body with respect to the pawl.

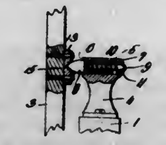
1,452,897. GRATE. GEORGE M. SMITH, Maryville, Tenn., assignor of one-fourth to Rutherford M. Henry, Maryville, Tenn. Filed Mar. 16, 1922. Serial No. 544,203. 2 Claims. (Cl. 126—164.)



1. A grate basket comprising a front member having legs, said legs having ledges, and a removable grate member comprising a frame resting on said ledges, said frame having lugs bearing against the front face of the front member of the basket and lugs bearing against the rear of the ledges, said grate member being removable through the front member.

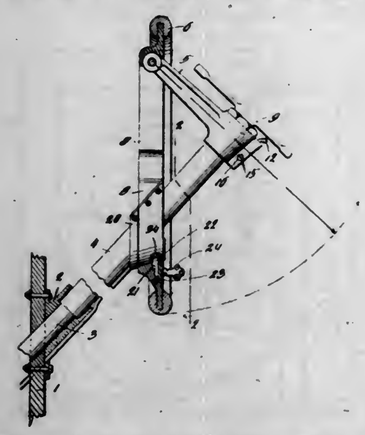
1,452,898. PROCESS OF TREATING ROCK ASPHALT. JOHN BLEWETT SMYTH, Beaumont, Tex. Filed Apr. 24, 1920. Serial No. 376,876. 10 Claims. (Cl. 18—48.)

1. A process of treating porous rock, the pores of which are partially filled with hard asphaltic material, said process consisting in comminuting said rock, thoroughly disseminating, throughout a mass of the comminuted rock, only sufficient solvent of the asphaltic material to soften the surface of said material to such an extent that the particles may be kneaded together, and to fill the voids in the pores of the rock not occupied by said asphaltic material.



1,452,899. FLUID-FLOW-CONTROLLED SAFETY APPARATUS. CHARLES LESLIE STOKOE, Wallsend-on-Tyne, England. Filed Jan. 27, 1920. Serial No. 354,885. 1 Claim. (Cl. 200—81.)

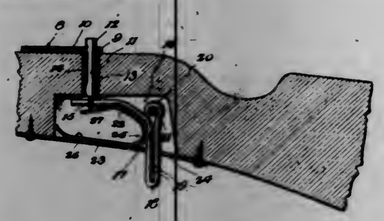
A circuit closer for safety apparatus actuated on the failure or commencement of the flow of fluid through a pipe, comprising, in combination, a pipe, a spindle extending transversely through said pipe at one side thereof, a flap valve fixed on said spindle within said pipe and normally held open by fluid flowing through the pipe, a weighted lever on said spindle outside the pipe tending to cause the flap valve to assume a position in which it extends transversely across the pipe in the path of fluid flowing therethrough, an arm on said spindle outside the pipe, a block of insulating material on said arm, a supporting member of insulating material fixed



on the outside of the pipe, and a pair of resilient switch members mounted on said supporting member, said switch members being operated by the block of insulating material on the arm on the valve spindle upon rotation of said spindle upon failure or commencement of the flow of fluid through the pipe.

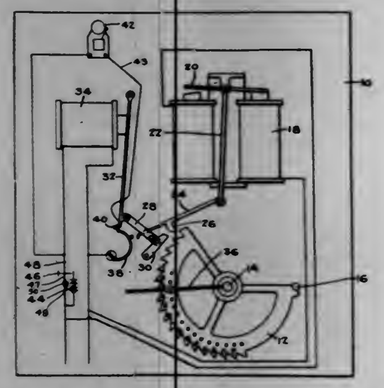
1,452,900. LOCKING MEANS FOR BELT-TIGHTENING MECHANISM. CHARLES H. TURNER, Statesville, N. C. Filed July 29, 1921. Serial No. 488,348. 1 Claim. (Cl. 74—89.)

In combination, a control lever for a belt tightening mechanism, a plate mounted on the control lever and provided with a centrally disposed indenture, arcuate ears extending in opposite directions from each other and laterally from the sides of the lever, and a second pair of ears extending from the plate in opposite directions and aligned at substantial right angles to the first mentioned ears, means passing through the second mentioned ears for fastening the plate to the lever, and a spring pressed latch element engageable with the plate and the arcuate ears and the indenture all in the manner and for the purpose specified.



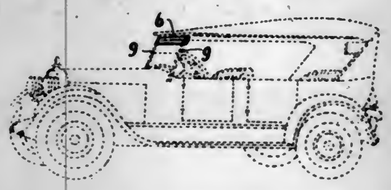
1,452,901. STEERING LOCKING DEVICE. LUDWIG WERLE, Sturgeon Bay, Wis. Filed Mar. 29, 1921. Serial No. 456,766. 1 Claim. (Cl. 74—33.)

The combination of a steering column, a steering shaft and a steering wheel secured to said steering shaft



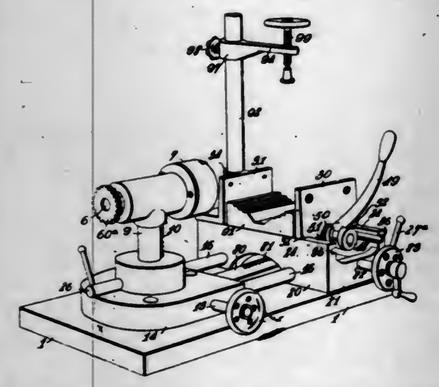
so as to rotate therewith but adapted to tilt about an axis transverse of the axis of said shaft so that it may be tilted from a normal operative to an out of the way position; said steering column including a member disposed at the limit of tilting movement of the wheel, a switch in said member, means for normally holding the switch in a closed position, a spring pressed latch mounted on said wheel and engageable with said switch when said wheel is in an out of the way position for holding said switch open, said switch being located in the ignition system of a vehicle to which the steering wheel is attached.

1,452,902. TOY GUN. ROY H. WILLIAMSON, Spooner, Wis. Filed Feb. 10, 1921. Serial No. 443,913. 5 Claims. (Cl. 124—14.)



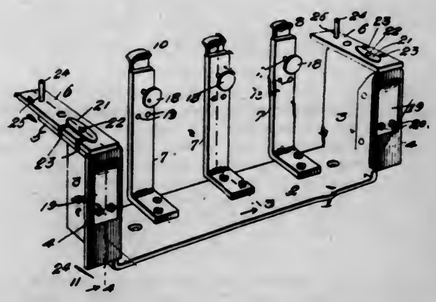
3. In a toy gun, a gun body having a recess in its under side, a plate closing the recess and provided with a slot, a pivot pin extending across the recess above the said plate, a trigger comprising a length of wire bent upon itself to provide a finger piece having one terminal formed with an eye pivotally engaging the said pin, the finger piece fitting through the slot in the said plate and adapted to engage one end wall of the slot whereby to have its movement in one direction limited by such engagement, the other terminal portion of the wire being extended forwardly within the recess to provide a finger, a detent pin slidable in an up and down direction in the gun body and having its lower end projecting into the recess and operatively engaged by the said finger, and a bowed leaf spring arranged between the said finger and the said plate and having one of its members resting against the upper side of the plate and its other member engaging beneath and bearing upwardly against the said finger whereby to yieldably hold the trigger in position to project the detent pin.

1,452,903. STATION SELECTOR. OLE K. BAKKEN, Northwood, N. Dak. Filed Jan. 30, 1920. Serial No. 355,289. 1 Claim. (Cl. 177—343.)



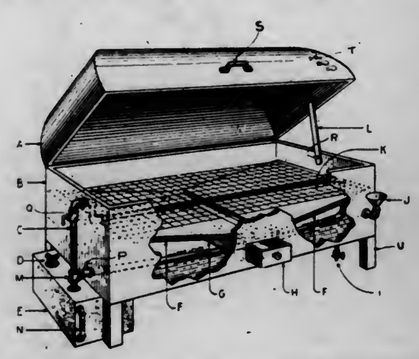
A selective signaling device for party lines comprising signaling means, a ratchet wheel, an arm adapted to be fixed in different positions on said ratchet wheel, a pawl engaging said ratchet wheel, a stationary electro magnet, connections between said pawl and the armature of said electro magnet whereby successive electrical impulses move said ratchet wheel progressively, a pivoted bow-shaped member normally in inoperative position and adapted to be moved by said arm into circuit-making position for operating said signaling means, a second stationary and independent electro magnet having an armature adapted to be moved by an electrical impulse into contact with said bow-shaped member to complete a circuit through said signaling means, a detent for said ratchet wheel, and a link connecting said second mentioned armature with said pawl and said detent whereby said pawl and said detent are both lifted away from said ratchet wheel when said second mentioned armature is attracted.

1,452,904. AUTO-WINDSHIELD ATTACHMENT. MAX BECKER, Los Angeles, Calif. Filed May 18, 1922. Serial No. 561,872. 1 Claim. (Cl. 296—97.)



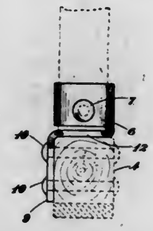
In a wind shield attachment, a rear-sight reflector comprising a hollow body having a mirror in its rear side and having perforations in its front side, a shading member shiftably disposed in the hollow body and adapted to be lowered below the lower edge of the mirror for increasing the normal shading facilities of the mirror, and controlling means for adjustably holding the auxiliary and second-named shading member.

1,452,905. AUTOMOTIVE TEST UNIT. ELMER G. BEEHLER, Yuma, Colo. Filed Sept. 24, 1921. Serial No. 502,863. 5 Claims. (Cl. 73—51.)



1. In an automotive equipment testing means of the character described, the combination with a base, a test head carrying support mounted on the base, means mounted on the base and engaging the support for effecting vertical adjustment of the test head, a pair of parallel oppositely disposed horizontal rods and a horizontal rack rod intermediate of the parallel rod and in parallelism with the said rod, the several rods being fixedly connected to the base that supports the test head, of a vise, a supporting frame therefor mounted on the aforesaid pair of oppositely disposed rods, said vise being adapted to hold the equipment to be tested and means carried on the vise for effecting adjustment thereof on the said rods to and from the test head, the said means including a hand operable rotatable shaft having a gear engaging the rack rod.

1,452,906. SPLICING APPARATUS. OBADIAH BUTLER and AMOS MORIN, Killingly, Conn. Filed Aug. 28, 1922. Serial No. 584,932. 5 Claims. (Cl. 117—6.)

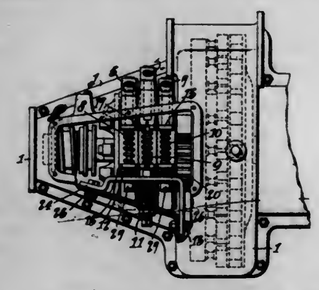


1. In an apparatus of the class described, the combination of a frame, including a base and ends, said ends provided with front and horizontal flanges, yarn-holding means carried by said front and horizontal flanges, and strand-holding or clamping means on said frame between said ends.

1,452,907. STEAM CABINET FOR FOODS. ROBERT JOSEPH CAMPBELL, Denver, Colo., assignor to W. Hawley Smith, Denver, Colo. Filed Sept. 17, 1921. Serial No. 501,414. 1 Claim. (Cl. 126—20.)

In a warming cabinet for food having a tight fitting lid, a water tank formed at the bottom of the cabinet, a perforated tray above said tank, dripping boards between said tank and said tray, said boards being inclined towards the middle of the cabinet, a dripping pan beneath the lower ends of said boards, a steam chest mounted exteriorly to the tank, a steam supply pipe from said chest provided with cocks adjacent the top and bottom of one end of the cabinet, a conduit opening into said supply pipe adjacent said cocks and having an upper horizontal portion situated above said dripping boards, and a lower horizontal portion situated below said dripping boards, whereby a complete circuit is formed by said supply pipe and said conduit for circulating steam from said chest through the cabinet.

1,452,908. SPOKE GRIP. MILTON NOAH COLVIN, Komoka, Ontario, Canada. Filed Mar. 16, 1922. Serial No. 544,383. 1 Claim. (Cl. 301—70.)



The herein described attachable reinforcing means for vehicle wheel spokes stamped from sheet metal and comprising a body portion to embrace a spoke and having apertures for the reception of securing means, and a plate offset from said body portion and having apertures for the reception of means to secure it to a felly, said body portion and plate being bendable at their point of union and the body portion having a horizontal portion insertable beneath the end of the spoke.

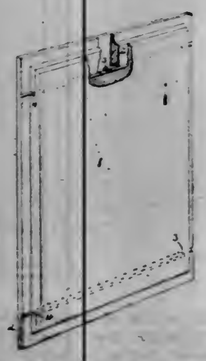
1,452,909. METHOD OF ADJUSTING GLASSES, SPECTACLES, AND THE LIKE. ALBERT E. COVELLE, West Medford, Mass. Filed Nov. 8, 1921. Serial No. 513,690. 5 Claims. (Cl. 88—20.)

1. That improvement in the process of adjusting spectacles, glasses and the like, which consists in restricting the vision of each eye of the individual being fitted substantially to the optical center of the respective lenses, and then adjusting the lenses until the individual, with his vision so restricted, sees the same field of vision with each eye.

1,452,910. CHATTERLESS LUG AND PEDAL-SHAFT SUPPORT. OSCAR W. GORENFLO, Buffalo, N. Y. Filed Mar. 23, 1922. Serial No. 546,096. 8 Claims. (Cl. 188—249.)

5. As a new article of manufacture, a transmission band lug for planetary type transmissions comprising a bifurcated member having a counterbore, and a bearing washer located in said counterbore and apertured to fit on the pedal shaft.

1,452,911. HIGH CHAIR. MARTIN GRONSDAHL, Congress, Saskatchewan, Canada. Filed Mar. 16, 1922. Serial No. 544,374. 1 Claim. (Cl. 155—181.)

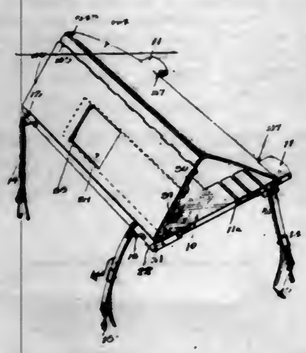


A chair attachment comprising uprights, end members having forked members pivotally mounted on the lower rear sides of the end members, a transverse rung connecting the end members near their upper ends, the end members having their upper edges notched adjacent said uprights, and a detachable tray having depending brackets at the ends, lateral projections at the rear side of said tray to engage in said notches and to bear against the rear faces of said uprights, and openings in the tray at the rear of said brackets to receive the said uprights.

1,452,912. PLOW FOR PLANTING POTATOES. WILLY HARTENSTEIN, Darmstadt, Germany, assignor to Josephine Aman, Rutherford, N. J. Filed Nov. 15, 1920. Serial No. 424,332. 5 Claims. (Cl. 221—118.)

1. A receptacle having a main and an auxiliary compartment, a pocketed drum rotating in open communication with both compartments, and means in both compartments for stripping the excess potatoes from the pockets of the drum.

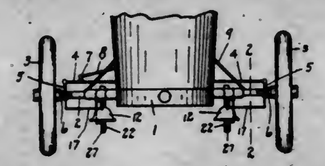
1,452,913. CABINET-DOOR. EARL V. HUGHES, Andrews, Ind., assignor to Wasmuth-Endicott Company, a Corporation of Indiana. Filed Aug. 31, 1921. Serial No. 497,129. 2 Claims. (Cl. 20—35.)



1. In a cabinet door comprised of a wooden slab having a transverse groove in each end and corresponding wooden cleats secured therein, a flat metallic strip positioned in each groove at the base thereof and being concealed therein by the corresponding wooden cleat, the ends of said strip terminating respectively within the slab a short distance from the corresponding ends of said groove.

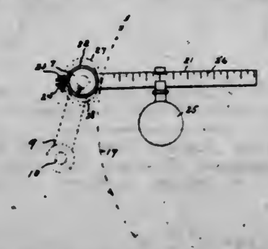
1,452,914. BUCKLE. WILLIAM E. JAMES, St. Louis, Mo. Filed Feb. 9, 1922. Serial No. 535,211. 1 Claim. (Cl. 24—182.)

The improvement in buckles, comprising a flattened coiled spring and body having a terminal loop and formed of a single wire; the end of said wire opposite to said loop serving as a base for a buckle frame and tongue, and the interior of the body being of greater width than the belt whereon the buckle is used, and serving as a sheath for the end of the belt engaged by said buckle.



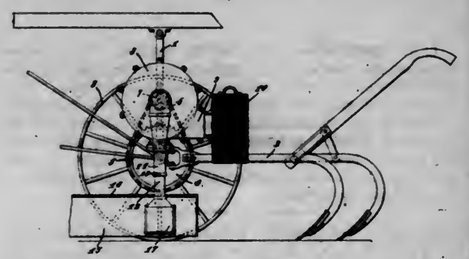
1,452,915. SUPPORT FOR INVALIDS. GEORGE KENNEDY, Covington, La. Filed July 14, 1922. Serial No. 575,035. 4 Claims. (Cl. 5—327.)

1. A support for invalids including a base having bars extending therefrom, means cooperating with the base and bars for securing them in position, a plate, means for pivotally connecting one end of said plate to said base, said plate having an opening therein, a closure for said opening comprising a sliding panel, guides carrying said sliding panel, a handle for operating said sliding panel, a second plate having a curved portion, a hinge for connecting the curved portion to the first plate, said bars having series of inclined notches cooperable with the free end of said second plate, the free end of said second plate being cut away adjacent each side to provide shoulders engageable with the bars for reinforcing the second plate and preventing lateral displacement thereof.



1,452,916. DIRIGIBLE AUTOMOBILE LAMP DEVICE. CHARLES E. KISTNER, Cincinnati, Ohio. Filed June 20, 1921. Serial No. 479,106. 7 Claims. (Cl. 240—45.2.)

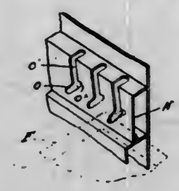
1. In a dirigible automobile lamp device of the character described, steering mechanism, lamps rigidly connected to the automobile frame, shutters associated with each of said lamps and mounted to swing at the front middle point of said lamps, means upon which said shutters are mounted capable of being moved upwardly or downwardly to raise or lower the shutters to fit lamps mounted at various heights, means for locking the last mentioned means in variable vertical position, and means between the means upon which said shutters are



mounted and the inner hub of the wheels for forcing said shutters to automatically shift so that the light rays will be thrown in the path of the automobile.

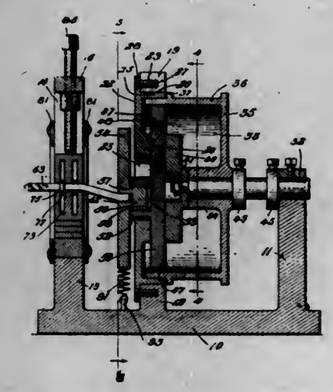
1,452,917. LENS-GRINDER ATTACHMENT. JOSEPH J. KOVACS, Orange, N. J. Filed July 1, 1920. Serial No. 393,294. 1 Claim. (Cl. 51—101.)

An attachment for lens edge grinders comprising an arm having clamping means at one end thereof for rigidly but adjustably securing said arm in horizontal relation to the rocking frame of the lens grinder, and a weight adjustably suspended from said arm whereby the edge of a lens held upon said rocking frame may be caused to bear with uniform yielding pressure upon a grindstone during a complete revolution of said lens.



1,452,918. INSECT DESTROYER. CICERO HAMILTON LA CROIX, Bannister, Tex. Filed Mar. 9, 1921. Serial No. 450,986. 2 Claims. (Cl. 43—140.)

1. An insect destroying attachment for cultivators and the like comprising a hood open at its front, rear and bottom and increasing in area toward its front end, oppositely disposed suction heads within the hood near its rear end, said heads being arranged adjacent the sides of the hood and facing each other, a foraminous receiver, and means for creating suction through the hood and heads and directing the air currents into the receiver.

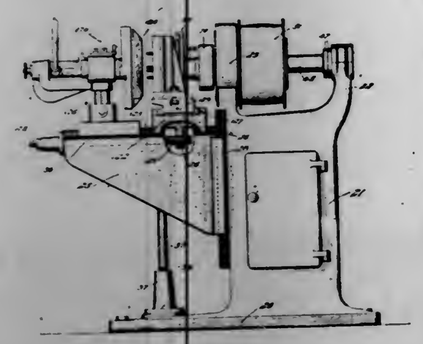


1,452,919. ACCOUNT-FILING CABINET. WILLIAM T. MCGRAW, Detroit, Mich. Filed Feb. 14, 1921. Serial No. 444,790. 2 Claims. (Cl. 45—2.)

1. In a filing cabinet, the combination with a casing, of a series of trays arranged within said casing in stepped relation, pintles projecting from each tray forming hinged members therefor and pressed sheet metal members secured to the inner walls of the casing, said members having spaced slots extending transversely thereof for en-

gaging the pintles, and the member on one side having entrance slots extending obliquely from said spaced slots for said pintles, said entrance slots intersecting the spaced slots intermediate the ends thereof to prevent accidental disengagement of the pintles.

1,452,920. MULTIPLE-DRILL MACHINE. JOHN MCLELLAN, Providence, R. I., assignor, by mesne assignments, to Multiple Drilling Machine Company, a Corporation of Rhode Island. Filed Aug. 4, 1921. Serial No. 489,663. 1 Claim. (Cl. 77—22.)



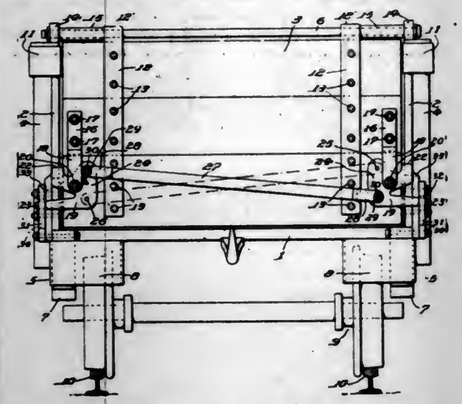
In a multiple spindle drilling machine, a base, an annular support, a retaining plate upon the support provided with a central orifice, a standard on the base, a spindle on the standard, a pulley on the spindle extending within the annular support and provided with an eccentric seat, a driving disk loosely mounted in the eccentric seat in slidable contact with the retaining plate, a thrust disk upon the spindle slidably engaging the driving disk, a boss on the driving disk projecting through the orifice, a driving disk detachably mounted on the boss exterior of the retaining plate provided with drill sockets, a tool holder support on the base adjacent the first support, a tool holder upon the second support, and drills comprising bodies rotatably mounted in the holder, and offset ends in the sockets.

1,452,921. MULTIPLE-DRILL MACHINE. JOHN MCLELLAN, Providence, R. I., assignor, by mesne assignments, to Multiple Drilling Machine Company, a Corporation of Rhode Island. Filed May 9, 1922. Serial No. 559,575. 13 Claims. (Cl. 77—22.)

1. In a multiple spindle drilling machine, a bearing, a pulley provided with an eccentric bore journaled in the

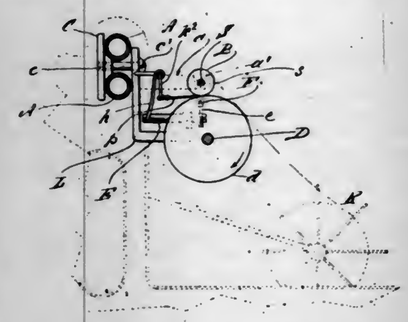
bearing, a bushing in the bore having an eccentric bore, a spindle free to rotate in the bushing, a driving plate carried by the spindle provided with drill sockets, a tool

holder adjacent the plate, and drills comprising bodies rotatably mounted in the holder and offset ends free to rotate in the sockets.



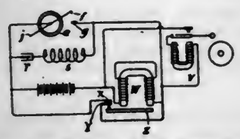
1,452,922. DISPENSING DEVICE. JOHN MASON, Philadelphia, Pa. Filed Oct. 26, 1920. Serial No. 419,671. 3 Claims. (Cl. 221—60.)

1. A dispensing device comprising a dispensing member provided with a dispensing outlet; and a closure member movable transversely relatively to said dispensing member to open and close said outlet; and securing means pivoted to one of the aforementioned relatively movable members and swingable transversely with reference to said closure member into and out of engagement with the other of the aforementioned relatively movable members, to lock said closure member with reference to said outlet or release it.



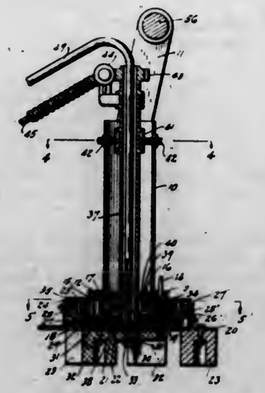
1,452,923. LOCKING DEVICE FOR MINE CARS. JOHN P. MILLER, Duryea, Pa., assignor of one-half to Herbert S. Woodward, Carbondale, Pa. Filed Jan. 26, 1920. Serial No. 353,940. 5 Claims. (Cl. 292—45.)

1. In a locking device for mine car doors, the combination of slotted locking plates fixed to the sides of said mine car adjacent the ends thereof, a pair of locking latches pivotally mounted on said door adjacent said plates and operative in planes transverse to said plates, said latches comprising means adapted to engage in the slots of said plates for normally maintaining said door in closed position, a link connecting said latches, said link having one end pivoted to one latch on one side of a plane passing through the axes of the pivots of said latches and its other end pivoted to the other latch on the opposite side of said plane, whereby an operating



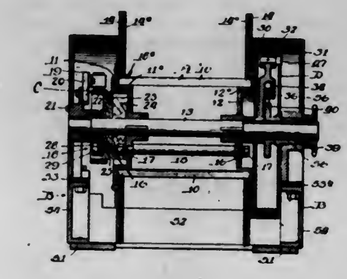
movement of either latch will be imparted by said link to simultaneously similarly operate the other of said latches.

1,452,924. STOP MOTION FOR BOBBIN WINDERS. PHILIP NATHANSON, Allentown, Pa. Filed Apr. 15, 1922. Serial No. 552,892. 4 Claims. (Cl. 242—39.)



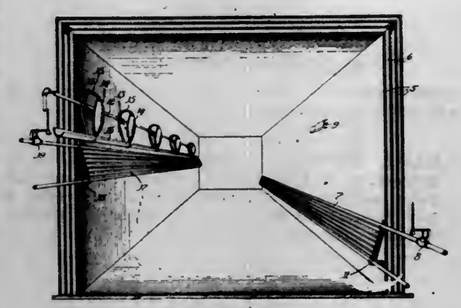
1. In combination with bobbin spindle drive mechanism of the character designated, an automatic stop device comprising a rock lever, a rotatable yarn mass feeler mounted on said rock lever, and a brake plate connected therewith by intermediate means and adapted to be protruded thereby between the spindle drive wheel and the spindle head by means of the accumulation of yarn mass on the bobbin, substantially in the manner and for the purpose described.

1,452,925. WIRELESS TELEGRAPH CALLING DEVICE. WILLIAM HOCKLEY NOTTAGE and THOMAS DIXON PARKIN, Chelmsford, England, assignors to The Radio Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Dec. 18, 1920. Serial No. 431,599. 6 Claims. (Cl. 250—2.)



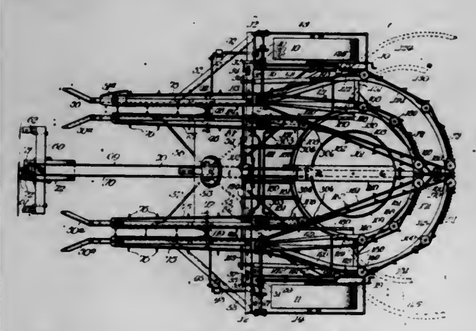
1. In a wireless telegraph timing mechanism, a spring controlled balance wheel oscillated by an electromagnet the circuit of which is interrupted by the oscillations of the wheel, substantially as described.

1,452,926. POLISHING MACHINE. ANTHONY ORLANDO, Chattanooga, Tenn. Filed Feb. 2, 1922. Serial No. 533,602. 8 Claims. (Cl. 51—177.)



1. In a polishing machine, co-axial plates, polishing elements carried by the plates, planetary gearing connected with the plates and including a sun gear connected with one of the plates, an orbit gear connected with the other of the plates and a plate upon which the planet gears are mounted, a handle member, means connected with the handle member for preventing rotation of the plate upon which the planet gears are mounted and means extending longitudinally of the handle for driving said orbit gear.

1,452,927. GATHERING REEL. GLENN W. PACKER, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Original application filed July 30, 1920, Serial No. 400,251. Divided and this application filed Nov. 20, 1920. Serial No. 425,302. 2 Claims. (Cl. 173—367.)



2. In a device of the class described, a reel provided with a conductor cable, a shaft for said reel, a support for said shaft adjacent one end of the reel, two end plates laterally spaced apart on said shaft, having annular shoulders concentric therewith, and flanges extending outwardly beyond said shoulders, a plurality of longitudinally disposed frame members of substantially equal length having their end portions abutting said flanges and seated on said shoulders, a collector ring carried at one end of said reel having electrical connection with said conductor cable, said collector ring comprising an annular contact ring and a plurality of radially extending lugs, insulating means interposed between said contact ring and said reel, an annular insulating disc provided with notches on the under surface thereof adapted to register with the lugs on said ring, a contact member for said collector ring mounted on said supports and securing means extending thru said end plates and said insulating disc to clamp said end plates, frame members and collector ring together as a unitary structure.

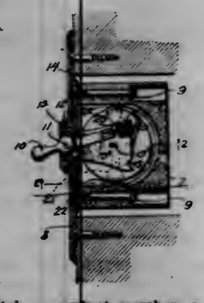
1,452,928. DRYING KILN. ELMER E. PERKINS, Chicago, Ill. Filed Mar. 5, 1921. Serial No. 449,798. 8 Claims. (Cl. 34—3.)

3. A drying kiln, comprising a heat insulated room, heating means disposed at one side of said room near the floor, and means spaced from the floor remote from said heating means for washing the air in said room, said last-mentioned means including a water supply pipe, a plurality of spray nozzles connected thereto, and means for collecting the water delivered by said nozzles.

1,452,929. CORN HARVESTER AND SHOCKER. DARIUS T. PHILLIPS, Chicago, Ill., assignor of one-half to Charles G. Williams, Chicago, Ill. Filed Mar. 15, 1919. Serial No. 282,941. 18 Claims. (Cl. 56—83.)

1. In a corn harvester and shocker, the combination with cutting and gathering devices, of shock forming and packing devices comprising a collapsible core, and a frame surrounding the core and provided with a plurality of packing chains adapted to receive the incoming corn from the cutting and gathering devices.

1,452,930. MEANS FOR PEELING CITRUS FRUIT. RALPH POLK, Greenwood, Ind. Filed Dec. 19, 1922. Serial No. 607,844. 2 Claims. (Cl. 146—14.)



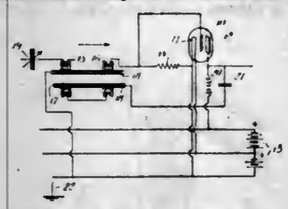
1. A knife for removing the peel of citrus fruit, comprising a blade curved to substantially conform to the

contour of the whole fruit and having a cutting edge and provided with a handle by which the blade may be

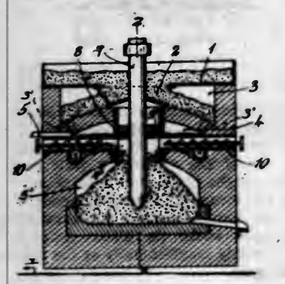
grasped, the curve of said blade commencing at the tip and extending substantially to the handle.

1,452,931. ELECTRIC SWITCH. CHARLES S. PRICE, Rutherford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 26, 1920. Serial No. 426,537. 7 Claims. (Cl. 200—10.)

1. In a switch, a contact member, a rotatable ratchet member, a stepping pawl for driving said ratchet member and said contact member, a holding pawl operative to prevent both overthrow and retrograde movement of said ratchet member, said holding pawl being controllable by said stepping pawl.



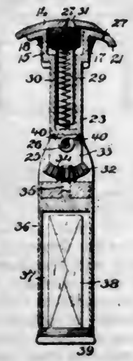
1,452,932. CONNECTING ROD FOR PISTONS. CHARLES A. G. PRITCHARD, Cleveland, Ohio, assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 3, 1921. Serial No. 519,617. 13 Claims. (Cl. 74—108.)



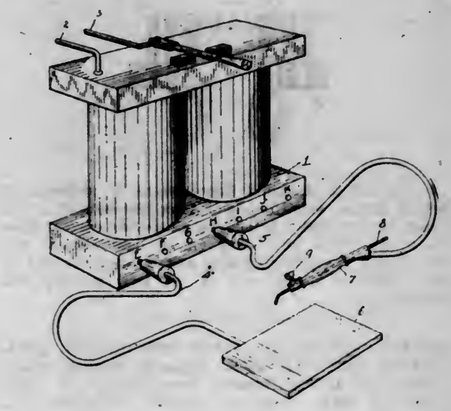
1. In a device of the class described, the combination of a piston rod having a head, a piston, a slotted socket cooperating with said head and fastened to said piston, and means for closing the slot in said socket.

1,452,933. SELECTIVE AMPLIFYING APPARATUS. MICHAEL IDVORSKY PUPIN, Norfolk, Conn., assignor to Westinghouse Electric and Manufacturing Company, East Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 10, 1918, Serial No. 257,571. Renewed Sept. 14, 1922. Serial No. 588,287. 27 Claims. (Cl. 179—171.)

1. A multi-step selective amplifying apparatus comprising several units connected in cascade, each of said units including a circuit containing a high resistance conductor, a control device excited by an electrical reaction of said circuit, a source of electric energy, and a negative resistance compensator controlled by said device and which by conveying power to said circuit from said source increases said exciting electrical reaction.



1,452,934. ZINC-SMELTING FURNACE. BJÖRN RÆDER, Kykkelsrud, Askim Station, Norway, assignor to himself and Aktieselskapet Zink, both of Kykkelsrud, Askim Station, Norway. Filed Feb. 5, 1920. Serial No. 356,515. 6 Claims. (Cl. 204—64.)

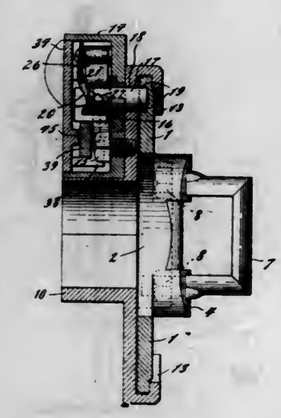


1. A furnace of the character described comprising essentially three superposed communicating chambers, the uppermost chamber constituting a preliminary drying chamber, the intermediate chamber constituting a preheating chamber, and the bottom chamber constituting a reduction chamber, said drying chamber being constructed to be heated by the combustion gases from the intermediate chamber, means for heating the last-named chamber, and an electrode extending down through the two uppermost chambers into the bottom chamber for the purpose of electrically heating the latter.

1,452,935. SAFETY RAZOR. JACOB SCHICK, New York, N. Y. Filed July 18, 1921. Serial No. 485,640. 12 Claims. (Cl. 30—12.)

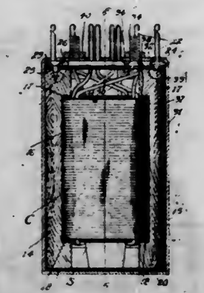
11. A safety razor comprising means for holding a blade in shaving position, a magazine for holding a stack of blades, and means for feeding a blade from said stack to shaving position in the holding means.

1,452,936. METHOD OF AND APPARATUS FOR WELDING. FRANK J. SCHUMAN, Cleveland Heights, Ohio, assignor to The Allan Manufacturing and Welding Corporation, Buffalo, N. Y., a Corporation of New York. Filed Mar. 31, 1920. Serial No. 370,168. 3 Claims. (Cl. 219—8.)



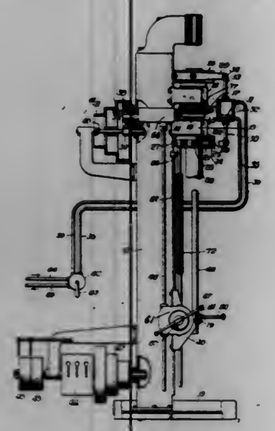
1. In a method of filling recesses in iron articles, the steps which consist in establishing a closed electrical circuit through a nickel pencil and the wall of such recess until a drop of the nickel has melted and deposited, and then moving such pencil to a new point on such wall and repeating such operation.

1,452,937. SUCKER-ROD-CONNECTING MEANS. ERNEST J. SHAFFER, Tulsa, Okla. Filed Dec. 24, 1921. Serial No. 524,688. 3 Claims. (Cl. 294—86.)



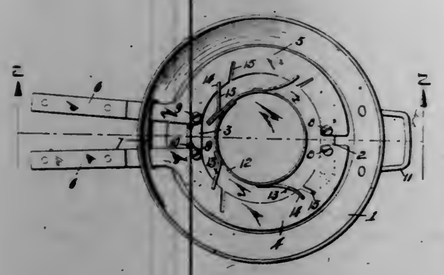
1. A device for recovering broken sucker rods from well tubing consisting of an elongated body portion having a threaded bore and slotted longitudinally at points spaced apart circumferentially of the bore thereby to provide resilient parts capable of yielding radially, said parts being arranged to grasp between them the broken end of a sucker rod and hold the same firmly by reason of the inherent resiliency of said parts and the presence of the thread.

1,452,938. LOCKING DEVICE. ERNEST SIMON, New York, N. Y., assignor to Axle Lock Corporation, a Corporation of New York. Filed Feb. 24, 1921. Serial No. 447,445. 18 Claims. (Cl. 70—129.)



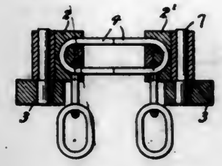
1. In a lock for vehicles having a steering wheel and a relatively stationary steering column, the combination of a disc, means for securing the disc to the spokes of the steering wheel for rotation therewith, a split element having means on each part overhanging the disc to prevent separation of the element and disc but permit of their relative rotation, means for clamping the parts of the split element together and to the steering column, and a locking device carried by one of the parts settable to lock the disc and split element against relative rotary movement.

1,452,939. COIL. CHARLES SPARKS, Oak Park, and WILLIAM G. SHULL, Chicago, Ill., assignors to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 9, 1920. Serial No. 350,316. 18 Claims. (Cl. 175—360.)



14. An inductorium of the character described including a spool provided with a plurality of windings and having a rectangular core of magnetic material, composed of a plurality of laminations, each lamination having two oblong openings opposite each other, the portion between said openings extending through the opening in said spool, a pair of rectangular plates, four posts connecting said plates together, and recessed portions cut in said posts adapted to receive the heads of said spool to maintain said coil in position, the said rectangular core for said coil being adapted to extend between the two sets of two posts to maintain said core in position.

1,452,940. BORING MACHINE. CHARLES STECHER, Chicago, Ill. Filed Apr. 6, 1918. Serial No. 227,118. 2 Claims. (Cl. 77—4.)

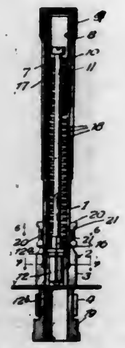


1. In a machine of the class described, the combination of a vertical column, bearings carried by the upper portion of said column, a hollow spindle disposed vertically in said bearings, chucking mechanism carried by said spindle, a tool carriage mounted on the lower portion of said column, means for rotating said spindle, clamping devices carried by said carriage for rigidly holding a tool in axial alignment with said spindle, mechanism for moving said carriage vertically on said column, horizontally disposed studs carried by said carriage supporting said clamping devices and permitting movement thereof, together with the tool held thereby laterally of the column to clear said spindle, return movement of said clamping devices on said studs again bringing said tool into axial alignment with said spindle, and retaining devices for holding said clamping devices on said studs in said alignment.

1,452,941. FRUIT-JAR HOLDER. WALTER C. SZYKOWNY, Toledo, Ohio. Filed May 25, 1922. Serial No. 563,744. 4 Claims. (Cl. 81—3.3.)

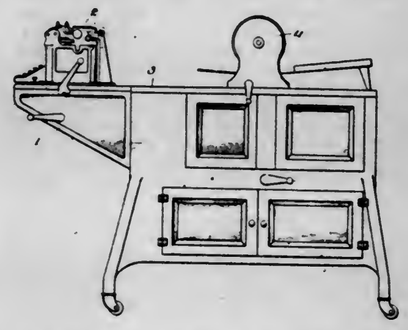
1. In a device of the class described, a pair of article gripping jaws mounted for opposed pivotal movements and having a set of notches provided in their inner edges, a compressible article engaging ring disposed between the jaws and having fingers projecting therefrom for seating in the notches in the jaws whereby a contraction of the jaws effects a contraction of the ring.

1,452,942. CHAIN-LINK WELDING. ELIHU THOMSON, Swampscott, Mass., assignor to Thomson Electric Welding Company, Lynn, Mass., a Corporation of Massachusetts. Filed Mar. 16, 1921. Serial No. 452,665. 4 Claims. (Cl. 219—5.)



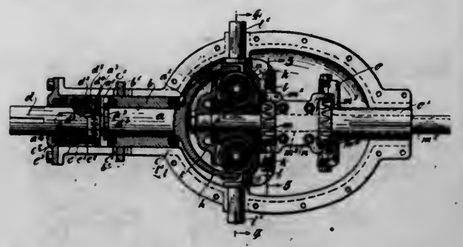
1. The herein described improvement in processes of making chains, consisting in heating the ends of the U blanks for two chains by passing an electric current from one to the other while they are in light contact and immediately thereafter forming and welding the end of each U-shaped blank each in its own welding and forming die.

1,452,943. CONVEYER CHAIN FOR DRYING APPARATUS AND THE LIKE. CHARLES WAGNER, Grantwood, and AUGUST HORMEL, Jersey City, N. J. Filed Mar. 15, 1921. Serial No. 452,632. 5 Claims. (Cl. 198—134.)



1. In a conveyer chain, the combination with a series of links having means adapted to engage a sprocket-wheel, of a series of web members connected to said chain and adapted to permit relative pivotal movement of the links in one direction from a rectilinear line but to prevent movement of such links in the opposite direction beyond such rectilinear line.

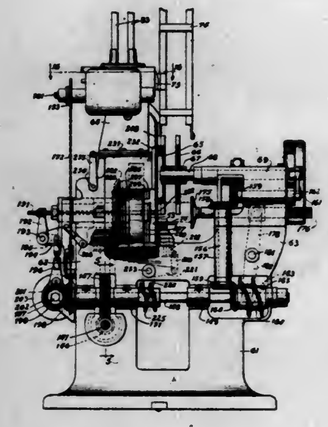
1,452,944. DEVICE FOR TESTING FIBER BOARD. JOHN W. WEBB, Chicago, Ill. Filed Feb. 28, 1921. Serial No. 448,439. 7 Claims. (Cl. 265—12.)



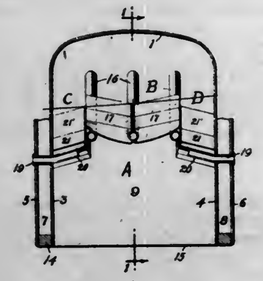
1. A testing device of the character described and comprising a shank, a transversely slotted base block, a spring-stressed plunger slidingly mounted in said shank and provided with means for indicating the stress of the spring, and a recessed clamping plug in alignment with said plunger, said plug being provided with a scale indicating the distance between the opposed clamping faces.

1,452,945. TYPESETTING MACHINE. BESTER R. WEBSTER, Chicago, Ill., assignor to Chester A. Macomic, Chicago, Ill. Filed Dec. 27, 1921. Serial No. 525,172. 9 Claims. (Cl. 276—3.)

1. In a typesetting machine of the class described, the combination with a typewriting machine, of type-selecting mechanism, said type-selecting mechanism comprising a plurality of differentially adjustable selecting bars, a guiding member for the keys of the typewriting machine, said guiding member being equipped with plungers for coacting with the keys of the typewriting machine and the type-selecting mechanism, and means for shifting said guiding member and plungers into and out of cooperation with the typewriter keys.



1,452,946. TRANSMISSION DEVICE. CARL W. WEISS, Brooklyn, N. Y. Filed Mar. 8, 1920. Serial No. 364,202. 5 Claims. (Cl. 74—26.)

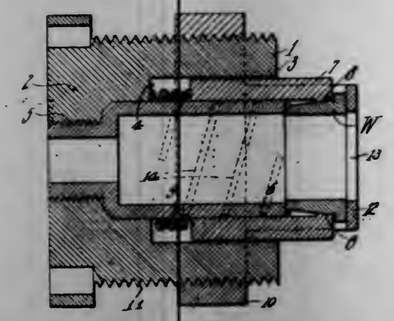


1. A power transmission device comprising a support, a rotating body supported thereby, a second rotating body having a spherical bearing surface for co-operation with the first mentioned body, a shaft carrying said second rotating body, a rotatable sleeve member, said shaft and said sleeve member being formed with opposed surfaces with tapered recesses and rollers in said recesses.

1,452,947. HORIZONTAL STATIONARY DOUBLE SEAMER FOR CANS. MAGNUS E. WIDELL, Maywood, and ARTHUR A. JAHR, Forest Park, Ill., assignors to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 17, 1920. Serial No. 424,697. 11 Claims. (Cl. 113—28.)

1. In a machine for seaming flanged can ends to flanged can bodies, the combination of a seaming head, a carrier rotating about a horizontal axis, means feeding non-circular can ends edgewise and downward and non-circular can bodies into said carrier, and means projecting said bodies endwise and thereby the can end into said seaming head for seaming.

1,452,948. FIRE-BOX-ARCH CONSTRUCTION. ALFRED H. WILLETT, West New York, N. J., assignor to American Arch Company, a Corporation of Delaware. Filed Oct. 18, 1920. Serial No. 417,665. 6 Claims. (Cl. 110—87.)



1. In a locomotive fire box provided with circulation tubes and an arch supported thereon, the combination with the side water legs of the fire box of a plurality of brick supporting members projecting into the fire box from said water legs and a plurality of bricks supported on said members independently of the circulation tubes, said bricks forming edge or side portions for the arch.

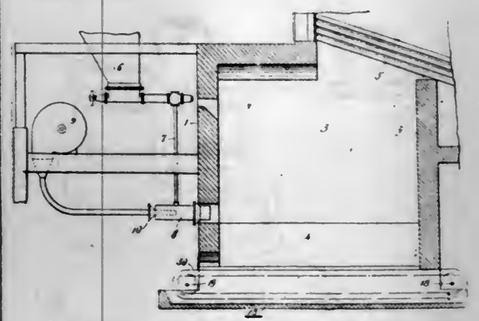
1,452,949. WORKHOLDER. IRVIN F. WOODROW, West Philadelphia, Pa., assignor, by mesne assignments, to Standard Steel and Bearings Incorporated, Wilmington, Del., a Corporation of Delaware. Filed Sept. 30, 1918. Serial No. 256,316. 1 Claim. (Cl. 279—8.)

A work holder comprising a body portion having a socket, an abutment member in said socket, means movably mounted on said abutment member to locate a piece

of work coaxial therewith, and a cap movable longitudinally of said body portion to clamp the work

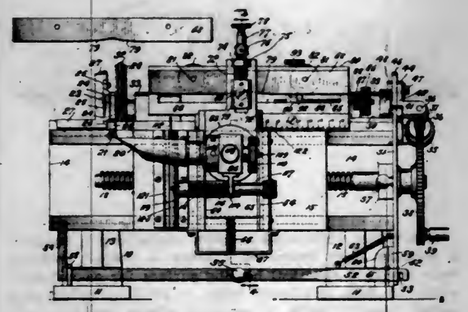
against said abutment member, a portion of said cap being cut out to provide an aperture through which the work may be inserted and removed.

1,452,950. ADJUSTABLE DROPLIGHT SUPPORT. GEORGE W. ANDERSON, St. Louis, Mo. Filed July 24, 1922. Serial No. 577,042. 2 Claims. (Cl. 248—1.)



1. An adjustable drop light support comprising securing clamps adapted to be secured to a support, a plate hingedly carried by said securing clamps, a tube pivotally mounted on said plate, a screw threaded sleeve located in said tube, a dog located in said tube adapted to contact with the plate, a screw threaded rod extending through said sleeve and adapted to contact with said dog, said rod and dog adapted to hold the tube against movement on the second mentioned plate, and a cord holding clamp detachably and adjustably located on said rod.

1,452,951. WRENCH. GEORGE R. BAKER, Joliet, Ill., assignor to William E. Pratt, Chicago, Ill. Filed Aug. 2, 1920. Serial No. 400,630. 1 Claim. (Cl. 81—134.)

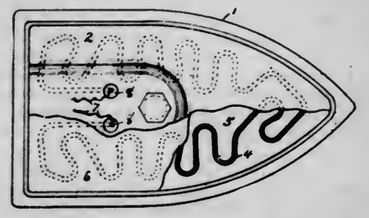


In a wrench of the class described, a body member having a jaw fixed thereon and a trough-shaped portion, a rack in the bottom of the trough-shaped portion of the body member, an adjustable member comprising a jaw, and a sleeve surrounding the trough-shaped portion of the body member and adjustable thereon, a pawl, trunnions on the pawl, means on the adjustable member receiving the trunnions and affording movement thereto longitudinally of the adjustable member, an eccentric journaled in the adjustable member and engaging the pawl to move the latter longitudinally of the adjustable member, a handle on the eccentric outside the adjustable member.

1,452,952. PULVERIZED-FUEL FURNACE. HENRY G. BARNHURST, Allentown, Pa., assignor to Fuller Engineering Company, a Corporation of Pennsylvania. Filed Feb. 17, 1919. Serial No. 277,411. 4 Claims. (Cl. 110—28.)

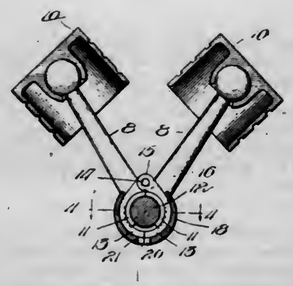
1. A furnace of burning pulverized fuel, comprising the combination of a relatively large combustion chamber, means for feeding a mixture of pulverized fuel and air into the combustion chamber, an endless conveyor mounted to travel through the bottom of the combustion chamber, shafts for supporting the conveyor, means for driving one of the shafts to cause travel of the conveyor to carry residues of combustion deposited thereon out of the combustion chamber, and means at the front and rear of the furnace contacting substantially closely with the conveyor and preventing a connection between the interior of the furnace and the atmosphere.

1,452,953. MACHINE FOR FACING MOUTHPIECES OF MUSICAL WIND INSTRUMENTS. EUGENE BERCIOUX, New York, N. Y. Filed July 11, 1921. Serial No. 483,727. 10 Claims. (Cl. 90—24.3.)



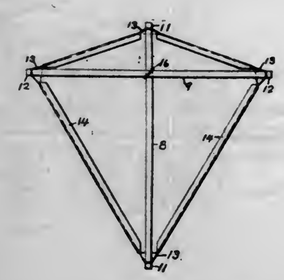
1. In a machine of the character desoribed, a main body-frame, a main vertically disposed carriage mounted on the front thereof and movable longitudinally along the same, a vertically movable plate carried by said carriage spring-pressed upwardly and carrying a pin to cooperate with a templet, a stationary templet against which said pin presses and slides, means carried by said plate for holding a mouth-piece to be faced and a reciprocatory cutter to move transversely across the face of said mouthpiece as the same is gradually fed thereto due to the movement of said carriage and said vertically movable plate, the presentation of the mouth-piece

to the cutter being under the control of said templet, and mechanism for holding and reciprocating said cutter.



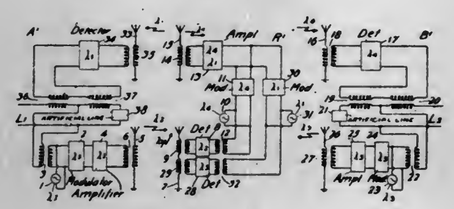
10. A machine as in claim 1 having a screw-shaft connected with said main carriage for moving the same forwardly and backwardly along said body frame and provided on one end with a gear-wheel carrying a crank-handle, a power shaft, means connecting said power shaft with said gear wheel for operating said gear wheel and screw-shaft by power and means for disconnecting said power shaft from said gear wheel when said screw shaft is to be operated manually, the means connecting the power shaft with said gear wheel being a power worm wheel on the end of said power shaft, a pivotally hung shaft having on one end a worm wheel in mesh with said power worm wheel and on its other end a worm to be placed into or out of mesh with said gear wheel according as said shaft is swung downwardly or upwardly, means for latching said pivotally hung shaft in its down position so that it may transmit power to said gear wheel and a spring for turning said shaft upwardly when freed by its latch, leaving said gear wheel for manual operation.

1,452,954. PACK FOR ELECTRICAL HEATING ELEMENTS. WILLIAM A. BRAUN, Dover, Ohio, assignor to Dover Manufacturing Company, a Corporation of Ohio. Filed Apr. 18, 1922. Serial No. 555,257. 2 Claims. (Cl. 219—25.)



2. In an electrically heated unit having a resistance member, a pack encasing the member and being composed of pulverulent refractory material, clay and boracic acid.

1,452,955. PISTON AND CRANK CONNECTION FOR ENGINES. WILLIAM H. CALLAN and THEODORE P. KIMMAN, Cleveland, Ohio, assignors to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 21, 1922. Serial No. 530,799. 16 Claims. (Cl. 74—17.)

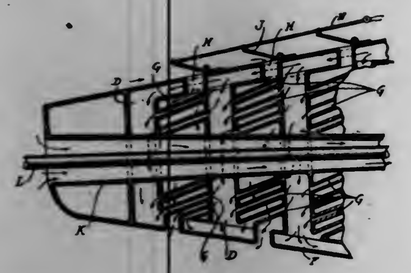


1. In a device of the class described, the combination of a pair of connecting rods cooperating with a single crank, bearing means on the ends of the rods, a device having relatively movable parts encircling said bearing means, and a resilient ring around said device.

1,452,956. KITE. ARTHUR W. CASH, Decatur, Ill., assignor to Harvey A. Sellers, Decatur, Ill. Filed Sept. 19, 1922. Serial No. 589,192. 2 Claims. (Cl. 244—22.)

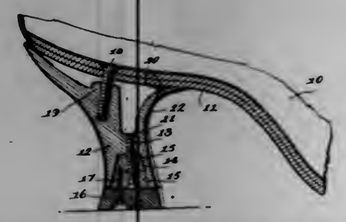
1. In a kite having vertical and crosswise frame members a resilient metallic loop clamping member substantially rectangular in form adapted to slidably and loosely encompass the two frame members when in parallel partially assembled form, and tightly clamp said members against free sidewise movement of either one when said crosswise member is in full extended predetermined position when full assembled.

1,452,957. HIGH-FREQUENCY SIGNALING. EDWIN H. COLPITTS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 23, 1916. Serial No. 116,447. 5 Claims. (Cl. 250—6.)



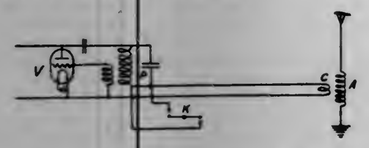
1. In combination, two widely separated stations each comprising a two-wire two-way telephone line, a balancing network simulating the impedance of said line connected to a terminal thereof, means including an antenna for transmitting high frequency waves modified in accordance with telephone currents received over said line, means, including a second antenna spaced from said first named antenna and differently tuned, for receiving different frequency waves modified in accordance with telephonic variations and for impressing corresponding telephonic currents on said line, said transmitting means and said receiving means being conjugately connected with respect to each other to said line and said network, and a two-way radio repeating apparatus located between said two widely separated stations for repeating energy transmitted from each of said stations to the other of said stations.

1,452,958. RADIATOR FOR AIRPLANE ENGINES. EDWARD T. CURRAN, Detroit, Mich. Filed Aug. 17, 1918. Serial No. 250,277. 8 Claims. (Cl. 257—125.)



1. In a radiator, an upper water space, a lower water space, the outer surfaces thereof being at an angle to each other so that if prolonged they would meet in a

frontal direction, water legs connecting the two water spaces, water tubes passing diagonally from one water space to the other and connecting with the water legs,

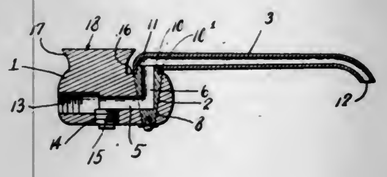


passageways in the water space through which air may pass transversely through the radiator and means for controlling the passage of air therethrough.

1,452,959. SHOE HEEL. GIUSEPPE DI DIO, New York, N. Y. Filed Jan. 9, 1922. Serial No. 527,899. 1 Claim. (Cl. 36—40.)

A shoe heel comprising a hollow body having an open upper end presenting the rear a relatively deep recess with its marginal edge inclining from the back to the breast of the heel body, said heel body having a post inclining forwardly from the rear wall of the body at substantially right angles to the plane of the upper edge of the body and at the center thereof, and a screw threaded axially in the post and adapted to engage through the sole of the shoe for binding the same evenly about the edge of the heel body, said post terminating below the plane of the upper edge of the heel body to permit the sole to extend downwardly into the recess in the top of the heel body and settle against the upper edge thereof at all sides, the breast portion of the heel body at its upper end having an opening therein adapted to receive an anchoring device subsequent to the clamping of the screw.

1,452,960. WIRELESS TRANSMITTER. WILLIAM THEODORE DITCHAM, Twickenham, England, assignor to Radio Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Dec. 18, 1920. Serial No. 431,583. 4 Claims. (Cl. 250—19.)

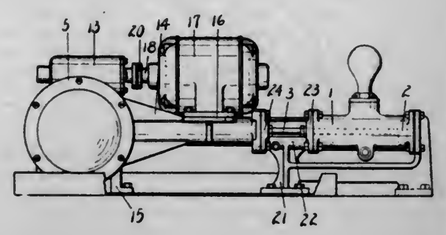


1. In radio transmitting apparatus, a vacuum tube oscillator, provided with inductance in its output circuit, an antenna having inductance in its circuit, said inductances being so constructed and arranged as to be substantially without effect on each other, an inductance connected in one of said circuits and located so as to be coupled to said other circuit, and means for short-circuiting said last named inductance.

1,452,961. GUTTIFORM SECTION. CLAUDIUS DORNIER, Friedrichshafen, near Berlin, Germany, assignor of one-half to Dornier-Metallbauten, Gesellschaft mit beschränkter Haftung, Friedrichshafen, Germany. Filed June 28, 1920. Serial No. 392,551. 4 Claims. (Cl. 244—31.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

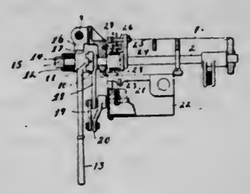
1. A stream lined structural member comprising in combination a hollow load carrying front portion with rearwardly projecting flanges and a non-load carrying fairing portion secured to said flanges.

1,452,962. VALVE. HARRY H. EMMONS, Alliance, Ohio. Filed Oct. 28, 1921. Serial No. 511,120. 1 Claim. (Cl. 251—95.)



In combination, a valve casing, a valve rotatable therein, a nozzle connected with and adapted to be used as a handle or lever in turning the valve, said nozzle adapted to open the valve when in extended or operative position and to close the valve when in a folded or out-of-the-way position and a raised shoulder or boss formed on the top of the valve casing, said boss provided with a flat upper face disposed in a plane above that of the upper edge of the nozzle and having apertured lugs disposed at opposite edges thereof.

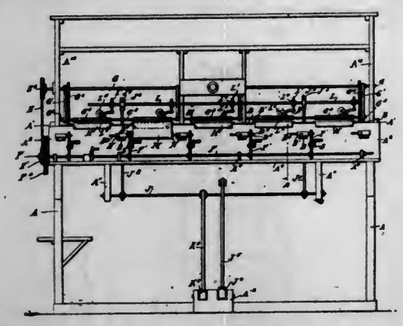
1,452,963. POWER PUMP. ROLAND J. FAIRCHILD, Kalamazoo, Mich., assignor to National Water Lift Co., Kalamazoo, Mich. Filed June 4, 1921. Serial No. 474,951. 4 Claims. (Cl. 103—57.)



1. In a power pump, the combination with a cylinder, piston, and a piston rod, of a gear box provided with a base and having a removable side plate and an inwardly projecting bearing on its wall opposite said side plate, there being a removable cap for the outer end of said

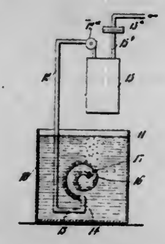
bearing, said gear box also having a worm housing extension at its top, and a connecting rod and crosshead extension at the front, a base for said cylinder provided with a yoke having a cylinder head at one end and a head for said crosshead extension at the other, said heads being provided with packings for said piston rod, a worm

gear mounted in said bearing in said gear box, a connecting rod, a crosshead to which said piston and connecting rods are connected sliding in said extension, a motor mounted on said crosshead and connecting rod extension, and a driving worm to which the motor shaft is connected mounted in said worm extension of said gear box to coact with said worm gear.



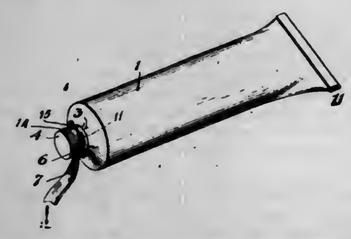
1,452,964. HOISTING MECHANISM. ARTHUR FALKENAU, New York, N. Y., assignor to Gillis & Geoghegan, New York, N. Y., a Firm. Filed Apr. 9, 1921. Serial No. 459,963. 5 Claims. (Cl. 192—142.)

1. In a mechanism of the character set forth, a screw-shaft, a nut arranged to travel thereon, an operating-shaft having a clutch member and connections to a switch, an operating-lever on said operating-shaft, having a clutch member adapted to engage said shaft clutch member to turn said operating-shaft, means actuated by said nut for disengaging said clutch members, and means for automatically returning said operating-shaft.



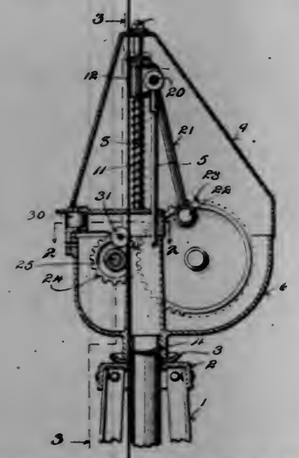
1,452,965. APPARATUS FOR WINDING MUSIC ROLLS. NUNEZ CLARENCE FERRIS, Brooklyn, N. Y., assignor to Elizabeth F. Boyle, Brooklyn, N. Y. Filed May 3, 1920, Serial No. 378,548. Renewed Sept. 22, 1922. Serial No. 589,917. 5 Claims. (Cl. 242—55.)

1. In an apparatus of the character set forth, a series of spool holders in axial alinement, each arranged to receive a spool, a shaft, means for driving the same, means for rotating simultaneously a plurality of spools and guiding sheets thereto, means for permitting of turning any of such spools in advance independently of



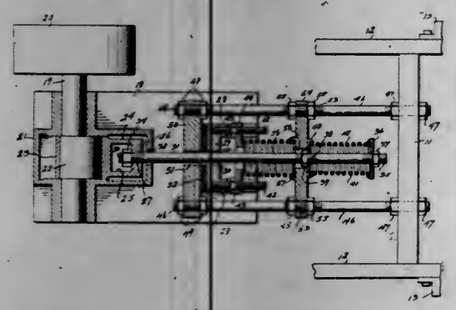
the others in initiating the winding operation, and suction means for freeing the sheets from dust during their passage through the apparatus.

1,452,966. AGITATOR. CROSBY FIELD, Yonkers, N. Y., assignor to Chemical Machinery Corporation, New York, N. Y. Filed July 30, 1918, Serial No. 247,366. Renewed June 28, 1921. Serial No. 481,169. 6 Claims. (Cl. 259—99.)



1. Agitating means consisting of a flexible tubular member, spring means carried by said tubular member, adapted to normally coil said tubular member, means for admitting pressure to said tubular member, said tubular member adapted to be moved proportionately as pressure is increased or diminished therein.

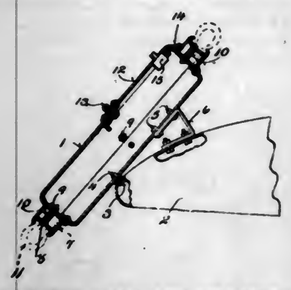
1,452,967. CLOSURE FOR TUBES. LOUIS A. FREEDMAN, New York, N. Y. Filed Feb. 23, 1921. Serial No. 447,302. 7 Claims. (Cl. 221—60.)



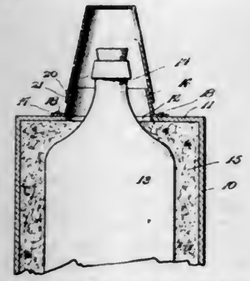
1. A device of the class described comprising a tube having a threaded end, a closure cap received on said threaded end, said cap having an opening, means on said cap for restricting movement of the cap on the threaded end, said means being removable to permit removal of the cap from the tube.

1,452,968. PUMP-OPERATING MECHANISM. MICHAEL N. FREEMAN, Racine, Wis., assignor to Freeman Manufacturing Co., Racine, Wis., a Corporation of Wisconsin. Filed Aug. 18, 1922. Serial No. 582,602. 2 Claims. (Cl. 74—14.)

1. In pump operating mechanism, parallel guide rods, a cross head slidable thereon, and springs on said guide rods and engaging said cross head for feeding lubricant to said cross head.



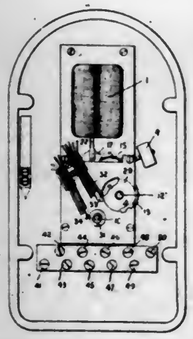
1,452,969. CONCENTRATING TABLE. CHARLES C. HEBBARD, Joplin, Mo., assignor of one-third to Edward H. Shackelford and one-third to Otto Ruhl, both of Joplin, Mo. Filed May 18, 1921. Serial No. 470,714. 23 Claims. (Cl. 74—14.)



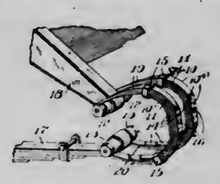
21. In a concentrator, the combination with a deck frame mounted for longitudinal reciprocation, of means urging the deck frame in one direction and power operated means operatively connected to the frame for intermittently retracting it against the urging means, and adjustable means permitting the retracting means to move rearward a predetermined distance before exerting any retraction on the frame.

1,452,970. LUGGAGE CARRIER AND TIRE RACK. CHARLES J. HEPTING, Milwaukee, Wis. Filed July 18, 1921. Serial No. 485,624. 1 Claim. (Cl. 224—29.)

In combination, a tire rack and luggage carrier comprising a closed receptacle, a wheel rim encircling the same, a hinged door for providing access to the interior of the receptacle, headed bolts extending through the rim and into the receptacle with the heads located exteriorly of the rim, nuts upon the inner end of said bolts and located within said receptacle, attaching means for securing the receptacle to the vehicle, and a lock for locking the hinged door, said headed nuts being removable radially outwardly and being adapted to be covered by a tire when carried upon said rim.

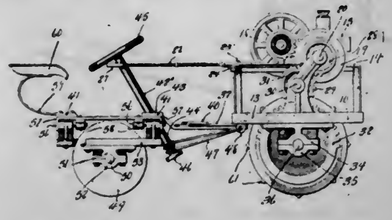


1,452,971. CARBOY. FRANK E. HODES, Denver, Colo. Filed Aug. 15, 1922. Serial No. 582,005. 1 Claim. (Cl. 215—12.)



In a carboy, the combination of a casing having a top wall provided with an opening, a container within the casing having a neck projecting through said opening, a base ring mounted upon said wall to surround said opening and provided with a stud, and a removable cap slipped over the base ring and provided with a slot accommodating said stud locking the cap in position.

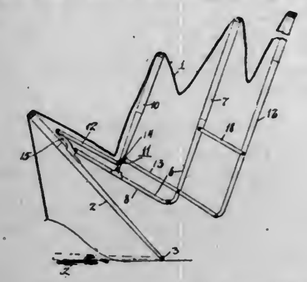
1,452,972. SIGNAL SYSTEM AND TRANSMITTER THEREFOR. RICHARD M. HOPKINS, Rutherford, N. J., assignor to American District Telegraph Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 12, 1918. Serial No. 249,460. 2 Claims. (Cl. 177—364.)



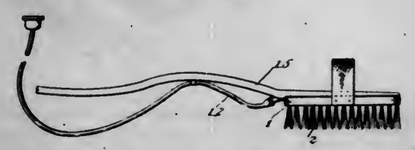
1. A transmitter such as described comprising in combination an electric generator, a controlling magnet, retard mechanism operated thereby, transmitting means comprising normally energized driving means therefor, restraining means for said transmitting means, a controlling cam for said restraining means arranged to be driven by said transmitting means but normally stationary, and releasing means for said restraining means, arranged to be operated by said retard mechanism upon deenergization of said magnet, said cam arranged to cause arrest of operation of said transmitting means in the event of reenergization of said magnet, connections for an external circuit and contact means operated concurrently with said transmitting means and arranged to reenergize said magnet during the operation of said transmitting means, in the event of breakage of said external circuit, and means for transposing the connections of said external circuit with the poles of said generator to thereby permit said magnet to be reenergized in the event of the grounding of said external circuit.

1,452,973. SHOCK-ABSORBER SPRING. THOMAS B. JENKINS, Richmond, Ind., assignor to Jenkins Vulcan Spring Company, Richmond, Ind., a Corporation of Indiana. Filed Aug. 3, 1922. Serial No. 579,344. 7 Claims. (Cl. 267—46.)

1. The combination with the body springs of a vehicle, of a pair of supplemental C-springs connected at their ends to the ends of the respective body springs of the vehicle, and having a portion of the back thereof flattened.



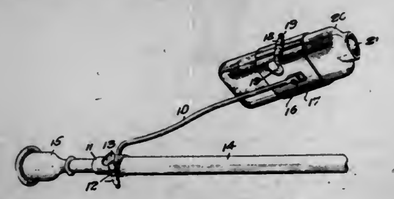
1,452,974. MOTOR-DRIVEN LAND ROLLER. WILLIAM KIPPENHAN, Allenton, Wis. Filed Mar. 28, 1922. Serial No. 547,390. 1 Claim. (Cl. 180—20.)



In a motor driven land roller, the combination of a front roller, a frame therefor, a rear frame pivoted to said front frame, a pair of rollers, a pair of trunnions on each of said rear rollers, a frame for each of said rear rollers secured to and permitting rotation of said trunnions, and means securing each of said last mentioned frames for pivotal movements in a transverse plane with respect to said rear frame.

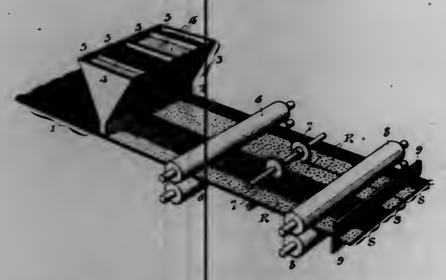
1,452,975. TOP FOR VEHICLES AND THE LIKE. FRED K. LEWIS, Ashtabula, Ohio. Filed Jan. 11, 1919. Serial No. 270,709. 7 Claims. (Cl. 296—116.)

1. In a top for vehicles and the like, the combination of a main bow; a two-part articulated outrigger bow having its rear portion pivotally attached to said main bow; a lever pivotally attached to the forward portion of said outrigger bow and intersecting the same in the open position of the top; a second outrigger bow pivotally attached to the forward end of said lever, the rear end of the latter having a flexible linked connection with said main bow; and a supplemental bow pivotally attached to the rear portion of said first-named out-rigger bow and operatively connected with said lever through said linked connections.



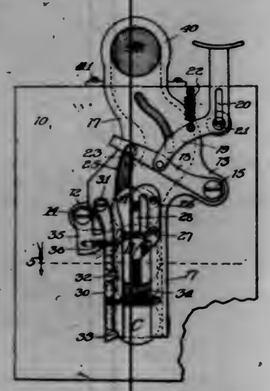
1,452,976. FOUNTAIN BATH BRUSH. EDWARD N. LICHTENSTEIN, Baltimore, Md. Filed Oct. 27, 1921 Serial No. 510,736. 3 Claims. (Cl. 15—128.)

1. In a device of the kind described comprising in combination, a brush back provided on its upper side with a converging wedge-shaped channel extending longitudinally from one edge thereof, the side walls of said channel being undercut, said brush back being further provided with an orifice opening from the lower face of said back into said channel, and a groove formed in the bottom wall of said channel and extending from one edge of the brush back and communicating with the orifice, a supply tube adapted to rest in said longitudinal groove, a rubber tube connected to said supply tube, a handle provided with a longitudinal groove, said handle being so constructed as to slide longitudinally within said converging wedge-shaped channel member to hold the brush and parts rigidly in position.



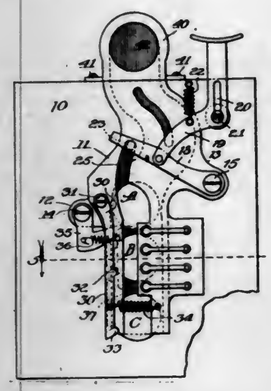
1,452,977. TORCH HOLDER FOR MUSICAL INSTRUMENTS. ERNEST B. MEDEIROS and ANTONE B. MEDEIROS, New Bedford, Mass. Filed May 14, 1921. Serial No. 469,571. 1 Claim. (Cl. 240—52.)

A torch holder for musical instruments comprising an elongated one-piece adjustable shank capable of being adjusted at any point throughout its length, a coupling element carried at the inner end of the shank and provided with means for connecting it to instruments of varying sizes, said element being resilient, a light imparting device holder member secured to the other end of



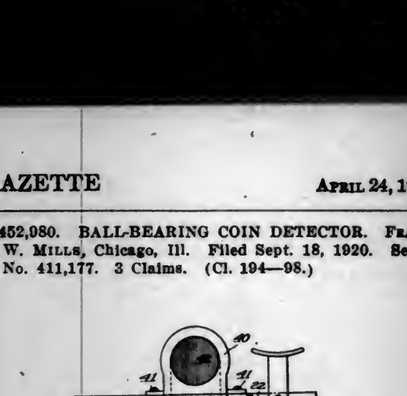
the shank and provided with means for connecting it to light imparting devices of varying sizes, said coupling element being circular in contour and said holder being substantially oval-shaped in contour and of materially greater width than said coupling element, said coupling element and holder member disposed at right angles with respect to the shank and said element extending in an opposite direction with respect to the direction of the holder member.

1,452,978. METHOD OF MAKING PARTI-COLORED BITUMINOUS ROOFING SHINGLES. JOHN STROTHER MILLER, Jr., Rahway, N. J., assignor to The Barber Asphalt Company, Philadelphia, Pa., a Corporation of West Virginia. Filed Feb. 11, 1921. Serial No. 444,117. 3 Claims. (Cl. 91—68.)



1. The method of producing shingles which consists in applying to one surface of a web of bituminous roofing material coloring matter to form a stripe, severing the web along the stripe in the direction thereof to form ribbons leaving a portion of the stripe on each ribbon, and cutting the ribbons transversely to form shingles.

1,452,979. COIN DETECTOR. FRANK W. MILLS, Chicago, Ill. Filed Sept. 15, 1920. Serial No. 410,512. 2 Claims. (Cl. 194—98.)

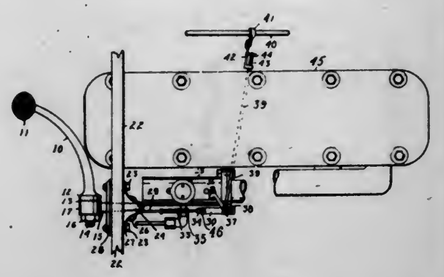


1. In a coin-operated machine, a guide having a slot thru which the coins are caused to pass, said slot having a smooth plane side, detents for stopping coins at definite points in said slot, and a plurality of spring-pressed fingers having free ends overlying said slot, one of said fingers having an elongated bearing surface running lengthwise of the slot, said fingers being adapted to engage the coin in front of the second detent and the coin immediately preceding to press them against the back of the slot.

1,452,980. BALL-BEARING COIN DETECTOR. FRANK W. MILLS, Chicago, Ill. Filed Sept. 18, 1920. Serial No. 411,177. 3 Claims. (Cl. 194—98.)

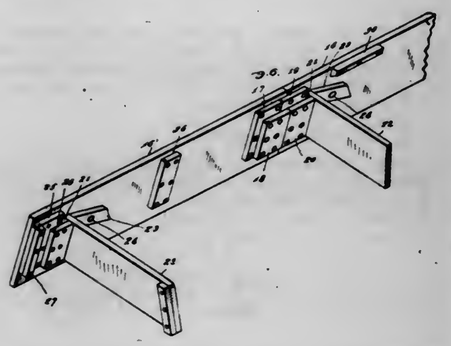
2. In a coin-operated machine, a slot thru which the coins are caused to pass, said slot having a smooth plane side, and spring pressed balls overlying said slot for pressing adjacent coins against the back of the slot whereby they will be brought edge to edge.

1,452,981. FASTENING DEVICE. HERMAN MUEHLE, Cleveland, Ohio. Filed Sept. 11, 1922. Serial No. 587,547. 7 Claims. (Cl. 24—132.)



1. A device of the character described comprising the combination of a support, a clamping member pivotally mounted on said support and adapted gravitationally to assume an inutile position, and an actuating lever connected with said support for moving said member to its clamping position.

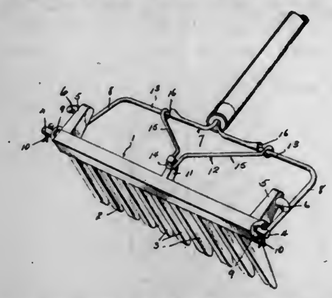
1,452,982. ACCELERATOR FOR MOTOR-CAR ENGINES. WILLIAM A. NORDSTROM, Jamestown, N. Y. Filed Oct. 28, 1921. Serial No. 511,203. 6 Claims. (Cl. 74—39.)



1. In combination with an operating arm of a throttle valve, an actuating lever, an elongated throttle plate having one end secured to the free outer end of the arm

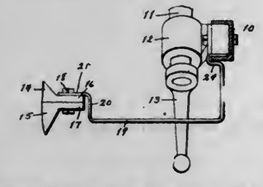
and formed with a pair of lateral, depending ears for freely straddling said outer end of the arm to prevent

relative pivotal movement between said arm and plate, and means connecting the opposite end of the plate to the lever.



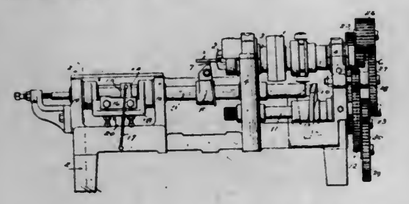
1,452,983. FORM FOR CONCRETE. HERMAN RATH, Indianapolis, Ind., assignor of one-half to Emil Rath, Indianapolis, Ind. Filed Dec. 16, 1921. Serial No. 522,783. 5 Claims. (Cl. 25—131.5.)

2. A collapsible floor form comprising a bottom board, side boards detachably associated therewith and having laterally extending sockets, cross braces having laterally extending projections removably engaging in said sockets, means for holding said cross braces and side boards in interlocked position and a bridge plate supported upon the upper edges of the side boards of two adjacent forms and withdrawable interlocking connections between the bridge plate and side boards.



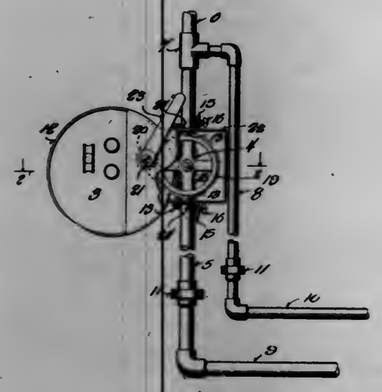
1,452,984. SELF-CLEANING RAKE. JESSE D. RICHARDS, La Fontaine, Ind., assignor of one-third to Jesse D. Gillenwater, Wabash, Ind., and one-third to Charley Gable, Peru, Ind. Filed July 30, 1921, Serial No. 488,594. Renewed Sept. 25, 1922. Serial No. 590,539. 2 Claims. (Cl. 306—11.)

1. A rake of the character described comprising a U-shaped frame provided with a handle, a rake head pivoted between the arms of said frame and provided with teeth, rearwardly extending arms at the end portions of the rake head provided with lateral lugs engaging against the arms of the frame for limiting swinging movement of the rake head in one direction, and means carried by the frame and cooperating with the head for locking the head against movement in the other direction, said means comprising a rearwardly extending upturned hook



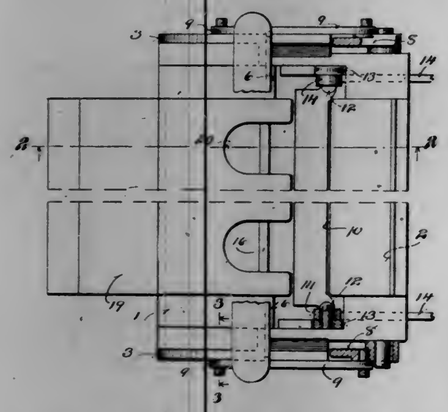
carried by the head, and a retaining yoke pivoted upon the bight portion of the frame and formed with a loop engaging over said hook.

1,452,985. STEERING-GEAR STOP DEVICE. JOHN ROWE, Casey, Iowa. Filed May 25, 1920. Serial No. 384,195. 2 Claims. (Cl. 280—89.)



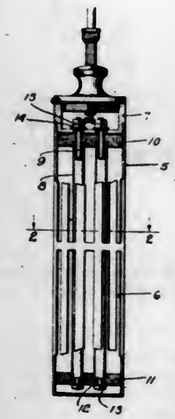
1. In a device of the class described, the combination with the frame and steering-gear arm of an automobile, of a plate arranged in horizontal position and attached to said frame, said plate being formed with a slot adapted to receive and limit movement of said steering-gear arm, said plate being formed with a notch opening from one of its margins to said slot.

1,452,986. OPERATING MECHANISM FOR WOOD-SCREW MACHINES. HENRY L. SMITH, Waterbury, Conn., assignor to The E. J. Manville Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed Jan. 3, 1922. Serial No. 526,494. 7 Claims. (Cl. 10—101.)



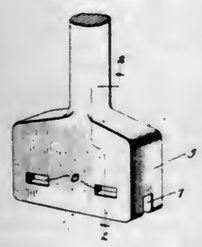
1. An operating mechanism for a wood screw machine comprising a spindle, means for rotating the spindle, a shaft, means for feeding the shaft longitudinally, means for oscillating the shaft on its axis, and intermeshing gears between the spindle and the shaft reciprocating and oscillating means, said gears having such ratio that the spindle turns one-half of a revolution more than a full number of revolutions with relation to the reciprocations and oscillations of the shaft, whereby a tool carried by the shaft will start cutting a blank carried by the spindle alternately on diametrically opposite sides.

1,452,987. AUTOMATIC GAS LIGHTER. RAY STANTON STARKS, Berlin, Wis., assignor of one-half to Henry Oliver Hamre, Berlin, Wis. Filed June 17, 1922. Serial No. 568,931. 2 Claims. (Cl. 161—9.)



1. A device of the class described comprising a gas supply pipe, a valve for said pipe, a clock mechanism secured to said pipe adjacent the valve, gears for operably connecting the alarm pintle of the clock mechanism to the valve, a lever secured to the alarm pintle, and a pair of stops for limiting movement of said lever in both directions.

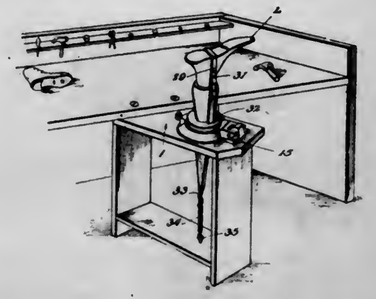
1,452,988. MACHINE FOR PRESSING AND LABELING INTERFOLDED SHEETS OF PAPER. LOUIS A. STRAUBEL, Green Bay, Wis. Filed Nov. 8, 1921. Serial No. 513,631. 9 Claims. (Cl. 216—9.)



1. A machine of the character described comprising a table adapted to receive a label and a bundle of interfolded paper, said table being provided with an elongated opening in its top, a stop on the table, a presser operating in conjunction with the stop to compress the bundle and an oscillatory folder positioned in the said opening for folding the label on the bundle, said folder being normally flush with the top of the table whereby the label is supported.

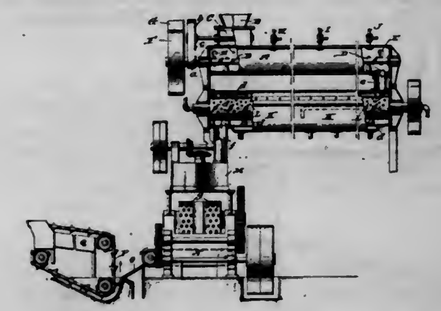
1,452,989. HEATING ELEMENT. NORBERT F. STRAUSS, Milwaukee, Wis., assignor to Milwaukee Manufacturing Co., Milwaukee, Wis. Filed Apr. 26, 1921. Serial No. 464,657. 5 Claims. (Cl. 219—40.)

1. A heating element for liquids comprising a housing having openings therein, electrodes supported at one end of the housing and each having a metal core and a carbon covering therefor, and means for connecting said electrodes to an electric circuit.



1,452,990. TAMPING TOOL. KNOX TAYLOR, High Bridge, N. J., assignor to Taylor-Wharton Iron and Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed Aug. 3, 1921. Serial No. 489,653. 2 Claims. (Cl. 94—48.)

2. A tamping tool whereof the head is constructed of manganese steel with a deep slot ranging lengthwise thereof defining wings which spread in service and impart a flare to the slot.

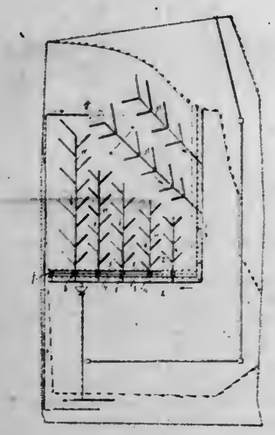


1,452,991. LAST SUPPORT. JULIUS C. TORCHIA, Hazleton, Pa. Filed Dec. 14, 1921. Serial No. 522,348. 3 Claims. (Cl. 12—123.)

1. The combination with a support having an opening therein, of a shoemaker's last support comprising an attaching member rotatably mounted upon said support for adjustment, means for holding the same at adjustment, a base pivotally connected with the attaching member and having a boss to seat within said opening within the support when the base is in the lowered

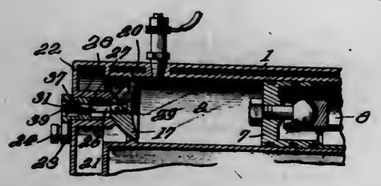
position, the base being movable upon its pivot to assume a tilted supporting position, and a last supporting member rotatably adjustably mounted upon the base.

1,452,992. BRIQUETTE AND PROCESS OF MAKING SAME. GERARD ANTHONY SCHADE VAN WESTRUM, Philadelphia, Pa. Filed Nov. 15, 1915, Serial No. 61,631. Renewed Aug. 4, 1922. Serial No. 579,770. 12 Claims. (Cl. 44—23.)



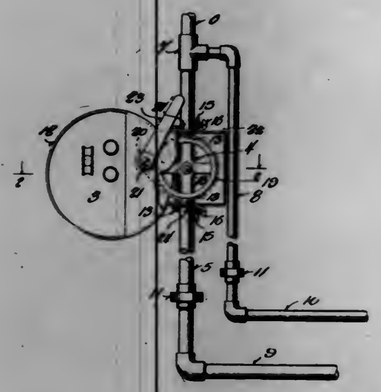
6. A process of producing briquettes, which comprises as a step in the operation, a complete and individual coating of the finely divided particles of combustible material with an asphaltic emulsion.

1,452,993. CLEAT FOR ELECTRIC CONDUITS. CHARLES H. WACK, Baltimore, Md. Filed July 13, 1921. Serial No. 484,306. 4 Claims. (Cl. 248—31.)



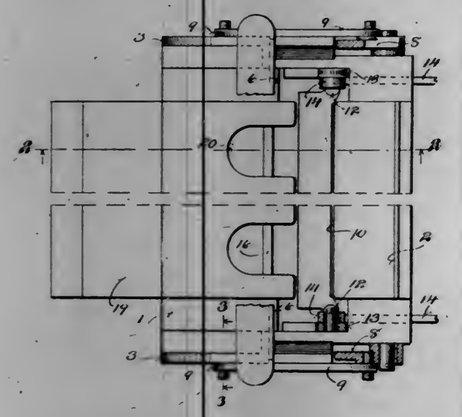
1. A cleat for supporting conduits comprising a base piece having flanges at its opposite edges projecting at the same side of the base-piece, each flange comprising a part bent outwardly to form a hook and a part bent inwardly over the base to form a support for the conduit, and a U-shaped strap having inwardly bent hooked portions at its ends adapted to engage the hooked portions on the base.

1,452,994. DEPOSITING METHOD FOR THE MASSES OF SAND AND GRAVEL OBTAINED IN BROWN-COAL OPEN WORKINGS. WILHELM WEBER, Wiesbaden, Germany, assignor to the Firm Gewerkschaft Hausbach II, Wiesbaden, Germany. Filed Jan. 22, 1921. Serial No. 439,274. 1 Claim. (Cl. 262—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



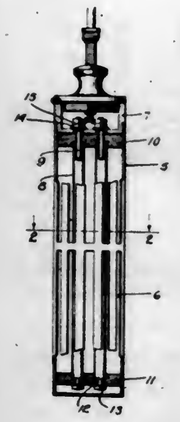
An improved method for depositing the masses of sand and gravel obtained in brown-coal open workings consisting in conducting the mixture of sand, gravel and water coming from the open working first between two boardings standing at a determined distance the one from the other and extending between the open workings and the dumping site so that a high dam of sand and gravel is erected between the boardings, whereupon the mixture of sand, gravel and water is conducted to a point of the field which is situated at a large distance from the dam so that the water has separated from the solid admixtures long before the deposited material reaches the dam and in draining the dumping site of the water by means of ditches arranged at the lowest parts of the flushing field.

1,452,995. VALVE-OPERATING CONNECTION. MELVIN A. YEAKLEY, Canton, Ohio. Original application filed May 17, 1915, Serial No. 28,669. Divided and this application filed Dec. 30, 1919. Serial No. 348,455. 5 Claims. (Cl. 123—190.)



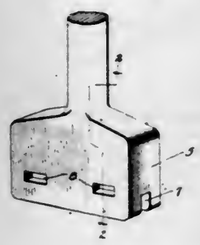
1. The combination with an engine cylinder having a frusto-conical valve seat at its head, an oscillating frusto-conical valve on said seat, an oscillating operating member, and a valve stem having an oscillatory connection between the apex of the valve and the operating member, whereby the valve cannot be unseated by the oscillation of the valve stem.

1,452,987. AUTOMATIC GAS LIGHTER. RAY STANTON STARKS, Berlin, Wis., assignor of one-half to Henry Oliver Hamre, Berlin, Wis. Filed June 17, 1922. Serial No. 568,931. 2 Claims. (Cl. 161—9.)



1. A device of the class described comprising a gas supply pipe, a valve for said pipe, a clock mechanism secured to said pipe adjacent the valve, gears for operably connecting the alarm pintle of the clock mechanism to the valve, a lever secured to the alarm pintle, and a pair of stops for limiting movement of said lever in both directions.

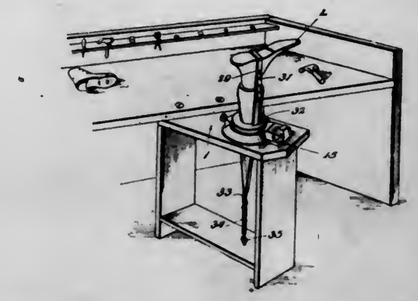
1,452,988. MACHINE FOR PRESSING AND LABELING INTERFOLDED SHEETS OF PAPER. LOUIS A. STRAUBEL, Green Bay, Wis. Filed Nov. 8, 1921. Serial No. 513,631. 9 Claims. (Cl. 216—9.)



1. A machine of the character described comprising a table adapted to receive a label and a bundle of interfolded paper, said table being provided with an elongated opening in its top, a stop on the table, a presser operating in conjunction with the stop to compress the bundle and an oscillatory folder positioned in the said opening for folding the label on the bundle, said folder being normally flush with the top of the table whereby the label is supported.

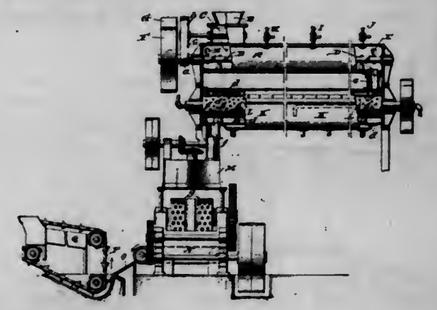
1,452,989. HEATING ELEMENT. NORBERT F. STRAUSS, Milwaukee, Wis., assignor to Milwaukee Manufacturing Co., Milwaukee, Wis. Filed Apr. 26, 1921. Serial No. 464,657. 5 Claims. (Cl. 219—40.)

1. A heating element for liquids comprising a housing having openings therein, electrodes supported at one end of the housing and each having a metal core and a carbon covering therefor, and means for connecting said electrodes to an electric circuit.



1,452,990. TAMPING TOOL. KNOX TAYLOR, High Bridge, N. J., assignor to Taylor-Wharton Iron and Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed Aug. 3, 1921. Serial No. 489,653. 2 Claims. (Cl. 94—48.)

2. A tamping tool whereof the head is constructed of manganese steel with a deep slot ranging lengthwise thereof defining wings which spread in service and impart a flare to the slot.

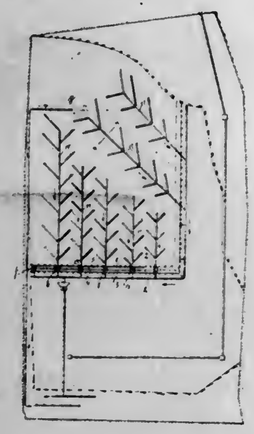


1,452,991. LAST SUPPORT. JULIUS C. TORCHIA, Hazleton, Pa. Filed Dec. 14, 1921. Serial No. 522,348. 3 Claims. (Cl. 12—123.)

1. The combination with a support having an opening therein, of a shoemaker's last support comprising an attaching member rotatably mounted upon said support for adjustment, means for holding the same at adjustment, a base pivotally connected with the attaching member and having a boss to seat within said opening within the support when the base is in the lowered

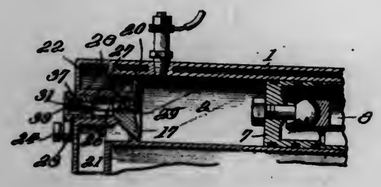
position, the base being movable upon its pivot to assume a tilted supporting position, and a last supporting member rotatably adjustably mounted upon the base.

1,452,992. BRIQUETTE AND PROCESS OF MAKING SAME. GERARD ANTHONY SCHADE VAN WESTRUM, Philadelphia, Pa. Filed Nov. 15, 1915, Serial No. 61,631. Renewed Aug. 4, 1922. Serial No. 579,770. 12 Claims. (Cl. 44—23.)



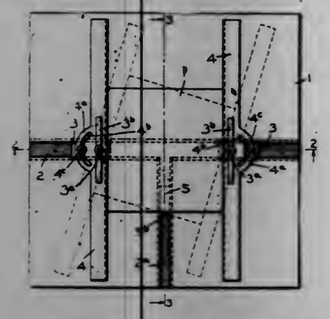
6. A process of producing briquettes, which comprises as a step in the operation, a complete and individual coating of the finely divided particles of combustible material with an asphaltic emulsion.

1,452,993. CLEAT FOR ELECTRIC CONDUITS. CHARLES H. WACK, Baltimore, Md. Filed July 13, 1921. Serial No. 484,306. 4 Claims. (Cl. 248—31.)



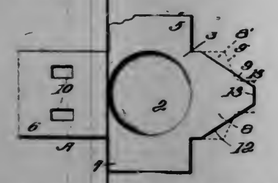
1. A cleat for supporting conduits comprising a base piece having flanges at its opposite edges projecting at the same side of the base-piece, each flange comprising a part bent outwardly to form a hook and a part bent inwardly over the base to form a support for the conduit, and a U-shaped strap having inwardly bent hooked portions at its ends adapted to engage the hooked portions on the base.

1,452,994. DEPOSITING METHOD FOR THE MASSES OF SAND AND GRAVEL OBTAINED IN BROWN-COAL OPEN WORKINGS. WILHELM WEBER, Wiesbaden, Germany, assignor to the Firm Gewerkschaft Hausbach II, Wiesbaden, Germany. Filed Jan. 22, 1921. Serial No. 439,274. 1 Claim. (Cl. 262—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



An improved method for depositing the masses of sand and gravel obtained in brown-coal open workings consisting in conducting the mixture of sand, gravel and water coming from the open working first between two boardings standing at a determined distance the one from the other and extending between the open workings and the dumping site so that a high dam of sand and gravel is erected between the boardings, whereupon the mixture of sand, gravel and water is conducted to a point of the field which is situated at a large distance from the dam so that the water has separated from the solid admixtures long before the deposited material reaches the dam and in draining the dumping site of the water by means of ditches arranged at the lowest parts of the flushing field.

1,452,995. VALVE-OPERATING CONNECTION. MELVIN A. YEAKLEY, Canton, Ohio. Original application filed May 17, 1915, Serial No. 28,669. Divided and this application filed Dec. 30, 1919. Serial No. 348,455. 5 Claims. (Cl. 123—190.)

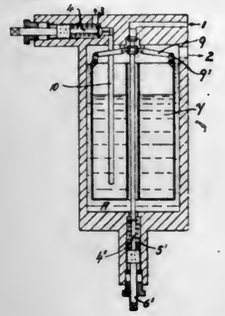


1. The combination with an engine cylinder having a frusto-conical valve seat at its head, an oscillating frusto-conical valve on said seat, an oscillating operating member, and a valve stem having an oscillatory connection between the apex of the valve and the operating member, whereby the valve cannot be unseated by the oscillation of the valve stem.

1,452,996. HOLDER FOR PHOTOGRAPHIC PAPER. NORMAN G. BAKER, Muscatine, Iowa. Filed June 11, 1921. Serial No. 476,805. 15 Claims. (Cl. 88—24.)

1. An adjustable holder for the purposes described comprising a board, a pair of parallel guide strips adjustable on the board to or from each other and adjustable at any desired angle relative to the vertical axis of the board adapted to support and position a sheet of paper between them, substantially as described.

1,452,997. RAILWAY SIGNAL TORPEDO. HARVEY O. BEMISDERFER, Hammond, Ind., assignor to Central Railway Signal Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Nov. 14, 1921. Serial No. 514,988. 8 Claims. (Cl. 246—487.)



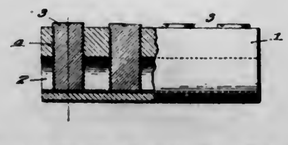
1. A railway signal torpedo comprising, an explosive, a casing for the explosive comprising several folds of material, a rail engaging member carried by the torpedo, and the final outer fold of the container locked beneath the rail engaging member.

1,452,998. ELBOW CUFF. SALLIE DAVIS BOWERS, Kansas City, Mo. Filed Aug. 3, 1921. Serial No. 489,418. 3 Claims. (Cl. 128—133.)

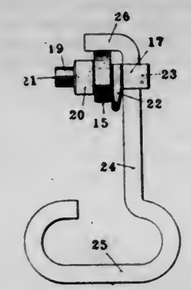
1. An elbow cuff comprising a flexible sheet adapted to be formed into a tube arranged to embrace the arm above and around the elbow, the upper portion of the sheet having overlapping portions and having means for fastening together said overlapping portions, elastic means provided along the upper edge of the sheet, longitudinal stiffening means attached to that portion of the sheet which embraces the elbow, and means for fastening together overlapping portions of that portion of the sheet which embraces the elbow, substantially as set forth.

1,452,999. RECEIVER OF REFRIGERATING APPARATUS. HENRY BRIER, Dartford, England. Filed Mar. 9, 1920. Serial No. 364,479. 4 Claims. (Cl. 137—68.)

1. In combination, a liquid-containing receiver for use with refrigerating apparatus, said receiver having at its upper part a gas inlet port and a gas outlet port, a spring loaded valve controlling said inlet port, said receiver having also a liquefied gas outlet port, a spring loaded valve controlling said outlet port, a float sustained by the liquid within said receiver, and operative connections between one of said spring loaded valves and said float whereby the load on the valve with which said float is connected is varied in dependence on the quantity of liquid within said receiver.



1,453,000. COLLAPSIBLE COAT HANGER. CARL F. BRINKMAN, Milwaukee, Wis. Filed May 8, 1922. Serial No. 559,200. 1 Claim. (Cl. 211—13.)

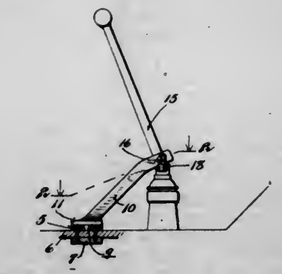


A foldable coat-hanger, comprising sheet metal bow-strips having longitudinal slots therein, the inner ends of the bow-strips being off-set and apertured, a pivot bolt engaging the apertures, tits extending from one of the off-set inner ends of the bow-strips for engagement with corresponding indentures in the outer off-set end of said bow-strips, said tits and depressions being diametrically arranged with respect to said pivot bolt, whereby said bow-strips are frictionally held in either extended or folded position, a hanger hook extending from the pivot bolt, T-shaped anchor lugs depending from the outer ends of the aforesaid bow-strips and alined with the slots therein, longitudinally adjustable shoulder-strips having slots therein for sliding engagement with the T-shaped lugs of the bow-strips, and T-shaped lugs projecting from the inner end of the shoulder-strips for engagement with the bow-strip slots, whereby the shoulder-strips are folded inwardly upon the bow-strips and the bow-strips are folded upon themselves about their pivot connection.

1,453,001. CABLE CONNECTOR. WILLIAM E. CAMP, Canton, Ohio. Filed May 1, 1920. Serial No. 378,240. 4 Claims. (Cl. 287—76.)

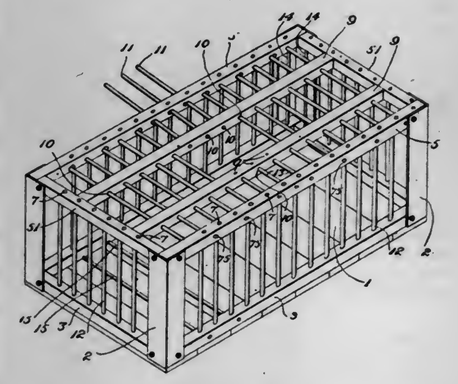
1. A cable connector comprising a block member having a main opening extending therethrough and a plurality of screw threaded openings at right angles to said main opening, and a screw threaded clamping member in each of said screw threaded openings having a diameter at least as great as the diameter of said main opening and extending completely to the side wall of said main opening opposite said right angle openings.

1,453,002. COUPLING-RELEASE RIGGING. STERLING H. CAMPBELL, St. Louis, Mo. Filed Aug. 12, 1922. Serial No. 581,400. 11 Claims. (Cl. 213—170.)



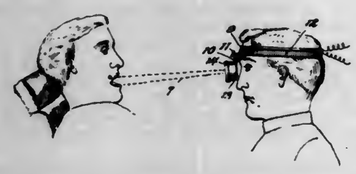
3. The combination with a coupler lock pin, of a pin lifting arm, a member attached to said arm and provided with a vertical eye, and a link connected to the lock pin and passing through the eye of said member, said link having an angular extension at its upper end to engage with the upper surface of the arm.

1,453,003. AUTOMOBILE POLISH. GEORGE A. COLETTE, Blanchard, Wash. Filed Sept. 21, 1922. Serial No. 589,705. 2 Claims. (Cl. 134—24.)



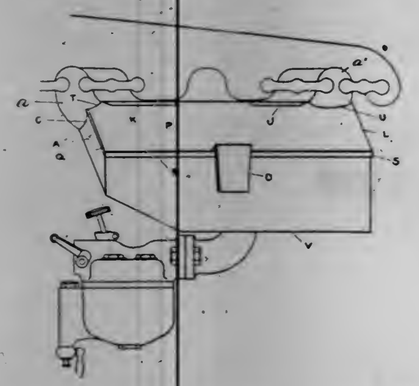
2. A composition of two parts of cider vinegar, one part of olive oil, and one part of corn oil.

1,453,004. GEAR-SHIFT LOCK. NICHOLAS COLLION, Milwaukee, Wis. Filed June 2, 1921. Serial No. 474,357. 4 Claims. (Cl. 70—128.)



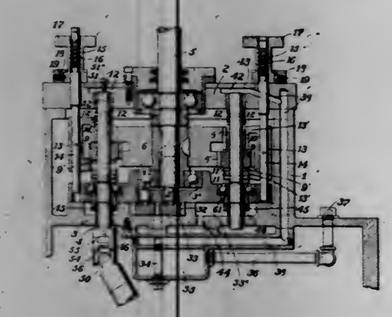
1. An attachment for motor vehicles comprising a block provided with means for securing it to the floor of the vehicle, said block having a slot therein, and an interior cavity in communication with said slot, an arm having a head adapted to removably seat on said block so as to conceal the securing means, said head having a key thereon insertible in said slot and securing said head against removal when turned angularly to said slot, and means operable when the head is keyed to the block for locking the other end of said arm to the gear shift lever to prevent the latter from being shifted.

1,453,005. CRATE. DANIEL T. CONSIDINE, Watertown, Mass. Filed May 15, 1922. Serial No. 560,865. 5 Claims. (Cl. 217—36.)



1. A crate or crate-like container comprising oppositely located frame-bars in pairs, and openwork composed of rods or staves, one frame-bar of each pair having a series of sockets for the corresponding ends of the rods or staves, and the other frame-bar of the pair having a second series of sockets, alined with those of the first bar, for the other ends, and also having through-holes disalined with but intersecting such sockets, whereby the rods or staves may be inserted by way of the said through-holes into the two series of sockets and by reason of the engagement of one set of their ends in the sockets of the first series their other ends will spring into the second series of sockets, out of register with the through-holes, and the rods or staves will be held from accidental endwise displacement.

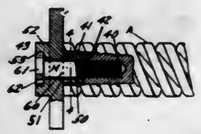
1,453,006. LIGHTING MEANS FOR SURGICAL AND OTHER PURPOSES. EMORY C. DAY, Laguna Beach, Calif. Filed May 26, 1921. Serial No. 472,789. 9 Claims. (Cl. 128—22.)



1. A lighting means for surgical and other purposes, comprising a body member with a centralized peep hole therethrough, a circular group of illuminating elements in the body member about the peep hole, and a circular group of reflector means also within the body member, with each reflector between the circular group of illuminating elements and the peep hole.

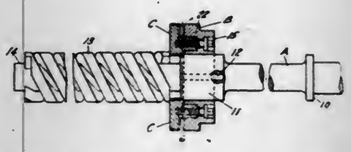
1,453,007. MANIFOLD HEATER. LORIN FLEGAL, Mount Williams, Va. Filed May 14, 1921. Serial No. 469,695. 3 Claims. (Cl. 123—180.)

1. A manifold heater comprising a receptacle shaped to substantially enfold the intake manifold of an internal combustion engine, and a cover-plate associated with the receptacle to lock the latter in position and to overlie the manifold.



1,453,008. MULTIPLE-DRILLING MACHINE. WILLIAM R. FOX and HOWARD D. CORWIN, Jackson, Mich., assignors to Fox Machine Company, Jackson, Mich., a Corporation of Michigan. Filed Oct. 7, 1921. Serial No. 506,090. 26 Claims. (Cl. 77—24.)

1. In combination in a multiple drill press, spindles, one for each drill having means to connect, individually, each with its own drill driving gears, for high and low speed, high and low pinions on the spindles, clutch means, one for each drill spindle between the respective pinions and the spindle mounted in part on the spindle and in part on the pinion, said pinions and clutch means being relatively movable, to change the speed of the spindles individually while the pinions are maintained in mesh with their respective driving gears, substantially as described.

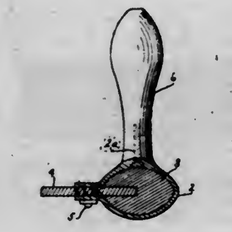


6. In combination in a multiple drilling machine, a casing, spindles, a pair of pinions on each spindle, gears for driving the pinions, and means for shifting the pinions including a screw threaded rod extending parallel with the spindle and to a point above the casing, a nut engaging the screw rod and carried by the top of the casing, a member mounted on the top of the casing, a rotary handle connected with the nut for moving the screw and detent means between the rotary handle and the said member, substantially as described.

1,453,009. TOP SCREW FOR GILL-DRAWING FRAMES. GEORGE T. HEMSLEY, Lawrence, Mass. Filed June 19, 1922. Serial No. 569,336. 5 Claims. (Cl. 19—129.)

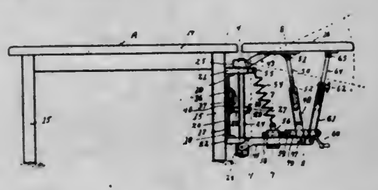
1. An improved top screw for gill-drawing frames comprising a shaft having screw threads on its exterior extending in from its outer end, a stem recess having a flattened side and a threaded axial hole, a faller-cam having on the inside a stem which fits the stem recess and a bore which registers with the axial hole and having on the outside an annular projecting boss which serves as a bearing for the end of the screw and has a countersunk head recess, and a fastening screw having a shank which passes through said bore into said hole and a head which fits said countersunk recess.

1,453,010. CAM FOR GILL BOXES. GEORGE T. HEMSLEY, Lawrence, Mass. Filed Nov. 17, 1922. Serial No. 601,660. 3 Claims. (Cl. 19—129.)



3. In a faller operating mechanism for a gill-box, the combination of a double threaded screw shaft, with a disc shaped cam plate fixed thereon, said cam plate having a face with two recesses therein, cam toes each detachable from said cam plate and each having a wearing edge together with an arm which fits into one of said cam plate recesses, and means to hold the cam toe arm in the cam plate recess.

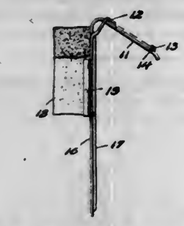
1,453,011. DEVICE FOR EXTRICATING MUD-STALLED VEHICLES. BENNETT D. HOBSON, Richmond, Va. Filed June 15, 1922. Serial No. 568,609. 1 Claim. (Cl. 242—95.)



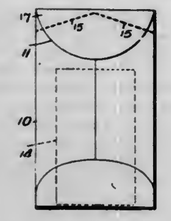
The combination with a vehicle, of a power wheel carried thereby, of a drum removably engaging the wheel and a cable engaging the drum, said drum having a hub and a pair of flanges spaced to receive but a single thickness of cable, the whole so arranged that when the vehicle is stalled and its resistance to movement is greatest, turning the power wheel and drum at a given expenditure of power exerts the greatest pull on the cable, and that as the vehicle moves and attains momentum, the effective diameter of the drum becomes increasingly greater and the vehicle speed of movement becomes increasingly greater with the same expenditure of power.

1,453,012. HANDWHEEL GRIP. HARRY L. JACKSON, Palo Alto, Calif. Filed Dec. 20, 1921. Serial No. 523,657. 2 Claims. (Cl. 74—33.)

1. A device of the character indicated comprising a resilient member having an inner contour adapted to engage the rim of a hand wheel and separable along one side to permit its engagement with said wheel, opposed flanges carried by the separable portions of said member, said flanges being formed to engage a spoke of said wheel, means for securing said flanges to said spoke, and a handle mounted on said member.



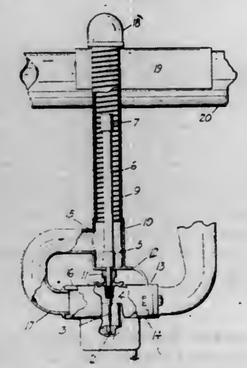
1,453,013. TREATMENT TABLE. FRANK KOENIGKRAMER, Cincinnati, Ohio, assignor to John V. McManis, Kirksville, Mo. Filed June 23, 1919. Serial No. 305,991. 4 Claims. (Cl. 128—74.)



1. A table attachment comprising a rigid frame separately attached to two adjacent legs of a table near the upper extremities of said table legs and near the lower extremities of said table legs and serving to thereby add to the rigidity of the table and at the same time afford a more firm and rigid support for an oscillatable table top section, a vertically disposed shaft journaled to said frame, a table top section pivotally attached to the upper end of said shaft and oscillatable vertically with reference to said shaft and horizontally with said shaft in its bearings, means carried by said frame to resiliently support said table top section vertically, means attached to said frame and to said shaft to yieldingly support said shaft in a predetermined position with reference to said frame, and means to positively lock said shaft against rotation relative to said frame.

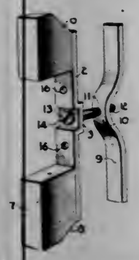
1,453,014. COMBINED RAZOR AND BRUSH. KOBY KOHN, New York, N. Y., assignor to Victory Sparkler & Specialty Co., Elkton, Md., a Corporation of Delaware. Filed Oct. 6, 1921. Serial No. 505,877. 3 Claims. (Cl. 132—80.)

3. In a device of the class described the combination of a sheet metal frame including a body portion having a flat back, a handle projecting from said back midway at one end and a razor supporting portion projecting from the other end of said body portion at an angle towards the handle end, means on said supporting portion for detachably engaging a razor blade, and a lathering brush composed of sponge rubber secured to said flat back portion by marginal flanges extending outwardly and inwardly, the central portion of said handle being curved transversely forming a rib and the razor blade holding means being formed integrally from the metal of the body and razor supporting portion.



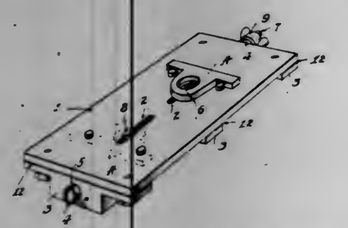
1,453,015. DRINKING CUP. JOSEPH W. LAVIGNE, Worcester, Mass. Filed Oct. 12, 1920, Serial No. 416,500. Renewed Feb. 27, 1923. 1 Claim. (Cl. 229—85.)

As an article of manufacture, a drinking cup formed of water repellant paper open at the top, but having a gummed flap for use in sealing it, whereby it can serve as a substantially water-proof sealed receptacle, and having a line of perforations through the front thereof and through the flap to permit of the top being torn off to adapt it for use as a drinking cup, said line of perforations being higher at the center of the front and rear than at the two edges, to provide, a depression at each edge of the top of the cup.



1,453,016. THERMOSTATIC VALVE FOR CARBURETORS. FREDERICK O. LEWIS, Dayton, Ohio, assignor of one-half to Oscar B. Reemelin, Oakwood, Ohio. Filed Aug. 31, 1921. Serial No. 497,445. 1 Claim. (Cl. 261—39.)

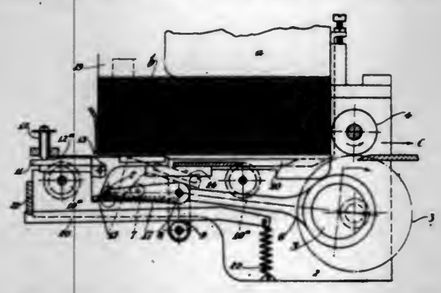
In a device of the type described, the combination with a carburetor having a liquid-fuel discharge orifice, of a



needle valve for controlling the latter, an air heater, an air conduit leading from the heater to the carburetor, a tubular support projecting into said air conduit, and an expansible element in said tubular support, connected to the needle valve, for the purpose specified.

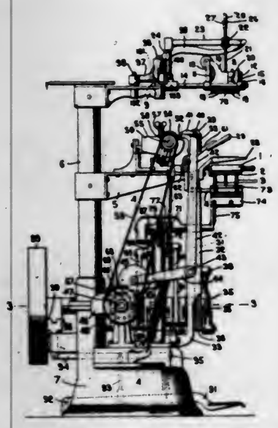
1,453,017. WALL BRIDGE FOR SWITCHES. GUSTAF HERMAN LINDELOF, De Kalb, Ill. Filed Mar. 22, 1922. Serial No. 545,813. 7 Claims. (Cl. 247—21.)

3. A wall bridge for switches comprising spaced wall-engaging members, said members each comprising an elongated metal bar, a screw-swivelled centrally of one bar and threaded centrally into the other bar, the latter being bent intermediate of its length towards the first bar, said first bar having a countersunk seat for the head of the screw and means at opposite ends of the bar to bear against the inner face of the wall, said screw having a shoulder or flange in opposition to the head to prevent dislodgement of the screw, while permitting the free turning of the same to cause a separation of the members for engaging the opposite inner faces of the laths of a wall and thereby support the device at the desired location.



1,453,018. TOOL. WILLIAM MCHEWITT and HAROLD G. BRANDT, Burlington, Iowa. Filed Jan. 19, 1922. Serial No. 530,251. 2 Claims. (Cl. 81—33.)

1. In a tool of the nature described, the combination of a support having a plane surface, a tubular member beneath the support, bearings secured to the latter in which the said member is slidable in a longitudinal direction, a rod slidable within the member, a right-angled extension on said rod, there being a slot in the member through which the extension projects, there also being a pair of slots in the said support arranged parallel to the member and rod, the extension of the latter projecting through one of the said slots, an extension on the member extending through the other slot, a pair of studs extending from the surface of the support near each slot in the latter, and means to shift the member and rod relatively in opposite directions.

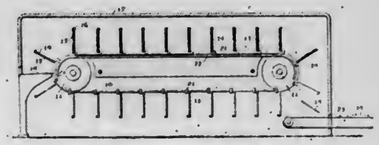


1,453,019. SHEET FEEDER. WALTER EVERETT MOLINS, London, England. Filed Mar. 24, 1922. Serial No. 546,511. 12 Claims. (Cl. 271—44.)

1. Apparatus for feeding sheets of material to sheet gripping means one by one from the bottom of a pile comprising in combination, a magazine adapted to receive a pile of sheets, a reciprocating slide beneath said magazine, a pin holder pivoted to said slide, pins in said

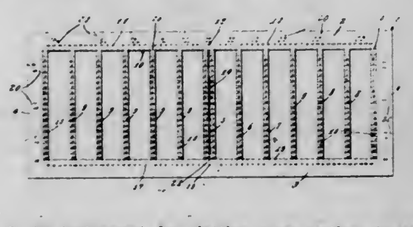
holder, a depending portion on said holder and an eccentric rod operating the slide and bearing on said depending portion of the holder.

1,453,020. LABELING MACHINE. NELSON MUSLAR, Worcester, Mass., assignor, by mesne assignments, to Royal Labeling Machine Company, Incorporated. Filed Feb. 2, 1920. Serial No. 355,874. 10 Claims. (Cl. 216—54.)



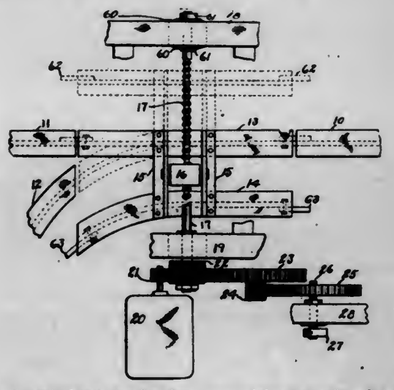
1. In a labeling machine, the combination with a bottle-supporting table, of means to place a glued label on a bottle on said table, a vertically-movable carrier, a pair of wipers mounted thereon for movement relative to each other, means to move the carrier vertically thereby to carry the wipers from a position above the table to one beneath the table, and means mounted on said carrier movable relative thereto to give the wipers a relative movement as the carrier is being moved.

1,453,021. PREPARATION FOR DYEING FURS, HAIRS, AND THE LIKE. PAUL ONNERTZ, Berlin-Wilmersdorf, Germany, assignor to Actien Gesellschaft für Anilin Fabrikation, Berlin, Germany. Filed Apr. 17, 1922. Serial No. 553,982. 3 Claims. (Cl. 8—6.)



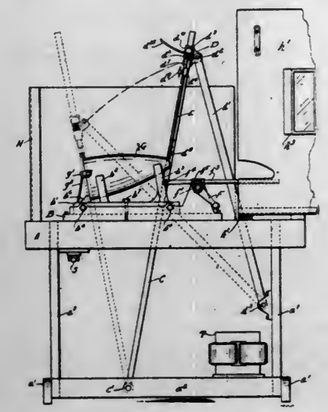
1. As new compositions of matter preparations for dyeing hairs, furs and the like, comprising a 4-amino-1-oxy-derivative of the benzene series and a m-diaminophenol-alkyl-ether, in aqueous solution in combination with an oxidizing agent producing on hairs, furs and the like from red-brown to violet to blue to black tints.

1,453,022. MAGNETIC DRYING APPARATUS. WILLIAM D. PHILIPS, Brooklyn, N. Y. Filed Apr. 27, 1920. Serial No. 377,133. 14 Claims. (Cl. 198—134.)



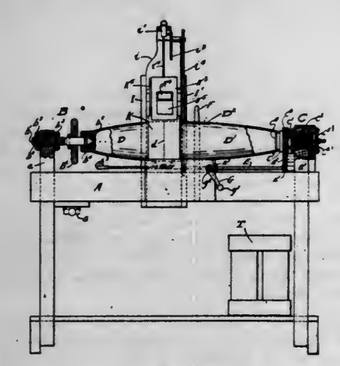
1. A magnetic drying apparatus comprising an enclosing casing, an endless carrier movable in the casing and provided with outwardly projecting spaced arms each adapted to carry a plate edgewise with relation to the carrier, means for magnetizing the arms so as to hold the plates against displacement, and means for substantially demagnetizing the arms at the discharge end of the carrier.

1,453,023. DRAFTING INSTRUMENT. ROBERT RUFFIN, Jr., Senatobia, Miss. Filed June 21, 1922. Serial No. 569,838. 2 Claims. (Cl. 33—75.)



1. An instrument for platting cross sections in earth work, comprising a frame including top and bottom strips, an intermediate rib connecting the strips, and lateral ribs connecting the strips and located on opposite sides of the intermediate rib, one of the strips having an inner fiducial edge, the ribs being spaced apart and being located at right angles to the fiducial edge, one of the strips being calibrated in opposite directions from a zero point coinciding with the intermediate rib, all of the ribs being calibrated longitudinally from a zero point coinciding with the fiducial edge.

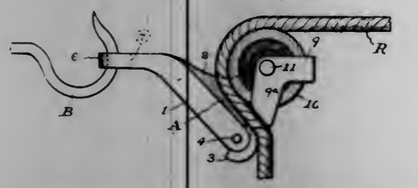
1,453,024. SWITCHING MECHANISM. TRACY B. RYON, Waltham, Mass. Filed Oct. 23, 1922. Serial No. 596,209. 6 Claims. (Cl. 104—102.)



2. A switching mechanism comprising a pair of track sections, means to shift said sections alternately in opposite directions, said means including a motor, a circuit controlling switch for said motor, positive driving connections between said motor and said circuit controlling switch, and yielding driving connections between said motor and said track sections.

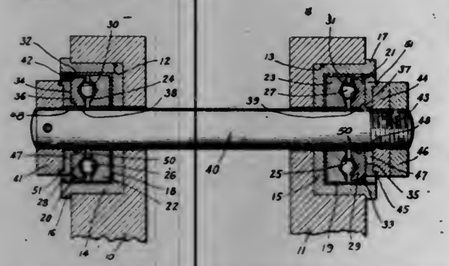
1,453,025. APPARATUS FOR ELECTRIC-ARC WELDING. REUBEN STANLEY SMITH, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Dec. 6, 1918. Serial No. 265,522. 9 Claims. (Cl. 219—8.)

1. In an arc-welding apparatus, an electrical welding circuit, a holder for the work to be welded, a spring for retracting the electrode, an electrode carrier movable under compression of the spring to bring the electrode into contact with the work to strike an arc, and devices for feeding the fusible electrode along the welding line in the ratio of the consumption of the electrode.



1,453,026. APPARATUS FOR ARC WELDING. REUBEN STANLEY SMITH, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Dec. 6, 1918. Serial No. 265,523. 8 Claims. (Cl. 219—8.)

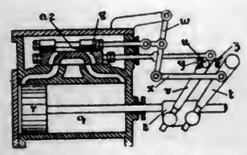
1. In an arc-welding apparatus, an electrical welding circuit of which a fusible electrode forms a part, a carrier for the electrodes, devices for imparting an initial movement to the said carrier to strike an arc between the electrode and the work to be welded, devices for feeding



the fusible electrode and for moving the work past the point of the fusible electrode at a speed in fixed ratio to the consumption of the electrode, whereby the fused electrode is evenly deposited and amalgamated with the work, and means to disconnect the electrode carrier from its actuating devices to permit the quick return of the carrier to initial position.

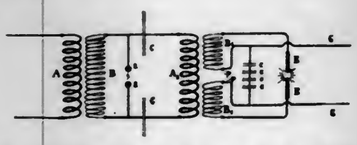
1,453,027. CLOTHESLINE HOLDER AND TIGHTENER. HOWARD A. THAM and RALPH J. WEAVER, Akron, Ohio. Filed Sept. 13, 1922. Serial No. 587,862. 6 Claims. (Cl. 24—134.)

1. A rope tightener including a frame formed with a laterally opening rope receiving space, a pulley journaled upon the frame adjacent to the rope receiving space so that the rope to be tightened can be engaged with the pulley, and moved laterally into the rope receiving space, and a gravity releasable rope clamping member mounted upon the frame for engaging the rope in the rope receiving space to permit longitudinal movement thereof in one direction and prevent movement thereof in the opposite direction.



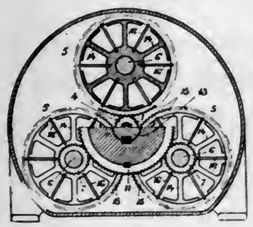
1,453,028. ANTIFRICTION BEARING AND SHAFT-CENTERING DEVICE. SIDNEY S. TOOKER, Rochester, N. Y. Filed Oct. 11, 1921. Serial No. 507,105. 4 Claims. (Cl. 64—49.)

4. An annular ball bearing comprising in combination with a support frame and a shaft passing loosely therethrough, a cup in said frame, a seat fixed in said cup, a race free in said cup, said seat and race being grooved, balls in the grooves of said seat and race, means formed with said cup preventing separation of said seat and race, a washer having a hub extending into a recess in said race, a peripheral flange on said washer extending opposite its hub, and a disc fixed on said shaft, said disc having its adjacent face recessed to receive the flange of said washer and being adapted to floatingly support said shaft.



1,453,029. VALVE GEAR OF DUPLEX PUMPS. ARTHUR HUGHES TWELLS, Leicester, England. Filed Aug. 20, 1919. Serial No. 318,197. 2 Claims. (Cl. 121—116.)

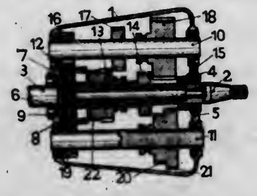
1. A duplex pump having in combination, a cylinder for each pump, a valve for each cylinder to control the admittance of an actuating fluid thereto, valve actuating levers actuated by the crosshead of each pump, movable fulcrums supporting said levers, stops to limit the movement of said fulcrums, each fulcrum being moved by the other pump and having a certain amount of free movement in respect of such pump crosshead, whereby the



valve for each cylinder is opened by the other pump and closed by its own pump, and a separate cut-off valve working in combination with the valve for each cylinder.

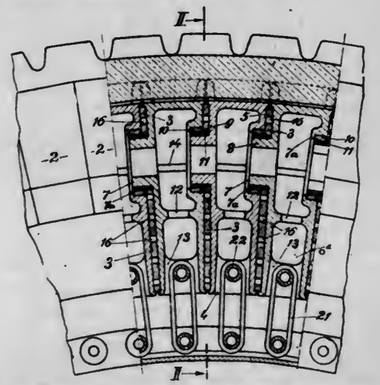
1,453,030. MEANS FOR ESTABLISHING A VOLTAIC ARC BETWEEN ELECTRODES NOT IN CONTACT. FLORENCIO COMAMALA UCAR, Madrid, Spain. Filed July 6, 1915. Serial No. 38,363. 9 Claims. (Cl. 176—104.)

1. In apparatus for establishing arcs between non-contacting electrodes, in combination, a supply circuit for supplying current to said electrodes, means for introducing an oscillatory current of high frequency into the supply circuit, and as part of said means a divided coil through the divisions of which the oscillatory current is introduced into the main circuit, a conductor connected across the divided coil circuit and, in the said cross connecting conductor, electric means for checking the passage of the main current while permitting the passage of the oscillatory current.



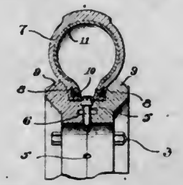
1,453,031. TOOTHED WHEEL. WILHELM ROBERT UGGLA and GUNNAR AUGUST FERDINAND WALLGREN, Harnosand, Sweden. Filed Feb. 21, 1921. Serial No. No. 446,927. 3 Claims. (Cl. 74—29.)

1. In a toothed wheel, a hub, spokes extending outwardly from said hub, a rim rotatably mounted on said spokes and provided with slots in the inner side thereof, springs fixed to said hub between said spokes and extending into said slots, and abutments provided on the spokes normally spaced from said springs and cooperating with the springs for positively limiting the relative movement between the rim and hub.



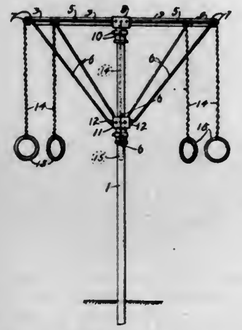
1,453,032. CHANGE-SPEED GEAR. GRAF ALFRED VON SODEN-FRAUNHOFEN, Friedrichshafen, Germany. Filed May 3, 1920. Serial No. 378,634. 3 Claims. (Cl. 74—58.)

1. In a device of the kind described in combination, a main shaft and two intermediate shafts extending at substantially equal distances from said main shaft, said three shafts being disposed in the corners of a triangle, gear wheels on said main shaft and a plurality of axially



displaceable wheels distributed over said intermediate shafts, the number of displaceable wheels being the same on both intermediate shafts.

1,453,033. VEHICLE TIRE. ROMAN VON KRENSKI, Berlin-Friedenau, Germany. Filed Jan. 24, 1922. Serial No. 531,459. 10 Claims. (Cl. 152—9.)



6. In a vehicle tire in combination, elastic and non-elastic segments alternating with one another and combined into an annulus, the non-elastic segments having the form of hollow bodies open on both sides and towards the centre of the annulus, a tubular extension surrounding the opening on each side of each segment, one extension being directed outwardly, the other inwardly a steel lining on said outwardly directed extension and a steel lining of convex section in said inwardly directed extension.

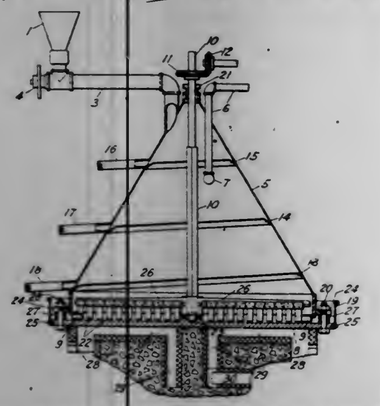
1,453,034. METHOD OF VULCANIZING TIRES. HARRY B. WALLACE, St. Louis, Mo. Filed Dec. 15, 1920. Serial No. 430,948. 2 Claims. (Cl. 18—53.)

1. A method of preparing a tire-casing for vulcanising upon an inflatable bag as a form, which method consists in distending the bag and the casing by the application of pressure internally of the bag until the bag is fully distended and free of wrinkles, reducing the pressure as required to accommodate the tire in a mould in which it is to be vulcanized so that it will take its proper position therein, and subsequently increasing the internal pressure of the air bag, after the mould has been fastened together, so as to receive the full and proper internal pressure during the process of vulcanization.

1,453,035. EXERCISING APPARATUS. WINFIELD WILLIAMS, San Jose, Calif., assignor to J. F. Patterson and Hortense Bean, a Copartnership operating as Patterson-Williams Mfg. Co., San Jose, Calif. Filed Mar. 17, 1921. Serial No. 453,115. 7 Claims. (Cl. 46—69.)

7. An exercising apparatus comprising a fixed support, a circuitous endless series of depending swing members directly connected thereto, and rings attached to the lower ends of said members.

1,453,036. SHOE-STRING-HOLDING CUFF. EDWARD H. BINNS and RALPH H. BINNS, Pittsburgh, Pa. Filed May 11, 1922. Serial No. 560,218. 1 Claim. (Cl. 24—117.)

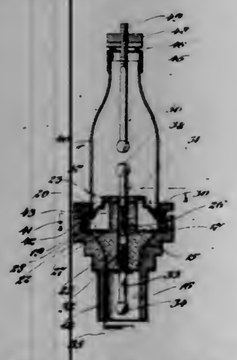


As a new article of manufacture, a shoe cuff provided at its upper inner margin with a lengthwise extending fillet forming a shoulder to rest on the shoe top, and provided at its ends with holes for attachment to opposed lacing studs adjacent the front foot opening of a shoe, each end portion of the cuff being provided with a rearwardly recessed shoe-string holder; the inner surface of the recessed holder being directly opposed to the cuff surface and being tippable in relation thereon for reception of a shoe-string end.

1,453,037. APPARATUS FOR THE TREATMENT OF NATURALLY-OCCURRING HYDROCARBON-CONTAINING MATERIALS. CLIFFORD P. BOWIE, Berkeley, Calif., and MARTIN J. GAVIN, Boulder, Colo. Original application filed Nov. 17, 1919, Serial No. 338,637. Divided and this application filed June 1, 1922. Serial No. 565,180. 6 Claims. (Cl. 196—19.)

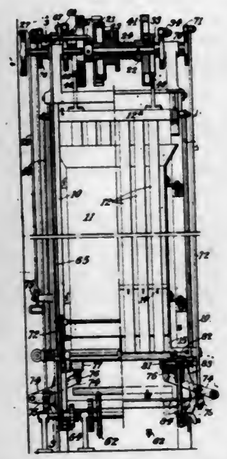
1. An apparatus for the described purpose, comprising a retort to which the material to be treated is supplied;

an underlying heating hearth for receiving the material, said hearth being spaced from the base of the retort to leave a peripheral opening; means within the retort, operating over the hearth for moving the material to said



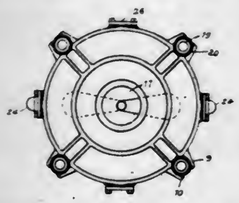
opening; offtakes in the wall of the retort above said opening for the vaporous material; and a sealed discharge associated with said opening for the residual material, consisting of a plate exterior to, spaced from, and rising above the level of the opening.

1,453,038. POWDER PUFF. CHARLES T. BOYD and GEORGE S. HERSHEY, Columbus, Ohio. Filed Sept. 30, 1922. Serial No. 591,624. 6 Claims. (Cl. 132—78.5.)



4. A powder puff comprising, in combination, a magazine for the powder and a distributing member for the powder comprised of a perforated support of resilient material surmounted with powder distributing fabric, said distributing fabric adapted for attachment to the magazine.

1,453,039. SPARK PLUG. HARRY H. CHINSKY and EMIL HONSTETTER, Brooklyn, N. Y. Filed Apr. 10, 1920. Serial No. 372,823. 1 Claim. (Cl. 123—169.)

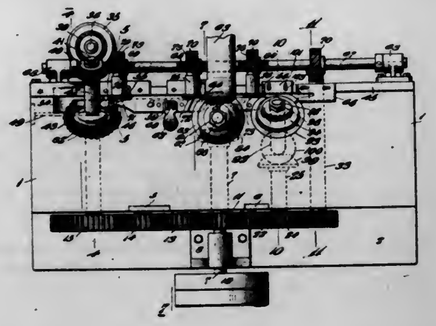


A spark plug comprising a body, an insulator therein, a ring above said insulator, a glass casing, means for clamping said casing to said ring, non-conducting, yielding packings between said casing and said ring, a sleeve in said insulator, a sectional conductor in said sleeve, each section being independently adjustable longitudinally, a fixed terminal at the inner end of said body, and an adjustable terminal engaged at the outer end of said casing.

1,453,040. MACHINE FOR MAKING CEMENTITIOUS ARTICLES. ALFRED OWEN CROZIER, New York, N. Y., assignor to Crozier-Straub, Inc., New York, N. Y., a Corporation of New York. Filed May 22, 1920. Serial No. 383,501. 13 Claims. (Cl. 25—11.)

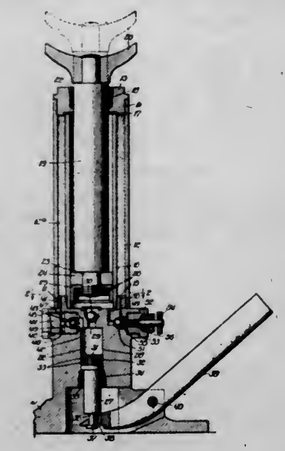
1. A machine for making cementitious articles by the column method from an intermittently descending unset cementitious column, comprising power actuated means operating to permit the unset cementitious column to descend upon a pallet, and a cutter means operating in the manner of a saw to sever the lower end of the column.

1,453,041. CONDENSER. MAX DONAUER, Elyria, Ohio, assignor to The Elyria Enameled Products Company, Elyria, Ohio, a Corporation of Ohio. Filed Mar. 10, 1920. Serial No. 364,639. 5 Claims. (Cl. 227—245.)



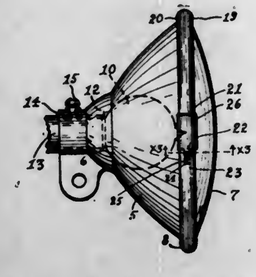
1. A condenser element consisting of a dished top plate having an opening in the bottom of the dished portion, a bottom plate having an opening in alignment with the first-mentioned opening, walls joining said plates at their periphery to form a chamber for cooling fluid, and walls joining said plates adjacent the edges of said openings to form a passage through the element.

1,453,042. PROCESS AND MACHINE FOR MAKING RANDS. JOHN F. DUGAN, Philadelphia, Pa., assignor to Laird, Schober and Co., Philadelphia, Pa., a Firm. Filed Aug. 26, 1922. Serial No. 584,402. 10 Claims. (Cl. 12—67.)



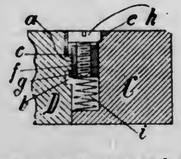
6. A machine for making rands from the offal strip of a block stock, in which are combined:—means for

continuously pressing and feeding forward against and along a guiding device or guideway an offal strip:—a guideway;—means for cutting off in a plane parallel with that of its opposite side the near side of the strip while the latter is being pressed against and advanced along



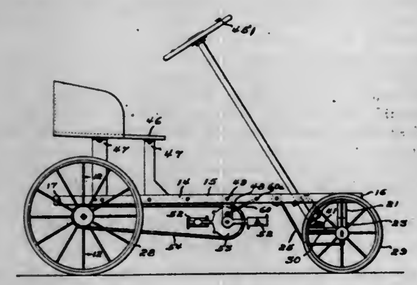
the guideway and expelling laterally from the machine said near side;—means for cutting off and expelling from the machine a uniform top portion of the strip;—and means for obliquely dividing the strip so as aforesaid reduced in both width and depth, into two strips or rands of opposite cross-section.

1,453,043. HYDRAULIC LIFTING JACK. JOSEPH ERHARDT, Chicago, Ill. Filed Aug. 5, 1921. Serial No. 489,933. 10 Claims. (Cl. 138—9.)



1. In a portable lifting device the combination of a member providing a base for the lifting device, said base having a fluid chamber and a pressure chamber secured thereto, a lifting element arranged in the pressure chamber, said base being provided with a chamber which communicates directly with the pressure chamber, a pump arranged in the chamber, a wall of the pump chamber providing a wall for the pressure chamber, a valve arranged in said wall, a passage leading from the fluid chamber to said pump chamber and a passage leading from the pressure chamber to the fluid chamber.

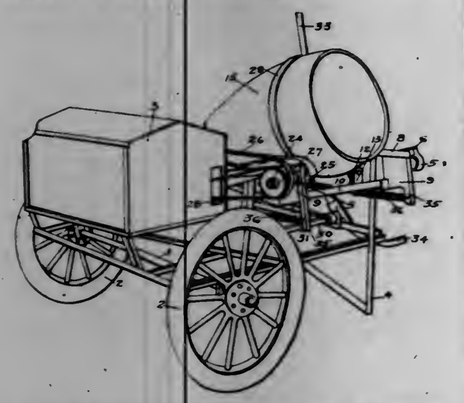
1,453,044. LAMP. HAROLD G. FITZ GERALD, Los Angeles, Calif. Filed Jan. 26, 1920. Serial No. 354,184. 2 Claims. (Cl. 240—41.)



1. In a device of the character described, a casing, a glass applied to said casing, a packing element applied to said casing and glass, a U-shaped band to hold said casing and glass rigidly in position when affixed thereto, slots formed in said band adjacent one end, an inwardly extending lug formed integral with the other end which fits any one of said slots.

1,453,045. CHUCK JAW. PAUL FÖRSTER, Nuremberg, Germany, assignor to Aktiengesellschaft vorm. Adolf Finze & Co., Nuremberg, Germany. Filed Feb. 13, 1922. Serial No. 536,375. 1 Claim. (Cl. 279—123.)

A jaw part having a tongue and groove engagement with an arc shaped seat or guide and a perforation parallel to the axis of the arc and intersecting the engaging parts, a tightening piece in said perforation having a shoulder engaging a groove in the guide, a spring for yieldably pressing said shoulder against the guide and a screw for positively securing the piece in tightened position.



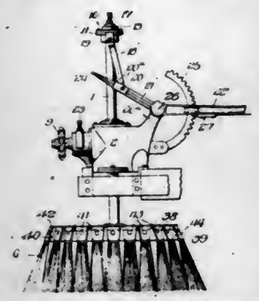
1,453,046. TOY VEHICLE. JOHN S. GABKE, Wilmington, Del. Filed June 21, 1921. Serial No. 479,185. 1 Claim. (Cl. 208—153.)

A toy vehicle comprising a frame; an axle mounted on the frame; traction wheels fixed to the axle; a sprocket fixed to the axle; hangers pivoted to the frame; a shaft bearing in the hangers; a sprocket fixed to the shaft between the hangers; a chain connecting the sprockets; blocks pivoted on the hangers; tension rods pivoted on

the frame and adjustably connected to the blocks, and means for holding the hangers in an adusted position against swinging movement in either direction.

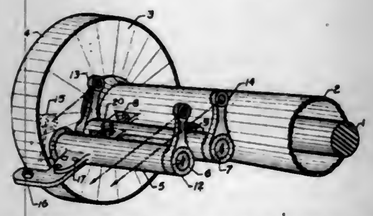
1,453,047. CONCRETE MIXER. HENRY E. JOHNSON, Milwaukie, Oreg. Filed June 16, 1922. Serial No. 568,677. 2 Claims. (Cl. 83—73.)

1. In a concrete mixer of the type described, a mixer frame, a cradle pivoted at one end thereof and carrying a mixing container therein, levers and connecting rods mounted on said mixer frame and connected to the cradle, brackets mounted about said cradle pivota provided with levers failing in the down-ward direction, springs attached to said bracket levers and held in tension by a fastening on the mixer frame, such that said springs will operate in tension and assist in dumping the mixer container.



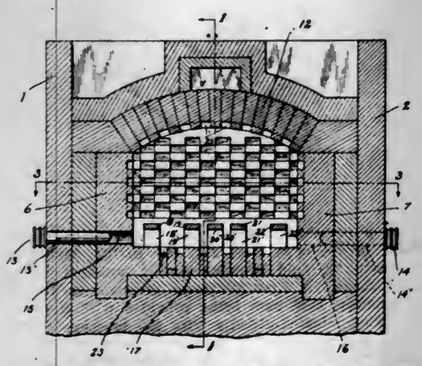
1,453,048. SPINNERET. FREDERICK G. KRAFT and CHARLES J. BACON, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Feb. 14, 1920. Serial No. 358,731. 13 Claims. (Cl. 18—8.)

1. In a spinneret, in combination, a nozzle member having an expansible open end, and an orifice member provided in its periphery with a transverse fluid channel and adapted to fit in said end, said orifice member being larger than the interior size of said end when unexpanded, whereby when said orifice member is fitted in said end, and said end expanda to receive it, the wall of said end closely contacts the periphery of said orifice member at the sides of said channel and prevents side-leakage from said channel along said periphery, and whereby upon insertion of said orifice member in said open end, said end will slide transversely of said periphery in contact therewith to clean the same.



1,453,049. STREET SWEEPER. MOSES VOLNEY LIDDELL, Harvey, Ill., assignor to Austin Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 24, 1920. Serial No. 353,794. 9 Claims. (Cl. 74—7.)

1. In combination, a bearing box, a sleeve and a drive shaft mounted in said box, coacting bevel pinions carried, respectively, by said drive shaft and sleeve, a driven shaft having splined sliding bearing in said sleeve, and means for longitudinally positioning said driven shaft comprising a supporting head in which the driven shaft

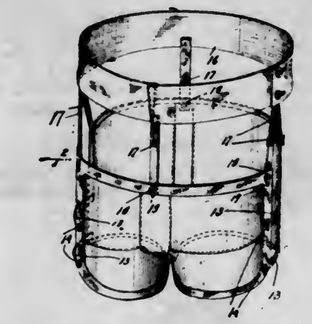


is suspended and a controlling lever having connection with said supporting head; said connection comprising an arm on said lever and a link forming with said arm a toggle lever.

1,453,050. BRAKING MECHANISM. VINCENT LINK, Detroit, Mich., assignor to Studebaker Corporation, a Corporation of New Jersey. Filed Oct. 28, 1921. Serial No. 511,050. 8 Claims. (Cl. 188—264.)

1. In combination with the rear axle of an automobile and associated braking mechanism including a brake support, a unit assemblage of brake operating mechanism having a relatively large lubricating magazine incorporated therewith and having one end of the unit socketed in the brake support and passing therethru.

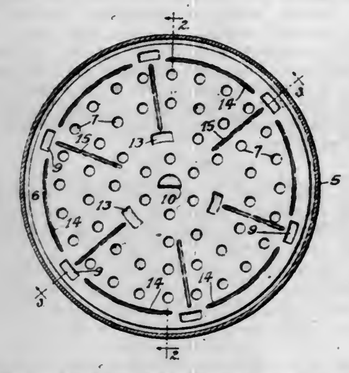
1,453,051. ENAMELING FURNACE. FREDERIC C. MACKEY and JOHANN H. GUMZ, Chicago, Ill. Filed Mar. 20, 1922. Serial No. 545,159. 18 Claims. (Cl. 25—132.)



1. An enameling furnace embodying therein a refractory lining formed with a checkered surface, as and for the purpose specified.

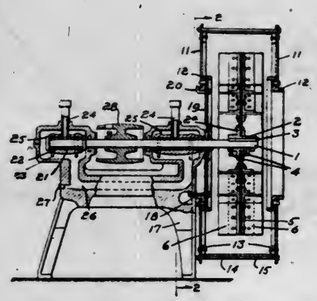
1,453,052. HOLDER FOR DESK OR MEMORANDUM PADS. STEWART B. MEIN, Philadelphia, Pa. Filed June 7, 1922. Serial No. 566,460. 5 Claims. (Cl. 211—82.)

1. A holder for a desk or memorandum pad primarily of the form of a continuous length of paper or the like consisting of a plate composed of a front portion having a cutting edge, and means adapting it to be attached to the under side of the front cross bar of a desk or the like, a rear portion on which the length of paper is adapted to be mounted concealed beneath the top of the desk or the like, said plate having therein intermediate of said portions a horizontal passage for the paper from its support to said cutting edge, and a movably-mounted sustaining plate for retaining the paper close to said front portion of the plate adjacent to said cutting edge thereof.



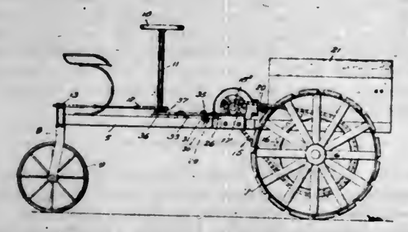
1,453,053. CATAMENIAL APPLIANCE. ISAAC NEWMAN, ISIDOR KERN, and MAMIE KERN, New York, N. Y. Filed Nov. 12, 1921. Serial No. 514,558. 6 Claims. (Cl. 128—287.)

1. In a support of the character described, the combination with a sanitary pad, of an apron like apparel capable of being folded into a bifurcated garment and having two lateral pockets to receive the sides of the pad, so that when the garment is worn the pad will rest on the crotch thereof and its sides be engaged in the pockets which extend downwardly around the inner sides of the legs of the wearer.



1,453,054. FALSE BOTTOM FOR COOKING UTENSILS. GUSTAVE P. NORDSTROM, Chicago, Ill. Filed Nov. 28, 1921. Serial No. 518,118. 1 Claim. (Cl. 53—1.)

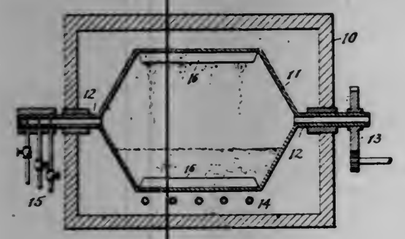
A device of the class described consisting of a circular perforated flat plate having near its periphery a plurality of spaced depending legs punched therefrom and near its center a plurality of spaced depending legs punched therefrom, the said legs intersecting radial lines extended from the center of the plate and presenting one of their faces towards said center, the said legs adapted to rest on the bottom of a vessel for supporting the plate thereon at a distance therefrom, said plate also having near its periphery a plurality of spaced segmental ribs punched downwardly therefrom and located one between each pair of said peripheral legs, said plate also having a plurality of radially disposed ribs punched



downwardly therefrom and centrally with an upwardly extended lip punched from the plate to provide means for removing the same from a vessel.

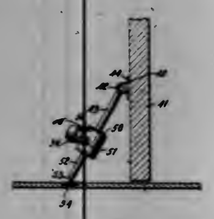
1,453,055. CENTRIFUGAL FAN. FRANK PHELPS, Little Rock, Ark., assignor to L. C. Barnett, Duluth, Minn. Filed Aug. 9, 1915. Serial No. 44,365. 4 Claims. (Cl. 230—11.)

1. In a centrifugal fan, a casing comprising side plates having outwardly facing shoulders on their proximate sides, a peripheral wall member mounted upon said shoulders and spacing the side plates apart, and tie members extending from one side plate to the other just outside such peripheral wall and holding the latter in place on the said shoulders.



1,453,056. TRACTOR. GEORGE P. RISSER and ALBERT P. WILLIAMS, Seattle, Wash. Filed Feb. 10, 1921. Serial No. 443,817. 1 Claim. (Cl. 180—18.)

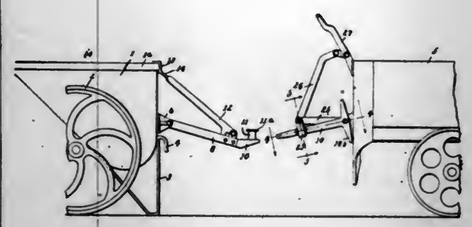
In a tractor, a guide wheel oscillatable about a vertical axis, a steering post operatively connected to said



guide wheel for regulating the latter, an axle, two traction wheels rotatably mounted thereon, power operated means including two clutches for driving the respective traction wheels, means for releasably retaining said clutches in their engaged relations, two rock shafts operatively connected with the detachable members of the respective clutches, links connected from one arm of each to the respective rock shafts, a lever connected to the other ends of said links, and a cam operated by said steering post for oscillating the lever to uncouple said clutches selectively.

1,453,057. PROCESS OF MAKING IRON, STEEL, OR STEEL ALLOYS. JOSEPH A. WILLIAMS, Cleveland, Ohio. Filed Dec. 6, 1920. Serial No. 428,583. 14 Claims. (Cl. 75—50.)

1. The process which comprises oxidizing iron or steel scrap so as to produce iron oxide in finely divided form, reducing the oxide to powdered metallic iron, and subsequently treating the metallic iron so as to produce a solid metallic body.

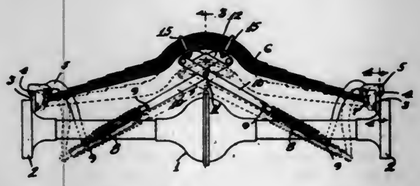


1,453,058. BURGLAR ALARM. ARNOLD ZUKOR, New York, N. Y. Filed Sept. 5, 1922. Serial No. 586,161. 1 Claim. (Cl. 116—13.)

The combination with a door, of a bar attached thereto at its upper end and carrying at its lower end a piston, a cylinder in which said piston is slidably arranged, a second bar fixed to said cylinder for engagement with the floor adjacent the door, the longitudinal axes of said bars forming a continuation of one another, a bell carried by said cylinder, a pin mounted upon said piston and adapted, when moved, to operate said bell, and a spring within said cylinder bearing on said piston for normally holding said pin disengaged from said bell.

1,453,059. COUPLING. CARL J. BLASS, Lakewood, Ohio, assignor to The Lakewood Engineering Company, Lakewood, Ohio, a Corporation of Ohio. Filed Aug. 4, 1919. Serial No. 315,079. 8 Claims. (Cl. 280—33.15.)

1. A coupling device comprising two cooperating parts, one of said parts including an upstanding post, the other of said parts comprising a pair of jaws, said jaws being mounted to permit relative movement toward and from

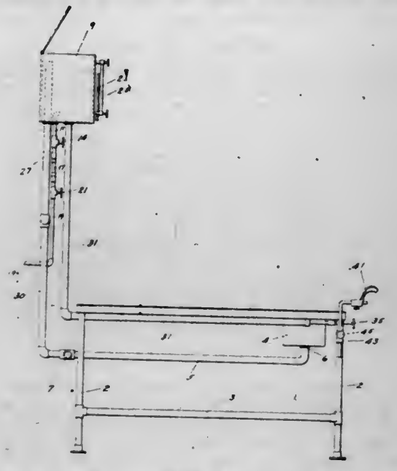


each other and movementk as a unit about a pivot, means cooperating with said jaws for moving them together, and also for moving said jaws about said pivot.

1,453,060. CONVERSION OF AMMONIA INTO AMMONIUM CHLORIDE. CARL BOSCH, Ludwigshafen-on-the-Rhine, ERICH DEHNEL, Rossen, near Merseburg, and CARL KIRCHER, Ludwigshafen-on-the-Rhine, Germany, assignors, by mesne assignments, to Badische Anilin & Soda Fabrik, Ludwigshafen-on-the-Rhine, Bavaria, Germany, a Corporation of the Grand Duchy of Baden. Filed July 9, 1920. Serial No. 395,150. 3 Claims. (Cl. 23—13.)

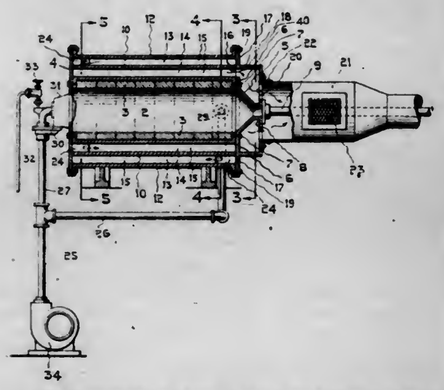
1. The process of transforming synthetic ammonia into a salt for use as a fertilizer by employing such ammonia in the ammonia soda process and withdrawing from the bicarbonate mother liquor ammonium chlorid by alternately concentrating removing the sodium chlorid separated and cooling to precipitate ammonium chlorid.

1,453,061. VEHICLE SPRING. EDWARD BRUNDIGE, Chicago, Ill. Filed Feb. 2, 1922. Serial No. 533,572. 2 Claims. (Cl. 267—17.)



1. In a vehicle, a pair of spaced supports, levers pivoted at one end to said supports, a leaf spring having its ends attached to intermediate points of said levers, coil springs attached to the free ends of said levers, and toggle links connecting said coil springs with the central part of said leaf spring.

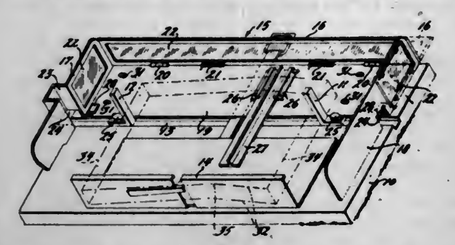
1,453,062. SURGICAL TABLE. ELBERT E. CARLE, Portland, Oreg. Filed Apr. 23, 1920. Serial No. 375,921. 7 Claims. (Cl. 45—50.)



1. In apparatus of the kind described, the combination with an operating table having an unobstructive top in operative communication with a drain, of a reservoir elevated above the table, valve controlled intercommunicating pipe connections adapted through commingling

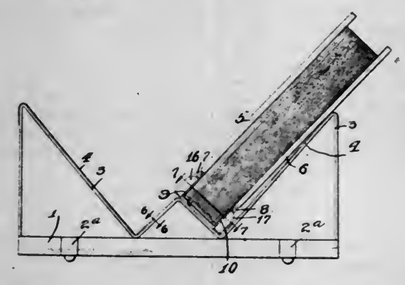
contributions at different temperatures to supply tempered water to the interior of the reservoir, and means

of service supply controllable by an operator from the foot of the table for drawing off the liquid contents of the reservoir.



1,453,063. HOT-AIR FURNACE. JOHN CHALMERS, Vancouver, British Columbia, Canada. Filed Nov. 16, 1921. Serial No. 515,607. 5 Claims. (Cl. 126—116.)

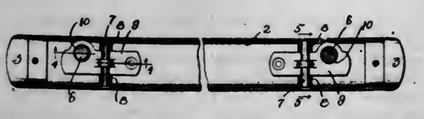
1. The combination with a heat generating chamber; and a continuous air conductor surrounding the chamber, said conductor comprising a series of longitudinal passages of segmental cross-section collectively forming an annular unit surrounding the heat generating chamber, each passage having an inlet at one end and an outlet at its opposite end, the outlet communicating with the inlet of the next succeeding passage thereby forming a continuous zigzag conductor, a blower located in position exteriorly of the furnace, and means effecting communication between the air conductor and blower for the purpose of supplying fresh air thereto.



1,453,064. SHEET GUARD FOR PLATEN PRESSES. ABRAHAM DANSIGER, New York, N. Y. Filed Nov. 19, 1921. Serial No. 516,429. 8 Claims. (Cl. 271—61.)

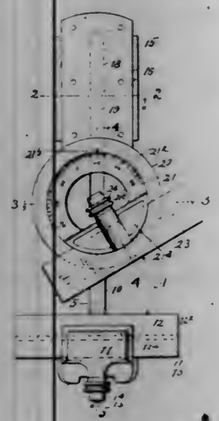
1. A guard of the character described and for the purpose specified adapted to rest upon the sheet receiving platform of a printing press so as to prevent air currents from dislodging the sheets therein contained and other

means associated with said guard, and adapted to be disposed either longitudinally or transversely thereof so as to prevent the sheets from curling at the edges.



1,453,065. COMBINED STAND AND BINDER AND METHOD OF USE. CHARLES R. FARGO, Chicago, Ill., assignor to Wilson-Jones Loose Leaf Company, Chicago, Ill., a Corporation of Illinois. Filed July 16, 1915. Serial No. 40,183. 11 Claims. (Cl. 129—1.)

6. The combination with a loose leaf ledger having separable covers, of a base, and unitary members thereon each adapted to receive said covers disposed in opposite relation to one another thereon.



11. In a temporary binder the combination of clamping members having opposed post sockets in their inner faces, means for detachably connecting said clamping members, and a removable post adapted to be engaged in said sockets in said clamping members.

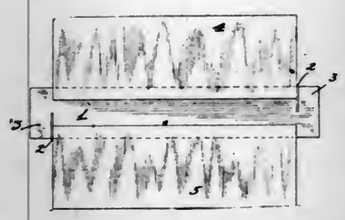
1,453,066. BINDER-LOCKING MECHANISM. CHARLES R. FARGO, Chicago, Ill., assignor to Wilson-Jones Loose Leaf Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 9, 1917. Serial No. 160,685. 2 Claims. (Cl. 129—12.)

1. In a temporary binder, a hollow binder plate having holes in its walls, impaling posts through said holes traversing said binder plate, sheet metal levers each having a hole through which one of said posts goes, pintles for said levers secured in the walls of the binder plate and crossing the same at right angles to the posts, the planes of the sheet metal levers being each parallel to its pintle, and loops struck from the sheet metal of the levers and forming holding means for pivotally securing said levers each to its pintle.

1,453,067. UNIVERSAL TAPER PROTRACTOR. GUSTAVE H. FELSKE, Cleveland, Ohio. Filed July 26, 1922. Serial No. 577,520. 3 Claims. (Cl. 33—97.)

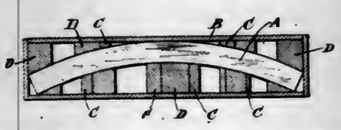
1. A universal taper protractor comprising a portable holder having a pair of blades disposed opposite each other, one blade being normally fixed, a slide movable toward and from said normally fixed blade, and a rotatable protractor carried by said slide, said protractor having a blade carrying portion in which said second blade is mounted and is adjustable in an endwise direction, and having also clamping means by which said second blade may be clamped in any adjusted position.

1,453,068. CROZE RING FOR BARRELS. STANTON W. FORSMAN, Los Angeles, Calif., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of Delaware. Filed Mar. 7, 1921. Serial No. 450,386. 1 Claim. (Cl. 217—76.)



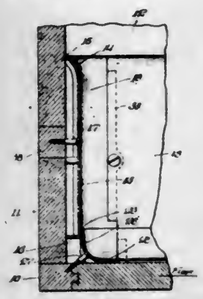
A closure heading and binding band comprising a single integral piece of sheet metal shaped to form an inwardly presented channel portion to receive a closure head, and a downwardly presented gradually widening channel portion to receive a closure wall, the outer wall of the downwardly presented gradually widening channel portion being flared outward at its lower edge.

1,453,069. MANUFACTURE OF UREA. WILHELM GAUS, WILHELM MEISER, and ERNST EBERHARDT, Ludwigshafen-on-the-Rhine, Germany, assignors to Badische Anilin- & Soda-Fabrik, Ludwigshafen-on-the-Rhine, Germany, a Corporation of Germany. Filed Aug. 1, 1921. Serial No. 489,070. 2 Claims. (Cl. 260—125.)



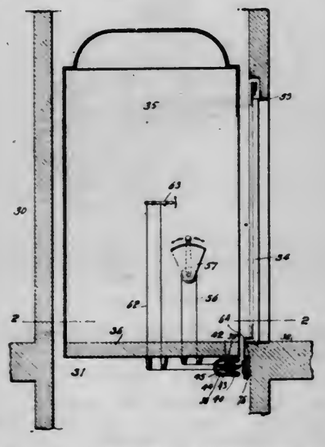
2. The process of producing urea which consists in heating an ammonium carbonate solution under pressure, liquefying the vapors to form a melt of moist ammonium carbamate and heating the melt to urea-producing temperature, while still under the pressure generated by the expelling by heat.

1,453,070. COLLAR WRAPPER. EDMUND F. JANTZ, Chicago, Ill. Filed June 6, 1921. Serial No. 475,195. 2 Claims. (Cl. 228—87.)



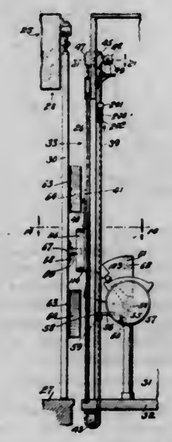
1. In a collar container, a strip of stiff wrapping material having slots near each end thereof at right angles to the length of said strip whereby said ends may be secured together, and wings of flexible wrapping material attached to the long edges of said strip and stopping at said slots, the width of said strip being greater than the height of a standard collar and the length being less than the circumference of such a collar.

1,453,071. FORMING AND FORM-RETAINING MEANS FOR PLASTIC, OR SEMIPLASTIC, OR SIMILAR MATERIALS. WILLIAM KLEEMAN, Hartwell, Cincinnati, Ohio, assignor to The Philip Carey Manufacturing Company, a Corporation of Ohio. Filed Mar. 8, 1922. Serial No. 541,888. 4 Claims. (Cl. 18—48.)



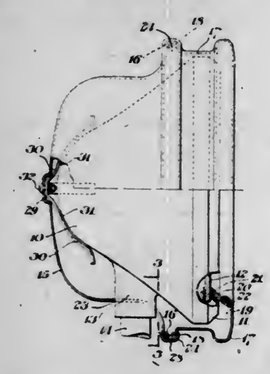
1. An arc forming and crating device, for plastic slabs, consisting of means for supporting a slab and removable wedge shaped means adapted to give the desired curve to the slab and retain same.

1,453,072. METALLIC BASEBOARD STRUCTURE. GEORGE A. KNAPP, Chicago, Ill., assignor to Knapp Brothers Manufacturing Company, a Corporation of Illinois. Filed June 23, 1921. Serial No. 479,735. 4 Claims. (Cl. 189—85.)



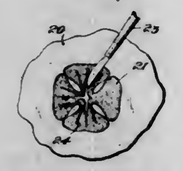
2. A metal base board comprising a face plate for attachment to a vertical wall having its lower edge spaced away from the floor and a cove strip having its upper edge overlapping the lower edge of the plate and having its lower edge in contact with a floor and secured to the floor to compensate for relative vertical displacement of the members.

1,453,073. SAFETY MECHANISM FOR ELEVATOR-SHAFT DOORS. GUSTAVE G. LAUREYNS, Newark, N. J. Filed Dec. 3, 1919. Serial No. 342,240. 18 Claims. (Cl. 187—50.)



5. In safety appliances for elevator shaft doors, elevator cars and elevator shafts, a latch for the door, motive control means on the car, magnetic means on the car for freeing said latch and rendered operable on the movement of said control means to arrest the car, a locking bar in the shaft exposed to the magnetic force and locking means on the car connected with said control means to interlock with said bar when the bar is drawn thereto by the magnetic force, for locking said control means against movement.

1,453,074. SAFETY APPLIANCE FOR ELEVATOR-CAR GATES AND ELEVATOR-SHAFT DOORS. GUSTAVE G. LAUREYNS, Newark, N. J. Filed Nov. 9, 1920, Serial No. 422,764. Renewed Dec. 8, 1922. 14 Claims. (Cl. 187—52.)

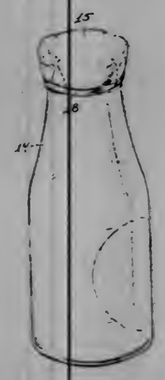


5. In mechanism of the character described comprising an elevator car having a gate, an elevator shaft, and shaft-doors at the floors of the building, locking devices at the shaft side of said doors for locking them closed, means on said gate for engaging said devices when said gate is opened and releasing them and moving said doors, respectively, to open position and holding them open, and means on the car independent of the car control mechanism for opening and closing said gate and therethrough the shaft doors, the means on said gate for engaging said locking devices comprising wings hinged to fixed abutments, sliding plates on said gate, links connecting said plates and wings and adapted to move said wings to open position as said plates are respectively moved on the opening and closing movements of said gate, means operable from the gate operating mechanism for alternately sliding said plates to open their respective wings, and a spring for closing said wings after they have performed their duty.

1,453,075. ORNAMENTAL CASING FOR AUTOMOBILE HEADLIGHTS. NORMAN J. LEIDY, Philadelphia, Pa. Filed Oct. 7, 1921. Serial No. 506,122. 7 Claims. (Cl. 240—41.)

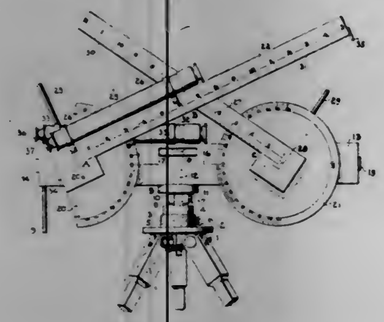
1. The combination with an automobile headlight including a casing, of an auxiliary casing surrounding and supported by the rear portion of said headlight casing, a ring surrounding and bearing against the front portion of said headlight casing, and means for connecting said ring and auxiliary casing.

1,453,076. PROCESS FOR ORNAMENTING SURFACES. ARTHUR H. LEVINE, New York, N. Y. Filed Sept. 2, 1921. Serial No. 497,938. 3 Claims. (Cl. 41—29.)



1. In the art of ornamenting surfaces, the process of producing the design by the use of a "resist" which comprises the steps of forming the gross design by deposition of the resist and forming the finer design portions by removing portions of the resist so deposited.

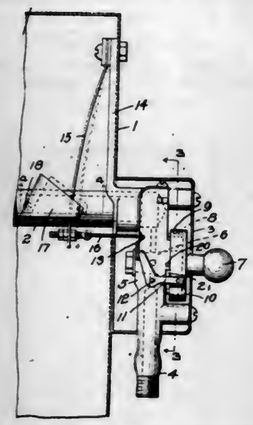
1,453,077. CLOSURE FOR CONTAINERS. WESLEY W. MASON, Baltimore, Md. Filed Jan. 19, 1922. Serial No. 530,324. 4 Claims. (Cl. 215—45.)



1. A closure for containers comprising a non-resilient flexible covering to seat over the mouth of a container and extend downwardly from said mouth in the form of a skirt or flange and a foldable non-resilient metallic

element attached to and carried by the said skirt or flange and foldable with said skirt or flange when the latter is contracted beneath the closure-mouth,—the folding of the metallic element producing a shortening there-

of, said metallic element having the characteristic of retaining substantially the folded shape to which it is bent whereby its folds will hold the contracted skirt or flange in close engagement with the container below the mouth of the latter.

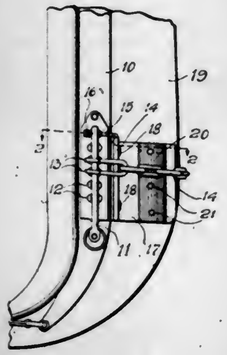


1,453,078. INSTRUMENT FOR THE SURVEY AND SOLUTION OF PLANE TRIANGLES IN FIELD WORK. WILLIAM S. MOSES, Onamia, Minn. Filed Aug. 22, 1921. Serial No. 494,200. 8 Claims. (Cl. 33—67.)

1. A surveying instrument comprising, in combination, a base-line bar, graduated arms pivotally mounted at spaced fixed points on the base-line bar, the distance between said points representing a unit base of a numerical triangle, the other two sides of the triangle being formed by the adjacent edges of the pivoted arms, means for rotating the pivoted arms, and telescopes one of which is collimated with the base-line bar and the other with a pivoted arm.

1,453,079. SAFETY VALVE. ROBERT E. NEWELL, Irwin, Pa. Filed Sept. 20, 1919. Serial No. 325,206. 9 Claims. (Cl. 67—116.)

1. In combination with a fuel burner, a valve, a thermostat controlling said valve and a shield adapted to concentrate the heat of said burner on said thermostat until the latter is heated and then to move with said

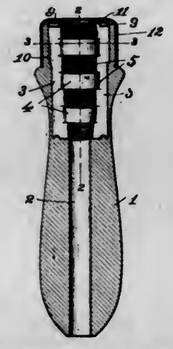


thermostat to a position where said thermostat will be heated by radiation only.

1,453,080. SOLDERING FLUX. HARRY A. PALLADY, Seattle, Wash. Filed Aug. 21, 1922. Serial No. 583,366. 1 Claim. (Cl. 148—23.)

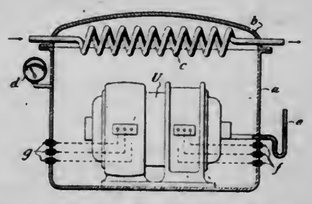
A soldering flux comprising zinc chloride 44.44%, tin amalgamated 33.33%, sal ammoniac 21.90% and glycerine .33%.

1,453,081. HAME. ROAM PALMORE, Rison, Ark. Filed Apr. 17, 1922. Serial No. 553,536. 1 Claim. (Cl. 54—30.)



The combination with a hame of a metallic wear bar means to attach the wear bar removably to the hame in such manner that the edge of the wear bar extends beyond the lines of the hame, a flexible sheet rigidly secured to the bar, and a metallic wear plate permanently secured to the flexible sheet and spaced from the wear bar in position to receive the wear of the trace carried by the hame in the usual manner.

1,453,082. TOOL HANDLE. HEYMAN ROSENBERG, New York, N. Y. Filed Dec. 17, 1921. Serial No. 522,995. 5 Claims. (Cl. 279—99.)



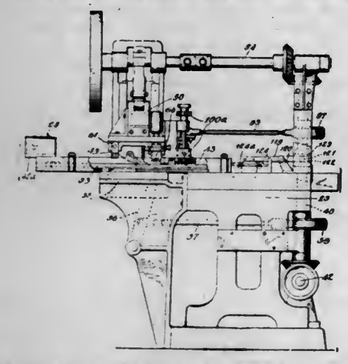
1. A tool handle comprising a body and an anchoring sleeve engaging the body and formed from oppositely-

disposed outstanding strips of a single sheet of material, the strips being curved for jointly forming substantially

the equivalent of a sleeve and being inclined at an angle to the planes of the faces of the sheet of material for giving a taper to the sleeve.

1,453,083. ELECTRIC MACHINE. MAX SCHULER, Neumuhlen, near Kiel, Germany, assignor to Anschutz & Co., Neumuhlen, near Kiel, Germany. Filed Oct. 25, 1916. Serial No. 127,682. 1 Claim. (Cl. 171—252.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

In combination, a casing having an electric machine therein; hydrogen gas in said casing as a cooling medium; and means within said casing for cooling the hydrogen.

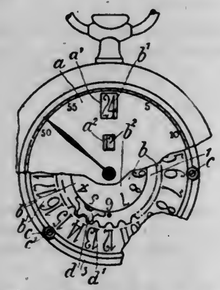


1,453,084. LONG-SPAN BRIDGE. JOSEPH B. STRAUSS, Chicago, Ill. Filed Dec. 27, 1921. Serial No. 524,832. 9 Claims. (Cl. 14—19.)

1. A bridge comprising separated cantilever arms extending towards each other and over the space to be spanned and terminating above the floor of the bridge, anchor cantilever arms extending from the supports of the first-named arms to the shore piers, and cables suspended between and secured to the extremities of said first-named arms, said cables supporting and extending over, at least one-half the total length of the span.

1,453,085. PINTLE-INSERTING MACHINE. CHARLES V. STRICKLAND, Winston-Salem, N. C., assignor to R. J. Reynolds Tobacco Company, Winston-Salem, N. C., a Corporation of New Jersey. Original application filed July 29, 1919, Serial No. 314,013. Divided and this application filed June 22, 1921. Serial No. 479,585. 10 Claims. (Cl. 29—11.)

1. In a machine of the class described, the combination with a container body forming machine having a guideway, of a blank conveyor adapted to deliver pintled



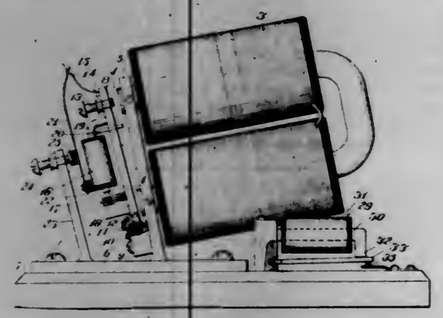
blanks to said guideway, and means for attaching pintles to blanks on said conveyor.

1,453,086. TIME INDICATOR. ANDRÉ VARAUD, Vesenaz, near Geneva, Switzerland, assignor to Société Anonyme d'Horlogerie et Bijouterie de Genève, Geneva, Switzerland, a Company of Switzerland. Original application filed Aug. 11, 1920, Serial No. 402,920. Divided and this application filed Nov. 5, 1921. Serial No. 513,120½. 12 Claims. (Cl. 58—128.)

1. In a time indicator and in combination with a casing and a motor mechanism, a fixed dial having an opening therein, a revoluble dial having chronometric indications thereon visible through the opening in the fixed dial, a cylinder escapement for controlling the movement of the revoluble dial, a cannon pinion, and means operated by the cannon pinion for turning the revoluble dial a predetermined portion of a revolution when released by the said escapement.

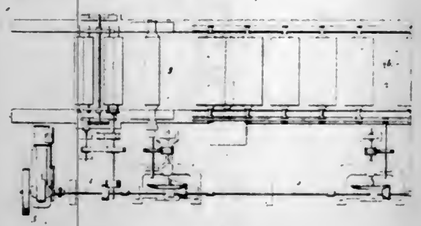
1,453,087. TIME INDICATOR. ANDRÉ VARAUD, Vesenaz, near Geneva, Switzerland, assignor to The Société Anonyme d'Horlogerie et Bijouterie de Genève, Geneva, Canton of Geneva, Switzerland, a Company of Switzerland. Original application filed Aug. 11, 1920, Serial No. 402,920. Divided and this application filed Nov. 5, 1921. Serial No. 513,121½. 8 Claims. (Cl. 58—128.)

1. In a time indicator and in combination with a casing and a motor mechanism, a fixed dial having an



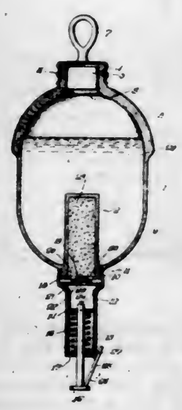
opening therein, a revoluble dial having chronometric indications thereon visible through the opening in the fixed dial, a cannon pinion, an escapement wheel, an escapement anchor, means actuated from the cannon pinion for operating the escapement anchor in one direction, yielding means for actuating the escapement anchor in the opposite direction, and means for moving the said revoluble dial a predetermined portion of a revolution when the said escapement anchor releases the said escapement wheel.

1,453,088. CHAIN LINK. JOSEPH E. BACHMAN and RAY A. BACHMAN, Bethlehem, Pa. Filed Dec. 3, 1921. Serial No. 519,795. 2 Claims. (Cl. 74—32.)



1. A chain including a plurality of solid links, and a plurality of open links arranged in alternate relation, a pair of headed studs formed at each end of each solid link, each open link comprising a pair of side bars, each side bar having an elongated, semi-circular ended opening at each end to receive the headed studs, and said openings being countersunk for a portion of their circumference to provide recesses in which to receive these heads, the countersunk portion having a diameter slightly greater than the major length of the stud head.

1,453,089. ELECTRIC-CIRCUIT CONTROLLER. STANLEY C. BRYANT, Chicago, Ill. Filed Aug. 6, 1921. Serial No. 490,398. 3 Claims. (Cl. 200—90.)

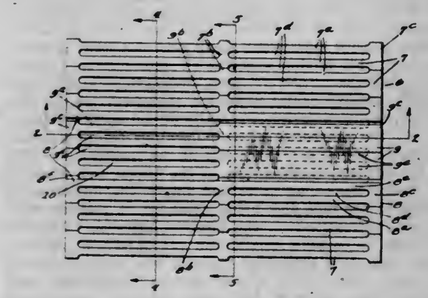


3. An electric circuit controller comprising an electromagnet, an armature therefor adapted to swing away from the poles of said magnet by gravity when said magnet is deenergized, an auxiliary electromagnet carried by said armature and having a pole adapted to magnetically engage said armature, the pole of said auxiliary magnet being adapted to swing away from said armature by gravity, means for moving the pole of said auxiliary magnet out of engagement with said armature when the latter reaches a predetermined position under the influence of said main electromagnet, and switch members carried by said armature and by said auxiliary electromagnet, said switch members being arranged to be in operative contact with each other when the pole of said auxiliary magnet engages said armature, and to be separated from each other when said pole is disengaged from said armature.

1,453,090. PAPER-MAKING MACHINE. WILLIS S. CRANDELL, Elsmere, N. Y., assignor to A. P. W. Paper Co., Albany, N. Y., a Corporation of New York. Filed May 9, 1919. Serial No. 295,828. 3 Claims. (Cl. 92—38.)

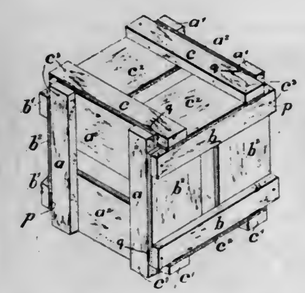
1. In a paper making machine, a plurality of machine elements adapted to perform successive operations in making a paper web, and an adjustable mechanism for driving said elements at the desired relative speeds, said mechanism comprising a line shaft extending longitudinally of the machine, friction cones carried by said line shaft respectively adjacent said elements, means permitting each of said cones to slide longitudinally relative to the line shaft as a whole, friction gears respectively engaging said cones, means for transmitting motion from said gears to their respective machine elements, and means for adjusting the longitudinal position of each of said cones relative to the line shaft as a whole, to vary the speed ratio between the line shaft and corresponding machine elements.

1,453,091. MEANS FOR EXTINGUISHING FIRE. HECTOR E. DELBARE, Chicago, Ill. Filed Jan. 3, 1921. Serial No. 434,625. 1 Claim. (Cl. 169—28.)



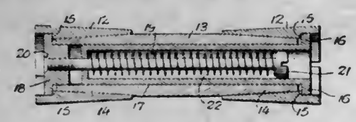
A fire extinguisher comprising a glass receptacle to contain extinguishing material having an integral cylinder to contain an explosive, open at its outer end and having a neck around the opening; a metal cylinder secured to the neck; a pair of disks having perforations out of register, adjacent the neck and within the metal cylinder; a percussion-cap within the metal cylinder and between the disks; a striker-pin in said metal cylinder arranged to pass thru one said disk; a spring to potentiate said pin and within the metal cylinder, and a low melting solder to hold the pin retracted.

1,453,092. CUSHION WHEEL. PHILIP H. DORSEY, Algiers, La. Filed Oct. 2, 1920. Serial No. 414,295. 1 Claim. (Cl. 152—48.)



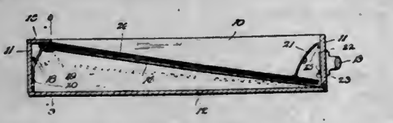
A resilient wheel comprising a hub-block provided with a series of pockets in combination with a series of compression blocks slidably mounted in said pockets, a post carried by each block, resilient means acting oppositely on said compression blocks, a felly, a driving ring extending radially inward therefrom and disposed midway between the opposite sides of said felly, a plurality of spoke sections alternately radially oppositely offset, pivotal connections between one end of each of said spoke sections and said drive ring, pivotal connections between the opposite end of each spoke section and one of the aforesaid posts, rings connected to said felly and extending radially inward and having their inner edges bevelled to provide clearance for the aforesaid spoke section in their flexing movements, annular casing plates slidably engaging said hub-block, each said plate being provided with a large central opening permitting easy access to the hub cap and end of the axle while all parts of the wheel and casing are in assembled relation, and connections between said casing plates and the aforesaid rings.

1,453,093. FURNACE GRATE. GEORGE C. EHRBAR, Cleveland, Ohio. Filed June 29, 1921. Serial No. 481,290. 1 Claim. (Cl. 126—152.)



A furnace grate comprising side sections and an intermediate section therebetween, each side section consisting of spaced bars provided with spacing lugs at the ends and the middle thereof, the intermediate section being depressed thruout its entire length below the level of the side sections and consisting of bars having depending cross webs 9^b at the middle thereof, that part of the bars in front of said webs being spaced apart, and that part of the bars in the rear of said webs having laterally extending tops 9^c meeting to form a closed rear part of said intermediate section.

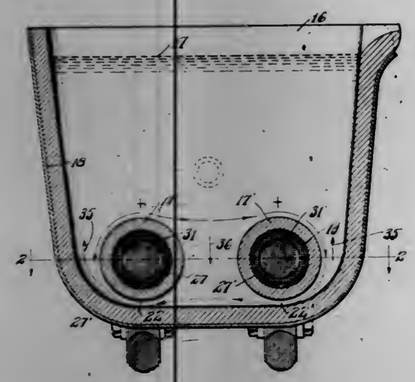
1,453,094. PACKING CASE. ROBERT HENRY ELLIS and FRANK SIMPER, Fremantle, Western Australia, Australia. Filed Sept. 11, 1922. Serial No. 587,536. 1 Claim. (Cl. 217—12.)



A packing case comprising frame members, wall members and straps; said frame members extending across the outside of the ends of wall members on all sides of the case and being inset adjacent their ends, said frame members holding the wall members against the edges of frame members on adjacent sides, said straps running parallel with said frame members on the opposite sides of said wall members and lying in the insets in the ends of the frame members.

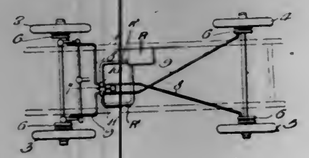
1,453,095. PISTON PIN. JOHN C. ENGSTRAND, Chicago, Ill. Filed July 27, 1922. Serial No. 577,903. 4 Claims. (Cl. 74—108.)

1. The combination with a piston having inwardly and oppositely tapered diametrical bearing bores, a wrist pin therein having oppositely tapered bushings mounted upon its opposite ends and disposed within the said bores, and means also supported by the said pin for automatically adjusting the bushings as and for the purpose set forth.



1,453,096. LETTER FILE. EDWARD ERICKSON, Fresno, Calif. Filed Apr. 18, 1922. Serial No. 554,941. 3 Claims. (Cl. 129—35.)

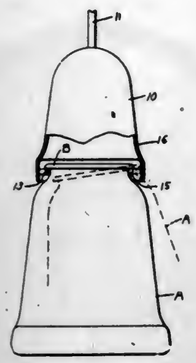
1. A device of the character described including a casing, a cross strip carried thereby, a clamping plate mounted at one end within the casing to extend at its opposite end beneath said strip, a spring secured in the casing below the latter end of the plate and bearing



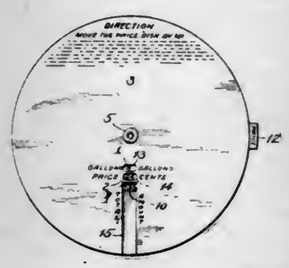
against the same to urge it toward the strip, and a spring mounted upon the casing above the opposite end of the plate to bear against a sheet overlying the plate.

1,453,097. MULTIPLE-UNIT INDUCTION FURNACE. CHARLES B. FOLEY, Bristol, Conn., assignor to Charles B. Foley, Inc., New York, N. Y., a Corporation of New York. Original application filed Dec. 28, 1916, Serial No. 139,437. Divided and this application filed Mar. 13, 1920. Serial No. 365,636. 8 Claims. (Cl. 204—64.)

1. An electric furnace, comprising a receptacle of refractory material, having interior walls forming channels, and independent current-inducing means linked with said channels said current inducing means being so connected as to produce secondary electromotive forces of the same direction.



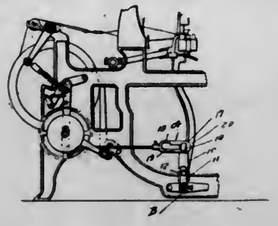
1,453,098. PRESSURE EQUALIZER FOR HYDRAULIC BRAKES. OSCAR J. FROCK, Wilmington, Del. Filed Jan. 27, 1922. Serial No. 532,088. 11 Claims. (Cl. 188—152.)



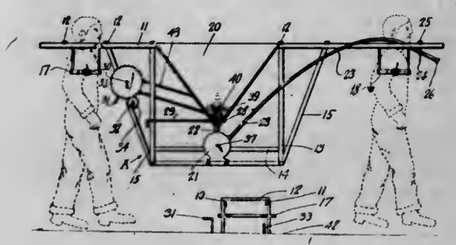
1. A brake structure comprising fluid brakes, and pressure applying means comprising separate cylinders, separate pipes connecting the brakes in pairs and connecting each cylinder with a pair of brakes to be controlled thereby, pistons in said cylinders, and common actuating means for causing movement of said pistons in an operative direction.

1,453,099. SHADE HOLDER. THEOPHILE EUPHRAT, Mount Vernon, N. Y. Filed Apr. 13, 1922. Serial No. 552,096. 4 Claims. (Cl. 240—111.)

1. A holder for a shade, comprising a fixture having an open end, and a spring secured within said end to removably retain a shade, said spring having an intermediate portion secured to the fixture and disconnected and spaced apart end portions extending from said intermediate portion and spaced from the fixture, the intermediate and end portions forming the shade support, whereby a shade can be inserted in said fixture and manipulated to swing said spring ends apart and toward the fixture when said shade is to be inserted in or removed from the fixture.

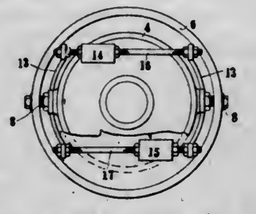


1,453,100. CALCULATING DEVICE. FRED FULGORA, Pittsburgh, Pa. Filed Jan. 17, 1922. Serial No. 529,834. 1 Claim. (Cl. 235—67.)



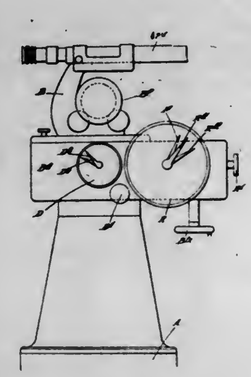
A calculator comprising a plurality of concentric pivotally-connected disks, the lowest disk having upon its face radial columns each containing a series of total cost indications and having a circular series of quantity designations spaced inwardly from the columns and each radially alined with one of the columns, an intermediate disk having an arcuate slot registering with the quantity designations on the first-mentioned disk and also having a series of price indications along said slot, said intermediate disk also having a series of slots therein radially alined with the respective price designations and at successively greater radial distances therefrom, and a facing disk having a series of radially alined openings therethrough, the innermost of said openings being arranged to register with the arcuate slot of the intermediate disk and the quantity designations on the lowest disk whereby said designations may be viewed singly, the intermediate opening in the face disk being arranged to register with the price indications on the intermediate disk to permit the latter to be read singly, and the outermost opening in the face disk extending radially and accommodating the range of the series of slots in the intermediate disk whereby when selected price and quantity designations are brought to view through the inner and intermediate openings of the face disk one of the series of slots in the intermediate disk will be caused to register with the outermost opening in the face disk and a total cost designation will be displayed through the registering opening and slot.

1,453,101. YARN LET-OFF CONNECTION. JOHN W. GILES, Greer, S. C. Filed Apr. 10, 1922. Serial No. 551,220. 2 Claims. (Cl. 139—59.)



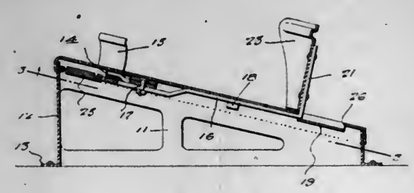
1. In combination with a let-off rod having a slot therethrough, an arm to drive said rod having a head provided with a shank and with a lug, said slot being of a size to permit passage of the lug therethrough in one position to facilitate attachment and detachment, said lug adapted to normally prevent detachment of the rod and arm, and said rod and said slot having a thickened portion to accommodate wear imposed by operation of the shank.

1,453,102. POWDER DUSTER. WILLIAM WILKINSON GOODE, Arlington, Ala. Filed May 28, 1920. Serial No. 385,052. 4 Claims. (Cl. 43—148.)



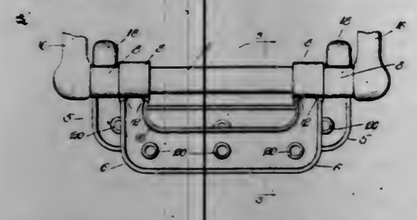
3. A powder duster comprising a carrying structure including a relatively vertical frame and horizontal carrying members projecting beyond opposite sides of the frame to provide shoulder-straddling bars adjacent the upper end, a powder spraying mechanism supported in said frame and including flexible sprayers, means operable from one side of the frame for actuating the spraying mechanism, and loops depending from the shoulder bars on the opposite side of the frame for supporting the nozzle ends of the said flexible sprayers.

1,453,103. GYROSCOPIC COMPASS. ARTHUR EDGAR GOTT, Southall, England. Filed Feb. 12, 1921. Serial No. 444,313. 18 Claims. (Cl. 33—204.)



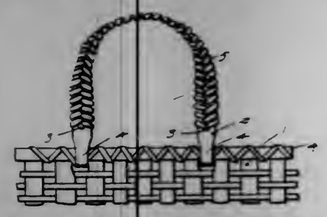
1. In a gyroscopic compass, the combination of a suspended vertical ring, a gyro case pivotally mounted therein, a gyro rotor revolubly mounted in said case and masses distributed upon the said gyro case adjustable about vertical and horizontal axes so that the maximum moment of inertia of the said case and rotor about an axis passing through the centre of gravity occurs in a vertical plane passing through the centre of gravity of the said case and rotor and containing one of the cardinal axes.

1,453,104. APPARATUS FOR USE IN THE LAYING OR SIGHTING OF ORDNANCE. PERCY WILLIS GRAY, Westminster, London, England, assignor to Vickers Limited, Westminster, England, a British Company. Filed Aug. 29, 1922. Serial No. 585,068. 10 Claims. (Cl. 235—61.)



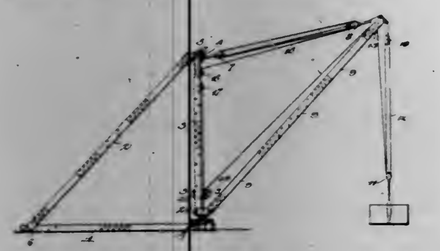
1. In a device of the type described, the combination with the training portion of a sight, of means adapted to be adjusted in accordance with the course of "own" ship, said means being actuated by the training movement of the sight.

1,453,105. BOOTJACK. WALTER C. GRUSS, Pittsburgh, Pa. Filed Sept. 29, 1922. Serial No. 591,359. 2 Claims. (Cl. 132—6.)



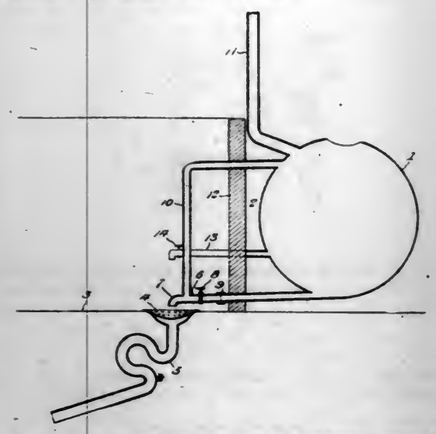
2. A boot jack comprising a foot rest, a stationary support therefor having an inclined upper edge, said foot rest having opposed slots, a bar arranged beneath the foot rest, and movable longitudinally thereof, shoe engaging members pivotally associated with said bar and movable through said slots toward and away from each other, one end of said bar extending upwardly from said foot rest, a heel engaging member secured thereto, and utilized for moving the bar in one direction, a coiled spring arranged beneath the foot rest, and normally holding the latter at the limit of its movement in the opposite direction, and a plurality of depressed portions formed on said foot rest, and constituting guides for said bar.

1,453,106. HINGE. BENJAMIN T. HAIN, Chicago, Ill., assignor to Beneke & Kropf Mfg. Co., a Corporation of Illinois. Filed Nov. 12, 1921. Serial No. 514,534. 4 Claims. (Cl. 4—18.)



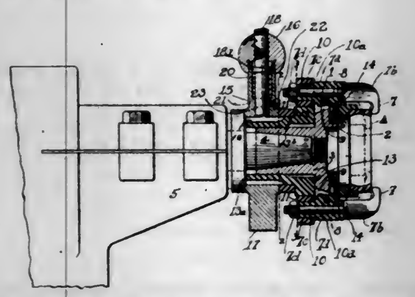
1. A hinge member comprising a flanged screw-receiving plate and an integral ligament extending from the flanged terminals thereof, having a head at its end with notches behind the head to receive part of the inturned flanges when the ligament is bent into a ring.

1,453,107. HANDLE FOR BASKETS, SATCHELS, AND LIKE CONTAINERS. WESLEY HAMM, Dolgeville, N. Y. Filed Apr. 10, 1922. Serial No. 551,330. 2 Claims. (Cl. 217—125.)



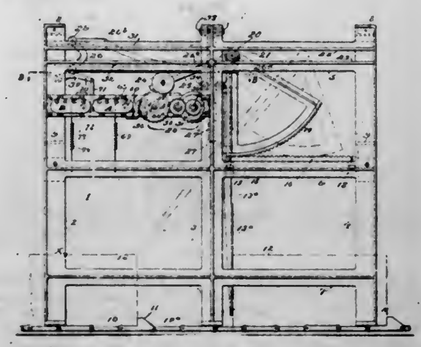
1. A handle of the character and for the purpose herein stated, the same comprising a member folded upon itself and having the fold or bight engaging the article to which the handle is applied, and having the portions adjacent the fold divided, and a binder woven about the divided portions and serving to connect the same and the folded parts.

1,453,108. DERRICK. HANS H. H. HARKLOW, Freeport, N. Y. Filed Aug. 31, 1920. Serial No. 407,140. 4 Claims. (Cl. 212—58.)



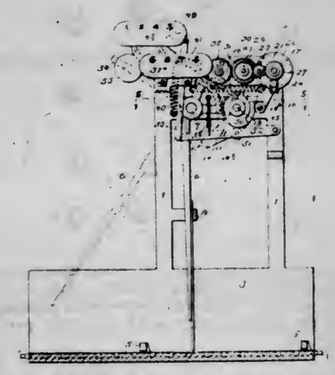
1. In a device of the class described, the combination of a plurality of beams secured together in pairs and in spaced relationship with each other, a socket member supported by said beams, a bearing supported by said socket member, a mast support rotatably supported by said bearing and provided with an element adapted to project into the socket of said socket member, and mechanical means for driving said mast support.

1,453,109. CISTERN. ROBERT W. HATHAWAY, Springfield, Ohio, assignor of one-half to Homer Powell, Springfield, Ohio. Filed July 18, 1921. Serial No. 485,491. 4 Claims. (Cl. 137—79.)



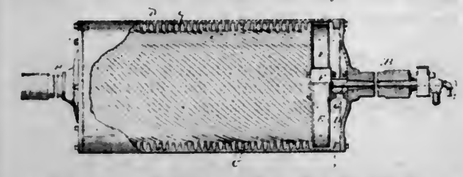
4. A cistern construction and arrangement comprising a cistern body arranged in the earth adjacent to one wall of a cellar, a drain pipe leading from the lower portion of the cistern body and provided with a valve and adapted to be connected outwardly beyond the valve with a sewer, and an overflow pipe leading from the upper portion of the cistern body to the drain pipe at a point outwardly beyond the valve of the latter; the valved portion of the drain pipe being located in the cellar.

1,453,110. CHUCK. CHARLES HIRD, Hartford, Conn., assignor to S. K. F. Ball Bearing Company, a Corporation of Connecticut. Filed Sept. 6, 1919. Serial No. 322,006. 3 Claims. (Cl. 279—106.)



1. In a chuck, the combination of a rotary body provided with a work seat, a work clamping jaw pivoted between its ends on said body to move radially at its inner end in clamping and releasing the work at its outer end, a jaw actuating member movable circumferentially relatively to the body and provided with a peripheral cam so formed that when the actuating member is moved circumferentially in one direction the cam will engage and positively move the inner end of the jaw radially outward and cause its outer end to positively clamp the work, and when moved in the opposite direction the cam will relieve the inner end of the jaw and permit its outer end to release the work, a controlling device for the jaw actuating member in relation to which said member is freely rotatable with the chuck body, and means for releasably engaging the controlling device with the jaw actuating member at will.

1,453,111. MECHANISM FOR MEASURING THE CUBIC CONTENTS OF BODIES. PAUL V. HOLLENBECK, New York, N. Y., assignor to International Paper Company, a Corporation of New York. Filed Apr. 19, 1921. Serial No. 462,680. 16 Claims. (Cl. 33—142.)

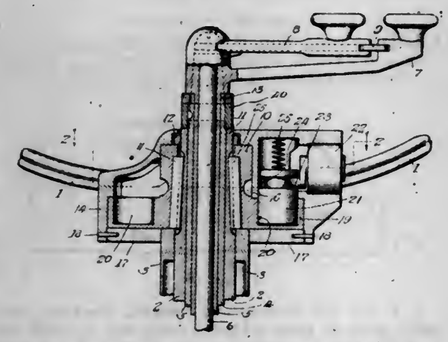


1. In a mechanism of the type described, the combination of a movable member adapted to be displaced by passing bodies to positions determined by the diameters of the respective bodies, means whereby said member is moved bodily in a direction opposite its displaced movement, a registering mechanism for registering the cubic contents of the bodies, and means operated by the movable member and operatively connected with the registering mechanism to actuate the same.

1,453,112. MECHANISM FOR MEASURING CUBIC CONTENTS OF BODIES. PAUL V. HOLLENBECK, New York, N. Y., assignor to International Paper Company, a Corporation of New York. Filed June 4, 1920, Serial No. 386,611. Renewed Oct. 26, 1922. Serial No. 597,137. 18 Claims. (Cl. 33—142.)

1. In a mechanism of the the type described, the combination of a movable member adapted to be displaced by passing bodies to positions determined by the diameters of the respective bodies, a registering mechanism for registering the cubic contents of the bodies, and means operated by the displaced movements of the movable member and operatively connected with said registering mechanism to actuate the same, said means being so formed in relation to the registering mechanism, that for bodies of a given length, the displaced movements of the movable member will operate said mechanism to register the cubic contents of the bodies.

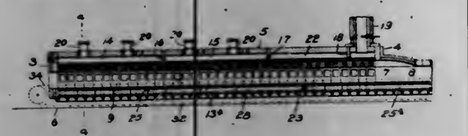
1,453,113. DRYING CYLINDER. EDWARD HUTCHINS, New York, N. Y., assignor to International Paper Company, a Corporation of New York. Filed Feb. 18, 1922. Serial No. 537,378. 6 Claims. (Cl. 34—4.)



1. A drying cylinder adapted to have heating steam introduced therein, said cylinder being provided on its interior with heat conducting projections formed and arranged to be exposed to direct contact with the steam and to diffuse the heat of the steam throughout the external surface of the cylinder.

1,453,114. AIRPLANE-RIB CONSTRUCTION. JOHN W. RAPP, Flushing, and JOSEPH VANORIO, Brooklyn, N. Y.; said Vanorio assignor to said Rapp; William C. Lange temporary administrator of said John W. Rapp, deceased. Filed Dec. 19, 1917. Serial No. 207,832. 2 Claims. (Cl. 244—31.)

1. An aerofoil frame construction embodying marginal frame members and ribs secured in said marginal frame, each comprising top and bottom T-shaped members formed of a single strip of sheet metal perforated between its side edges and bent to provide an intermediate flat outer portion, return portions extending inwardly toward the center line of the strip and marginal flanges extending parallel to each other to form a seat therebetween; diagonal bracing members, each embossed along its longitudinal axis and arranged along the longitudinal axes of the said T-shaped members in single pairs, one member only of each pair crossing another, and having opposite ends seated within and abutting at opposite surfaces against the parallel marginal flanges of said T-shaped members and also having a connection to said parallel flanges.

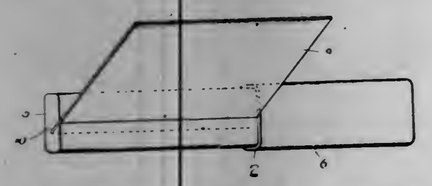


1,453,115. LOCK. SAMUEL L. TERRY, Chicago, Ill., assignor, by mesne assignments, to Terry-McCluskey Auto Lock Company, a Corporation of Illinois. Filed Feb. 1, 1910. Serial No. 274,469. 6 Claims. (Cl. 70—129.)

1. An automobile lock having a socketed head for attachment to the steering post of an automobile, a nut

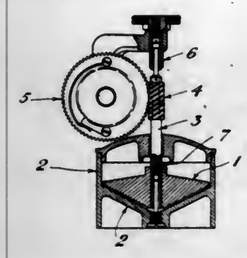
for anchoring the head on the post, a steering wheel having at its axis a housing which encloses and journals on the head and also prevents access to the nut, lock mechanism for operatively connecting and disconnecting the wheel and head, and means for preventing the removal of the housing from the head.

1,453,116. ANNEALING FURNACE OR LEER. WALTER O. AMSLER, Pittsburgh, Pa. Filed May 21, 1920. Serial No. 383,256. 12 Claims. (Cl. 49—47.)



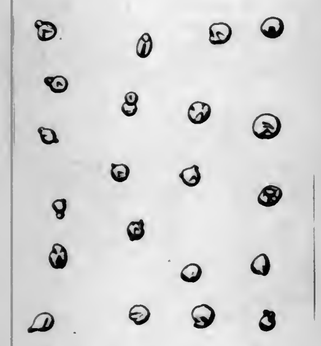
6. In an annealing furnace or leer, an annealing chamber, a tunnel in communication with the annealing chamber, a chimney disposed between the annealing chamber and tunnel, and longitudinally extending heating flues disposed below the annealing chamber and extending beyond the chimney and into the tunnel structure and exteriorly of the tunnel, said flues having connections with the chimney and arranged to produce a flow of gases from the tunnel back to the chimney.

1,453,117. DRAW CHUCK ATTACHMENT. LEONARD H. ANDERSON, Bridgeport, Conn. Filed Feb. 24, 1921. Serial No. 447,431. 1 Claim. (Cl. 279—53.)



A draw chuck attachment comprising a tapered socket member adapted to be inserted in the tapered mouth of a rotating spindle, said socket member having a recessed mouth to form a bearing and a reduced threaded opening extending inwardly therefrom, and a beveled seat at its outer end, a shell having a cylindrical body journaled in the socket bearing and a head portion to form means for rotating the shell, said shell having a bevel portion to register with the beveled seat of the socket and a flared mouth, combined with a tool holding spring chuck mounted in the shell having a threaded end engaging the threaded opening of the socket and a tapered head cooperating with said flared mouth, and means for rotatably connecting the chuck with the shell.

1,453,118. TOOL FOR FORMING INSULATORS. VINCENT G. APPLE, Dayton, Ohio. Filed Apr. 4, 1921. Serial No. 458,590. 2 Claims. (Cl. 18—35.)

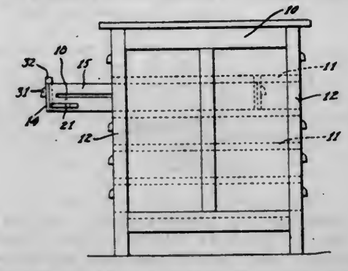


1. A tool for forming and inserting armature insulators made of sheet material, comprising a shank and a handle with a shoulder at the junction of the members, said shank being transversely slotted to receive the edge of the sheet.

1,453,119. SPEED-CONTROLLING DEVICE. ARCHIBALD BARR and WILLIAM STROUD, Glasgow, Scotland, assignors to Barr and Stroud, Limited, Glasgow, Scotland. Filed Feb. 10, 1921. Serial No. 443,977. 5 Claims. (Cl. 188—90.)

1. A speed controlling device comprising a rotatable member rotatable about a vertical axis and a stationary member having complementary surface portions the lower of which is recessed in close proximity forming a receptacle such that liquid within the receptacle is constrained by the surface portions into the form of a thin lamina and means for effecting relative axial adjustment of the members for varying the moment of the liquid friction involving variation of the thickness of the lamina, variation of the area of contact of the lamina with one of the members and variation of the effective radius at which the liquid acts upon the rotating member.

1,453,120. STEEL PEB. HERMANN LEROY BEAVER, Philadelphia, Pa. Filed Apr. 15, 1922. Serial No. 552,977. 2 Claims. Cl. 51—279.)



1. A metal polishing material comprising heteromorphic, asymmetrical polished metallic units, a portion of which have projections adapted to make polishing contact with the angular surfaces of the metal part to be polished.

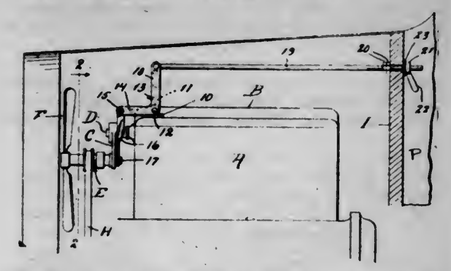
1,453,121. DRAWER. ARTHUR M. BENNER, Olympia, Wash. Filed Nov. 29, 1920. Serial No. 427,066. 1 Claim. (Cl. 45—94.)

An article of furniture embodying a casing consisting of top, bottom and side walls, slotted guides arranged in parallel relation within the side walls, drawers slidingly mounted therein and capable of being pulled outward in either direction, the side members of each drawer having a longitudinally arranged groove registering with the guides of the side walls, and a block having its opposite ends extending within the guides and grooves to engage the opposite ends thereof to limit the outward movement of the drawer, and spring actuated

arms for holding the drawer in closed position, said arms having manually operated means connected thereto

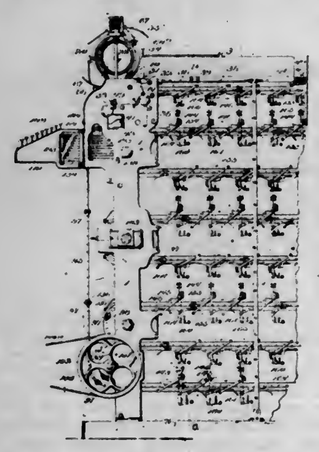
whereby the drawer may be released to permit of its being opened.

1,453,122. TROMBONE ATTACHMENT. LEON C. BENSON, Philadelphia, Pa. Filed May 1, 1922. Serial No. 557,622. 2 Claims. (Cl. 84—395.)



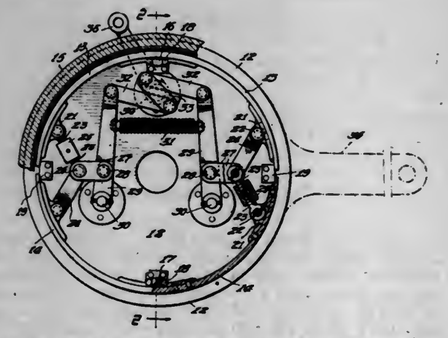
1. A counter-balance attachment for trombones comprising a substantially solid elongated body portion, axial longitudinal borings in the ends of said body portion, the inner ends whereof are screw-threaded in reverse direction, shank members for fitting in the aforesaid borings and having their inner ends reduced and screw-threaded for engagement in the aforesaid threaded counter-borings, the outer ends of said shank members being adapted for gripping engagement between opposed tubular portions of the trombone.

1,453,123. MOLD FOR RUBBER MATS, ETC. LEROY M. BICKETT, Watertown, Wis. Filed June 23, 1922. Serial No. 570,322. 5 Claims. (Cl. 18—35.)



1. A mold for rubber sheets and mats comprising a plate having base and top portions composed of yielding material, and an embedded foraminous portion composed of a material which will not expand or distort laterally under vertical pressures.

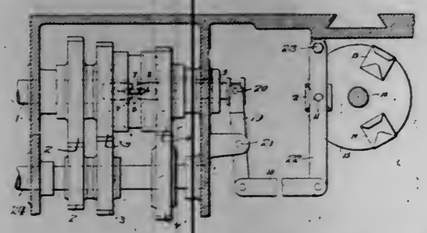
1,453,124. FAN CONTROL FOR MOTOR VEHICLES. ELBERT I. BOWN, Huron, S. Dak. Filed Dec. 17, 1921. Serial No. 523,066. 5 Claims. (Cl. 123—171.)



1. Means for controlling the temperature of internal combustion engines of vehicles comprising the combination with a fan for directing cooling air against the engine, and a drive belt for said fan driven from the engine, of a shiftable arm supporting the fan, and means operable from the cockpit, of the vehicle for shifting said arm to tension or loosen said belt.

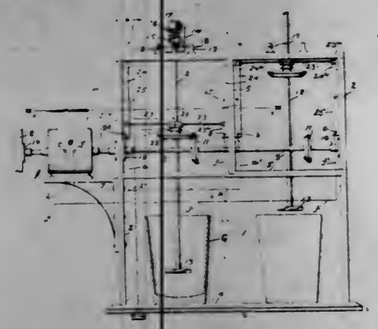
1,453,125. MAIL-DISTRIBUTING APPARATUS. ARTHUR J. BRIGGS, Syracuse, N. Y., assignor to The Auto Mail Distributer, Inc., Syracuse, N. Y., a Corporation of New York. Filed May 23, 1913, Serial No. 769,438. Renewed July 17, 1922. Serial No. 575,639. 119 Claims. (Cl. 214—11.)

1. In combination, in mail distributing apparatus, a distributing case comprising rows of boxes and having a letter passage from row to row and throughout each row, an endless letter conveyer common to all of said boxes for moving letters throughout said passage and into delivering relation with every box of every row, normally-inactive letter moving mechanism on each stroke adapted to deliver a single letter to said conveyer and then come to rest, and devices, whereby said mechanism is caused to move on a letter moving stroke, and whereby the box to which said letter will be delivered by the conveyer is predetermined.



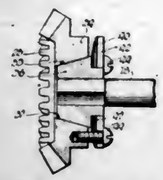
1,453,126. HUB BRAKE FOR MOTOR VEHICLES. WILLIAM GEORGE BRYAN, Sydney, New South Wales, Australia, assignor to Thomas Stuart Gurr and Percival Bernard Sheather, both of Mosman, near Sydney, New South Wales, Australia, and Cecil Roy Sweetman, Randwick, near Sydney, New South Wales, Australia. Filed Mar. 8, 1922. Serial No. 541,944. 3 Claims. (Cl. 188—78.)

3. In a brake mechanism, the combination of a pair of expansible brake shoes, a pair of toggles connected to



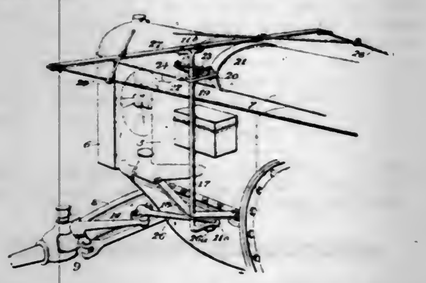
said shoes, one arm of each of said toggles comprising a turnbuckle device, means for operating said toggles to expand said shoes, and a spring acting upon the operating means for both of said toggles thereby to retire the same into inoperative position.

1,453,127. MULTISPEED GEAR FOR MACHINE TOOLS. ARTHUR BUTTERWORTH, ARTHUR BUTTERWORTH, Jr., and HAROLD BUTTERWORTH, Rochdale, England. Filed Nov. 13, 1919. Serial No. 337,843. 1 Claim. (Cl. 74—59.)



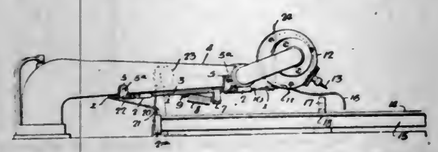
A device of the class described comprising a drive shaft, three spaced gears of varying diameter fixed thereon, a hollow driven shaft, three gears loosely mounted thereon and permanently meshing with said first three gears, the largest of said second three gears having an overruning clutch connection with said driven shaft, clutch mechanism for selectively connecting either of said two remaining loosely mounted gears to said driven shaft, said mechanism including a split-ring expanding friction lining within each gear, a pair of cam jaws arranged to operate between the free ends of each lining, the jaws of each pair being pivoted together at their outer ends and having their free ends facing an operating rod passing through said hollow driven shaft and provided with a lateral lug adapted to be selectively shifted between either pair of jaws to clutch the corresponding gear to said driven shaft.

1,453,128. DRINK MIXER. JAMES V. CARITHERS and [illegible]EY J. WILLIAMSON, Pomeroy, Wash. Filed Sept. [illegible], 1922. Serial No. 589,439. 5 Claims. (Cl. 259—131.)



1. In a drink mixer, a casing having a horizontal wall, a power shaft journaled above the wall, a plurality of vertically slidable perpendicular mixing shafts associated with the power shaft and extending through the horizontal wall of the casing, stationary bearings through which the mixing shafts are slidable and a mixer carried by the lower end of each shaft and constantly remaining below the horizontal wall.

1,453,129. CLUTCH FOR WASHING MACHINES. WALTER J. CONLON, Oak Park, Ill. Filed Aug. 14, 1919. Serial No. 317,403. 5 Claims. (Cl. 64—99.)

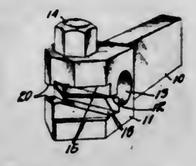


4. In combination, a driving element, a hub on said driving element, a conical bore in said hub, a conical plug engaging in said conical bore, said plug having a reduced hub extension forming an abutment shoulder, a circular pressure plate rotatably mounted on said reduced hub extension, a cup-shaped spring disk engaging said abutment shoulder and said pressure plate, said spring disk having recesses in its periphery thereby forming compression arms, said compression arms having holes therein, screws passing freely thru said pressure plate and thru the holes in said compression arms and tapping into the hub on said driving element, said screws being operable to adjust the compression pressure on said spring disk, and a driven shaft having rigid connection with said conical plug.

1,453,130. DISTANT CONTROL FOR TRACTORS. FRANK T. COURT, Walker, Iowa. Filed May 12, 1922. Serial No. 560,508. 2 Claims. (Cl. 180—77.)

1. Tractor control apparatus operable from a distance, comprising, in combination with the front axle steering-gear, a cranked upright shaft, bearing therefor, a link connecting its crank with the steering-gear, a right-and-left cross-lever attached to the shaft, pull-ropes attached to the arms of the lever, and strut-rods connecting with said ropes some distance from the arms, the struts being slidably connected with the lever arms, but limited in their inward movement, whereby leverage may always be had on the farther arm, while the nearer one may be practically in line with its pull-rope.

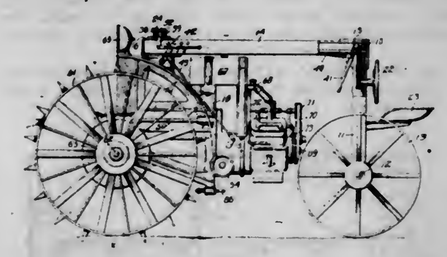
1,453,131. STOP DEVICE FOR TALKING MACHINES. EDWARD GRIEGER, Philadelphia, Pa. Filed Apr. 19, 1920. Serial No. 374,908. 10 Claims. (Cl. 274—15.)



1. In a talking machine, the combination with a rotatable carriage adapted to hold a record, of a tone arm

carrying a stylus, a member slidably mounted upon and solely supported by the tone arm and having portions adapted respectively for raising the stylus clear of the record and to engage the carriage, a spring tending to shift the member into operating position in which the stylus is elevated by one of said portions and the carriage engaged by the other, means for normally retaining the said member in inoperative position, and means for releasing said member when the stylus has reached a predetermined point upon the record to permit the spring to shift the member into operating position.

1,453,132. PROCESS FOR THE RECOVERY OF PURE ALKALIES FROM IMPURE LYES. KARL HEINEMANN, Heidenau, Germany. Filed Nov. 8, 1920. Serial No. 422,734. 1 Claim. (Cl. 204—58.)

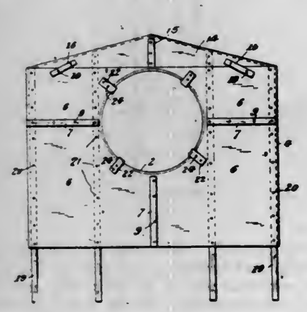


The herein described process for the recovery of pure caustic alkalies from impure alkali lyes, consisting in electrolyzing the said impure lyes, mercury cathodes being used, and decomposing the resulting alkali amalgam by water.

1,453,133. LATHE TOOL. JOHN O. HEINZE, Lakeland, Fla. Filed May 27, 1921. Serial No. 473,128. 6 Claims. (Cl. 29—96.)

1. A lathe tool comprising a shank, a head thereon, said head being bifurcated, means for drawing together the sides of the head, the opposing faces of such sides being formed to engage directly with and to hold in place a cylindrical boring bar or cutting blades of various widths, substantially as set forth.

1,453,134. TRACTOR. JOHN O. HEINZE, Lakeland, Fla. Filed June 18, 1921. Serial No. 478,612. 19 Claims. (Cl. 180—26.)

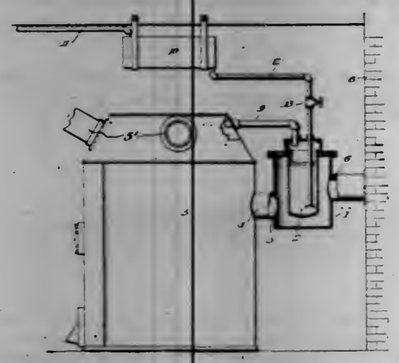


1. In a tractor, a traction wheel, a pair of spaced supporting wheels, a main frame having a U-shaped axle for the supporting wheels, a pair of horizontal converging members secured to the shoulders of said axle, a bearing supported by the converging members at their forward ends, an auxiliary frame supported on said traction wheel for carrying the engine and related parts, a vertical post on said auxiliary frame extending into said bearing on the main frame, an operator's seat suspended midway of the U-shaped axle, and a steering wheel and engine controlling devices carried by said axle adjacent to said seat, whereby a clearance for growing crops is provided beneath said main frame and at each side of said traction wheel from end to end of the tractor, substantially as set forth.

1,453,135. FLOATING FISH TRAP. AUGUST L. HERMANSON, Nome, Territory of Alaska. Filed July 23, 1920. Serial No. 398,356. 3 Claims. (Cl. 43—100.)

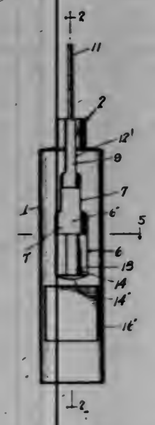
3. A floating fish trap comprising an elongated trap body of cylindrical formation terminating at one end in a substantially rectangular funnel and at the opposite end in a series of flexible loops, a plurality of successively arranged entrance funnels within the trap body, anchoring means at opposite lower corners of the rectangular funnel, stretching lines including floats connected with the said anchored corners of the rectangular funnel for stretching the lead line thereof, a shore lead connected with the said rectangular funnel and having anchoring means, and an anchoring line having one end threaded thru the loops at the opposite end of the strap to provide a draw-string and the other end carrying a weight, said anchoring line serving to close the end of the trap when in anchoring position.

1,453,136. CULVERT. WALTER E. HITCHCOCK, Blanchard, Iowa. Filed Aug. 21, 1922. Serial No. 583,297. 2 Claims. (Cl. 61—16.)



1. In a device of the character described, a main metal plate formed in sections securely fastened together, a crown plate also formed in sections and secured to said main plate at its upper edge, rearwardly directed flanges formed on said main plate and said crown plate and providing a continuous flange around the sides and upper edge of the device, said main plate being provided with a central opening for the terminal of a culvert.

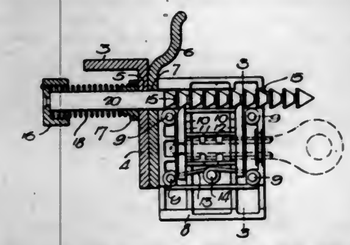
1,453,137. HUMIDIFIER. CHARLES C. HOCKINS, Rochester, N. Y. Filed July 8, 1922. Serial No. 573,640. 1 Claim. (Cl. 126—113.)



In combination with a furnace having the usual smoke pipe, of a drum arranged intermediate the ends of the smoke pipe and in communication therewith, a water tank entering the drum and spaced from the wall thereof

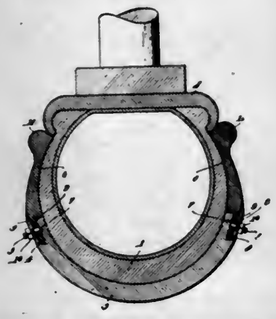
so that the products of combustion from the furnace will heat the water in the tank, valved means for supplying

water to the tank, and means for conveying steam from the tank to moisten the air from the furnace.



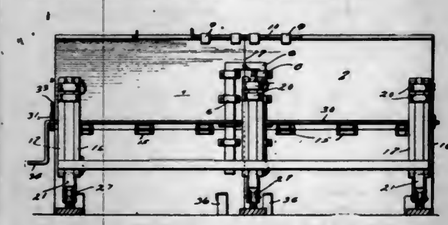
1,453,138. SOCKET. CURTER B. HOLLIDAY, Charleston, W. Va. Filed Feb. 20, 1922. Serial No. 538,052. 2 Claims. (Cl. 255—26.)

1. The combination, a wire line rope socket having a neck extension and having an interior bore communicating with a restricted bore in the neck, said socket having an opening communicating with the lower portion of the bore, a slot between the upper wall of the opening which also communicates with the bore of the socket, and a second slot in a line with the first mentioned slot but narrower than the former communicating with the said first mentioned slot, the bore of the socket and extending through the neck, a wire line swivel comprising a body and a neck, said body and neck being respectively of sizes to be passed into the bore of the socket through the opening of the first mentioned slot, and the line carried by the swivel designed to be passed into the socket through the last mentioned slot, and a removable block partially closing the opening and received in the bore of the socket after the swivel is arranged therein.



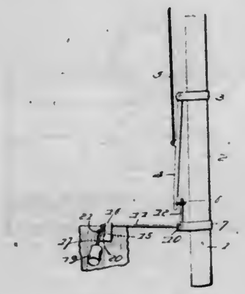
1,453,139. TIRE LOCK. JOHN L. HUSTON, Boston, Mass., assignor to The Miller Lock Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 18, 1921. Serial No. 509,485. 7 Claims. (Cl. 70—90.)

6. The combination in a tire lock, of a casing having an opening therein; a headed shackle arranged to pass into the opening and having a series of shoulders thereon; and two bolts in the casing so located that, when one bolt



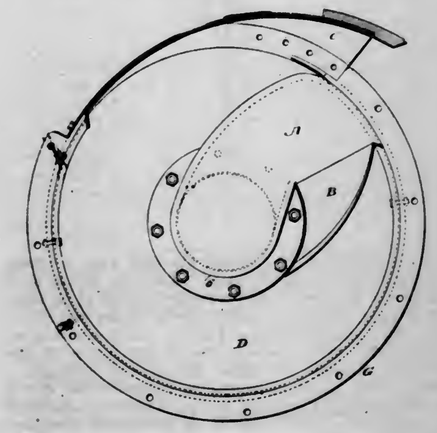
is in engagement with a shoulder of the shackle, the other bolt is midway between two shoulders.

1,453,140. TIRE PROTECTOR. CRUSSELLE B. JACKSON, Hartselle, Ala. Filed Apr. 3, 1922. Serial No. 549,063. 2 Claims. (Cl. 152—17.)



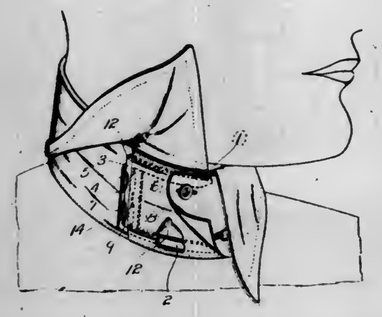
2. A tire protector comprising a metallic ring of trough shape in cross section to receive the threaded part of the tire, said ring having its edges recessed and studs located therein and projecting therefrom, annular bands of rubber arranged to engage the side walls of the tire, each band having a reduced outer edge for engaging the recess in the edge of the metallic ring, said reduced portions having eyelets formed therein to receive said studs, steel rings engaging reduced portions of the bands clamping the same in recess, said rings having openings therein for receiving the studs which are screw threaded, the heads provided on the inner edges of the bands for stiffening the latter and holding them in place on the tire.

1,453,141. BURIAL APPARATUS. JOHN DAWSON JENNINGS, Charleston, S. C. Filed Nov. 4, 1921. Serial No. 512,820. 10 Claims. (Cl. 214—130.)



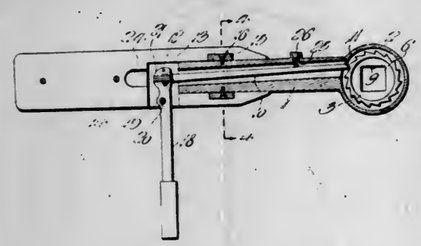
1. A burial apparatus comprising a hopper, a gate at one end of said hopper and adapted to open, means at such end of the hopper for engaging the ground whereby to prevent such end of the hopper from sliding along the ground when its other end is lifted, and means for holding the other end of the hopper elevated as and for the purpose set forth.

1,453,142. AUTOMATIC STOP FOR WINDMILL PUMPS. EDWIN JOHNSON, Osnabrock, N. Dak. Filed Jan. 7, 1922. Serial No. 527,657. 4 Claims. (Cl. 103—28.)



1. In combination with a windmill tank or reservoir and a windmill frame including a plurality of uprights, an elongated shaft journaled in a horizontal position and extending from an upper edge of the tank to a point adjacent one of the uprights, means carried by said one shaft is journaled for supporting the shaft from the upright, means carried by the tank in which the other end of said shaft is journaled, a lever swingingly mounted upon said one upright and depending toward said shaft, said lever being adapted to swing in a plane parallel with the longitudinal axis of said shaft and having a lateral hook upon its lower end, said shaft having a crank arm extending upwardly for engagement with said hook to hold the lever in lowered position, means for connecting the lever with the operating mechanism of a windmill, and a lateral arm upon one end of the shaft provided with a float on its free end movable by the rise of fluid in the tank for rocking said shaft to disengage the crank arm from the hook on the lever.

1,453,143. DRUM FEEDER. OSCAR H. JOHNSON and HENRY F. WEBB, Denver, Colo., assignor to The Mine & Smelter Supply Company, Denver, Colo., a Corporation of Colorado. Filed Nov. 12, 1918. Serial No. 262,197. 7 Claims. (Cl. 83—9.)

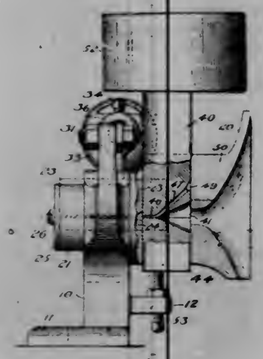


1. A drum feeder made in sections including a main casting or body portion which forms one end and the center of the drum, an end cone removably secured thereto, an internal scoop located within the center of the drum, and a wing located at the inlet of said internal scoop and flaring into the end cone.

1,453,144. SOFT-COLLAR SUPPORTER. FLORENCE A. KAUFMANN, Kansas City, Mo., assignor to W. A. Hill, Kansas City, Mo. Filed July 15, 1921. Serial No. 484,926. 4 Claims. (Cl. 2—91.)

1. A soft collar supporter having two arms, each having a right angular extension, one extension having a slot at an obtuse angle to the major portion of its arm and adjustably receiving the extension on the other arm.

1,453,145. COMBINED RATCHET WRENCH AND TOOL HOLDER. HOWARD A. KENNEDY, Latonia, Ky. Filed May 11, 1922. Serial No. 560,128. 8 Claims. (Cl. 81—60.)

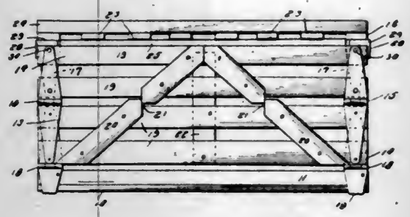


1. A device of the class described embodying a body provided with a rotary gripping device, a longitudinally reciprocating part cooperative with the device for rotating it, and an operating lever for said part, said lever being connected thereto through the medium of a universal joint, whereby to permit the lever to be disposed in a horizontal plane with the gripping device, or at various angles with respect thereto.

1,453,146. SPINNING-JENNY NIPPER. JOHN JOSEPH KINNEY, Auburn, N. Y., assignor to Columbian Rope Company, Auburn, N. Y., a Corporation of New York. Filed Sept. 1, 1922. Serial No. 585,776. 7 Claims. (Cl. 118—395.)

4. In a spinning jenny nipper, a nipper tube, an adjustable pointed lower nipper steel and a weighted pointed upper nipper steel with a conical sliver receiving recess

in the proximate faces of the steels, the apex of the recess being in proximity to the points, one of said steels



also having a center member receiving and guiding opening communicating with the conical recess in proximity to its apex.

1,453,147. NECKTIE DISPLAY AND ILLUMINATI STAND. ALPHONSE M. KUNZ, St. Louis, Mo. Filed Aug. 1, 1921. Serial No. 488,767. 1 Claim. (Cl. 240—4.)

A display and illuminating necktie stand, comprising a standard provided at the top with a forwardly extending arm, a horizontal casing centrally connected with the outer end of the arm and constituting a reflector adapted to contain illuminating means and open at the bottom, a rotary necktie rack mounted on the standard and below the said arm and composed of spaced necktie supporting rods, and a centrally connecting member pivoted by the standard to permit either of the necktie supporting rods to be swung to the front to a position below the arm and the casing supported by the same.

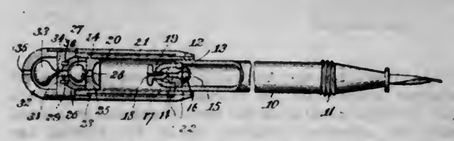
1,453,148. COLLAPSIBLE CRATE. HENRY J. LEE, Fountain Run, Ky. Filed Dec. 21, 1921. Serial No. 523,917. 5 Claims. (Cl. 217—47.)

1. A crate having a wall provided with a slat, said slat having an abutment thereon, a movable wall, and said movable wall being engageable with said slat to spring the same and cause locking engagement of said abutment with said movable wall.

1,453,149. TOOTHBRUSH. ANDRÉ LENIEF, Paris, France. Filed Oct. 16, 1922. Serial No. 594,841. 1 Claim. (Cl. 15—176.)

A brush, comprising a head provided with a brush-holding recess; a shank rigidly connected to the head and having a threaded axial passage opening at its inner end directly through the wall of said recess and at its outer end through the free end of the shank, said wall being provided with a lateral spur which is located diametrically opposite the inner end of said passage; a brush having its back conformably and removably fitting in said recess and provided at one end with a seat to receive said spur and at the other end with a seat in register with said inner passage end; a removable handle; and a threaded locking stem fixed to the inner end of the handle for engagement in said passage and terminating in a point which projects through the inner passage end into the second-named seat.

1,453,150. VEHICLE TIRE. JOSEPH HENRY MCCORMICK, South Pittsburg, Tenn. Filed Nov. 11, 1920. Serial No. 423,289. 1 Claim. (Cl. 152—10.)

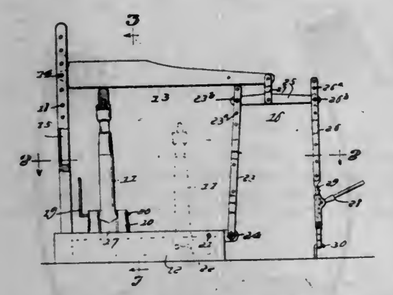


A double tube tire having an outer casing consisting of a split cross sectionally U-shaped element for disposition in surrounding relation to the felly of a wheel, a U-bolt spanning the connecting edges of the outer casing for the passage of its legs through the felly to receive nuts to hold it in engagement with the same, plates spanning the connecting edges of the side walls of the outer casing and secured to the same, a tread section surrounding and engaging with the outer section, and an inflatable tube carried in the outer section and embraced by the latter and the tread section.

1,453,151. POCKET STERILIZING CASE FOR CLINICAL THERMOMETERS. ALEXANDER JOSEPH VINCENT MCDONNELL, London, England. Filed Dec. 22, 1921. Serial No. 524,261. 1 Claim. (206—16.5.)

The combination of a clinical thermometer, a sterilizing tube open at both ends, an enlargement on the thermometer adapted to seat on the lip of the sterilizing tube to thereby hold the thermometer suspended in said tube, a plug projecting sufficiently from said end to be readily grasped, and an outer protecting case in which the sterilizing tube is slidable, said outer case being formed with a longitudinal slot whereby removal of the sterilizing tube is facilitated and which also serves for viewing purposes.

1,453,152. FOUNTAIN PEN. ROBERT J. MCVICKER, New York, N. Y. Filed Aug. 20, 1921. Serial No. 493,808. 4 Claims. (Cl. 120—47.)

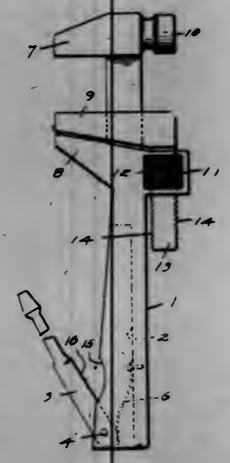


1. A fountain pen comprising a barrel a valve at one end of said barrel, a cap formed of two co-operating sleeves adapted to be threadedly engaged with either end of said barrel, and valves carried by said cap and operable for effecting suction at said first mentioned valve, as and for the purpose set forth.

1,453,153. OCCUPANT-STEERED SLED. MICHAEL MARCINIAK, Duluth, Minn., assignor of one-half to Michael W. Olszewski, Duluth, Minn. Original application filed May 23, 1921, Serial No. 471,644. Divided and this application filed Nov. 23, 1921. Serial No. 517,255. 2 Claims. (Cl. 296—75.)

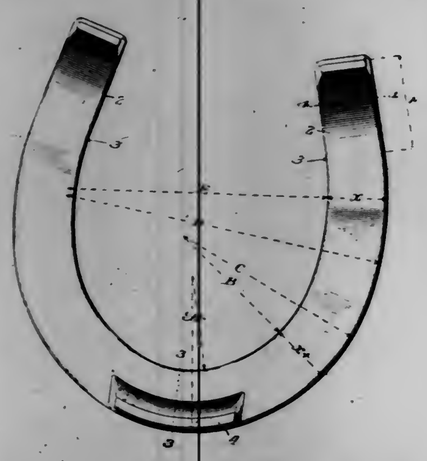
1. In a sled, an elongated flat runner carrying platform, foot rests hinged on the upper surface of said platform adjacent its forward end for horizontal swinging movements to inoperative positions within the plane of the longitudinal edges of said platform and to operative positions outwardly beyond said edges substantially at right angles to the longitudinal axis of the platform, stops on the upper surface of the platform for limiting the outward swinging of said foot rests, said stops being located in the path of said foot rests to limit movement of the foot rests inwardly to their inoperative positions, with the foot rests extending forwardly substantially parallel with the longitudinal axis of the platform, and clips for releasably retaining the foot rests in their inoperative positions.

1,453,154. DRILL-BIT SWELLING AND DRESSING APPARATUS. HARVEY A. MARTIN, Brady, Tex. Filed Aug. 11, 1921. Serial No. 491,492. 3 Claims. (Cl. 76—5.)



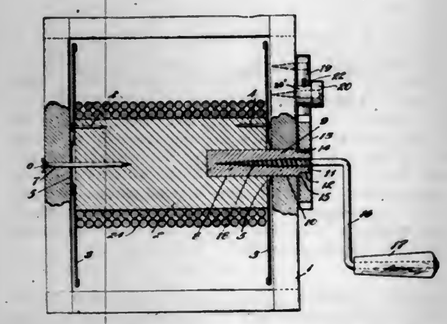
1. A drill bit swelling and dressing apparatus having an anvil provided with a die for the reception of the cutting head of the bit, a bearing member for imparting longitudinal movement of the bit toward the die, and means for actuating the bearing member, the bearing member consisting of a lever terminally mounted for pivotal movement and adapted for engagement at an intermediate point of its length with the rear end of the drill bit.

1,453,155. COMBINATION TOOL. MATIAS BERENDA MARTINEZ, Guasti, Calif. Filed Apr. 26, 1921. Serial No. 464,618. 2 Claims. (Cl. 81—77.)



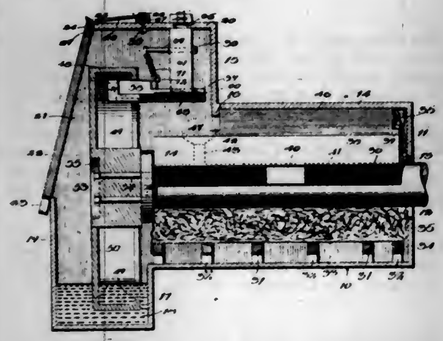
1. A wrench comprising a shank having a handle at one end, a pair of spaced stationary unlike jaws carried by the other end of said shank, a cage formed with one of

said stationary jaws and on said shank, a nut mounted in said cage, a movable jaw surrounding said shank and having a pair of unlike jaw faces, said movable jaw having a shank, said nut having screw-threaded engagement



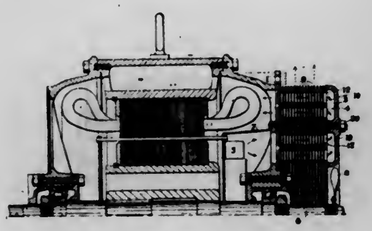
with the last-named shank to adjust said movable jaw, and said movable jaw being movable to bring corresponding jaw faces into cooperation with either of said stationary jaws.

1,453,156. HORSESHOE FOR PITCHING CONTESTS. GEORGE W. MAY, Akron, Ohio. Filed Nov. 9, 1921. Serial No. 513,879. 5 Claims. (Cl. 46—65.)



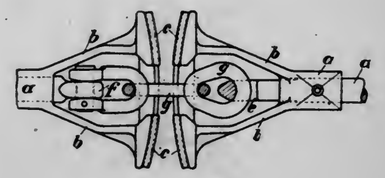
1. A horseshoe for pitching purposes, the arms of which converge to an unobstructed opening at the heel portion of the shoe, the inner surfaces of the arms being formed as straight lines diverging from the opening and extending to points between one-third and one-fourth of the total length of the shoe, thereupon merging with a curved line extending over the remainder of the shoe, whereby, should the shoe strike the stake against its inner surface, a spinning action will be set up only after the shoe has passed the stake between one-third and one-fourth of its total length.

1,453,157. CLOTHESLINE REEL. JOHN MIESSNER, Cleveland, Ohio. Filed Oct. 5, 1922. Serial No. 592,623. 3 Claims. (Cl. 242—100.)



1. A device of the character described, comprising a frame, a drum mounted in the frame and having a longitudinal bore in one end, a journal secured in said bore and projecting through the frame and having a bearing in the latter, said journal having a reduced outer end forming an annular shoulder, a ratchet wheel secured on the reduced outer end of the journal and held by the shoulder away from the frame, a spring pressed pawl engaging the ratchet wheel, a cam turn button on the frame and adapted to move the pawl out of engagement with the ratchet wheel, and a crank arm secured to the journal.

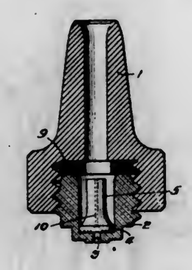
1,453,158. CAR-WHEEL BOXING AND OILING DEVICE. ARTHUR WELLS MINNEY, Stockton, Calif., assignor of one-half to F. L. Boyd, Stockton, Calif. Filed Mar. 28, 1921. Serial No. 456,358. 2 Claims. (Cl. 64—24.)



1. A lubricator for journal boxes comprising an oil collector mounted on the journal, a scraper adjustably and pivotally mounted on the journal box and cooperable with the collector, yieldable means for holding the scraper in cooperative engagement with the collector, and a distributer coacting with the journal and receiving the oil from the scraper.

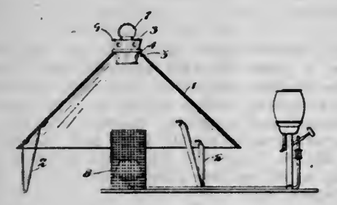
1,453,159. COOLING OF DYNAMO-ELECTRIC MACHINES. PAUL ALPHONSE HUBERT MOSSAY and HENRY CHARLES EDWARD JACOBY, London, England. Filed Jan. 16, 1919. Serial No. 271,381. 4 Claims. (Cl. 171—252.)

1. The combination of a dynamo electric machine, having a casing, a cooling device arranged co-axial with and applied to the casing of said dynamo electric machine, said cooling device comprising an air-chest arranged co-axial with and in spaced relation to one end of said casing, a multiplicity of thin walled conduits adapted to connect said air chest to the interior of said casing at the adjacent end thereof to said air-chest, means for circulating the internal air of the machine through said conduits and said air-chest, and means for passing cooling fluid among and in contact with the exterior surfaces of said conduits substantially as and for the purpose hereinbefore set forth.



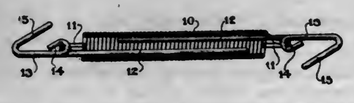
1,453,160. CENTRAL BUFFER FOR SHORT COUPLINGS OF RAILWAY VEHICLES. EMIL MÜLLER, Berlin, Germany. Filed Jan. 19, 1921. Serial No. 438,351. 1 Claim. (Cl. 213—178.)

A central buffer for short couplings of railway vehicles, comprising a buffer shaft provided at its rear portion with a longitudinal bore, a draw-bar disposed within said bore and provided at its forward end with a coupling member, the front portion of the buffer shaft being fork-shaped and having a web uniting the forked ends at their lower portions, a buffer plate secured to the end faces of the forks and web, said plate having a U-shaped recess, and means adapted to be inserted in said recess for connecting the coupling members disposed between the forks of two adjacent vehicles.



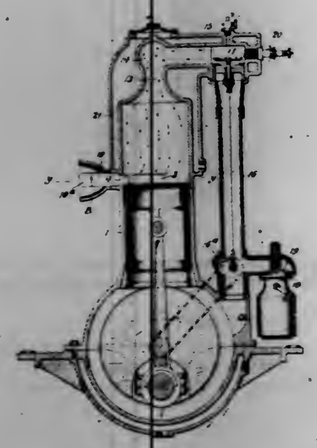
1,453,161. SPRAY NOZZLE. THOMAS W. MURPHY and WLADYSLAW CZARNECKI, Philadelphia, Pa. Filed Jan. 6, 1919. Serial No. 269,897. 2 Claims. (Cl. 299—120.)

1. The combination in a nozzle of a hollow porcelain cap having a flat inner surface and an outlet opening therefrom; with a loose porcelain member in the cap having a flat face normally engaging the flat face thereof and formed with a recess adjacent the outlet opening,



said member being freely movable toward and from said flat face of the cap and having passages leading to the recess.

1,453,162. VENTILATING MEANS FOR CHICKEN HOVERS AND BROODERS. JOHN W. MYERS, Quincy, Ill. Filed Dec. 30, 1919. Serial No. 348,344. 1 Claim. (Cl. 98—27.)



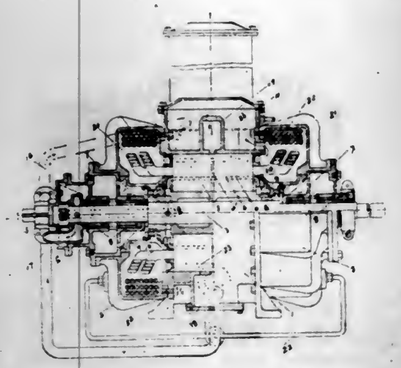
In a device of the character described, a roof with a circular opening in it, a ventilator comprising a frusto-conical hollow casing having an exterior encircling rib between the upper and lower ends thereof for supporting it in said opening, the side walls of said casing having openings formed therein above and below said rib, and a handle for said ventilator.

1,453,163. SHOCK ABSORBER TOP COUPLING. GEORGE D. NEAL, Little Rock, Ark., assignor of one-half to John R. Baker, Little Rock, Ark. Filed July 28, 1922. Serial No. 578,202. 2 Claims. (Cl. 267—72.)

2. Means for connecting the top with the windshield of an automobile, comprising an elongated coil spring formed at its ends with connecting loops, and a member associated with each end of the spring and formed of a single length of resilient wire bent upon itself intermediate its ends to define a long arm extending within the spring and a short arm having its terminal formed as an eye engaging a loop of the spring, the intermediate portion of the wire member being formed as a hook, one hook being designed for engagement with the ordinary top strap carrying staple subsequent to the removal of the strap and the other hook being designed for engagement with the bracket on the windshield.

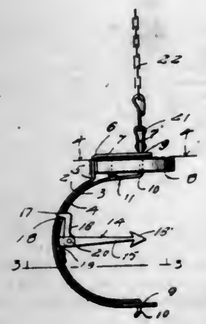
1,453,164. INTERNAL-COMBUSTION ENGINE. EDWARD COVERLY NEWCOMB, North Scituate, Mass. Filed June 4, 1919. Serial No. 301,709. 32 Claims. (Cl. 123—73.)

1. An explosive engine comprising in combination a cylinder, a piston mounted to reciprocate therein, a clearance chamber comprising an ignition chamber, an equalizing chamber and a venturi in open communication between said equalizing chamber and said cylinder, an intake valve located at or near the outer end of said ignition chamber and electrical firing mechanism operating in the ignition chamber and located adjacent to said intake valve.



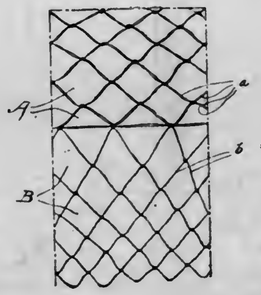
1,453,165. TROUSERS. LEOPOLD NEWMAN, Pittsburgh, Pa. Filed Apr. 17, 1922. Serial No. 553,708. 1 Claim. (Cl. 241—11.)

In combination with the waist band of a pair of trousers, a series of belt guiding loops each having its lower end secured to said waist band and its upper end doubled and fastening means passing through said waist band and through the double portion of said loop, and a suspender button disposed on the outer face of the waist band and at the upper end of said loop and secured thereto and to the waist band by the same fastening which secures the waist band and loop.



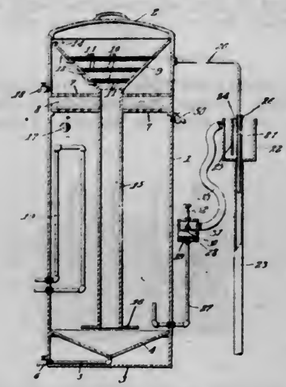
1,453,166. ROTARY ELECTRIC MACHINE. KANTARO NOBUHARA, Muko-gun, Hyogo-ken, Japan. Filed Oct. 23, 1919. Serial No. 332,697. 8 Claims. (Cl. 171—252.)

2. A machine having rotary mechanism comprising the combination of a stator member, a rotor member cooperating therewith and separated therefrom by a clearance space and means comprising substantially radial passages in one of said members for maintaining a partial vacuum in said clearance space.



8. A machine having rotary mechanism comprising a stator, a rotor separated therefrom by a clearance space, means for circulating a liquid through said stator and rotor, means for creating a suction in said clearance space and means for cooling said liquid.

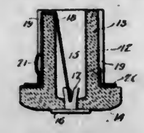
1,453,167. TRAP. JOHAN KONRAD NORDENSTAM, Strathcona, Minn. Filed Dec. 8, 1921. Serial No. 520,925. 3 Claims. (Cl. 43—89.)



2. A trap comprising inner and outer jaws, the outer jaw having the upper terminal thereof offset to form a spaced arm, a tensioned spring positioned between the arm and the inner jaw member, said inner jaw member having an upstanding lug positioned in the space between the inner jaw and the arm, said tensioned spring having one of its terminals connected to said outer jaw and having its outer terminal connected to said lug, the outer jaw having registering apertures formed in the terminals thereof, the inner jaw having its terminals bent angularly and pivotally seated in said apertures, and a trigger mechanism for holding the jaws in operative position.

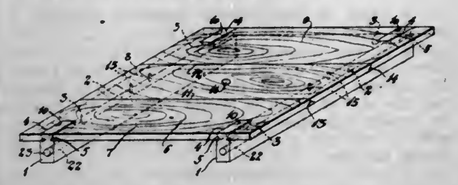
1,453,168. HAIR NET. JESSE OPPENHEIM, New York, N. Y., assignor to Hyman & Oppenheim, New York, N. Y., a Corporation of New York. Filed Aug. 15, 1922. Serial No. 582,017. 2 Claims. (Cl. 132—49.)

2. A hair net whose crown portion is of multiple strand and whose marginal portion is of single strand mesh.



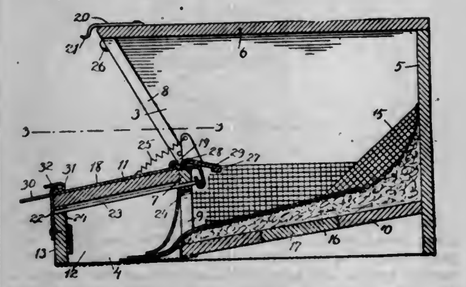
1,453,169. FILTERING TANK. JOHN HUNSICKER PACKER, Liberty, Mo. Filed Aug. 19, 1921. Serial No. 493,538. 1 Claim. (Cl. 210—48.)

A device of the class described comprising a casing; a filter extended across the casing adjacent to the top of the casing; a funnel in the casing above the filter, the funnel having a neck connected directly to the funnel and extending downwardly through the filter to a point adjacent to the bottom of the casing; superposed upper and lower screens extended across the funnel; air inlet conduits external to the funnel, the upper ends of all of the conduits opening through the funnel above the upper screen, the lower end of one conduit opening through the funnel below the lower screen, and the lower end of another of the conduits opening through the funnel at a point between the screens; and an outlet for the casing, the outlet being located above the filter.



1,453,170. FUSE PLUG. HENRY T. PAISTE, Philadelphia, Pa., assignor to H. T. Paiste Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 21, 1917. Serial No. 208,802. 13 Claims. (Cl. 200—130.)

6. The combination in a fuse plug of a hollow body; a capsule removably fitting the cavity of said body; and a spring tongue structurally independent of and operative between said parts for frictionally holding them

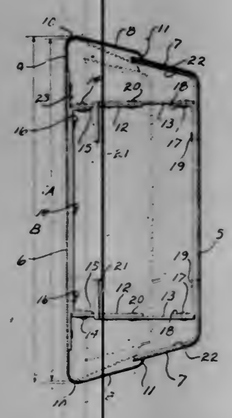


together; with means for removably holding the tongue on the capsule.

1,453,171. COLLAPSIBLE DRAWING BOARD. LEO L. OBERWARTH, Frankfort, Ky. Filed Nov. 14, 1921. Serial No. 514,074. 4 Claims. (Cl. 45—131.)

3. A device of the type described comprising a board composed of three sections, the end sections having recesses in one of their sides, transverse members, each having an arcuate groove therein and a projection at the ends thereof, pins carried by said transverse members, said projections being adapted to be received in the recesses of said end sections, whereby said end sections can only be moved toward each other, and means carried by the center section for locking said section in place with respect to said transverse members, said means comprising said pins which are adapted to be received in openings in said center section, and a strip pivotally secured to the center board, the ends thereof being adapted to enter the arcuate grooves in said transverse members.

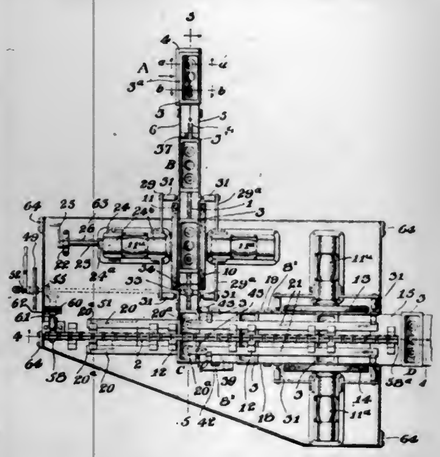
1,453,172. TRAP NEST FOR HENS. OLE K. OLSON, Oakdale, N. Dak. Filed Jan. 4, 1922. Serial No. 526,941. 2 Claims. (Cl. 119—47.)



1. In a hen's nest, a casing the front wall of which is provided with an upper entrance opening for the hen, and a lower exit opening for the eggs, a forward collection chamber for eggs communicating in rear with said exit opening and having a removable top, a trap door normally resting upon said top and hinged in the angle between said top and said front wall, and adapted when raised to close entrance opening, a spring for raising said door, means for holding said door in lowered normal position, and means for releasing the holding means including a lever fulcrumed adjacent to the angle of said front wall and said top, and a reciprocatory rod engaged by one arm of said lever and at its outer end engaging the holding means.

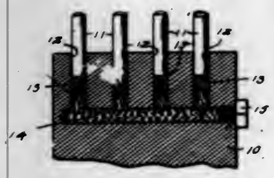
1,453,173. ELECTRIC-WIRE CLAMP. PIERRE PAIRARD, Paris, France. Filed June 13, 1918. Serial No. 239,835. 3 Claims. (Cl. 173—313.)

1. A clamp of the character described including an annular strap-like body portion having spaced hooks formed at the terminals and adjacent the side edges thereof, the hooks on one terminal extending in a direction opposite to those on the other terminal, a threaded stud the base of which is formed with opposed recesses the opposite side edges of which are embraced by opposed hooks of the body portion and a clamping element embracing the stud.



1,453,174. CONCRETE FORM. EDWARD E. PATMOR, Santa Ana, Calif. Filed June 9, 1922. Serial No. 567,038. 1 Claim. (Cl. 25—128.)

In a concrete form, the combination of trough-shaped sheet metal sections of different widths assembled with their flanges in opposition, the flanges of the narrower section flaring and being disposed between the flanges of the wider section, the flanges of the wider section having their longitudinal edges closer together than the longitudinal edges of the flanges of the narrower section when the sections are in collapsed position, and retractable means to hold the sections, against pressure tending to collapse them.

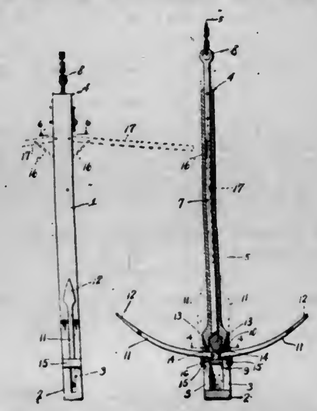


1,453,175. GRINDING MACHINE. JOSEPH E. PERAULT, Watertown, Mass., assignor to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed Feb. 17, 1922. Serial No. 537,269. 7 Claims. (Cl. 51—112.)

1. In a machine for shaping the edges of battery box covers and similar articles having flanged edges, two sets of upper and lower guide rails having intervening guide spaces through which the said flanged edges pro-

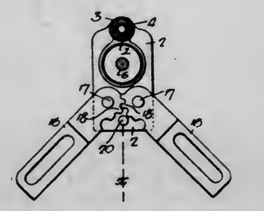
ject, shaping devices mounted outside said guide rails and arranged to shape said projecting edges, and means for moving said articles along said guide rails.

1,453,176. COMPENSATING JAW FOR CHUCKS AND THE LIKE. LESTER PERRINE, Detroit, Mich. Filed Mar. 18, 1921. Serial No. 453,287. 3 Claims. (Cl. 90—60.)



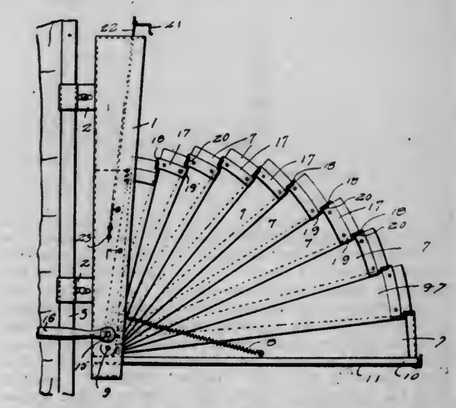
1. A gripper jaw having independently movable gripper elements to directly contact with the surface gripped and fitted in communicating guides provided with a mobile filler and capable of substantial movement in said guides whereby the elements will automatically adapt themselves to the contour of the said surface.

1,453,177. ANCHOR. PETER A. PETERSON, Pocatello, Idaho. Filed Apr. 18, 1922. Serial No. 554,733. 2 Claims. (Cl. 114—208.)



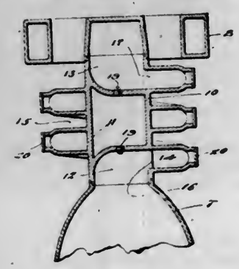
2. In an anchor, a hollow substantially cross sectionally rectangular shank having its sides and ends provided with elongated openings, a slide movable in the shank having its outer end provided with a ring for the reception of a chain, said slide having openings providing pockets therein, arms having flukes at their outer ends passing through two of the opposed openings in the shank entering one of the openings in the slide and pivotally secured therein, antifrictional guide members arranged transversely of the referred to openings in the shank to contact with the arms to swing the same at an outward angle with respect to the shank when the slide is drawn outwardly from the shank, bars pivotally secured in the remaining openings of the shank and

foldable into the remaining openings of the shank, links pivotally secured to the bars and to the arms, whereby



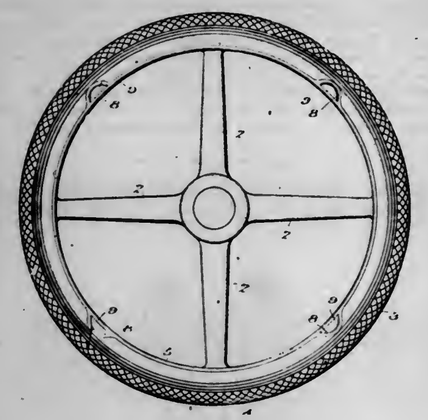
to limit the outward swinging of the arms when the slide is drawn outwardly through the shank.

1,453,178. AIR PUMP. NICHOLAS A. PETRY, Philadelphia, Pa. Filed Feb. 1, 1921. Serial No. 441,586. 5 Claims. (Cl. 230—27.)



1. The combination of an air pump having a base; a cylinder on said base; two foot plates pivotally mounted on the base, with means whereby the foot plates are operatively geared together and are free to swing in a plane at right angles to the line of the cylinder.

1,453,179. VEHICLE SIGNAL. JOHN B. PHLEGER, Dayton, Ohio. Filed Nov. 8, 1921. Serial No. 513,635. 3 Claims. (Cl. 116—41.)

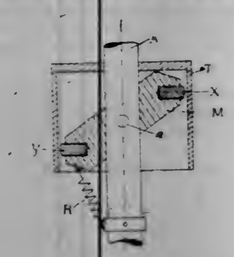


1. A signal of the character specified comprising a plurality of pivoted vanes adapted to be folded and spread, and stop and guide means on each of the vanes to direct and limit the movements thereof in each direction, said means consisting of transversely disposed strips having opposite end portions bent laterally in the same direction and corresponding ends of the strips expanded.

1,453,180. HOT-AIR HEATING APPARATUS. JAMES F. POWERS, Linwood, Pa. Filed Nov. 3, 1922. Serial No. 598,886. 3 Claims. (Cl. 126—102.)

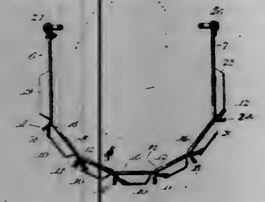
1. As a new article of manufacture, a unit for use in hot air furnaces, comprising a lower central conduit, an upper central conduit, a body or core interposed between the said central conduits, and a spiral conduit surrounding the lower and upper central conduits and the body or core, and having its lower end in lateral communication with the lower conduit and its upper end in lateral communication with the upper conduit and also having its convolutions separated by a spiral space whereby all portions of the wall of the spiral conduit are utilized for heat radiating purposes.

1,453,181. STEERING-WHEEL COVER. WILLIAM F. RIDGE, Akron, Ohio. Filed Oct. 23, 1922. Serial No. 596,210. 9 Claims. (Cl. 74—33.)



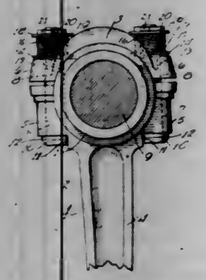
1. As a new article of manufacture, an elastic cover for steering wheels or the like, comprising a torus split along its inner circumference and provided on its surface in contact with the wheel with irregular formations adapted to prevent slippage of the cover.

1,453,182. CENTRIFUGAL FORCE GOVERNOR. GIOVANNI RIVETTA, Paris, France. Filed July 12, 1921. Serial No. 484,271. 2 Claims. (Cl. 188—184.)



2. A centrifugal governor comprising in combination a rotary spindle, a rotary mass pivoted centrally on said

spindle, hardened blocks carried by the said mass, a spring tending to maintain the pivoted mass in an ob-

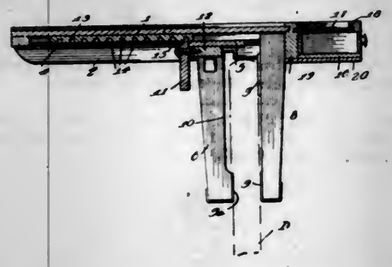


lique position relatively to the spindle, and a stationary brake ring against the inner surface of which the blocks tend to engage when the spindle is rotated.

1,453,183. GROUND-GRIPPING CHAIN FOR AUTOMOBILE TIRES. JAMES E. ROBISON, Denver, Colo. Filed July 29, 1921. Serial No. 488,362. 9 Claims. (Cl. 152—14.)

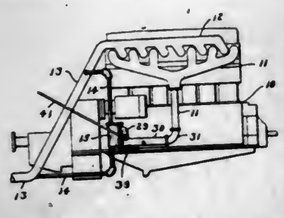
3. In a ground gripping chain for automobile tires, the combination with side chains, of cross chains connected thereto, comprising links, each having a fluked head at one end and an aperture adjoining the other end, the fluked head of one link engaging the margin of the aperture of the adjoining link, whereby the links are detachably hinged, and projecting lips on each of said links, which are disposed at right angles to each other.

1,453,184. AUTOMATIC BEARING ADJUSTER. JOHN F. ROSE, Moline, Ill. Filed Mar. 21, 1921. Serial No. 453,932. 1 Claim. (Cl. 85—32.)



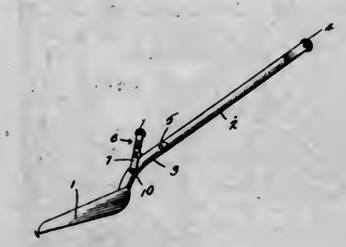
In a device of the character described, a threaded bolt having an opening extending transversely therethrough and adjacent the outer end thereof, a sleeve having an interiorly threaded bore arranged to receive said threaded bolt, said sleeve having a radial flange on the peripheral wall thereof, an adjustable washer having radial grooves on the upper face thereof, a torsion spring arranged to lie concentric with said sleeve on said bolt and engage said flange at one end and said washer at the other end, and a pin projected through the opening in said bolt and arranged to engage the grooves in said washer to normally prevent the rotation of said washer on said bolt.

1,453,185. APPLICATION OF THE BARK (SUBER) OF MELALEUCA LEUCADENDRON TO THERMIC, HYDRAULIC, AND DIELECTRIC DEVICES. PAUL EMMANUEL HIPPOLYTE ROUSSAN, Paris, France. Filed Aug. 23, 1920. Serial No. 405,310. 2 Claims. (Cl. 154—44.)



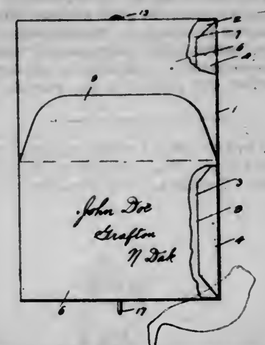
1. An insulating medium made of the bark of *Melaleuca leucadendron*.

1,453,186. TABLE. ROBERT RUFFIN, Jr., Como, Miss. Filed Oct. 28, 1922. Serial No. 597,575. 3 Claims. (Cl. 45—51.)



1. A table of the class described comprising a top having a pair of laterally spaced fixed legs depending therefrom, a slide movable toward and away from said fixed legs and having a pair of legs fixed thereto and movable therewith, a transversely grooved board secured to the lower face of said table and a pivotal latch carried by said slide to enter one of the grooves in said board and lock the slide in adjusted position.

1,453,187. MEANS FOR VAPORIZING HYDROCARBON FUELS. HARRY ROBINSON RUMFORD, Chester, Pa., assignor of one-half to Walter A. Landry, Chester, Pa. Filed Feb. 18, 1921. Serial No. 446,141. 2 Claims. (Cl. 123—133.)

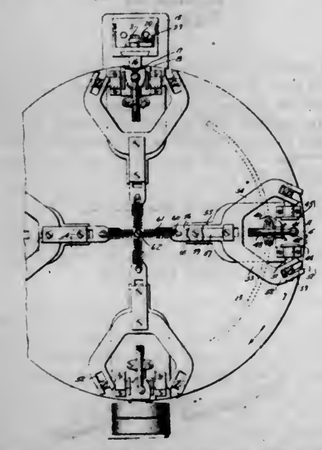


1. The combination with the intake manifold and the exhaust of an internal combustion engine of a reservoir adapted to receive a supply of hydrocarbon, means for regulating a supply of atmospheric air into the reservoir, float mechanism for controlling the supply of hydrocarbon to the reservoir, an auxiliary collecting pipe connecting with the exhaust and passing through the reservoir, a baffle in the reservoir for preventing raw hydrocarbon from splashing into the vaporized mixture, a conduit from the reservoir to the intake manifold having spaced choke and throttle valves therein, a spring-influenced valve intermediate the choke and throttle valves, and an auxiliary connection controllable by the spring-influenced valve for supplying raw hydrocarbon to the intake manifold when the engine is cold.

1,453,188. DETACHABLE HANDLE. CECIL R. RUPPE, Oakley, Kans. Filed June 3, 1921. Serial No. 474,656. 1 Claim. (Cl. 294—58.)

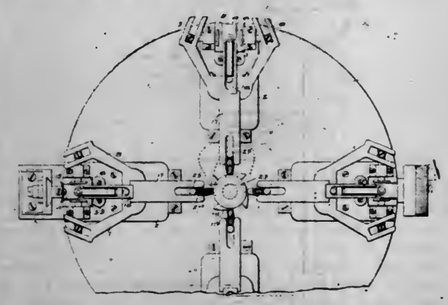
A scoop having a handle, auxiliary handle comprising a pair of spaced side members, means for pivotally connecting the auxiliary handle to the handle of the scoop, a grip for the auxiliary handle, and a strip connected to the spaced side members and engaging the lonitudinal edges thereof and adapted for abutment with the scoop handle to limit the pivotal movement of the auxiliary handle.

1,453,189. ENVELOPE. HORACE ETHELBERT SALTER, Grafton, N. Dak., assignor of one-half to H. A. Ball, Grafton, N. Dak. Filed Dec. 30, 1919. Serial No. 348,307. 2 Claims. (Cl. 229—73.)



1. A mailing envelope having independent pockets flexibly connected together at their mouths for reversal to facilitate use both as an original and as a return packet by presenting different surfaces outermost to receive the original address and the return address, cooperating means on the pockets to selectively secure the pockets in either of their positions, and one of the pockets having a closure flap to function in one of the positions to extend into the opposite pocket to thus close both pockets.

1,453,190. HORSE-DRAWN CYCLE. FILANDRO HENRY SANDS, Nassau, Bahama Islands. Filed June 16, 1922. Serial No. 568,758. 2 Claims. (Cl. 280—29.)



1. A vehicle embodying a pair of spaced parallel frames, means connecting the frames, a fork located at the rear end of each of the frames, wheels mounted within the forks, a transversely disposed front frame, a wheel mounted for rotation at each end thereof, means pivotally connecting the front frame to the front ends of the spaced parallel frames, a seat mounted upon each of the last mentioned frames and shafts connected to the front frame.

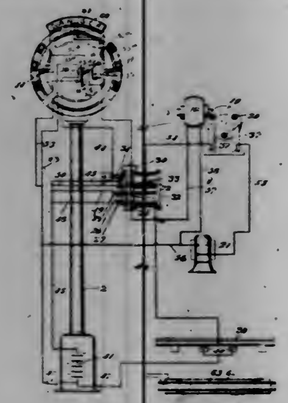
1,453,191. HEEL-BREASTING MACHINE. ADOLF SCHOEN, New York, N. Y. Filed Sept. 24, 1921. Serial No. 502,847. 7 Claims. (Cl. 12—47.)

1. A heel cutting machine comprising a turntable, a plurality of sets of mechanism for clamping heels on said table, automatically actuated means for bringing said clamping sets to an unclamped position for removing the cut heels and supplying new uncut heels, a knife arranged adjacent said table for severing the heels as they pass, means for stopping the table as each heel comes opposite said knife, and a single drive shaft for operating the knife and turntable in time relation.

1,453,192. HEEL-CUTTING MACHINE. ADOLF SCHOEN, New York, N. Y. Filed Aug. 12, 1922. Serial No. 581,506. 5 Claims. (Cl. 12—47.)

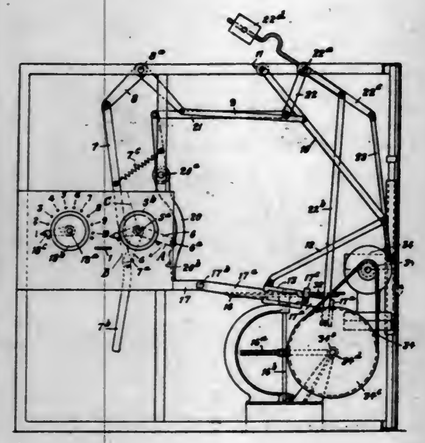
1. In a heel-cutting machine, a turntable, a plurality of spaced means for gripping heels mounted on said turntable, and means arranged adjacent said turntable for cutting said heels as they move to position past said means, and ejecting means for ejecting said heels after the cutting operation, said ejecting means including a reciprocating bar having an ejecting end, means for setting said reciprocating bar so that said ejecting end will act as a gage when inserting a new heel, and a cam for moving said bar in one direction.

1,453,193. DEVICE FOR ELECTROMAGNETICAL QUENCHING OF LIGHT ARCS APPEARING UPON THE INTERRUPTION OF AN ELECTRIC CIRCUIT. LUDWIG SCHÖN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 3, 1920. Serial No. 408,103. 9 Claims. (Cl. 200—147.)



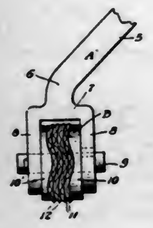
1. In apparatus of the character described the combination of a pair of separable contacts and opposing magnet cores in the plane of the meeting face of the contacts and having parallel, disc-shaped pole shoes, the contacts having fixed thereon oppositely curved arcing horns arranged between the pole shoes, said arcing horns including an angle of 180°.

1,453,194. DENTAL FILM HOLDER. ARTHUR E. SHAW, Columbia, S. C. Filed Apr. 26, 1922. Serial No. 556,687. 5 Claims. (Cl. 250—34.)



1. A dental film holder comprising a handle, a button member detachably connected thereto, and means for supporting a film pack by said button.

1,453,195. SIGNALING MECHANISM. JESSE CORNELIOUS SIMS, Maynard, Mass. Filed Nov. 6, 1919. Serial No. 336,036. 5 Claims. (Cl. 177—329.)



1. A signaling mechanism comprising a circular casing having inner and outer concentric transparent portions, a rotary support in the casing, signaling devices carried by said rotary support in position to be observed through said outer transparent portions, and light emitting means carried by the rotary support in position to be observed through the inner transparent portions.

1,453,196. GRAMOPHONE APPARATUS. CUTHBERT COATES SMITH, Twickenham, England. Filed Aug. 3, 1921. Serial No. 489,590. 12 Claims. (Cl. 274—10.)

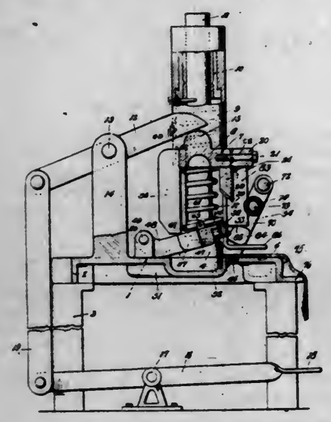
1. A talking machine, including a frame, a record playing table mounted thereon, a reproducer carried by the frame, a slide member mounted on the frame for vertical sliding movement, said member having an inclined arm adapted to engage the reproducer, and means for raising and lowering the slide member, whereby when said slide member is raised the inclined arm will engage the reproducer and raise it, the incline of the arm being such that the reproducer will slide to the lower portion by gravity which will place it in the starting position.

1,453,197. FACING OR CUTTING TOOL. CHARLES F. SNYDER, Pittsburgh, Pa. Filed Sept. 2, 1921. Serial No. 497,813. 7 Claims. (Cl. 29—104.)

1. A cutter disk for forming a granulated surface on metallic articles, having a sinusoidal periphery provided with a continuous annular shape beveled cutting edge of a nature adapted to cut into a metal surface and give it a pitted or granulated appearance.

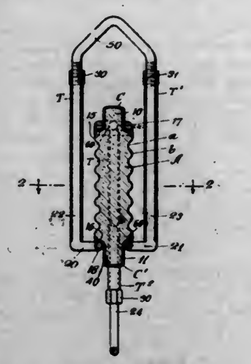
1,453,198. CUSHION WHEEL. EARL D. SNYDER, Albany, Ill. Filed June 15, 1921. Serial No. 477,719. 2 Claims. (Cl. 152—34.)

1. A cushion wheel comprising a hub structure including spaced parallel hub plates, a pneumatic tire, supporting means rigidly secured to said hub structure and extending outwardly therefrom and between the hub plate and supporting a tire rim on which said pneumatic tire is mounted, an outer rim resting on said tire, said outer rim consisting of inner and outer sections the inner side of the inner section shaped to conform to the



shape of the pneumatic tire and to rest thereon, the outer section of said outer rim carrying a cushion tire, outer plates secured to the outer rim and slidably received by the hub plates, and means loosely securing the outer plates to the supporting means whereby the outer rim and outer plates may move radially in respect thereto.

1,453,199. RESILIENT WHEEL AND AIR TIRE TO BE USED THEREWITH. JACOBUS SPIJKER, Amsterdam, Netherlands. Filed Aug. 24, 1921. Serial No. 494,885. 4 Claims. (Cl. 152—46.)

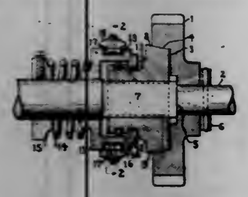


1. A resilient wheel of the character described comprising an outer wheel part including two disk-members having an internal circular chamber open at its inner side, an outer solid rim portion, said disk-like members having telescoping circumferential flanges, an inner wheel part, an air tube located in said chamber, and a separate cover overlying the inner surfaces of the side walls of the chamber and extending across the inner open side thereof, said cover forming a connection between the inner and outer wheel parts and the outer portion of said air tube being in direct contact with the rim portion of the outer wheel part.

1,453,200. FUR-CUTTING MACHINE. JOSEPH O. STACHO, Newark, N. J. Filed May 28, 1921. Serial No. 473,368. 36 Claims. (Cl. 164—50.)

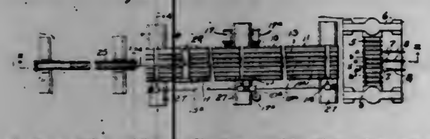
1. The method of cutting furs which comprises passing a blade therethrough, skin side first, and supporting the material at points spaced apart a distance sufficient to permit of free deflection of the fur by the blade and thus avoid clipping the fur along the line of severance.

1,453,201. STRAIN INSULATOR. LOUIS STEINBERGER, Brooklyn, N. Y. Filed Nov. 30, 1918. Serial No. 264,772. 7 Claims. (Cl. 173—366.)



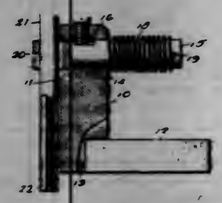
7. In a device of the kind described, a body of insulating material, strain members having bridge portions contacting with the ends of said body, leg portions extending axially beyond said bridge portions, the leg portions of each strain member being insulated from the bridge portion of the other strain member by tubular insulators surrounding the said leg portions, yokes for said leg portions, and nuts attaching said yokes to said leg portions and holding the insulating tubes in position on said leg portions.

1,453,202. CLUTCH. WILLIAM C. STEVENS, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 27, 1920. Serial No. 413,057. 3 Claims. (Cl. 192—82.)



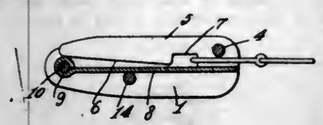
1. In a clutch, in combination, relatively rotatable members, one having an internal cone friction surface

and the other being arranged concentric to said surface, a cone element mounted on said latter member and engageable with and disengageable from said friction surface by relative axial movement between the same and certain of said members, said element being divided radially to form a plurality of segments and said latter member being formed to provide a plurality of cam sur-



faces one for engaging each of said segments and means for normally holding said segments in a given relation with respect to said cam surfaces and for permitting movement of the same on said surfaces in a plane at right angles to the axis of said members to augment the pressure of said segments on said friction surface when either of said members tends to drive the other.

1,453,203. TUBE-ROLLING MILL. RALPH C. STIEFEL, Ellwood City, Pa. Filed June 16, 1920. Serial No. 389,247. 4 Claims. (Cl. 80—11.)

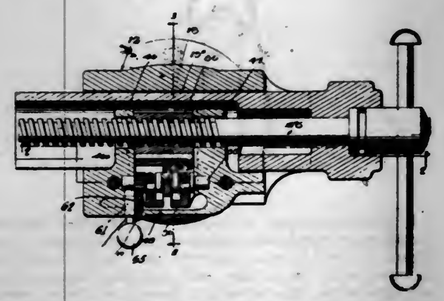


4. In a tube rolling mill, the combination of a set of grooved rolls having a plurality of passes, mandrel bars on the delivery side of the rolls in line with the passes therein, a table in front of said rolls provided with a plurality of tube supports in line with the passes in the rolls, said table being arranged to be bodily shifted sidewise, means on said table for transferring a tube sidewise from one of said tube supports to an adjacent one, and means for transferring the blanks from the delivery side of the rolls to the tube supports on the front side thereof in line with the feed of the blanks through the rolls.

1,453,204. GUIDE DEVICE FOR TAPS OR REAMERS. ALBERT W. STOKES, Philadelphia, Pa. Filed Nov. 8, 1921. Serial No. 513,790. 5 Claims. (Cl. 10—147.)

1. A guide device for screw-thread cutting taps, reamers or the like, comprising a body portion having one end thereof adapted to contact with the work having an opening therein, said body portion being provided upon one side with a groove, a holding element slidably engaging the body portion and adapted to move transversely of the groove, said holding element having means to slidably receive and hold a tap or the like, and yielding means to move said holding element in one direction.

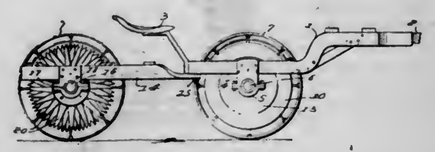
1,453,205. CHAIN FASTENER. CEYLON STUBBEVANT, Castle Rock, Colo., assignor to George Robinson, Larkspur, Colo. Filed July 25, 1921. Serial No. 487,318. 2 Claims. (Cl. 24—69.)



1. A chain fastener comprising a body formed of two spaced plates having outstanding ears at one end thereof and their edges notched at their said ears, a notched blade pivoted between the ears, a spring rod having an eye end which is pivoted between the plates near the ends thereof opposite those provided with the ears, and an element passing transversely through the plates engaging the spring rod for centrally bowing the same and for causing the free end of said rod to exert a pressure against the inner edge of the blade opposite the pivot therefor.

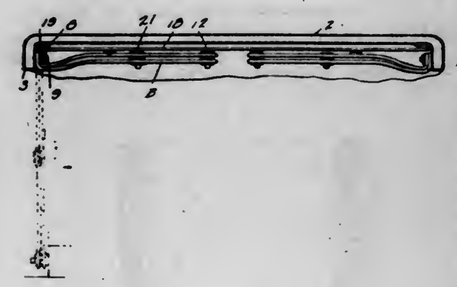
1,453,206. TWINE CUTTER. BENJAMIN SUBIN, Philadelphia, Pa. Filed June 17, 1922. Serial No. 568,896. 2 Claims. (Cl. 30—14.)

1. In an article of the character specified, a base having a projection, a sectional casing grouped about the projection of the base, a band confining the sections of the casing and securing the latter to the base, and cutting mechanism within the casing.



1,453,207. VISE. WALTER SUBY, Pieterlen, Switzerland. Filed Mar. 13, 1922. Serial No. 543,415. 3 Claims. (Cl. 81—32.)

1. In a vise, a fixed jaw including a body portion having an opening and provided with slideways and grooves, a movable jaw including a hollow slide having ribs operatively received in said slideways, an operating screw carried by said movable jaw and extending through the slide thereof, a nut carrying frame having tongues slid-

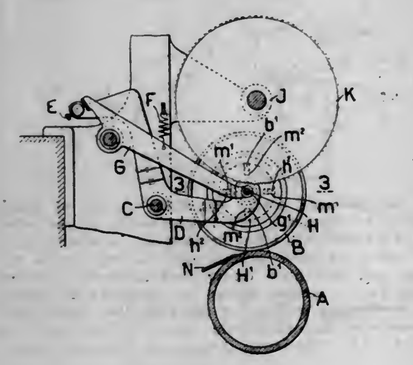


ably received in the groove of the body portion and comprising sections releasably secured to the body portion, the nut carrying frame having bearing lugs arranged within the hollow slide, a two-part nut mounted on the nut carrying frame, operating mechanism for moving the parts of the nut so as to engage them with or disengage them from the operating screw including a crank shaft having cranks of opposite throw operatively connected with the parts of the nut and actuating mechanism for said crank shaft including a lever, and gearing between the lever and the crank shaft.

1,453,208. SCARIFIER. NATHEN DANIEL THOMAS, Jacksonville, Fla. Filed Mar. 27, 1922. Serial No. 547,150. 4 Claims. (Cl. 55—11.)

1. An apparatus of the class described comprising a frame carrying an axle, a series of cutting disks arranged on said axle in spaced relation, a shaft mounted in the frame and arranged rearwardly of said axle, a series of star-shaped pulverizing cutters arranged on said shaft in spaced relation, and detachable supporting wheels of greater diameter than said cutting disks mounted on said axle.

1,453,209. SIDE CURTAIN FOR AUTOMOBILES. RALPH K. THOMSON, Sioux Falls, S. Dak. Filed June 28, 1920. Serial No. 392,229. 1 Claim. (Cl. 296—140.)

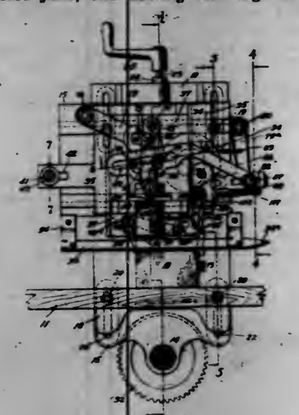


The combination with a vehicle having a top provided with a supporting frame and having a body on which said supporting frame rests, curtain securing pins located upon the supporting frame and body of the vehicle, a curtain comprising a plurality of sections each provided with socket members located along the edges thereof engageable over said pins, said sections overlapping at their adjacent edges, and transverse straps each extending across the under side of the top from a point opposite the overlapping edges of a respective pair of curtain sections to the point opposite the overlapping edges of the corresponding curtain sections on the opposite side of the vehicle and being free from engagement with the top intermediate its ends to permit the transverse straps to freely vibrate with the curtains, said straps being provided with downwardly extending curtain securing pins corresponding to the pins on the body in the frame whereby said curtains may be secured without rolling or folding in a flat position beneath the vehicle top.

1,453,210. PROCESS FOR PURIFYING THE RESIDUE OBTAINED IN PRODUCING AMMONIA FROM CYANIDE. CARL THEODOR THORSSELL and HARALD LUDVIG REINHOLD LUNDÉN, Gottenborg, Sweden, assignors to Aktiebolaget Kvåfveindustri, Gottenborg, Sweden. Filed July 9, 1919. Serial No. 309,738. 1 Claim. (Cl. 23—13.)

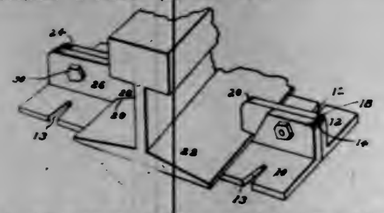
The herein described process of purifying a hydrolized product of a cyanide-forming reaction characterized in that the compounds present in the mass of reaction and consisting of silicates and aluminates, which are formed by the reaction by the base used in the mass, after water treatment of the cyanide-holding mass for the production of ammonia, are decomposed by carbon dioxide.

1,453,211. MACHINE FOR MEASURING SURFACE AREAS. HERMANN THUN, Essen, Germany, assignor to Fried. Krupp ..ktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Feb. 14, 1922. Serial No. 536,588. 2 Claims. (Cl. 33—124.)



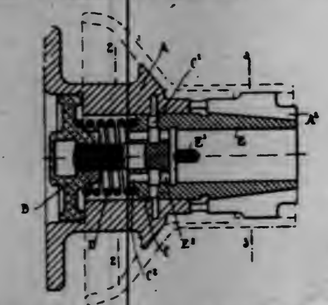
1. In a machine for measuring surface areas, in combination, a support over which the body to be measured is moved, members normally resting on the support and adapted to be lifted therefrom by the body to be measured, a series of coupling members adapted each to be engaged with a transferring element, a counter actuated by the said transferring elements, and a coupling between the liftable members and their co-operating coupling members, said coupling being adapted to prevent relative rotation between the liftable members and the coupling members but to allow relative shifting motion between the same in the sense of the lifting motion of the first-mentioned members.

1,453,212. CAPPING MACHINE. JONAS E. TORNQUIST, St. Paul, Minn. Filed Aug. 3, 1920. Serial No. 400,900. 24 Claims. (Cl. 113—18.)



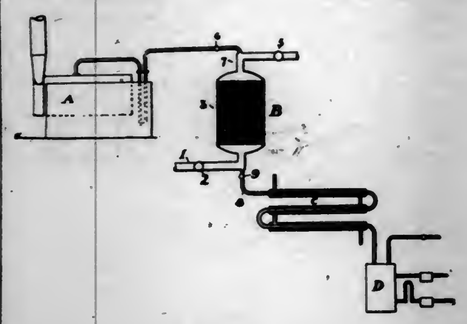
1. The combination, with means for supporting a container to be capped, of a cap sealing mechanism comprising jaws arranged to close under a cap in position on the neck of a container, means for closing said jaws

under said cap, means for forcing the edge of said cap against said jaws, and causing said edge to be turned



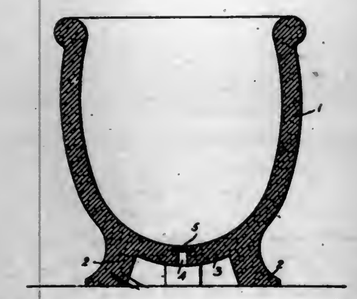
inward, and means for simultaneously moving said jaws in a direction opposite to the line of pressure on said cap.

1,453,213. RAIL-SECURING DEVICE. FRANK M. TUBBS, Santa Rosa, Calif. Filed Oct. 4, 1921. Serial No. 505,230. 1 Claim. (Cl. 238—290.)



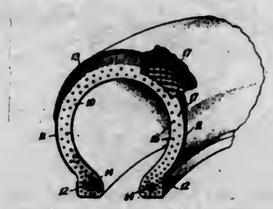
A rail securing device comprising a pair of plates adapted to support a rail independently of the other rail of a track, each plate including an upstanding member having an inner beveled edge for engaging a rail flange, and each plate carrying an upstanding member having an overhanging portion for engaging a rail flange, the overhanging portions of the respective plates being in reverse relation, all of said upstanding members being slotted, and bolts passing through the aforesaid slots.

1,453,214. SAFETY SUPPORT FOR THE SPARE WHEELS OF AUTOMOBILES. GAETANO VEGLIO, Levallois-Perret, France. Filed July 7, 1920. Serial No. 394,479. 6 Claims. (Cl. 224—29.)



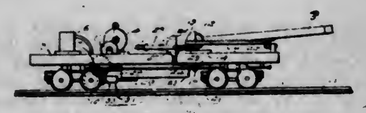
1. A support for securing spare wheels for automobiles, comprising an expansible hub, adapted to receive the spare wheel, a cone located within said hub, said cone terminating in a screwed portion, a nut fixed to said hub and receiving said screwed portion, means for rotating said cone and means for locking said cone.

1,453,215. METHOD OF VOLATILIZING, DISTILLING, OR SEPARATING ABSORBED VAPORS. CLYDE L. VORESS, New York, N. Y., and VERNON C. CANTER, Bradford, Pa., assignor to Gasoline Recovery Corporation, a Corporation of Delaware. Filed Feb. 18, 1922. Serial No. 537,570. 12 Claims. (Cl. 260—168.)



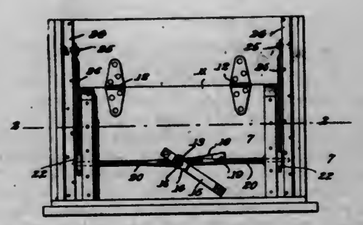
1. A process for the recovery of benzol vapors from gas mixtures by the method of absorption in activated charcoal, which consists in displacing benzol vapors from the charcoal by condensed distilling vapors at a temperature higher than the temperature at which the benzol was originally absorbed, then displacing the distilling vapors by lighter hydrocarbon vapors from substantially denuded gas at a temperature for the most part lower than that at which the benzol vapors were distilled from the charcoal, and then displacing the lighter hydrocarbon vapors by heavier benzol vapors from the gas mixture being denuded at a temperature lower than the temperature at which the previous displacement of benzol by the distilling vapors was made.

1,453,216. PLANT RECEPTACLE. EUGENE CHARLES WEIDIG, New Orleans, La. Filed Sept. 2, 1921. Serial No. 497,892. 2 Claims. (Cl. 47—19.)



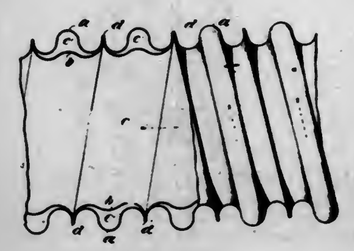
2. A receptacle of the character described having an opening in its bottom, and a wire mesh screen located across the opening and having its edges embedded in the material of the receptacle.

1,453,217. PNEUMATIC TIRE. DANIEL M. WEIGEL, Chicago, Ill., assignor to The Wire Cord Company, Akron, Ohio, a Corporation of Delaware. Filed Aug. 22, 1921. Serial No. 494,089. 9 Claims. (Cl. 152—13.)



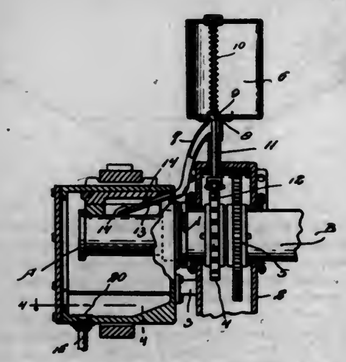
1. In a pneumatic tire, a carcass having a rubber body portion including bead portions, spaced wires embedded therein extending from bead to bead and being independent of each other throughout their length except at the point of fastening in the bead portion, said rubber body portion and said wires in themselves solely constituting the means for resisting the tendency of the contained air to rupture the tire.

1,453,218. TRUCK AND PUSH POLE FOR SWITCHING CARS. JAMES R. WESLEY, Chicago, Ill. Filed Jan. 23, 1922. Serial No. 531,248. 3 Claims. (Cl. 213—224.)



1. In a system for automatically switching cars, a truck, a propelling pole mounted upon the truck and laterally adjustable towards either side of the truck, and a notched bar in cooperative relation with the pole for securing the same in the adjusted position.

1,453,219. END GATE. HOWARD W. WHITE and WILLIAM LININGER, Kent, Iowa. Filed Apr. 17, 1922. Serial No. 553,349. 4 Claims. (Cl. 296—50.)

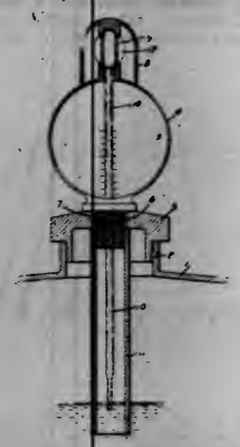


1. The combination with a vehicle body having an end gate, of bars pivotally secured to the vehicle body at each side of the gate, guides carried by the gate and slidingly engaging the bars and means operatively mounted upon the gate for engagement in openings provided in said bars to hold the gate in adjusted position.

1,453,220. DOUBLE-WALLED TUBE FOR HEATING AND COOLING PURPOSES. EMIL WITZENMANN, Pforzheim, Germany. Filed Mar. 4, 1918. Serial No. 220,384. 3 Claims. (Cl. 137—75.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

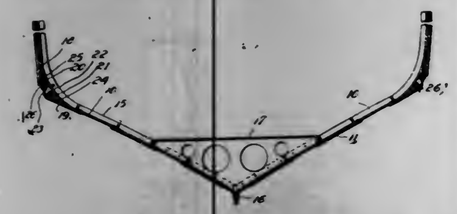
2. A tube of the character described comprising an inner and outer wall, said walls each consisting of a corrugated strip of metal and the opposite edges of said corrugated strips being connected together.

1,453,221. OILING DEVICE. JOSEPH WOROSILA, Fort Hancock, N. J. Filed Apr. 10, 1922. Serial No. 551,255. 4 Claims. (Cl. 184—6.)



2. A lubricating device for the journal box of a vehicle comprising a supply tank connected with the box, a valve for controlling the flow of oil from the supply tank, means for intermittently operating the same from the axle of the vehicle, a pump for returning the oil from the box to the tank and means for actuating the pump from the vehicle axle.

1,453,222. GAUGE. LEONARD FOOTE, Pedro Miguel, Canal Zone, Panama. Filed Nov. 2, 1921. Serial No. 512,286. 10 Claims. (Cl. 116—118.)



6. In a device of the character described, a supporting frame including a ring provided with diametrically opposed apertures, a hollow cap mounted on the ring and covering one of said apertures, said ring being provided with an annular shoulder adjacent to said aperture,

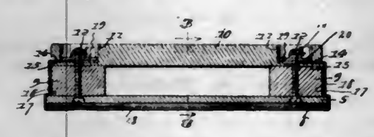
vacuum inducing means mounted on said shoulder and a tube carried by said means and extending from the

cap and through the apertures in the ring, said cap being provided with apertures whereby to manipulate said vacuum inducing means.

1,453,223. BOAT-HULL CONSTRUCTION. GEORGE MARSHALL FRENCH, Chicago, Ill. Filed Apr. 27, 1922. Serial No. 556,996. 8 Claims. (Cl. 114—84.)

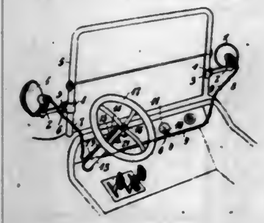
1. A boat hull having, in combination, a shell comprising plates having flanges at their opposite longitudinal edges, other plates having plain edges overlapping the flanged edges of the first mentioned plates, and metallic frame members arranged in spaced relation and formed of sheet metal and flanged along one edge, said plates being secured directly to said frame members, and the flanges of the first mentioned plates being cut away to receive the frame members.

8. In a hull, the combination of a metallic shell construction and a wooden planking, a frame to which said shell and planking are secured, and means for securing the uppermost plate of the shell construction to the frame including a metallic bracket secured upon the inner side of said plate below its upper edge, the upper edge of said plate terminating between the planking and the frame.



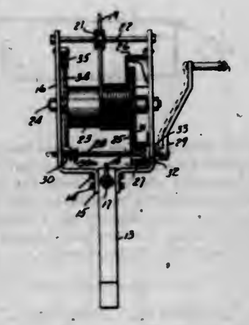
1,453,224. AUTOMOBILE TIRE. JOSEPH GRESZCZUK, Brooklyn, N. Y. Filed Nov. 25, 1921. Serial No. 517,540. 2 Claims. (Cl. 152—8.)

1. A spring wheel of the character described comprising in combination with a rim, a plurality of fastening cleats comprising complementary members adapted to be fastened together, the opposite ends of the cleats being opened, a plurality of leaves arranged in groups for forming a plurality of spring members, the leaves in each group being adapted to be extended into the open ends of the said fastening members whereby they may be engaged by the said cleats, the cleats having curved recesses, the ends of the springs being curved to fit the recesses, one



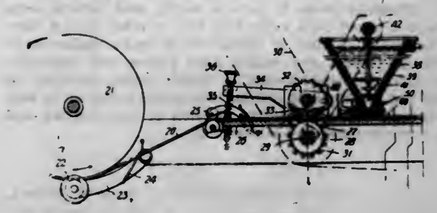
member of each cleat being provided with lugs to engage the curved portions of the said leaves whereby they will be rigidly held between the cleats.

1,453,225. BUFFER BLOCK. LUTHER E. HARRIS, Philadelphia, Pa., assignor to Harris & Wolfrey, a Partnership consisting of Luther E. Harris and John N. Wolfrey. Filed Apr. 15, 1921. Serial No. 461,665. 2 Claims. (Cl. 51—187.)



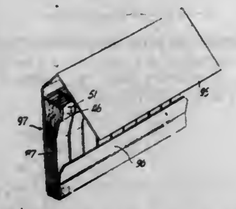
1. In a buffer block, a body and a handle, the said handle having slots extending inwardly from the ends and recesses in the top with which the slots merge, threaded studs projecting into the recesses, clamping elements having slotted portions extending through the slots of the handle into the recesses, members threaded on the studs and bearing on the slotted portions of the clamps for frictionally retaining the clamps in place, the said clamps having jaws overlying portions of the ends of the body and adapted to clamp sand paper against the said ends.

1,453,226. VEHICLE LIGHTING DEVICE. GERALD H. HARVEY, Cincinnati, Ohio. Filed Aug. 8, 1921. Serial No. 490,660. 12 Claims. (Cl. 240—7.)



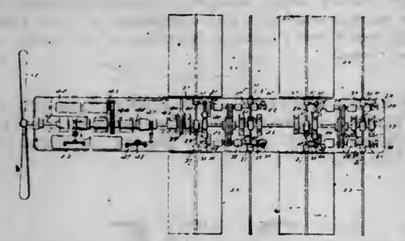
1. In a vehicle-lighting device, in combination with a vehicle, a steering-member on said vehicle, and a plurality of lamps on said vehicle, movable lamp-controlling means lighting one lamp or the other upon a requisite movement in one direction or the other, and engaging means carried by said steering-member momentarily engaging with said controlling means during steering movement in either direction and imparting said movement to said controlling means in one direction or the other entirely during the momentary engagement.

1,453,227. SCAFFOLD. WILLIAM J. MURRAY, Mamaroneck, N. Y. Filed Nov. 15, 1921. Serial No. 515,244. 2 Claims. (Cl. 254—167.)



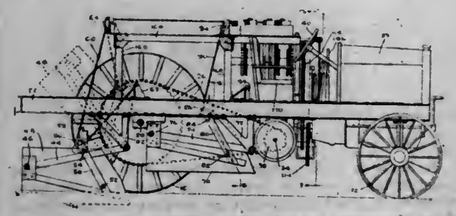
1. A hoisting and lowering unit for the suspension cables of scaffolds, said unit comprising a frame, a drum in said frame, a gear wheel rigid with said drum, a drive shaft turnable and slidable axially of the frame, a pinion on said shaft meshing with said gear wheel, a fixed clutch on said frame coaxial with the drive shaft, said clutch and pinion having mating clutch teeth, and spring means acting on said shaft and tending to maintain said pinion in engagement with said clutch.

1,453,228. PROCESS AND APPARATUS FOR MANUFACTURING MATCHES. JOHN GLEN NEWMAN, North Sydney, New South Wales, Australia, assignor to James Hardie and Company Limited, Sydney, New South Wales, Australia. Filed Nov. 2, 1921. Serial No. 512,361. 11 Claims. (Cl. 144—51.)



1. Apparatus for manufacturing flexible strip matches, comprising rolls with complementary sprocket teeth and indented teeth, said rolls positioned respectively below and above a table, and means for resiliently bearing said rollers against a continuous stock strip and for rotating them to feed the same and to form embossments therein, a heat jacketed hopper located above said table and adapted to contain match heading composition, a variable vent in the foot of said hopper and stirring means within it, fence and strickle guides below said hopper foot adapted to control the application of a streak of heading composition flowed on the strip from the hopper vent, an oven with heating means adapted for drying the streaked strip, rolls working in contact with said streaked strip after it leaves the oven, means for serving said rolls continuously with hot waxy material, means for drawing said strip from said last-mentioned rolls, and means for slitting it transversely to form individual headed match strips.

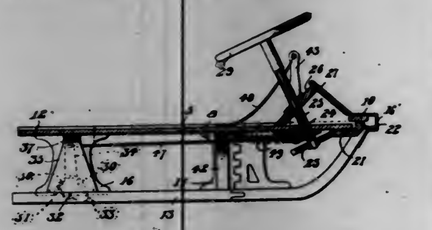
1,453,229. MATCH. JOHN GLEN NEWMAN, North Sydney, New South Wales, Australia, assignor to James Hardie and Company Limited, Sydney, New South Wales, Australia. Filed Nov. 2, 1921. Serial No. 512,362. 11 Claims. (Cl. 44—43.)



1. A match having a stem constructed of a strip of stout paper or thin wood veneer, and having slow burning igniting composition applied on one side only of said strip with a protuberance in said composition forming an ignitable striking face of small area.

1,453,230. AEROPLANE. LOUIS NORDQUIST, Galeton, Pa. Filed Apr. 3, 1922. Serial No. 549,028. 2 Claims. (Cl. 244—20.)

1. In a flying machine, a car, a crank shaft journaled therein, pairs of eccentrics on the crank shaft, eccentric straps engaging the said eccentrics and having arms extending oppositely, a crank partially rotated by each of the said arms, pitmen connected to the cranks and reciprocated thereby, shafts having wings mounted for oscillatory and rotary motion with respect to the car, arms extending from the said shafts to which the pitmen are connected, a pitman to which the inner ends of the shafts are connected, and means for connecting the opposite ends of the pitman to one of the throws of the crank shaft and means for driving the crank shaft.

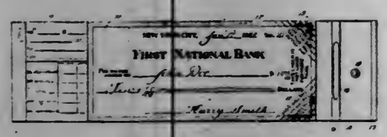


1,453,231. POWER-OPERATED ROAD-GRADING MACHINE. EDWIN M. WHEELOCK, Winona, Minn. Filed July 23, 1920. Serial No. 398,398. 4 Claims. (Cl. 37—126.)

1. A road grading machine comprising a wheel-supported frame, a traction engine mounted on said frame,

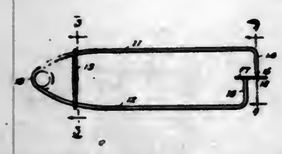
two hangers attached to said frame at opposite sides thereof, rearwardly extending arms pivoted to the lower ends of said hangers, a scoop pivotally attached at its rear to the rear ends of said arms, and means for lifting said scoop by power from said engine.

1,453,232. SLED. STEFAN ZUKOWSKI, Pascoag, R. I., assignor of forty-five per cent to Ludwik Okoniewski, Pascoag, R. I. Filed Feb. 21, 1922. Serial No. 538,198. 7 Claims. (Cl. 188—8.)



7. In an occupant-steered sled having runners and side rails disposed thereabove, braces rigidly connecting the runners and side rails, ground engaging spurs pivoted in said runners, means operatively connected to said spurs for moving said spurs into engagement with the ground, and means for automatic retraction of the spurs from the ground.

1,453,233. COUPLING FOR ELECTRIC-LIGHT FIXTURES. CHARLES M. BALL, Jr., Loveland, Colo. Filed Jan. 26, 1922. Serial No. 531,882. 1 Claim. (Cl. 240—85.)

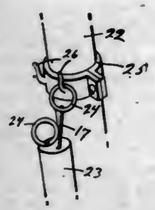


A coupling for electric fixtures comprising a flat base member having a laterally opening socket, a block having an annular groove adjacent one end so that the same may be slid laterally into said socket and having an opening, threads provided on the other end of said block exteriorly thereof, and a nut having an extension with a notched terminal disposed out of alignment with its body, said nut engaging said threads so as to hold said block in locked engagement with said base member.

1,453,234. BANK CHECK AND CHECK BOOK. ROY BATES, Nevada, Mo. Filed Jan. 31, 1922. Serial No. 533,079. 2 Claims. (Cl. 283—12.)

1. A check book having an extension at the outer end constituting a cutting device, said cutting device being foldable on itself and having an opening therethrough at the folding zone for the passage through the opening of a corner of a check, the edge of said extension having a cutter.

1,453,235. CHECK PERFORATOR. ROY BATES, Nevada, Mo. Filed Jan. 31, 1922. Serial No. 533,080. 3 Claims. (Cl. 164—119.)

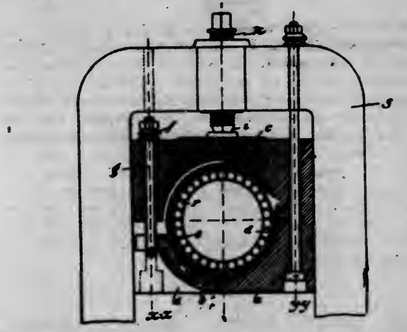


1. A perforating device of the class described formed of wire and having a spring coil therein and presenting arms extending forwardly from said coil, the one arm having a downturned puncturing member at the front end thereof, and the other arm supporting a table extending beneath the puncturing member and formed with a hole in register with said puncturing member.

1,453,236. AUTOMATIC ADDITIONAL AIR VALVE FOR COMBUSTION ENGINES. WILLIAM HENRY BAUERT, Roseville, near Sydney, New South Wales, Australia. Filed Feb. 18, 1920. Serial No. 359,643. 4 Claims. (Cl. 251—145.)

1. A device of the type herein described comprising a valve consisting of a hollow closed-bottom piston having air admission ports in its side walls, said bottom being adapted to act as a valve face and to coact with a movable seating capable of being secured to an engine manifold, a plunger rod within said piston and extending through the head thereof, a coiled spring mounted on said rod within said piston, and means adapted to support said valve in relative position to said seating and to vary the tension of said spring.

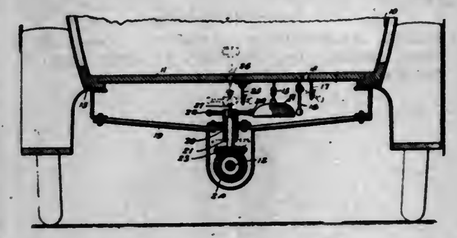
1,453,237. DIRECTION INDICATOR. ISAAC M. BROWN, Youngstown, Ohio. Filed Oct. 5, 1920. Serial No. 414,895. 1 Claim. (Cl. 74—39.)



In an operating mechanism for signals comprising a support, a sleeve situated adjacent the support, cables mounted in the sleeve, rings situated on the terminals of the cables, a collar fixed to the support above the upper end of the sleeve, and provided with hooks adapted to be engaged by the rings.

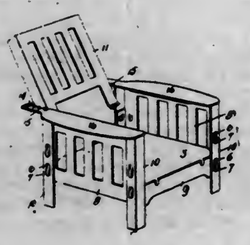
1,453,238. DISPLAY EASEL. GEORGE ADDISON DONALDSON, Girard, Ill. Filed May 16, 1922. Serial No. 561,463. 2 Claims. (Cl. 40—146.)

1. An easel, comprising a face plate, a member fixed to the back of the face plate, a back stay hingedly connected to said member, an attachment comprising a shaft, and a pair of arms at an angle thereto, said shaft mounted to turn between said member and the back stay, and said arms adapted to receive the back stay between them and hold the latter in operative position, and also adapted to be moved against the back plate and permit the stay to fold flat against said member.



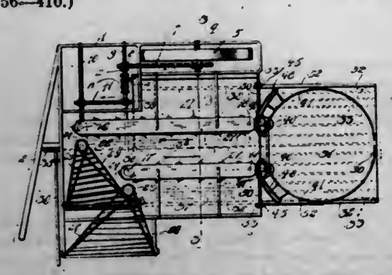
1,453,239. PEDESTAL. LEO DOSTAL, Kladno, Czechoslovakia. Filed May 15, 1920. Serial No. 381,736. 1 Claim. (Cl. 64—39.)

A bearing for rolling mills for taking a plurality of strains acting alternately in varying radial directions comprising a plurality of bearing rings arranged axially side by side, and supporting means for the bearing means, one of the said rings being resiliently mounted in such a manner as to keep the periphery of the neck of the roller in contact with the inner surface of the bearing member when there is a wear between the neck and the bearing, as set forth.



1,453,240. MOTOR-VEHICLE ALARM. PATRICK DOWD, Brooklyn, N. Y. Filed Feb. 7, 1922. Serial No. 534,725. 1 Claim. (Cl. 116—33.)

A device of the character described for use with vehicles, comprising a casing suspended from the vehicle, a gong suspended from the vehicle and located in the casing, a striking arm suspended from the vehicle adjacent the gong for sounding the latter when the car is in position, a hook suspended from the vehicle adjacent the striking arm for receiving the latter to retain it in



an inactive position when the vehicle is in motion, and means for inserting into the casing to place the striking arm in said hook to retain it in an inactive position when the vehicle is in motion.

1,453,241. TOY FURNITURE. ARCHIBALD DUFFIELD, Derby, Conn. Filed Aug. 12, 1920. Serial No. 403,016. 5 Claims. (Cl. 46—37.)

1. As a new article of manufacture, toy furniture, comprising side members, end members, and legs having right angular members fitting throughout their width against the adjacent ends of the side and end members and having detachable inter-locking engagement therewith, whereby the parts can be readily assembled and taken apart for the purpose set forth.

1,453,242. GRAIN-SHOCKING MACHINE. WALTER OTTO EICHENBERGER, Gray, Saskatchewan, Canada. Filed Dec. 9, 1918. Serial No. 265,943. 2 Claims. (Cl. 56—410.)

1. A grain shocking machine of the character described comprising a wheeled frame, a sliding plate supported on said frame, conveyors on said frame leading to said plate, vertical shafts positioned adjacent said plate and conveyors, arms on said shaft for retaining shocks of grain on the plate, a movable forked frame, means for normally retaining said plate above said forked frame, means for sliding said plate whereby the shocks supported thereby may be deposited upon said forked frame, and

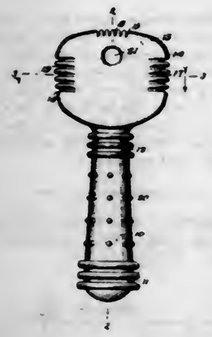
means operatively connecting said forked frame with said arms whereby the arms will release said grain shocks when the latter have been deposited upon said forked frame.

1,453,243. ADJUSTABLE GARMENT. JOSEPH EICHHORN, Columbia, Pa. Filed May 31, 1922. Serial No. 564,908. 2 Claims. (Cl. 2—143.)

2. A bifurcated garment having a waist portion and comprising a rear cloth piece on each side having a forwardly-extending flap at the waist portion, a front cloth piece on each side overlapping one of said rear pieces, there being side pocket openings under the overlapping edges of said front pieces, said rear and front pieces being sewed together at the sides of the garment below the pocket openings upwardly to the bottoms of those openings, a reinforcing strip sewed to each rear piece from the bottom of each pocket opening to a place below the top of said opening and extending from said place free of said rear piece and secured to said front piece with its rear edge positioned forwardly of the rear edge of said front piece and at the top of the pocket opening, there being an opening between the front and rear pieces extending through the waist portion of the garment downwardly to the place below the top of the pocket opening from which said reinforcing strip extends free, and a plurality of fastening means on said front pieces at the waist portion and on said flaps cooperable one with another.

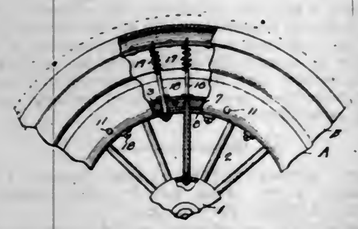
1,453,244. FILM HOLDER. CHESTER SCOTT HOWLAND, New Bedford, Mass. Filed Apr. 21, 1921. Serial No. 463,333. 7 Claims. (Cl. 95—100.)

1. A film holder including a U-shaped frame, a cross member connecting the ends of the U-shaped frame, a rectangular frame hinged to the cross member and adapted to cooperate with one end of the U-shaped frame to hold a film.



1,453,245. BUTTON. REUEL L. HUFFMAN, Brookfield, Mo. Filed Aug. 8, 1922. Serial No. 580,467. 1 Claim. (Cl. 24—95.)

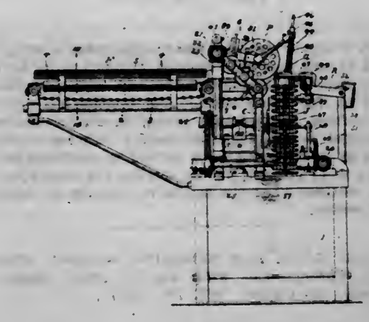
A button comprising a body, a cylindrical neck extending from one side of the body and coaxial therewith, an annular flange extending inwardly around the outer end of the cylindrical neck and an attaching plate having a plurality of resilient hooks extending parallel to the axes of the body and attaching plate in assembly, said hooks having shanks arranged so that the outer



lateral faces of the shanks engage the inner peripheral face of the flange in assembly, said hooks also having outwardly extending projections at their free ends adapted to extend over and positively and directly engage the inner lateral face of the flange in the assembly.

1,453,246. SCISSORS SHARPENER. EMILY JONES, Brooklyn, N. Y. Filed Mar. 16, 1922. Serial No. 544,204. 1 Claim. (Cl. 51—205.)

As a new article of manufacture, a scissors sharpener of the character described, comprising a tapering cylindrical handle, a plurality of circumferential ridges formed integral with the handle at each end, said circumferential ridges being spaced apart forming circumferential grooves, a head having an opening therethrough formed integral with the smaller end of the handle, and a plurality of curved faces of different thickness formed on the head, each curved face having a plurality of grooves formed therein.

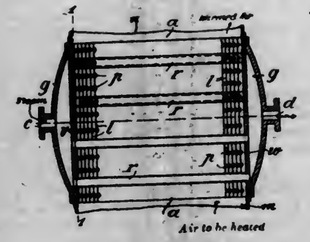


1,453,247. SPRING WHEEL. CHARLES A. KIGGINS, Weskan, Kans. Filed Feb. 25, 1920. Serial No. 361,131. 2 Claims. (Cl. 152—37.)

2. A resilient wheel comprising a hub, an inner rim portion, an outer rim portion slidably associated with

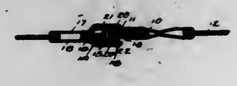
the inner rim portion, tubular spokes rigidly connecting the inner rim portion and the hub, radially extending rods fitted in the spokes and extending into the rim portions and terminating short of the outer wall of the outer rim portion, oppositely directed outwardly inclined coil springs secured to each rod at the outer terminal thereof and to the opposite side walls of the outer rim portion, relatively short rods rigidly secured to the inner rim portion intermediate the spokes extending radially from the inner rim portion and terminating short of the outer wall of the outer rim portion, and spring means connected with the terminals of the relatively short rods and with said outer rim sections.

1,453,248. GREEN - CORN - DEBUTTING MACHINE. WILLIAM HAMMOND LEISTER, Westminster, Md., assignor to The United Machinery Company, Westminster, Md., a Corporation of Maryland. Filed Sept. 20, 1917. Serial No. 192,367. 83 Claims. (Cl. 146—11.)



1. A corn debutting machine including cutting means, aliining means engaging the body of the ear proper to find the grain shoulder for positioning the ear by the grain shoulder relative to the cutting means, and means for giving said ear of corn and aliining means a relative movement to bring about the positioning of the ear on said aliining means.

1,453,249. ASSOCIATION VANITY BOX. ARTHUR E. ROPE, Brooklyn, N. Y. Filed Mar. 23, 1922. Serial No. 546,087. 5 Claims. (Cl. 132—83.)

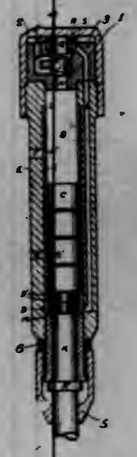


1. A device of the character described, comprising a plurality of independent containers, webs fixedly connecting the containers, and plates at the ends of the webs and spaced from the ends of the containers.

1,453,250. HEAT-EXCHANGING APPARATUS. RICHARD SCHNOECKEL, Auerbach, Germany, assignor to C. G. Haubold Aktien-Gesellschaft, Chemnitz, Germany, a Joint-Stock Company of Germany. Filed Aug. 26, 1922. Serial No. 584,593. 1 Claim. (Cl. 257—245.)

A heat exchange apparatus of the type having a plurality of substantially parallel plates pierced by a plurality of substantially parallel pipes at substantially right angles to said plates, the said plates being provided at regular intervals with struck-up portions in the form of parts of spheres, the struck-up portions of all the plates being similarly arranged on said plates, and being on the same sides of said plates, whereby a given plate is everywhere at substantially the same distance from its neighbor, including the stuck-up portion, the said plates being imperforate except as regards the perforations for accommodating the pipes above specified.

1,453,251. FASTENER FOR REVERSIBLE GARMENTS. JOHN J. SOMERS, Bridgeport, Conn. Filed Aug. 31, 1922. Serial No. 585,516. 8 Claims. (Cl. 24—222.)



1. A fastener for reversible garments, comprising loop members carried by one edge of the reversible garment, studs slidably mounted in the other edge of the reversible garment, and means attached to the reversible garment for forcing the studs to either side of the reversible garment to engage the loop members.

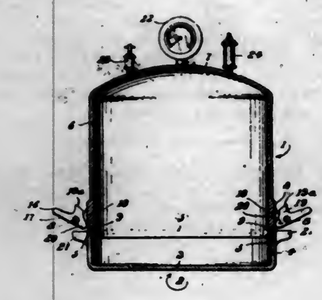
1,453,252. AUTOMATIC STOPPING DEVICE FOR PNEUMATIC TOOLS. LEOPOLD ROBIVE, Brussels, Belgium. Filed Apr. 11, 1919. Serial No. 289,379. 3 Claims. (Cl. 121—11.)

1. In a fluid pressure actuated tool, a cylinder, a tool carried at one end of the cylinder to have a limited movement into and out of the cylinder, a reciprocable hammer piston in the cylinder to co-operate with the tool, inlet ports to the cylinder at opposite sides of the piston, a valve to control the entrance of the actuating fluid through said ports to the cylinder controlled by the pressure within the cylinder, exhaust ports from the cylinder at opposite sides of the piston, and a valve op-

erated by the actuating fluid to shut off the exhaust ports from the cylinder when the tool is relieved of the pres-

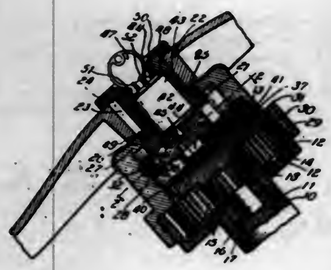
sure thereof upon the work and place the piston under equilibrium by the actuating fluid for the purpose specified.

1,453,253. METALLIC HEEL FOR SHOES AND THE LIKE. ANGEL KURTIS, now by judicial change of name ANGELOS KURTIS, Boston, Mass. Filed Jan. 21, 1921. Serial No. 438,861. 3 Claims. (Cl. 36—40.)



1. The combination of a hollow metallic heel member having plate supporting lugs interiorly therein, which are supplied with tapped holes for engaging with coupling screws; a perforated tap-plate adapted to be secured to a shoe bottom and provided with means for interlockingly fitting said lugs of said heel member for supportingly setting the plate within said heel member, and screw holes registering with the tapped holes of said heel member; and coupling screws adapted to engage the heel member with the tap-plate in set position and to anchor said heel member securely to the shoe.

1,453,254. ALLOY AND PROCESS OF MAKING THE SAME. ALLEN B. NORTON, Cleveland, Ohio, assignor to Aluminum Manufacturers, Incorporated, Cleveland, Ohio, a Corporation of Delaware. Filed May 31, 1921. Serial No. 473,826. 10 Claims. (Cl. 75—1.)

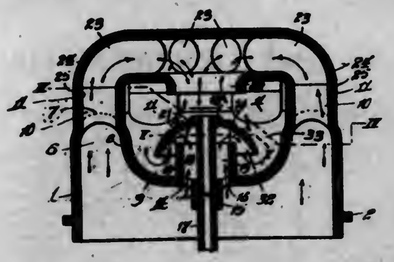


1. The process of making an alloy containing aluminum and metals having relatively high melting points as compared with aluminum, which comprises melting the aluminum, adding a high melting point metal in solid form to the molten aluminum and then adding a high melting point metal in molten form to the molten aluminum.

1,453,255. STEAM-PRESSURE COOKER. HENRY A. POPPERT, Milwaukee, Wis., assignor to Henry A. Poppert & Son Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 8, 1922. Serial No. 580,424. 3 Claims. (Cl. 53—2.)

3. In a steam pressure cooker embodying a receptacle formed of two separable sections adapted to be held together, combined lifting handles and separating means carried by the upper section and cooperating with the lower section, each of said lifting handles embodying a leg pivoted to the upper section, a cam-lug extension carried by said leg and a lug carried by the lower section adapted to be engaged by the cam-lug for separating the cooker sections when the handle is operated to raise the upper section.

1,453,256. LOCK FOR STEERING GEARS. WILLIAM GANZ, Chicago, Ill. Filed Dec. 7, 1921. Serial No. 520,468. 20 Claims. (Cl. 70—129.)



4. In a steering gear, a steering column, a steering shaft therein, a steering wheel, means adapted to simultaneously disconnect said steering wheel from said steering shaft, and secure said steering shaft against steering movement.

1,453,257. OIL BURNER. FERDINAND C. BRETSNYDER, St. Louis, Mo. Filed Jan. 17, 1919, Serial No. 271,605. Renewed Mar. 5, 1923. 2 Claims. (Cl. 158—01.)

1. An oil burner comprised of a housing having an inner and an outer circular wall, said walls being joined to each other by a curved top wall formed integral therewith, said inner wall curving inwardly at its lower end thereby providing a bowl within said inner wall in which the curving of the lower end of said inner wall forms a bottom to the bowl, a tubular extension formed integral with the bottom of said bowl forming a passageway to said bowl from therebeneath, an oil spreader extended above said extension having its lower edge extended on a plane below and on the outside of the upper end of said

extension, said walls of said housing forming an annular passageway, said upper wall of said housing having a plu-

rality of openings, and there being means provided for entraining air currents from said openings of said upper wall to the top of said spreader.

1,453,258. PROCESS OF MAKING A CONTACT TRANSFER PRINTING SURFACE WITH A COLORED EMULSION. ROBERT JOHN, New York, N. Y., assignor to Daylight Film Corporation, a Corporation of New York. Filed Oct. 23, 1919. Serial No. 332,806. 14 Claims. (Cl. 95—5.6.)

1. The process of forming a photographic record of lights and shades capable of use as a transfer printing plate, which comprises coloring a sensitized emulsion with a color complementary to the exposure light, exposing said emulsion to the lights and shades desired to be recorded, and hardening portions of emulsion adjacent the light affected sensitive content of a photographic emulsion with an agent adapted to harden said emulsion by reaction with the light affected sensitive content of the emulsion, and with a neutralizing agent for said hardening agent, the relative proportions of said hardening and neutralizing agents being such as to control selectively the effective area of influence of the hardening agent but to an extent less than the complete neutralization of said hardening agent.

1,453,259. PRINTING PLATE AND PROCESS AND COMPOSITION OF MATTER FOR FORMING THE SAME AND PROCESS OF PRINTING. ROBERT JOHN, New York, N. Y. Filed Aug. 16, 1922. Serial No. 582,321. 104 Claims. (Cl. 101—426.)

102. The process of printing which comprises forming on a backing a colloid coating, hardening said coating, sensitizing said colloid with a chromic acid salt, exposing said colloid to a light image, then without removng the unaltered portion of said salt, accentuating the difference in water-receptiveness between the exposed and unexposed portions of the colloid, removing the unaffected portions of said salt from the said colloid coating, hardening said colloid coating and heating said plate, moistening said plate, applying ink thereto, emulsifying said ink with the said water on said plate and transferring said ink.

ALPHABETICAL LIST OF REGISTRANTS OF TRADE-MARKS.

Acme Flavoring Co., Portland, Oreg. Food-flavoring extracts. 166,477; Apr. 3; Serial No. 166,069; published Jan. 16, 1923.

Acme Grocery Co., The, Chicago, Ill. Canned fruit and vegetables. 166,443; Apr. 3; Serial No. 166,625; published Jan. 16, 1923.

Aero-Kord Co. (See Berdon, Albert E.)

Air-Way Electric Appliance Corporation, The, Toledo, Ohio. Radio outfits and parts thereof. 166,428; Apr. 3; Serial No. 164,483; published Dec. 26, 1922.

Alexander, Armstead M., Independence, Mo. Ice cream. 166,445; Apr. 3; Serial No. 166,494; published Jan. 16, 1923.

Alling, Johan, Stockholm, Sweden. Steel pens. 166,361; Apr. 3; Serial No. 170,601; published Dec. 5, 1922.

Alouf Bros., Roanoke, Va. Coffee. 166,450; Apr. 3; Serial No. 166,217; published Jan. 16, 1923.

Alpine Chocolate Company, Boston, Mass. Candy. 166,359; Apr. 3; Serial No. 152,666; published Jan. 16, 1923.

Aluminum Company of America, Pittsburgh and New Kensington, Pa. Aluminum household, kitchen and cooking utensils. 166,413; Apr. 3; Serial No. 167,115; published Jan. 2, 1923.

American Agricultural Chemical Company, The, New York, N. Y. Fertilizer. 166,380; Apr. 3; Serial No. 169,739; published Nov. 7, 1922.

American Tablet Co., Green Bay, Wis. Tablets. 166,366; Apr. 3; Serial No. 170,175; published Nov. 14, 1922.

American Thermostat Co., Newark, N. J. Thermostatic temperature-control apparatus. 166,491; Apr. 3; Serial No. 171,115; published Jan. 2, 1923.

Anaconda Lead Products Company, New York, N. Y. White lead, both dry and in oil. 166,434; Apr. 3; Serial No. 164,094; published Jan. 9, 1923.

Anita Company, The. (See Rostow, Anna D.)

Ansco Company, Binghamton, N. Y. Photographic films. 166,463; Apr. 3; Serial No. 169,274; published Jan. 2, 1923.

Art Industries, Inc. (See Waldmeyer, Francis J., assignor.)

Beckwith Co., The, Reedley, Calif. Preserved figs. 166,420; Apr. 3; Serial No. 164,861; published Jan. 9, 1923.

Berdon, Albert E., doing business as Aero-Kord Co., Detroit, Mich. Combined cords and plugs used to connect translating devices with lamp sockets. 166,417; Apr. 3; Serial No. 165,658; published Jan. 9, 1923.

Bertini Bros., Chicago, Ill. Olive oil. 166,454; Apr. 3; Serial No 166,034; published Jan. 16, 1923.

Blackford, Herbert R., Brooklyn, N. Y. Candied pop corn and other pop-corn confections. 166,432; Apr. 3; Serial No. 164,153; published Jan. 9, 1923.

Bonadio & Merchiorri Co., Pittsburgh, Pa. Alimentary paste. 166,476; Apr. 3; Serial No. 166,973; published Jan. 16, 1923.

Bonita Company, The, Fond du Lac, Wis. Candy. 166,343; Apr. 3; Serial No. 160,856; published Jan. 9, 1923.

Bownes, Frank, Company Inc., Lynn, Mass. Paint enamels. 166,484; Apr. 3; Serial No. 170,619; published Jan. 9, 1923.

Bristol Company, The, Waterbury, Conn. Electrical loud-speaking receivers, horns, control boxes, etc. 166,471; Apr. 3; Serial No. 168,098; published Jan. 9, 1923.

Brown, R. J., Petroleum Company, St. Louis, Mo. Thinning oil. 166,442; Apr. 3; Serial No. 166,646; published Jan. 9, 1923.

Burdette-Murray Company, The, Cleveland, Ohio. Pantographs. 166,468; Apr. 3; Serial No. 168,669; published Jan. 2, 1923.

Burhorn, Edwin Co., New York, N. Y. Noncorroding and nonrusting alloys, rolled plates and sheets of such alloys, etc. 166,358; Apr. 3; Serial No. 149,210; published Jan. 2, 1923.

Cairo Food Products Company, Cairo, Ill. Chocolate-covered ice-cream bar. 166,507; Apr. 3; Serial No. 163,328; published Jan. 9, 1923.

Callidendron Mfg. & Chemical Corp., Brooklyn, N. Y. Polishing creams for painted, varnished, and lacquered surfaces. 166,467; Apr. 3; Serial No. 168,824; published Jan. 9, 1923.

Cartoning Machinery Corporation, Newark, N. J., and Newport, R. I. Carton and box filling machinery. 166,412; Apr. 3; Serial No. 166,933; published Jan. 2, 1923.

Caulk, L. D., Company, The, Milford, Del. Cement for filling teeth and liquid therefor. 166,520; Apr. 3; Serial No. 172,082; published Jan. 9, 1923.

Caulk, L. D., Company, The, Milford, Del. Dental alloy. 166,521; Apr. 3; Serial No. 172,081; published Jan. 9, 1923.

Cervelli, Blanche, San Francisco, Calif. Hip and bust reducer. 166,458; Apr. 3; Serial No. 169,890; published Jan. 9, 1923.

Charter Chocolate Company, Boston, Mass. Candy. 166,352; Apr. 3; Serial No. 141,556; published Jan. 9, 1923.

Chemical Fire Apparatus Company. (See Frey, Henry R.)

Cheney Brothers, South Manchester, Conn. Silk fabrics in the piece. 166,381; Apr. 3; Serial No. 169,701; published Dec. 19, 1922.

Chester, C. L., Productions, Inc., Hollywood, Calif., assignor to Globe Trots Films, Inc., New York, N. Y. Motion pictures reproduced in copies for sale. 166,354; Apr. 3; Serial No. 146,692; published Dec. 26, 1922.

Chillicothe Paper Company, The, Chillicothe, Ohio. Writing paper, bond. 166,371; Apr. 3; Serial No. 170,005; published Dec. 5, 1922.

Chisholm, John F., Philadelphia, Pa. Ready-mixed paints, paints for protecting metals, and black coating paints. 166,485; Apr. 3; Serial No. 170,621; published Jan. 9, 1923.

Cincinnati Storage Battery Company, The, Cincinnati, Ohio. Electric batteries. 166,356; Apr. 3; Serial No. 148,958½; published Jan. 16, 1923.

Clancy, James E., Lynbrook, N. Y. Peanuts in the shell. 166,448; Apr. 3; Serial No. 166,346; published Jan. 16, 1923.

Consumers Biscuit Company, New Orleans, La. Molded sugar candy in the shape of chickens, rabbits, and eggs. 166,430; Apr. 3; Serial No. 164,282; published Jan. 9, 1923.

Contra Chemical Co. (See Schmidt, Frank P.)

Adams, Roy W., New Britain, Conn. Reciprocating power jr pump. 1,450,345; Apr. 3.
Agnew, George B. (See de Simone, Michele G., assignor.)
Agnew, Thomas L. (See Helmick, M. J., and Agnew.)
Air Reduction Company, Incorporated. (See Anderson, J. L., and Plumley, assignors.)
Albach, Frank. (See Medart, P. S., and Albach.)
Alberger, Alvan H., New York, N. Y. Driving mechanism for agitators. 1,450,660; Apr. 3.
Alchemic Gold Company. (See McElroy, W. J., and Clarke, assignors.)
Alexander, William S., Elsmere, Del. Washer. 1,450,625. Apr. 3.
Allcutt, Chester T., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Wireless amplifier. 1,450,275; Apr. 3.
Allen, George F., Oronogo, Mo. Hydrocarbon-oil burner. 1,450,881; Apr. 3.
Allen, Horace E., assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio. Leer conveyer for sheet glass. 1,450,571; Apr. 3.
Allis-Chalmers Manufacturing Company. (See Cheney, Herbert W., assignor.)
Allis-Chalmers Manufacturing Company. (See Holthoff, Henry C., assignor.)
Allis-Chalmers Manufacturing Company. (See Kollberg, Gustaf L., assignor.)
Allis-Chalmers Manufacturing Company. (See Mortensen, Soren H., assignor.)
Allis-Chalmers Manufacturing Company. (See Newhouse, Ray C., assignor.)
Allis-Chalmers Manufacturing Company. (See Stemmler, Edwin F., assignor.)
Allworth, Frank E., assignor to Kalamazoo Paper Box Company, Kalamazoo, Mich. Display box. 1,450,477; Apr. 3.
Aluminum Company of America. (See Salisbury, Robert F., assignor.)
Aluminum Company of America. (See Varney, Theodore, assignor.)
Alvey Manufacturing Company. (See Rebstock, August, assignor.)
American Can Company. (See Leighton, George A., assignor.)
American Can Company. (See Wood, Frederick P., assignor.)
American Steel Foundries. (See Bender, Frederic H., assignor.)
American Telephone and Telegraph Company. (See Espenscheid, Lloyd, assignor.)
American Telephone and Telegraph Company. (See Rhodes, William A., assignor.)
Ames, Butler. (See Gilinson, Philip, assignor.)
Anderson, Anton, Port Washington, Wis. Concrete stair block. 1,450,404; Apr. 3.
Anderson, Carl L., assignor of one-fourth to L. Faust, one-fourth to E. S. Ekstrom, and one-fourth to C. E. Swenson, Rockford, Ill. Universal joint. 1,450,706; Apr. 3.
Anderson, Carl D., assignor of one-fourth to L. Faust, one-fourth to E. S. Ekstrom, and one-fourth to C. E. Swenson, Rockford, Ill. Universal joint. 1,450,707. Apr. 3.
Anderson, Carl L., et al. (See Faust, Levin, assignor.)
Anderson, James G., Needham, assignor to Pressure Proof Piston Ring Company, Boston, Mass. Making resilient split rings. 1,450,346; Apr. 3.
Anderson, James L., Bayonne, and S. Plumley, Westfield, N. J., assignors, by mesne assignments, to Air Reduction Company, Incorporated, New York, N. Y. Pressure regulator. 1,450,236; Apr. 3.
Anderson, Raymond E., Boone, Iowa. Draft equalizer. 1,450,781; Apr. 3.
Anderson, Robert M., Como, Miss. Plow fender. 1,450,828; Apr. 3.
Anderson, Wilson D., Bremerton, Wash. Vending device. 1,450,829; Apr. 3.
Anderson, Wilson D., Bremerton, Wash. Vending device. 1,450,830; Apr. 3.
Andrew, Joseph (See Andrew, Richard E., assignor.)
Andrew, Richard E., assignor of one-half to J. Andrew, Philadelphia, Pa. Trolley crossing. 1,450,276; Apr. 3.
Andrews, Frederick A., Pequannock, N. J., assignor to The Esmond Mills, New York, N. Y. Blanket or similar article. Des. 62,161; Apr. 3.
Andrews, Frederick A., Pequannock, N. J., assignor to The Esmond Mills, New York, N. Y. Blanket or similar article. Des. 62,162; Apr. 3.
Ansbacher Motorenfabrik Karl Bachmann Aktiengesellschaft. (See Kreisale, Hermann O., assignor.)
Armentrout, Luther E., Borderland, W. Va. Trolley and feed wire clamp. 1,450,347; Apr. 3.
Arthur, George T., assignor to The Holt Manufacturing Company, Stockton, Calif. Track link. 1,450,478; Apr. 3.
Arthur Trading Corporation. (See Hennech, Arthur B., assignor.)
Atlas Powder Company. (See Hazeltine, Walter E., assignor.)
Atwood, Leonard, Boston, Mass. Variable tractor wheel. 1,450,626; Apr. 3.
Atwood, Walter H., Walden, N. Y. Tie presser. 1,450,831; Apr. 3.
Audianne, Paul, assignor to Etablissents Kuhlmann, Paris, France. Apparatus for the manufacture of sulphuric anhydride. 1,450,661; Apr. 3.
Ayers, Dee, and H. D. Fossett, Mount Vernon, Mo. Animal poke. 1,450,237; Apr. 3.
Ayers, Dee, and H. D. Fossett, Mount Vernon, Mo. Churn. 1,450,238; Apr. 3.
Ayres, Elwood B., assignor to The Philadelphia Textile Machinery Company, Philadelphia, Pa. Skin-drying boards. 1,450,782; Apr. 3.
Bahls, Otto, assignor to O. B. Electric Vehicles, Inc., Long Island City, N. Y. Reversing and control switch. 1,450,572; Apr. 3.
Bailey, Joseph O., Atlanta, Ga. Riveting machine. 1,450,198; Apr. 3.
Baker, Louis E., assignor of one-fourth to A. J. Martin, one-fourth to J. H. Brock, and one-fourth to A. E. Harroun, Blum, Tex. Insect and worm catcher. 1,450,538; Apr. 3.
Bannister, Bryant, Pittsburgh, Pa. Pressure regulator. 1,450,783; Apr. 3.
Barber, Howard M., Stonington, Conn., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Sheet collecting and associating mechanism. 1,450,573; Apr. 3.
Barber, Howard M., Stonington, Conn., assignor to C. B. Cottrell & Sons Company, New York, N. Y. Sheet collecting and associating mechanism. 1,450,574; Apr. 3.
Barber, James T., Brooklyn, N. Y. Latch device for skid chains and the like. 1,450,190; Apr. 3.
Barbieri, Cesare, New York, N. Y., assignor to The Vortex Mfg. Co. Sundae dish and manufacture. 1,450,832; Apr. 3.
Barnes, James, New Kensington, Pa. Building block. 1,450,784; Apr. 3.
Bartels, Louis E. (See Neunaber, J. F., and Bartels.)
Barton, Robert W., Chicago, Ill. Method of and means for the production and use of steam. 1,450,405; Apr. 3.
Bates, Arthur, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J. Fastening-inserting machine. 1,450,164; Apr. 3.
Batts, John T., Grand Rapids, Mich. Packing and shipping case for garments. 1,450,708; Apr. 3.

Bayles, Lewis C., Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Column or support for rock drills. 1,450,709; Apr. 3.
Bayley, Harry P. (See Ross, Mark A., assignor.)
Baylis, Harry R., Seattle, Wash. Hairpin. 1,450,785; Apr. 3.
Beans, John F., Canton, assignor to The Beans Spring Company. Massillon, Ohio. Automobile bumper. 1,450,165; Apr. 3.
Beans Spring Company, The (See Beans, John F., assignor.)
Bear & Wilde Company, The. (See Wilde, Eben F., assignor.)
Bechtold, William S., Newark, N. J. Hairpin. 1,450,239; Apr. 3.
Becker, Joseph, Houston, Tex. Cabinet. 1,450,575; Apr. 3.
Beckley-Ralston Co., The. (See Rector, Harlan S., assignor.)
Beckwith, Henry C., assignor to The John F. Byers Machine Company, Ravenna, Ohio. Hoisting machine. 1,450,882; Apr. 3.
Beddingfield, John A., Fort Valley, Ga. Automobile tire rim. 1,450,786; Apr. 3.
Bedingfield, John A., Fort Valley, Ga. Automobile tire rim. 1,450,787; Apr. 3.
Beebe, Charles S., Tomahawk, Wis. Sled. 1,450,424; Apr. 3.
Beede, Herbert G., Pawtucket, R. I. Ring twisting or spinning device. 1,450,348; Apr. 3.
Beers, William H., Portland, Oreg. Pipe-bending machine. 1,450,317; Apr. 3.
Beierbach, Hans, Mannheim, Germany. Building unit. 1,450,240; Apr. 3.
Beiding, Warren S., Phillipsburg Borough, Pa. Telescope rifle sight. 1,450,349; Apr. 3.
Bell, Harvey W., Yonkers, N. Y., assignor to The Beloyt Corporation, Dover, Del. Universal joint. 1,450,350; Apr. 3.
Bell, Willard J., Newaygo, Mich. Sifting-testing machine. 1,450,166; Apr. 3.
Bellows, Warren S., assignor to Walden-Worcester, Inc., Worcester, Mass. Valve-grinding tool. 1,450,788; Apr. 3.
Beloyt Corporation, The. (See Bell, Harvey W., assignor.)
Bender, Frederic H., assignor to American Steel Foundries, Chicago, Ill. Drawbar yoke. 1,450,167; Apr. 3.
Bender, Lonnie S., Kansas City, Mo. Cream lifter. 1,450,789; Apr. 3.
Benedict, Edward. (See Reynolds, Arthur W., assignor.)
Bennett, Albert J., Chicago, Ill. Comb cleaner. 1,450,576; Apr. 3.
Bennett, James C., Detroit, Mich. Combined primer and gas-saving device. 1,450,883; Apr. 3.
Bentley, Jetson O., Schenectady, N. Y. Incense burner. 1,450,790; Apr. 3.
Beran, Albert, Hirschwang, Austria. Rolling mill for manufacturing corrugated pasteboard, sheet metal, and the like. 1,450,351; Apr. 3.
Bergeon, Paul, Grenoble, France. Steam-heating appliance. 1,450,833; Apr. 3.
Bergmann, Theodor, Gaggenau, Germany. Machine pistol. 1,450,834; Apr. 3.
Bethke, Walter, Walburg, Tex. Instrument board and engine brace. 1,450,791; Apr. 3.
Beyer, Emil, Newark, N. J. Implement for removing jar tops. 1,450,168; Apr. 3.
Bienenstok, Edgar A., assignor to Milwaukee Tank Works, Milwaukee, Wis. Portable liquid pump for oil containers. 1,450,406; Apr. 3.
Biggs, John M., Helena, Ark. Attachment for furniture. 1,450,662; Apr. 3.
Biggs, Joseph F., Richmond, Va. Amplifier for talking machines. 1,450,241; Apr. 3.
Billings, John R., jr., Durham, N. C. Grain door. 1,450,792; Apr. 3.
Bingay, Robert V., Pittsburgh, Pa., assignor to Pittsburgh Transformer Company. Protection of alternating-current-distributing circuits. 1,450,425; Apr. 3.
Bishop, Newton J., Washington, D. C. Curtain holder. 1,450,539; Apr. 3.
Blair, Lones, Oakland, Calif. Yarn holder. 1,450,835; Apr. 3.
Blalock, Joseph E., Salisbury, N. C. Car-door fastener. 1,450,242; Apr. 3.
Blaw-Knox Company. (See Brynoldt, Christian, assignor.)
Bohlman, Ernest A., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill. Desk-stand base. 1,450,169; Apr. 3.
Böhme, Kurt, Berlin-Siemensstadt, assignor to Siemens & Halske Aktiengesellschaft, Wernerwerk, Siemensstadt, near Berlin, Germany. Selecting switch for use in telephone systems. 1,450,352; Apr. 3.
Bond, James W., assignor of one-half to W. J. Taylor, Columbia, S. C. Brace for radius rods. 1,450,426; Apr. 3.
Boner, Hans, Maduleio, Switzerland. Saw for sawing trees. 1,450,540; Apr. 3.
Bonsall, Charles D., Pittsburgh, assignor to P. H. Murphy Company, New Kensington, Pa. Car roof. 1,450,243; Apr. 3.
Bosworth, Alfred W., Boston, Mass. Powdered modified-milk substitute. 1,450,836; Apr. 3.
Bourgon, Joseph H., Detroit, Mich., assignor to Studebaker Corporation. Hub cap. Des. 62,163; Apr. 3.
Bradford, Charles M., Boston, and D. W. Bunker, Brookline, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J. Safety device. 1,450,407; Apr. 3.
Bradshaw, Richard. (See Whittaker, J., Bradshaw, and Briggs.)
Brandenberger, Jaques E., assignor to La Societe La Cellophane, Siège Social, Paris, France. Photographic film with a carrier permeable to water. 1,450,479; Apr. 3.
Brasher, Albert. (See Leimberger, E. L., and Brasher.)
Breyer, Frank G. (See Singmaster, J. A., and Breyer.)
Briggs, Joseph, deceased. (See Whittaker, J., Bradshaw, and Briggs.)
Briggs, Millison, administratrix. (See Whittaker, J., Bradshaw, and Briggs.)
Brock, J. H., et al. (See Baker, Louis E., assignor.)
Brodner, John, Seattle, Wash. Automatic feeder. 1,450,710; Apr. 3.
Brogan, James A., Lawrence, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Finishing the edges of perforations. 1,450,244; Apr. 3.
Brooks, Charles, Washington, D. C., dedicated, by mesne assignments, to the people of the United States. Preserving apples. 1,450,408; Apr. 3.
Brown, Dock W., et. al. (See Goodwin, Adolphus D., assignor.)
Brown, Edmund N., and A. M. Lambert, San Francisco, Calif., assignors to Majestic Electric Development Company. Waffle and hot-cake iron. 1,450,277; Apr. 3.
Browne, Albred L., East Orange, N. J. Elastic-fluid-controlling device. 1,450,245; Apr. 3.
Bruninga, John H., assignor, by mesne assignments, to Spyroseal Manufacturing Company, St. Louis, Mo. Making piston rings. 1,450,200; Apr. 3.
Brynoldt, Christian, Pittsburgh, Pa., assignor to Blaw-Knox Company. Method of and apparatus for constructing tunnels and the like. 7,450,577; Apr. 3.
Bucher, William W., Chicago, Ill., assignor, by mesne assignments, to Kohler Company, Kohler, Wis. Automatic power-unit control. 1,450,793; Apr. 3.
Buck, James W., New York, N. Y. Mechanical bird. 1,450,480; Apr. 3.
Buckeye Iron & Brass Works. (See Sheppard, Orlando, jr., assignor.)
Budd, Edward G., Manufacturing Company. (See Clay, William H., assignor.)
Bugbee, Lucian W., assignor to Franklin Optical Company, Indianapolis, Ind. Making a fused bifocal. 1,450,711; Apr. 3.
Bunker, Darius W. (See Bradford, C. M., and Bunker.)
Burckhardt, Rodolphe W., Mulhouse, France. Means for insuring complete combustion of coal in heating boilers. 1,450,201; Apr. 3.
Burditt, William F., jr. (See Jacobus, M. E., and Burditt.)
Burke & James, Inc. (See Davis, Ernest W., assignor.)
Burnham, George A., Saugus, assignor to S. B. Condit, jr., Brookline, Mass. Short-time-limit switch. 1,450,768; Apr. 3.
Burroughs, Charles F., East Orange, assignor to Composition Machinery Corporation, Newark, N. J. Heated mold for plastic material. 1,450,481; Apr. 3.
Bursheim, Eilert J., Sperling, Manitoba, Canada. Tractor. 1,450,837; Apr. 3.
Burt, F. N., Company. (See Holly, Carlos, assignor.)
Burton, Thomas L. (See Ingersoll, H. L., and Burton.)
Bussac, Georges A., Paris, France. Steam generator. 1,450,838; Apr. 3.
Buzzo, Joseph T. (See Reese, C. C., Buzzo, and Woodford.)
Byers, John F., Machine Company, The. (See Beckwith, Henry C., assignor.)
Cady, Walter G., Middletown, Conn. Piezo-electric resonator. 1,450,246; Apr. 3.
Cady, Walter H., Boston, Mass. Making prepared roofing. 1,450,712; Apr. 3.
Campbell, Sterling H. (See Viberg, Ernest R., assignor.)
Cannard, William H., and G. A. Shaffer, Green Bay, Wis., assignors to said Cannard. Recording mechanism and dissemination method. 1,450,427; Apr 3.
Carey, Lawrence F., Philadelphia, Pa. Receptacle stand 1,450,713; Apr. 3.
Carpenter, Chester E., Aberdeen, S. Dak. Attachment for bens. 1,450,247; Apr. 3.
Carr, Melvin K., Bremerton, Wash. Coupling for railway cars. 1,450,248; Apr. 3.
Carroll, Stewart J., assignor to Eastman Kodak Company, Rochester, N. Y. Cellulose-ether solvent and composition. 1,450,714; Apr. 3.
Carroll, Stewart J., assignor to Eastman Kodak Company, Rochester, N. Y. Cellulose-ether solvent and composition. 1,450,715; Apr. 3.
Carroll, Stewart J., assignor to Eastman Kodak Company, Rochester, N. Y. Cellulose-ether solvent and composition. 1,450,716; Apr. 3.
Carson, Henry A., St. Joseph, Mo. Resilient tire. 1,450,473; Apr. 3.
Cary, George W., Greenfield, Mass. Valve-spring compressor. 1,450,578; Apr. 3.
Case, Francis M., Cleveland, assignor to The Enterprise Manufacturing Company, Akron, Ohio. Tension oil cap for fishing reels. 1,450,738; Apr. 3.
Case, Leona M. (See Weber, Leona M.)

Casey, William, Tulsa, Okla. Fishing tool. 1,450,541; Apr. 3.
Cave, Henry, Hartford, Conn. Novelty attachment for vehicles. 1,450,278; Apr. 3.
Chandler, David G., Racine, Wis. Vulcanizer. 1,450,794; Apr. 3.
Chapman, Samuel, Cleveland, Ohio. Window seating attachment. 1,450,353; Apr. 3.
Chappell, John M., and R. E. Edmondson, Thornton, Tex. Jack support. 1,450,482; Apr. 3.
Chautauqua Hygienic Institute, Inc. (See Wood, Sidney C., assignor.)
Cheney, Herbert W., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Motor controller. 1,450,808; Apr. 3.
Cheney, Herbert W., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Switch. 1,450,809; Apr. 3.
Chick, William C., Boston, Mass. Shaker. 1,450,279; Apr. 3.
Chickering, Horace G., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Sulphur burner. 1,450,677; Apr. 3.
Chidlow, David, Ridgefield, Conn., assignor to J. F. Strachan and W. S. Strachan, Montreal, Canada. Making bread. 1,450,483; Apr. 3.
Childs, Wallace, Kansas City, Mo. Vehicle wheel. 1,450,484; Apr. 3.
Childs, William L., assignor to Hughes Tool Company, Houston, Tex. Backout device for drilling rigs. 1,450,249; Apr. 3.
Chilowsky, Constantin, Paris, France. Projectile. 1,450,579; Apr. 3.
Christman, Matthias, Springfield, Mo. Valve. 1,450,663; Apr. 3.
Christophel, Carl E., assignor to Dexter Folder Company, Pearl River, N. Y. Sheet feeding machine. Re15,573; Apr. 3.
Cirac, Charles P., Fallon, Nev. Reverse-movement control for driving and driven elements. 1,450,409; Apr. 3.
Cite, Joseph D. (See McElroy, R. H., Cite, and Langenkamp.)
Clark, Ezra E., Newtonville, Mass. Dry-pipe valve. 1,450,428; Apr. 3.
Clark, George M., Charleston, W. Va. Spike puller. 1,450,664; Apr. 3.
Clarke, John. (See McElroy, W. J., and Clarke.)
Clarke, Peter J., Chicago, Ill. Pneumatic-tire casing. 1,450,170; Apr. 3.
Clay, William H., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa. Transfer mechanism for conveyers. 1,450,354; Apr. 3.
Cochran, Ralf S. (See Marsh, H. S., and Cochran.)
Cohen, Myer, Revere, Mass. Coin-controlled lock. 1,450,355; Apr. 3.
Cole, Don, assignor of one-half to J. A. Dienner, Chicago, Ill. Internal-combustion engine, method of and means for feeding the same. 1,450,250; Apr. 3.
Comfort Safety Razor and Novelty Co. Inc. (See Kulhawy, Ferdinand, assignor.)
Commonwealth Steel Company. (See Sheehan, William M., assignor.)
Composition Machinery Corporation. (See Burroughs, Charles F., assignor.)
Condit, Sears B., jr. (See Burnham, George A., assignor.)
Connor, Martha H., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md. Combined candlestick and flower vase. 1,450,429; Apr. 3.
Cornell, Fred W., St. Joseph, Mo. Safety head and track for traveling ladders. 1,450,430; Apr. 3.
Costmeter Company. (See Quigley, John T., assignor.)
Cote, Omer E., Pawtucket, R. I. Winding mandrel. 1,450,717; Apr. 3.
Cottrell, C. B., & Sons Company. (See Barber, Howard M., assignor.)
Courteen, Henry, Sunbury-on-Thames, England. Oil lamp. 1,450,580; Apr. 3.
Courtois-Suffit, Roger, Paris, France. Landing indicator for aircraft. 1,450,431; Apr. 3.
Cousins, Benjamin, Slick, Okla. Cementing dumper. 1,450,485; Apr. 3.
Cox, David C., Pittsfield, Mass. Indicator. 1,450,410; Apr. 3.
Cox, Oscar L., Memphis, Mo. Gate. 1,450,486; Apr. 3.
Coy, Earnest V., Excelsior Springs, Mo. Vehicle theft-preventing device. 1,450,411; Apr. 3.
Craig, Robert, assignor to International Scale Company, Dayton, Ohio. Scale. 1,450,487; Apr. 3.
Cramer, Albert N., Columbus, Ohio. Cap sterilizer and can-centering plate for can-sealing machines. 1,450,856; Apr. 3.
Crandell, Willis S., Elsmere, N. Y. Paper-making machine. 1,450,488; Apr. 3.
Crosby, Raymond A., Holyoke, Colo. Tire-deflation signal. 1,450,760; Apr. 3.
Cross, James W., Surbiton, England. Fluid-pressure-braking apparatus. 1,450,432; Apr. 3.
Crowell, Frank S., assignor to The Edward N. Riddle Co., Toledo, Ohio. Arm for lighting fixtures. Des. 62,184; Apr. 3.
Crowley, John W., jr., Chicago, Ill. Clutch. 1,450,202; Apr. 3.
Crozier, Arthur R., El Paso, Tex. Coupling. 1,450,665; Apr. 3.
Cruse, Henry, Hyde, England. Vertical steam-generator furnace. 1,450,389; Apr. 3.
Culley, Alfred E., Burton-upon-Trent, England. Abrading machine. 1,450,251; Apr. 3.
Curran, Edward T., Detroit, Mich. Priming device. 1,450,490; Apr. 3.
Curtis, Earl W., Fort Madison, Iowa. Crosscut sawing machine. 1,450,357; Apr. 3.
Cusick, Roy, Carnegie, Pa. Vending machine. 1,450,839; Apr. 3.
Cuthbert, Robert F., assignor to Theo. Tiedemann & Sons, Inc., New York, N. Y. Box for garments. 1,450,171; Apr. 3.
Cutler-Hammer Mfg. Co., The. (See Taylor, Herman J., assignor.)
Cutting, George B., Worcester, Mass. Protector for rail ties. 1,450,280; Apr. 3.
Dahl, Thure E., New York, N. Y. Ceiling fixture for lighting fixtures. Des. 62,185; Apr. 3.
Dahl, Thure E., New York, N. Y. Ring for lighting fixtures. Des. 62,186; Apr. 5.
Damon, Murray C., Leominster, Mass., assignor to The Hairlight Company. Hair roll or puff. 1,450,491; Apr. 3.
Darnley, Percy H., assignor of one-half to B. Richards, London, England. Typewriter. 1,450,627; Apr. 3.
Dath, Charles E., Chicago, Ill., assignor to W. H. Miner, Chazy, N. Y. Railway draft rigging. 1,450,358; Apr. 3.
Daulton, Benjamin H., and C. B. Robinson, assignors to The Irwin Auger Bit Company, Wilmington, Ohio. Mechanism for manufacture of auger bits. 1,450,252; Apr. 3.
Davis, David L., Norwalk, Conn. Headlight. 1,450,581; Apr. 3.
Davis, Ernest W., assignor to Burke & James, Inc., Chicago, Ill. Motion-picture camera. 1,450,433; Apr. 3.
Davis, Norman C. (See Fisher, H. W., and Davis.)
De Brown, Peter, Bay City, Mich. Screw driver. 1,450,203; Apr. 3.
Decker, Sharp, Commodore, Pa. Explosive cartridge. 1,450,666; Apr. 3.
Deere and Company. (See Sklovsky, Max, assignor.)
Deming, Barton R. (See Yates, W. G., and Fatscher, assignors.)
De Simone, Michele G., Stapleton, assignor to G. B. Agnew, New York, N. Y. Calculating machine. 1,450,718; Apr. 3.
Det Tekniske Forsøgsaktieselskab. (See Goldschmidt, Rudolf, assignor.)
Dewald, Edward, jr. (See Dewald, Edward, sr., assignor.)
Dewald, Edward, sr., assignor of one-half to E. Dewald, jr., Cincinnati, Ohio. Swivel-plug connector. 1,450,172; Apr. 3.
Dexter Folder Company. (See Christophel, Carl E., assignor.)
Dick, Samuel M., Minneapolis, Minn. Dehydrating apparatus. 1,450,840; Apr. 3.
Dickbert, William, deceased, Evansville, Ind.; J. F. Pfeiffer, administrator. Signal for railway crossings. 1,450,841; Apr. 3.
Dickinson, Frederick S., New York, N. Y. Vehicle tire. Des. 62,164; Apr. 3.
Dienner, John A. (See Cole, Don, assignor.)
Decampo, Ricardo, Buenos Aires, Argentina. Mouthpiece for smoking tobacco. 1,450,359; Apr. 3.
Doerfler, Otto H., Omaha, Nebr. Serving apparatus. 1,450,434; Apr. 3.
Dohe, Russell C., Okeene, Okla. Film-repair tool. 1,450,795; Apr. 3.
Doig, William S., Inc. (See Macdonald, Charles A., assignor.)
Domestic Electric Company, The. (See Mace, Arthur T., assignor.)
Dorey, William A., Newark, Ohio, assignor to Holophane Glass Co., Inc., New York, N. Y. Prismatic glass globe. Des. 62,187; Apr. 3.
Dorn, Henry C., Milwaukee, Wis. Composition board. 1,450,582; Apr. 3.
Douglas, Harry A., Bronson, Mich. Switching device. 1,450,253; Apr. 3.
Douglass, Leon F., San Rafael, Calif. Making a colored photographic image. 1,450,412; Apr. 3.
Drake, Joseph E., Blue Rapids, Kans. Grain-car door. 1,450,842; Apr. 3.
Draper Corporation. (See Rhoades, Alonzo E., assignor.)
Draper, Thomas B., Toronto, Ontario, Canada. Spring and mattress supporting means. 1,450,204; Apr. 3.
Drensike, Otto B., San Francisco, Calif. Sliding and reversing window. 1,450,281; Apr. 3.
Drynan, Thomas H., Sewickley, Pa. Water-heating system. 1,450,796; Apr. 3.
Dunlop Rubber Company, The. (See Paull, Wallace H., assignor.)
Du Pont, E. I., de Nemours & Company. (See Chickering, Horace G., assignor.)
Du Pont, E. I., de Nemours & Company. (See Gibbs, Harry D., assignor.)
Du Pont, E. I., de Nemours and Company. (See Stine, Charles M., assignor.)
Dvorak, John, Cedar Rapids, Iowa. Bacon-stringing machine. 1,450,667; Apr. 3.
Dyrssen, Waldemar, New York, N. Y. Apparatus for moving furnace electrodes. 1,450,668; Apr. 3.

E. & J. Bass, Incorporated. (See Negbaur, Harry, assignor.)
Eads, Harry B., Port Arthur, Tex., assignor to Worthington Pump and Machinery Corporation, New York, N. Y. Automatic valve and rim. Re15,568; Apr. 3.
Eastman Kodak Company. (See Carroll, Stewart J., assignor.)
Eastman Kodak Company. (See Stinchfield, Ray L., assignor.)
Easton & Burnham Company. (See Easton, Fred W., assignor.)
Easton, Fred W., assignor to Easton & Burnham Company, Pawtucket, R. I. Yarn and thread guide. 1,450,205; Apr. 3.
Edmondson, Robert E. (See Chappell, J. M., and Edmondson.)
Edmundson, Herbert W., and W. T. Munro, Rugby, England, assignors to General Electric Company. Vacuum electric discharge device. 1,450,413; Apr. 3.
Effertz, Edward P., Winona, Minn. Self-computing level rod. 1,450,360; Apr. 3.
Elard, Francois E. M., Lerallois-Perret, France. Divisible and adjustable bridge or crane for lifting, carrying, or sustaining loads. 1,450,492; Apr. 3.
Elch, Albert A., Richmond, Minn. Pulverizer and quack-grass destroyer. 1,450,118; Apr. 3.
Ekstrom, Eric S., et al. (See Anderson, Carl L., assignor.)
Ekstrom, Eric S., et al. (See Faust, Levin, assignor.)
Elliott-Fisher Company, The. (See Richter, Emannel, assignor.)
Elliott, James P., deceased. Chicago, Ill.; M. B. Elliott, executrix. Material for phonograph-record blanks and making the same. 1,450,739; Apr. 3.
Elliott, Mary B., executrix. (See Elliott, James P.)
Ellis, Carleton, and A. A. Wells, Montclair, N. J., assignors, by mesne assignments, to S. B. Hunt, trustee, Mount Kisco, N. Y. Ketone body and making same. 1,450,493; Apr. 3.
Enfield, William H., Osage, Iowa. Automatic gate for railway crossings. 1,450,797; Apr. 3.
Enterprise Manufacturing Company, The. (See Case, Francis M., assignor.)
Epstein, Eli, Dorchester, Mass., assignor to L. M. Starr, New York, N. Y. Impact-producing implement. 1,450,435; Apr. 3.
Esmond Mills, The. (See Andrews, Frederick A., assignor.)
Espenschied, Lloyd, Hollis, N. Y., assignor to American Telephone and Telegraph Company. Balancing arrangement for multiplex carrier circuits. 1,450,254; Apr. 3.
Eszto, Joseph, Halfway, Mich. Lubricating device for saws. 1,450,884; Apr. 3.
Etablissents Kuhlmann. See Audianne, Paul, assignor.)
Eummelen, Henry, Santa Ana, Calif. Watering trough. 1,450,494; Apr. 3.
Ever Ready Auto Signal Co. (See Trinca, F., and Wolf, assignors.)
Evr Klean Seat Pad Co. (See Reece, John, assignor.)
Evr-Klean Seat Pad Co. See Reece, John, assignor.)
Fankboner, Harland. (See Walser, J. J., and Fankboner.)
Farbenfabriken vorm. Friedr. Bayer and Co. (See Thauss, A., and Günther, assignors.)
Farbenfabriken vorm. Friedr. Bayer and Co. (See Weyland, Hermann, assignor.)
Farmers' Loan and Trust Company, The, executors. (See Pierce, George W.)
Fatscher, George C. (See Yates, W. G., and Fatscher.)
Faust, Levin, assignor of one-fourth to C. E. Swenson, one-fourth to E. S. Ekstrom, and one-fourth to C. L. Anderson, Rockford, Ill. Universal joint. 1,450,719; Apr. 3.
Faust, Levin, et al. (See Anderson, Carl L., assignor.)
Faust, Roy C., Deary, Idaho. Rotary toothbrush. 1,450,542; Apr. 3.
Federal Malleable Company. (See MacNeill, William J., assignor.)
Ferguson, David W., Harrold, S. Dak. Trace holder. 1,450,495; Apr. 3.
Ferguson, William E., Louisville, Ky. Rivet holder. 1,450,414; Apr. 3.
Ferry, Thomas, Cleveland, Ohio. Fastening device. 1,450,583; Apr. 3.
Filipowski, Wladyslav, Chicago, Ill. Fishhook. 1,450,798; Apr. 3.
Findlay, Robert, Manufacturing Company. (See Smith, Curtis A., assignor.)
Firestone Tire and Rubber Company. (See Goodenberger, Daniel E., assignor.)
Fisher, Henry W., and N. C. Davis, Perth Amboy, N. J., assignors to Standard Underground Cable Company, Pittsburgh, Pa. Cable-building machine. 1,450,584; Apr. 3.
Fisher, Raymond, assignor of one-half to O. W. Weisel, Philadelphia, Pa. Take-up mechanism for knitting machines. 1,450,799; Apr. 3.
Fisk, Carl A., New York, N. Y. Nonpneumatic tire. 1,450,843; Apr. 3.
Fisk Rubber Company, The. (See Little, Thomas P., assignor.)
Fisk Rubber Company, The. (See Midgley, Thomas, assignor.)
Fitton, John R., Woonsocket, R. I. Pencil. 1,450,436; Apr. 3.
Flannery, John M., Detroit, Mich. Carburetor. 1,450,628; Apr. 3.
Fleming, John L., Peoria, Ill. Plumbing apparatus. 1,450,844; Apr. 3.
Flint Electric and Manufacturing Company, The. (See Yont, Charles A., assignor.)
Flournoy, James P., jr., Shreveport, La. Drill bit and collar therefor. 1,450,845; Apr. 3.
Floyd, George G., Riverside, Ill., assignor to W. H. Miner, Chazy, N. Y. Manufacturing draft-rigging yokes. 1,450,361; Apr. 3.
Flues, Emil F., Buffalo, N. Y. Single-barrel firearm of the breakdown type. 1,450,496; Apr. 3.
Ford, Hannibal C., Jamaica, assignor to Ford Instrument Company, Inc., New York, N. Y. Range and bearing keeper. 1,450,585; Apr. 3.
Ford Instrument Company. (See Ford, Hannibal C., assignor.)
Foresman, Robert A., Chicago, Ill., assignor to Westinghouse Electric & Manufacturing Company. Underfeed stoker. 1,450,586; Apr. 3.
Fossett, Hal D. (See Ayers, D., and Fossett.)
Fox, Eston F., Williamsport, Md. Toy. 1,450,282; Apr. 3.
Fowler, Claude F. (See Lalle, P. A., and Fowler.)
Franklin Optical Company. (See Bugbee, Lucian W., assignor.)
Frazier, Truman D., Martins Ferry, Ohio. Pneumatic tire. 1,450,800; Apr. 3.
Fredericksen, Clayton E. (See McGuire, Michael H., assignor.)
French, Henry G., Schenectady, N. Y., assignor to General Electric Company. Protective device. 1,450,415; Apr. 3.
Freshour, Thomas C., and B. M. Jennings, Troy, Ohio. Garment-form supporter. 1,450,416; Apr. 3.
Frick, Phillip S., and C. E. Robinson, Oswego, Kans. Sanitary self-cleaning filter. 1,450,770; Apr. 3.
Frickey, Edward H., St. Louis, Mo. Adjustable multiple disk and shredding hammer. 1,450,173; Apr. 3.
Friedman, Louis, New York, N. Y. Lock. 1,450,206; Apr. 3.
Frisbie, Arthur N., Utica, N. Y. Internal-combustion engine. 1,450,801; Apr. 3.
Frost, Frederic A., West Newton, Mass. Implement for opening and sealing jars. 1,450,587; Apr. 3.
Frye, Fred A., Azusa, Calif. Device for supporting utensils over camp fires. 1,450,802; Apr. 3.
Frye, William A. (See Keddy, Clifford L., assignor.)
Fuller, Boyd H., Detroit, Mich. Key fastener. 1,450,588; Apr. 3.
Gaken, Jozef F., assignor of one-third to L. Kuzdial, Dunkirk, N. Y. Window fire escape. 1,450,207; Apr. 3.
Gallon Iron Works & Mfg. Co., The. (See Jones, Henry D., assignor.)
Galizia, Frank, Farrell, Pa. Sanitary seat. 1,450,283; Apr. 3.
Gaschott, Conrad. (See Terhune, Richard A., assignor.)
Gassman, Howard M., Birmingham, Ala. Load-regulating means. 1,450,720; Apr. 3.
Gaudin, Oneil B., Laurel, Miss. Hand car. 1,450,846; Apr. 3.
Gaunt, Charles F., Birmingham, England. Holder for badges, buttons, and the like. 1,450,721; Apr. 3.
Gaunt, Charles F., Birmingham, England. Medal-ribbon mount. 1,450,722; Apr. 3.
Geiger, Charles M., Denver, Colo. Combined radiator, steam cooker, and warming oven. 1,450,847; Apr. 3.
General Electric Company. (See Edmundson, H. W., and Munro, assignors.)
General Electric Company. (See French, Henry G., assignor.)
General Electric Company. (See Perham, Charles F., assignor.)
General Electric Company. (See Thomson, Elihu, assignor.)
Gerl, Frank F., Milwaukee, Wis. Guitar. Des. 62,165; Apr. 3.
Gerrard, Alec. J. (See Wood, George, assignor.)
Geto, Max M., Brooklyn, assignor to Watch Protector Corporation, New York, N. Y. Watch protector. 1,450,848; Apr. 3.
Gibbs, Harry D., Pennsgrove, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Producing phthalimids. 1,450,678; Apr. 3.
Gilinson, Philip, assignor to B. Ames, Lowell, Mass. Electric coil. 1,450,362; Apr. 3.
Gillespie, Alexander, Pittsfield, Ill. Device and process for feeding roller mills. 1,450,723; Apr. 3.
Gillette Safety Razor Company. (See Parker, Riley H., assignor.)
Gillette Safety Razor Company. (See Thompson, Ralph E., assignor.)
Gilpin, Garth G., Riverside, assignor to W. P. Murphy, Chicago, Ill. Sheet-metal end for railway cars. 1,450,255; Apr. 3.
Gingerick, Kent S., Urbana, assignor to R. T. Parrish, Dayton, Ohio. Plow-depth adjusting device. 1,450,417; Apr. 3.
Glenn, Samuel, Detroit, Mich. Garbage receptacle. 1,450,363; Apr. 3.
Glisson, William B., Rutherford, Tenn. Ventilation system. 1,450,771; Apr. 3.

Globe Paper Box Company. (See Schwenneke, Hans, assignor.)
Goff, Hobart. (See Walker, W. H., and Goff.)
Goldschmidt, Rudolf, Berlin, Germany, assignor to Det Tekniske Forsøgsaktieselskab, Ordrup, Charlottenlund, Denmark. Flexible shafting. 1,450,284; Apr. 3.
Goldsmith, Walter A., Cleveland, Ohio. Bloomers. 1,450,437; Apr. 3.
Goodenberger, Daniel E., assignor to The Firestone Tire and Rubber Company, Akron, Ohio. Process and apparatus for the manufacture of solid tires. 1,450,256; Apr. 3.
Goodwin, Adolphus D., assignor of thirty per cent to D. W. Brown, East Durham, and thirty per cent to D. W. Sorrell, Durham, N. C. Railway-crossing gate. 1,450,285; Apr. 3.
Goss Printing Press Company. (See Walser, J. J., and Fankboner, assignors.)
Graff, George, New York, N. Y., and W. A. Kennedy, Leonia, N. J., assignors to Graff Washburne & Dunn. Combined heating and cooling device. 1,450,589; Apr. 3.
Graff, Joseph F., Milwaukee, Wis. Scaffold bracket. 1,450,286; Apr. 3.
Graff Washburne & Dunn. (See Graff, G., and Kennedy, assignors.)
Grande, Nicholas, New York, N. Y. Milk-bottle receptacle. 1,450,772; Apr. 3.
Granichstadten, Albert, and E. Sittig, Vienna, Austria. Nickeliferous catalyzers and manufacturing the same. 1,450,174; Apr. 3.
Grant, Fred C., Sangerville, Me. Hard grease cup. 1,450,773; Apr. 3.
Graser, Harry. (See Jackson, John C., assignor.)
Gray, Joseph M., assignor of one-third to J. M. Robertson and one-third to M. P. Pferrer, Brownstown, Ind. End gate. 1,450,364; Apr. 3.
Gray, Joseph M., assignor of one-third to J. M. Robertson and one-third to M. P. Pferrer, Brownstown, Ind. End-gate latch. 1,450,365; Apr. 3.
Gray, William, Lancaster, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio. Glass-drawing apparatus. 1,450,590; Apr. 3.
Grafenstatt, Emil S., Los Angeles, Calif. Hydraulic clutch. 1,450,679; Apr. 3.
Green, Charles, assignor of one-fourth to E. F. Richman and one-fourth to C. J. Richman, Muscatine, Iowa. Hammer. 1,450,849; Apr. 3.
Green, William F., Houston, Tex. Coupling yoke. 1,450,591; Apr. 3.
Greenburg, Meyer, Kearney, N. J. Shaving-brush holder. Des. 62,166; Apr. 3.
Greene, Grover C., T. O. Tune, and R. E. Stamps, Nashville, Tenn. Self-serving store. 1,450,803; Apr. 3.
Gress, Calvin. (See Holtz, G., and Gress.)
Griffin, Henry F. (See Ott, W. D., and Griffin.)
Griffith, Thomas H., Cincinnati, Ohio. Bed. 1,450,497; Apr. 3.
Grigg, Lilly S., Long Beach, Calif. Drainer for sinks. 1,450,629; Apr. 3.
Grip, Martin A., Chippewa Falls, Wis. Changeable exhibitor. 1,450,850; Apr. 3.
Groner, Leo N., St. Thomas, Mo. Lace cutter. 1,450,498; Apr. 3.
Grönwall, Eugen A. A., Stockholm, Sweden. Method and device for the heating of material in electric furnaces. 1,450,543; Apr. 3.
Gross, Henry D., Kennett, Mo. Furnace stoker. 1,450,851; Apr. 3.
Gross, William B., Oxnard, Calif. Clutch. 1,450,804; Apr. 3.
Guazzoni, Alberto, Rome, Italy. Cycle stand and brush holder. 1,450,680; Apr. 3.
Gnenther, Henry L., Los Angeles, Calif. Seaming head for can machinery. 1,450,418; Apr. 3.
Gunn, James N., New York, N. Y., assignor to Morgan & Wright. Tire tread. Des. 62,167; Apr. 3.
Gunn, James N., New York, N. Y., assignor to Morgan & Wright. Tire tread. Des. 62,168; Apr. 3.
Günther, Alfred. (See Thauss, A., and Günther.)
Guynes, John W., Calvert, Tex. Lint-cleaning attachment for cotton gins. 1,450,592; Apr. 3.
Hadsell, Darwin G., Kansas City, Mo. Reversible handle socket. 1,450,438; Apr. 3.
Haering, Joseph, Louisville, Ky. Cow-tail holder. 1,450,774. Apr. 3.
Hager, Albert R., Manila, P. I. Game-scoring device. 1,450,852; Apr. 3.
Hahnemann, Walter, Kitzeberg, near Kiel, assignor to the Firm Signal Gesellschaft, m. b. H., Kiel, Germany. Submarine signaling apparatus. 1,450,287; Apr. 3.
Hairlight Company, The. (See Damon, Murray C., assignor.)
Haller, Herbert L. J. (See Williams, R. R., and Haller.)
Hamlin-Holmes Motor Company. (See Holmes, Edgar R., assignor.)
Hamm, William L., Oskaloosa, Iowa. Tire armor. 1,450,288; Apr. 3.
Hanlon & Goodman Company. (See Wright, Ernest B., assignor.)
Hannah, William G., Paterson, N. J. Preparing wound packages from skeins. 1,450,544; Apr. 3.
Hans, Oscar E., Bartlesville, Okla. Apparatus for separating liquids of different densities. 1,450,545; Apr. 3.
Hansen, Joseph, assignor to Marine Specialty Manufacturing Company, Seattle, Wash. Trolling spoon. 1,450,546; Apr. 3.
Hanson, James and R. G., Stafford, England. Rock-drilling apparatus. 1,450,208; Apr. 3.
Hanson, Richard G. (See Hanson, James and R. G.)
Hanson, Richard G. (See Hanson, James and R. G.) 1,450,775; Apr. 3.
Hardaway, Jarder, Pittsburgh, Pa. Game trap. 1,450,775; Apr. 3.
Hardinge, Harry W., New York, N. Y. Apparatus for entraining and removing fines from conical mills. 1,450,289; Apr. 3.
Hardinge, Harry W., New York, N. Y. Oversize return for mills. 1,450,290; Apr. 3.
Harroun, A. E., et al. (See Baker, Louis E., assignor.)
Harris, James, Ponoka, Alberta, Canada. Gate-fastening device. 1,450,630; Apr. 3.
Harris, John P., Lakewood, Ohio. Package for incandescent mantles. 1,450,593; Apr. 3.
Hart-Spratt, Herbert, London, England. Universal joint or coupling. 1,450,805; Apr. 3.
Harvey, Charles W., East Lyme, Conn. Clipping machine. 1,450,499; Apr. 3.
Harvey, Charles W., New London, Conn. Flash light. 1,450,500. Apr. 3.
Hase, Rudolf, Berlin, Germany, assignor, by mesne assignments, to Namlooze Vennootschap Finanzieele Mattschapij "Driebergen," Amsterdam, Netherlands. Recording phonograph. 1,450,439; Apr. 3.
Haseltine, Stacy B., Chicago, Ill., assignor to W. H. Miner, Chazy, N. Y. Hand brake. 1,450,366; Apr. 3.
Haubrock, Frank. (See Schwier, William, assignor.)
Hawes, Charlie L., Ashtabula, Ohio. Machine for polishing and grinding. 1,450,853; Apr. 3.
Hays, Fred, Tuckahoe, N. J. Tire tool. 1,450,209; Apr. 3.
Hazelton, John A., Baltimore, Md. Differential gearing. 1,450,210; Apr. 3.
Hazeltine, Walter E., Stamford, Conn., assignor to Atlas Powder Company, Philadelphia, Pa. Decorative fabric and manufacturing same. 1,450,367; Apr. 3.
Heacock, Harley O., Winslow, Ind. Burial vault. 1,450,291; Apr. 3.
Healy, James F., Chicago, Ill. Trolley construction. 1,450,885; Apr. 3.
Hecht, Earl A., Mansfield, Ohio. Tire tread. Des. 62,169; Apr. 3.
Heck, George D., Prince Bay, N. Y., assignor to The S. S. White Dental Manufacturing Company. Spittoon. 1,450,806; Apr. 3.
Heidbrink, Jay A., Minneapolis, Minn. Dental device for spreading tissues. 1,450,419; Apr. 3.
Heidbrink, Jay A., Minneapolis, Minn. Sensitized-film holder for X-ray photography. 1,450,420; Apr. 3.
Helmerdinger, William G., Louisville, Ky. Ice-cream dipper. 1,450,886; Apr. 3.
Heine, Fritz F., Leipzig, Germany. Elastic ring-shaped holder for small lamps. 1,450,547; Apr. 3.
Helmick, Milton J., and T. L. Agnew, Albuquerque, N. Mex. Resilient wheel. 1,450,740; Apr. 3.
Hennech, Arthur B., assignor to Arthur Trading Corporation, New York, N. Y. Identification device. 1,450,854; Apr. 3.
Henriod, Charles E., Chanelaz, Areuse, Neuchatel, Switzerland. Progressive change-speed gear. 1,450,594; Apr. 3.
Henriod, Charles E., Lausanne, Switzerland. Gradual-change gear. 1,450,595; Apr. 3.
Henry, Ellison D., Houston, Tex. Firearm. 1,450,596; Apr. 3.
Hewitt, Peter C., deceased. (See Pierce, George W., assignor.)
Hewlett, James M., Lawrence, assignor to The Stockade Building System, Inc., New York, N. Y. Wall structure. 1,450,724; Apr. 3.
Hexagon Specialty Manufacturing Company. (See Kirsch, Raymond R., assignor.)
Higgins, James F., assignor to The Rogers-Higgins Co., Inc., New Orleans, La. Burner. 1,450,631; Apr. 3.
Hildreth, James W., assignor of one-half to W. C. Hufford, Marion, Ohio. Flytrap. 1,450,855; Apr. 3.
Hill, Edwin, Norwich, Conn. Billiard-cue-tip chalker. 1,450,741; Apr. 3.
Hilt, Frank E., Lyons, Kans. Egg tray. 1,450,368; Apr. 3.
Hines, Edwin G., Drums, Pa. Tree holder. 1,450,807; Apr. 3.
Hodson, Frank, Philadelphia, Pa. Electrical resistance heating element and making same. 1,450,725; Apr. 3.
Hoe, R., and Co. (See Schmidt, Louis A., assignor.)
Hokanson, Otto A., assignor to Woodstock Typewriter Company, Woodstock, Ill. Keyboard screen for typewriters. 1,450,369; Apr. 3.
Holbrook, Charles W., Providence, R. I. Buffer for pickers. 1,450,726; Apr. 3.
Holland Rod Manufacturing Company. (See Mull, Raymond A., assignor.)
Holly, Carlos, Lockport, assignor to F. N. Burt Company, Limited, Buffalo, N. Y. Making boxes and elements thereof. 1,450,681; Apr. 3.
Holmes, Edgar R., Detroit, Mich., assignor to Hamlin-Holmes Motor Company. Motor vehicle. 1,450,292; Apr. 3.

Holophane Glass Co. (See Dorey, William A., assignor.)
Holt Manufacturing Company, The. (See Arthur, George T., assignor.)
Holt Manufacturing Company, The. (See Turnbull, William, assignor.)
Holt Manufacturing Company, The. (See Wickersham, Elmer E., assignor.)
Holthoff, Henry C., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Roasting furnace. 1,450,900; Apr. 3.
Holtz, Gustav, and C. Gress, Gouldsboro, Pa. Self-centering ice chute and run. 1,450,887; Apr. 3.
Honsinger, William E., Round Lake, N. Y. Poultry feeder. 1,450,175; Apr. 3.
Hopkins, Alfred, assignor to Hopkins Manufacturing Company, Boston, Mass. Suspending element. 1,450,176; Apr. 3.
Hopkins Manufacturing Company. (See Hopkins, Alfred, assignor.)
Horton, Eugene L., San Francisco, Calif. Bucket protector. 1,450,632; Apr. 3.
Houpert, Henri J., Manhannock, N. Y. Internal-combustion-engine piston. 1,450,177; Apr. 3.
Howard, Lemuel F., Edgewood Borough, assignor to The Union Switch & Signal Company, Swissvale, Pa. Indication means for light signals. 1,450,548; Apr. 3.
Howard, Lemuel F., Edgewood Borough, assignor to The Union Switch & Signal Company, Swissvale, Pa. Indication means for light signals. 1,450,549; Apr. 3.
Howell, Wesley E., assignor to Whitall-Tatum Company, Millville, N. J. Marking machine. 1,450,776; Apr. 3.
Hudson, George R., Portland, Oreg. Mixer for gas engines. 1,450,550; Apr. 3.
Husdon, Pearl, Burlington, Iowa. Ratchet device for augers. 1,450,440; Apr. 3.
Hudson, Willard W., Shelbyville, Ill. Self-watering flowerpot. 1,450,633; Apr. 3.
Huebner, Julius J., Detroit, Mich. Spring suspension for vehicle bodies. 1,450,370; Apr. 3.
Huenergardt Manufacturing Co. (See Huenergardt, William H., assignor.)
Huenergardt, William H., assignor to Huenergardt Manufacturing Co., Lincoln, Nebr. Washing-machine frame. 1,450,808; Apr. 3.
Huff, Slaughter W., New York, N. Y. Automatically-operated slot cover. 1,450,727; Apr. 3.
Hufford, Ward C. (See Hildreth, James W., assignor.)
Hughes Tool Company. (See Childs, William L., assignor.)
Hull, Charles E., Onaway, Mich. Spark breaker. 1,450,501; Apr. 3.
Hummell, William, et al. (See Snyder, Samuel W., assignor.)
Hummell, William Q., New Philadelphia, Ohio. Artificial bait. 1,450,777; Apr. 3.
Hunt, Chester, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Cutting shoe-part blanks. 1,450,257; Apr. 3.
Hunt, Seth B., trustee. (See Ellis, C., and Wells, assignors.)
Hunt, Seth B., trustee. (See Williams, R. R., and Haller, assignors.)
Hunter, Omer B., Chickasha, Okla. Amusement device. 1,450,624; Apr. 3.
Hurst, Leonard E., and J. F. Miller, Detroit, Mich. Truck conveyer. 1,450,371; Apr. 3.
Hydraulic Pressed Steel Company, The. (See Irish, William E., assignor.)
Illch, Herbert H., New York, N. Y. Attachment shield for automobile windshields. 1,450,551; Apr. 3.
Illemann, Robert, Glasgow, Scotland. Non-conducting material. 1,450,856; Apr. 3.
Illingworth Carbonization Company. (See Illingworth, Stewart R., assignor.)
Illingworth, Stewart, R., Radyr, Glamorgan, Wales, assignor to Illingworth Carbonization Company, Limited, Manchester, England. Coking of coal. 1,450,888; Apr. 3.
Ingersoll, Howard L., White Plains, and T. L. Burton, New York, N. Y. Superheater for locomotives. 1,450,178; Apr. 3.
Ingersoll-Rand Company. (See Bayles, Lewis C., assignor.)
International Scale Company. (See Craig, Robert, assignor.)
Ionite Storage Battery Co. (See Williams, Albert H., assignor.)
Irish, William E., assignor to The Hydraulic Pressed Steel Company, Cleveland, Ohio. Fluid-pressure system. 1,450,372; Apr. 3.
Irwin Auger Bit Company, The. (See Daulton, B. H., and Robinson, assignors.)
Isaacs, Bernhardt B., and J. E. Marqua, assignors to The J. E. Marqua Company, Cincinnati, Ohio. Projecting lantern. 1,450,179; Apr. 3.
Jackson, John C., Philadelphia, assignor of one-fourth to H. Graser, Wissahickon, Philadelphia, Pa. Resilient wheel. 1,450,778; Apr. 3.
Jacobus, Martin R., Ridgefield, and W. F. Burditt, jr., Hillside, N. J.; said Burditt assignor to said Jacobus. Collapsible poultry feeder. 1,450,258; Apr. 3.
Jamison, Charles R., assignor, by mesne assignments, to United Alloy Steel Corporation, Canton, Ohio. Cabinet construction. 1,450,180; Apr. 3.
Janney, Robert E. L., Chicago, Ill. Transitional coupling arrangement. 1,450,295; Apr. 3.
Jenner, Percy, assignor to The Palm Brothers Company, New York, N. Y. Plate or similar article. Des. 62,170; Apr. 3.
Jennings, Bert M. (See Freshour, T. C., and Jennings.)
Jerry, John, Milwaukee, Wis. Welding tool. 1,450,294; Apr. 3.
Johnson, Albert H., Washington, D. C. Closure. 1,450,857; Apr. 3.
Johnson, Arvid L. (See Worna, Benjamin A., assignor.)
Johnson, Charles E. G., Des Moines, Iowa. Pneumatic clutch. 1,450,441; Apr. 3.
Johnson, Everard L., Patchogue, N. Y. Door construction for flashlight apparatus. 1,450,502; Apr. 3.
Johnson, Maxwell O., Waipio, Hawaii. Fruit-peeling machine. 1,450,295; Apr. 3.
Jombart, Félix, assignor to La Société d'Etudes et de Constructions Metallurgiques, Paris, France. Productions of hollow metal castings. 1,450,552; Apr. 3.
Jones, Frank S., Philadelphia, Pa. Straightening press. 1,450,375; Apr. 3.
Jones, Henry D., assignor to The Galion Iron Works & Mfg. Co., Galion, Ohio. Cooling system for motor vehicles. 1,450,442; Apr. 3.
Jones, Ira M., administrator. (See Ratcliffe, Frank S.)
Jones, James E., Richmond, Ind. Fly-eliminating screen. 1,450,374; Apr. 3.
Judge, Michael H., Greeley, Nebr. Gate latch. 1,450,443; Apr. 3.
Kalamazoo Paper Box Company. (See Allworth, Frank E., assignor.)
Kalamazoo Paper Box Company. (See Poppe, Edward W., assignor.)
Kasley, Alexander T., Eslington, Pa., assignor to Westinghouse Electric and Manufacturing Company. Torpedo. 1,450,597; Apr. 3.
Kaisling, William, assignor to Kellogg Switchboard and Supply Company, Chicago, Ill. Ignition switch. 1,450,728; Apr. 3.
Kavanaugh, Edward W. and M. J., Minneapolis, Minn. Stuffing box and the like. 1,450,421; Apr. 3.
Kavanaugh, Michael J. (See Kavanaugh, Edward W. and M. J.)
Kearney & Trecker Corporation. (See Kearney, Edward J., assignor.)
Kearney, Edward J., Wauwatosa, assignor to Kearney & Trecker Corporation, West Allis, Wis. Slide-actuating mechanism. 1,450,598; Apr. 3.
Keddy, Clifford L., Lynn, Mass., assignor of one-half to W. A. Frye, Welchville, Me. Lobster trap. 1,450,682; Apr. 3.
Keene, Waite W., Quincy, assignor to Masury Young Company, Charlestown, Mass. Portable sprayer. 1,450,742; Apr. 3.
Kehl, George A., St. Paul, Minn. Sand toy. 1,450,375; Apr. 3.
Keller, Jay R., Elizabeth, Nebr. Bog pulverizer. 1,450,503; Apr. 3.
Kellerman, James M., Los Angeles, Calif. Draw work for standard and rotary drilling operations. 1,450,743; Apr. 3.
Kelley, Thomas F., Gloucester, N. J. Plate holding and guiding apparatus. 1,450,744; Apr. 3.
Kellogg Switchboard and Supply Company. (See Bohlman, Ernest A., assignor.)
Kellogg Switchboard and Sopply Company. (See Kaisling, William, assignor.)
Kelly, Irene E., Highland Park, Ill. Combination undergarment for stout women. 1,450,683; Apr. 3.
Kelly, William D., Riverside, Ill. Vehicle spring. 1,450,378; Apr. 3.
Kennedy, William A. (See Graff, G., and Kennedy.)
Killian, Laurence J, Boston, and E. J. Parker, Lynn, Mass. Signaling apparatus for motor vehicles. 1,450,553; Apr. 3.
Kirkpatrick, George W., Rochester, N. Y. Cooling device for power transmission jacks. 1,450,858; Apr. 3.
Kirsch, Raymond R., assignor to Hexagon Specialty Manufacturing Company, St. Louis, Mo. Automobile. 1,450,684; Apr. 3.
Kirschbraun, Lester, Chicago, Ill., assignor to The Raybestos Company, Bridgeport, Conn. Asbestos friction clutch rings. 1,450,319; Apr. 3.
Kirschbraun, Lester, Chicago, Ill. Bituminous emulsion and making same. 1,450,685; Apr. 3.
Klaasse, Arend, Jackson, Mich. Spring. 1,450,686; Apr. 3.
Kohler Company. (See Bucher, William W., assignor.)
Kollberg, Gustaf L., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Pump. 1,450,901; Apr. 3.
Kopp, Arile E., New Middletown, Ind. Ratchet plate and die. 1,450,211; Apr. 3.
Korn, Joseph, Newark, N. J. Grease-retaining device for hats. 1,450,181; Apr. 3.
Kreissle, Hermann O., assignor to Ansbacher Motorenfabrik Karl Bachmann Aktiengesellschaft, Ansbach, Germany. Trailer. 1,450,554; Apr. 3.
Kriegenhofer, August. (See Twitchell, Herbert E., assignor.)
Kulhawy, Ferdinand, assignor to Comfort Safety Razor and Novelty Co. Inc., West Hoboken, N. J. Safety razor. 1,450,859; Apr. 3.
Kunin, Harry, assignor to Midwest Machinery Products Co., Chicago, Ill. Cooking vessel. 1,450,687; Apr. 3.
Kuttroff Pickhardt & Co. (See Landle, August, assignor.)

Kuzdial, Lawrence. (See Gaken, Josef F., assignor.)
Lacki, Wojciech, Chicago, Ill. Cradle. 1,450,635; Apr. 3.
Laing, Norman B., Detroit, and F. C. Rindfish, Highland Park, Mich. Storage battery. 1,450,589; Apr. 3.
Lalle, Peter A., and C. F. Fowler, assignors of one-third to S. L. Petrino, Buffalo, N. Y. Amusement apparatus. 1,450,069; Apr. 3.
La Mar, Frank C., Pittsburgh, Pa. Indicator for electric fuses. 1,450,670; Apr. 3.
Lamb, George L., Nappanee, Ind. Visor for use with automobiles. 1,450,809; Apr. 3.
Lambert, Alfred M. (See Brown, E. N., and Lambert.)
Lamm, Anthony, Brooklyn, and J. F. Schroeder, Middle Village, N. Y. Roof structure. 1,450,182; Apr. 3.
Landgraf, William F., Washington, D. C. Valve-spring compressor. 1,450,890; Apr. 3.
Lang, Albert B., St. Louis, Mo. Transmission lock for automobiles. 1,450,212; Apr. 3.
Langenkamp, Albert G. (See McElroy, R. H., Cite, and Langenkamp.)
La Pierre, Frank H. (See Winter, Arthur, assignor.)
La Riviere, Mathias J., Waterbury, Conn. Antiskid device. 1,450,779; Apr. 3.
La Société d'Etudes et de Constructions Metallurgiques. (See Jombart, Félix, assignor.)
La Societe La Cellophane, Siège Social. (See Brandenberger, Jaques, E., assignor.)
Latshaw, Adam, Dubois, Pa. Traffic signal. 1,450,636; Apr. 3.
Laufe, Charles, New York, N. Y. Hair-waving comb. 1,450,860; Apr. 3.
Lawrence, John T., Newark, N. J. Paint. 1,450,688; Apr. 3.
Leece, Leicester L., Cleveland, Ohio. Gear shift for motor vehicles. 1,450,745; Apr. 3.
Leeds, Robert R., assignor to The Topping Manufacturing Co., Ashland, Ohio. Carrier for disappearing doors. 1,450,729; Apr. 3.
Lego, Russell C., Beaver Falls, Pa. Double-acting deep-well pump. 1,450,213; Apr. 3.
Leighton, George A., Roslindale, Mass., assignor to American Can Company, New York, N. Y. Friction-top can. 1,450,422; Apr. 3.
Leimberger, Edward L., and A. Brasher, Chicago, Ill. Feeding attachment for power wringers. 1,450,891; Apr. 3.
Lemon, Alfred B., Providence, R. I. Badge. 1,450,689; Apr. 3.
Lencke, John K., Brooklyn, N. Y. Armature. 1,450,599; Apr. 3.
Landle, August, Forest Hills, assignor to Kuttroff Pickhardt & Co., Inc., New York, N. Y. Paper made from kapok fiber. 1,450,600; Apr. 3.
Leopold, Samuel N., assignor to Morris Paper Mills, Chicago, Ill. Collapsible caddy. 1,450,690; Apr. 3.
Lépine, Charles, Torino, Italy, assignor to Pathe Cinema, Anciens Etablissements Pathe Freres, Paris, France. Apparatus for direct observation of picture films. 1,450,555; Apr. 3.
Lewis, Harry R., jr. (See Morse, A. C., and Lewis.)
Libbey-Owens Sheet Glass Company, The. (See Allen, Horace E., assignor.)
Libbey-Owens Sheet Glass Company, The. (See Gray, William, assignor.)
Lincoln, Irvin, Lansing, Mich. Resilient wheel. 1,450,671; Apr. 3.
Little, Thomas P., assignor to The Fisk Rubber Company, Chicopee Falls, Mass. Tube manufacture. 1,450,320; Apr. 3.
Locomobile Company, The. (See Roos, Delmar G., assignor.)
Lohr, Michael E., Johnstown, Pa. Mine car. 1,450,637; Apr. 3.
Lonergan, Patrick H., Boulder, Colo. Radiator cores. 1,450,746; Apr. 3.
Long, William N., Springfield, Oreg. Internal-combustion engine. 1,450,810; Apr. 3.
Longnaker, Milton S., Pleasant Hill, Ohio, assignor, by mesne assignments, to J. W. Page, Chicago, Ill. Excavating machine. Re15,571; Apr. 3.
Lovejoy, Ralph M., Meredith, N. H. Shock absorber. 1,450,601; Apr. 3.
Lowe, Edward L., Palo Alto, Calif. Burner for internal-combustion engines. 1,450,691; Apr. 3.
Lucas, Irving V., Muskogee, Okla. Vehicle jack. 1,450,504; Apr. 3.
Lucas, Stephen J., Chicago, Ill. Level attachment for carpenters' squares. 1,450,296; Apr. 3.
Lundell, Alben E., Chicago, Ill., and G. Thompson, Mount Vernon, assignors to Western Electric Company, Incorporated, New York, N. Y. Party-line revertive ringing system. 1,450,321; Apr. 3.
Lunt, George P., New York, N. Y. Drying colloids. 1,450,377; Apr. 3.
McAnally, William R., Fort Dodge, Iowa. Light reflector. 1,450,376; Apr. 3.
McDowell, Joe E., Fort Worth, Tex. Pneumatic stage pump. 1,450,505; Apr. 3.
McElhany, John W., Denver, Colo. Hand-operating extensible fish-landing net and handle. 1,450,322; Apr. 3.
McElroy, Roy H., receiver. (See McElroy, R. H., Cite and Langenkamp, assignors.)
McElroy, Roy H., J. D. Cite, and A. G. Langenkamp, assignors to R. H. McElroy, receiver for The Bahmann Iron Works Co., Dayton, Ohio. Brick and tile machine.
McElroy, William J., New York, and J. Clarke, Manhasset, North Hempstead, N. Y., assignors, by mesne assignments, to Alchemic Gold Company, Inc. Printing ink. 1,450,692; Apr. 3.
McEwan, Hugh, Pittsburgh, Pa., assignor to W. W. Nicoll, New York, N. Y. Safety exploder. 1,450,672; Apr. 3.
McGahey, Robert E., Alexandria, Va. Self-locking angle-cock. 1,450,811; Apr. 3.
McGuire, James E., Camden, N. J. Safety device for tools. 1,450,323; Apr. 3.
McGuire, Lee, Paint Lick, Ky. Electrically operated vehicle signal. 1,450,214; Apr. 3.
McGuire, Michael H., Clifford, assignor of one-half to C. E. Frederickson, St. Joseph, Mich. Portable bathtub with heating appliance. 1,450,444; Apr. 3.
McKeever, William J., Cambridge, Mass. Mop. 1,450,556; Apr. 3.
McKenzie, William S., Creighton Mine, and R. Richardson, Copper Cliff, Ontario, Canada. Lighting accessory for automobiles. 1,450,324; Apr. 3.
McLean, Embury, Brooklyn, N. Y. Furnace control. 1,450,693; Apr. 3.
McNamara, Edward M., Chicago, Ill. Mop holder and wringer. 1,450,673; Apr. 3.
McNary, James E., Chicago, Ill., assignor to J. W. Weeks, Secretary of War of the United States of America. Helmet. 1,450,379; Apr. 3.
McNaughton, John. (See McNaughton, Mabel P. and J.)
McNaughton, Mabel P., and J., New York, N. Y. Mop. 1,450,445; Apr. 3.
Macdonald, Charles A., Cambridge, Mass., assignor to William S. Doig, Inc., Brooklyn, N. Y. Nailer for corrugated fasteners. 1,450,730; Apr. 3.
Mace, Arthur T., assignor to The Domestic Electric Company, Cleveland, Ohio. Driving mechanism for sewing machines. 1,450,602; Apr. 3.
Mack, William H., Oak Grove, La. Saw set. 1,450,812; Apr. 3.
Mackay, Philip A., London, England. Recovering vanadium from its ores. 1,450,507; Apr. 3.
Maclean, Robert S., Chicago, Ill. Building construction. 1,450,731; Apr. 3.
MacNeill, William J., Wauwatosa, assignor to Federal Malleable Company, West Allis, Wis. Molder's press. 1,450,862; Apr. 3.
MacPhee, Dougald, Rivers Inlet, British Columbia, Canada. Fish-cleaning machine. 1,450,508; Apr. 3.
Maegly, George B., Houston, Tex. Pump. 1,450,215; Apr. 3.
Magny, Daniel, Issoudun, France. Installation for the washing and combing of pigs' bristles. 1,450,325; Apr. 3.
Mahoney, Raymond, Philadelphia, Pa. Safety device for ladders. 1,450,694; Apr. 3.
Maitland, Harold T., Sharon Hill, assignor to Sun Oil Company, Philadelphia, Pa. Apparatus for treating oils. 1,450,326; Apr. 3.
Majestic Electric Development Company. (See Brown, E. N., and Lambert, assignors.)
Maltby, Julius, assignor to Waterbury Buckle Co., Waterbury, Conn. Strap buckle. 1,450,509; Apr. 3.
Mann, J. A. (See Reed, George E., assignor.)
Manning, Robert M., Hewitt, Okla. Stopcock. 1,450,861; Apr. 3.
Marine Specialty Manufacturing Company. (See Hansen, Joseph, assignor.)
Marks, Herbert E., Sewickley, Pa. Skylight. 1,450,557; Apr. 3.
Marlin Firearms Corporation, The. (See Swebilius, Carl G., assignor.)
Marqua, J. E., Company. (See Isaacs, B. B., and Marqua, assignors.)
Marqua, James E. (See Isaacs, B. B., and Marqua.)
Marsh, Henry S., and R. S. Cochran, Youngstown, Ohio. Method of and apparatus for recovering spent pickling solutions. 1,450,216; Apr. 3.
Marsh, Henry S., and R. S. Cochran, Youngstown, Ohio. Method of and apparatus for reclaiming spent pickling solution. 1,450,217; Apr. 3.
Marshall, Charles J., and F. R. Weaver, assignors to P. B. Yates Machine Company, Beloit, Wis. Milling-machine adjustment and quick release. 1,450,695; Apr. 3.
Marston, Howard F., Dayton, Ohio. Size-reducible box. 1,450,674; Apr. 3.
Martin, A. J., et al. (See Baker, Louis E., assignor.)
Martin, James M., Knoxville, Tenn. Pipe wrench. 1,450,297; Apr. 3.
Mason, William H., Leesburg, Ohio. Wire-fence fastener. 1,450,298; Apr. 3.
Master Carbureter Corporation. (See Summers, Caleb E., assignor.)
Masury-Young Company. (See Keene, Waite W., assignor.)
Mayer, Fred G., assignor to Starr Piano Company, Richmond, Ind. Automatic stop for phonographs. 1,450,299; Apr. 3.
Maze, Charles A. F., dit D. Maze, Paris, France. Gun. 1,450,558; Apr. 3.

Holophane Glass Co. (See Dorey, William A., assignor.)
Holt Manufacturing Company, The. (See Arthur, George T., assignor.)
Holt Manufacturing Company, The. (See Turnbull, William, assignor.)
Holt Manufacturing Company, The. (See Wickersham, Elmer E., assignor.)
Holthoff, Henry C., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Roasting furnace. 1,450,900; Apr. 3.
Holtz, Gustav, and C. Green, Gouldsboro, Pa. Self-centering ice chute and run. 1,450,887; Apr. 3.
Honsinger, William E., Round Lake, N. Y. Poultry feeder. 1,450,175; Apr. 3.
Hopkins, Alfred, assignor to Hopkins Manufacturing Company, Boston, Mass. Suspending element. 1,450,176; Apr. 3.
Hopkins Manufacturing Company. (See Hopkins, Alfred, assignor.)
Horton, Eugene L., San Francisco, Calif. Bucket protector. 1,450,632; Apr. 3.
Houpert, Henri J., Mamaroneck, N. Y. Internal-combustion-engine piston. 1,450,177; Apr. 3.
Howard, Lemuel F., Edgewood Borough, assignor to The Union Switch & Signal Company, Swissvale, Pa. Indication means for light signals. 1,450,548; Apr. 3.
Howard, Lemuel F., Edgewood Borough, assignor to The Union Switch & Signal Company, Swissvale, Pa. Indication means for light signals. 1,450,549; Apr. 3.
Howell, Wesley E., assignor to Whitall-Tatum Company, Millville, N. J. Marking machine. 1,450,776; Apr. 3.
Hudson, George R., Portland, Oreg. Mixer for gas engines. 1,450,550; Apr.
Husdon, Pearl, Burlington, Iowa. Ratchet device for augers. 1,450,440; Apr. 3.
Hudson, Willard W., Shelbyville, Ill. Self-watering flowerpot. 1,450,633; Apr.
Huebner, Julius J., Detroit, Mich. Spring suspension for vehicle bodies. 1,450,370; Apr. 3.
Huenergardt Manufacturing Co. (See Huenergardt, William H., assignor.)
Huenergardt, William H., assignor to Huenergardt Manufacturing Co., Lincoln, Nebr. Washing-machine frame. 1,450,808; Apr. 3.
Huff, Slaughter W., New York, N. Y. Automatically-operated slot cover. 1,450,727; Apr. 3.
Hufford, Ward C. (See Hildreth, James W., assignor.)
Hughes Tool Company. (See Childs, William L., assignor.)
Hull, Charles E., Onaway, Mich. Spark breaker. 1,450,501; Apr. 3.
Hummell, William, et al. (See Smyder, Samuel W., assignor.)
Hummell, William Q., New Philadelphia, Ohio. Artificial bait. 1,450,777; Apr. 3.
Hunt, Chester, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Cutting shoe-part blanks. 1,450,257; Apr. 3.
Hunt, Seth B., trustee. (See Ellis, C., and Wells, assignors.)
Hunt, Seth B., trustee. (See Williams, R. R., and Haller, assignors.)
Hunter, Omer B., Chickasha, Okla. Amusement device. 1,450,634; Apr. 3.
Hurst, Leonard E., and J. F. Miller, Detroit, Mich. Truck conveyer. 1,450,371; Apr. 3.
Hydraulic Pressed Steel Company, The. (See Irish, William E., assignor.)
Illich, Herbert H., New York, N. Y. Attachment shield for automobile windshields. 1,450,551; Apr. 3.
Illemann, Robert, Glasgow, Scotland. Non-conducting material. 1,450,856; Apr. 3.
Illingworth Carbonization Company. (See Illingworth, Stewart R., assignor.)
Illingworth, Stewart, R., Radyr, Glamorgan, Wales, assignor to Illingworth Carbonization Company, Limited, Manchester, England. Coking of coal. 1,450,888; Apr. 3.
Ingersoll, Howard L., White Plains, and T. L. Burton, New York, N. Y. Superheater for locomotives. 1,450,178; Apr. 3.
Ingersoll-Rand Company. (See Bayles, Lewis C., assignor.)
International Scale Company. (See Craig, Robert, assignor.)
Ionite Storage Battery Co. (See Williams, Albert H., assignor.)
Irish, William E., assignor to The Hydraulic Pressed Steel Company, Cleveland, Ohio. Fluid-pressure system. 1,450,372; Apr. 3.
Irwin Auger Bit Company, The. (See Daulton, B. H., and Robinson, assignors.)
Isaacs, Bernhardt B., and J. E. Marqua, assignors to The J. E. Marqua Company, Cincinnati, Ohio. Projecting lantern. 1,450,179; Apr. 3.
Jackson, John C., Philadelphia, assignor of one-fourth to H. Graser, Wissahickon, Philadelphia, Pa. Resilient wheel. 1,450,778; Apr. 3.
Jacobus, Martin R., Ridgefield, and W. F. Burditt, jr., Hillside, N. J.; said Burditt assignor to said Jacobus. Collapsible poultry feeder. 1,450,258; Apr. 3.
Jamison, Charles R., assignor, by mesne assignments, to United Alloy Steel Corporation, Canton, Ohio. Cabinet construction. 1,450,180; Apr. 3.
Janney, Robert E. L., Chicago, Ill. Transitional coupling arrangement. 1,450,293; Apr. 3.
Jenner, Percy, assignor to The Palm Brothers Company, New York, N. Y. Plate or similar article. Des. 62,170; Apr. 3.
Jennings, Bert M. (See Freshour, T. C., and Jennings.)
Jerry, John, Milwaukee, Wis. Welding tool. 1,450,294; Apr. 3.
Johnson, Albert H., Washington, D. C. Closure. 1,450,857; Apr. 3.
Johnson, Arvid L. (See Worna, Benjamin A., assignor.)
Johnson, Charles E. G., Des Moines, Iowa. Pneumatic clutch. 1,450,441; Apr. 3.
Johnson, Everard L., Patchogue, N. Y. Door construction for flashlight apparatus. 1,450,502; Apr. 3.
Johnson, Maxwell O., Waipio, Hawaii. Fruit-peeling machine. 1,450,295; Apr. 3.
Jombart, Félix, assignor to La Société d'Etudes et de Constructions Metallurgiques, Paris, France. Productions of hollow metal castings. 1,450,552; Apr. 3.
Jones, Frank S., Philadelphia, Pa. Straightening press. 1,450,373; Apr. 3.
Jones, Henry D., assignor to The Galion Iron Works & Mfg. Co., Galion, Ohio. Cooling system for motor vehicles. 1,450,442; Apr. 3.
Jones, Ira M., administrator. (See Ratcliffe, Frank S.)
Jones, James E., Richmond, Ind. Fly-eliminating screen. 1,450,374; Apr. 3.
Judge, Michael H., Greeley, Nebr. Gate latch. 1,450,443; Apr. 3.
Kalamazoo Paper Box Company. (See Allworth, Frank E., assignor.)
Kalamazoo Paper Box Company. (See Poppe, Edward W., assignor.)
Kasley, Alexander T., Essington, Pa., assignor to Westinghouse Electric and Manufacturing Company. Torpedo. 1,450,597; Apr. 3.
Kaisling, William, assignor to Kellogg Switchboard and Supply Company, Chicago, Ill. Ignition switch. 1,450,728; Apr. 3.
Kavanaugh, Edward W. and M. J., Minneapolis, Minn. Stuffing box and the like. 1,450,421; Apr. 3.

Kreissle, Hermann O., assignor to Ansbacher Motorenfabrik Karl Bachmann Aktiengesellschaft, Ansbach, Germany. Trailer. 1,450,554; Apr. 3.
Kriegenhofer, August. (See Twitchell, Herbert E., assignor.)
Kulhawy, Ferdinand, assignor to Comfort Safety Razor and Novelty Co. Inc., West Hoboken, N. J. Safety razor. 1,450,859; Apr. 3.
Kunin, Harry, assignor to Midwest Machinery Products Co., Chicago, Ill. Cooking vessel. 1,450,687; Apr. 3.
Kuttroff Pickhardt & Co. (See Lendle, August, assignor.)

Kuzdial, Lawrence. (See Gaken, Josef F., assignor.)
Lacki, Wojciech, Chicago, Ill. Cradle. 1,450,635; Apr. 3.
Laing, Norman B., Detroit, and F. C. Rindfish, Highland Park, Mich. Storage battery. 1,450,889; Apr. 3.
Lalle, Peter A., and C. F. Fowler, assignors of one-third to S. L. Petrino, Buffalo, N. Y. Amusement apparatus. 1,450,669; Apr. 3.
La Mar, Frank C., Pittsburgh, Pa. Indicator for electric fuses. 1,450,670; Apr. 3.
Lamb, George L., Nappanee, Ind. Visor for use with automobiles. 1,450,809; Apr. 3.
Lambert, Alfred M. (See Brown, E. N., and Lambert.)
Lamm, Anthony, Brooklyn, and J. F. Schroeder, Middle Village, N. Y. Roof structure. 1,450,182; Apr. 3.
Landgraf, William F., Washington, D. C. Valve-spring compressor. 1,450,890; Apr. 3.
Lang, Albert B., St. Louis, Mo. Transmission lock for automobiles. 1,450,212; Apr. 3.
Langenkamp, Albert G. (See McElroy, R. H., Cite, and Langenkamp.)
La Pierre, Frank H. (See Wister, Arthur, assignor.)
La Riviere, Mathias J., Waterbury, Conn. Antiskid device. 1,450,779; Apr. 3.
La Société d'Etudes et de Constructions Metallurgiques. (See Jombart, Félix, assignor.)
La Societe La Cellophane, Siège Social. (See Brandenberger, Jaques, E., assignor.)
Latshaw, Adam, Dubois, Pa. Traffic signal. 1,450,636; Apr. 3.
Laufe, Charles, New York, N. Y. Hair-waving comb. 1,450,860; Apr. 3.
Lawrence, John T., Newark, N. J. Paint. 1,450,688; Apr. 3.
Lecce, Leicester L., Cleveland, Ohio. Gear shift for motor vehicles. 1,450,745; Apr. 3.
Leeds, Robert R., assignor to The Topping Manufacturing Co., Ashland, Ohio. Carrier for disappearing doors. 1,450,729; Apr. 3.
Lego, Russell C., Beaver Falls, Pa. Double-acting deep-well pump. 1,450,213; Apr. 3.
Leighton, George A., Roslindale, Mass., assignor to American Can Company, New York, N. Y. Friction-top can. 1,450,422; Apr. 3.
Leimberger, Edward L., and A. Brasher, Chicago, Ill. Feeding attachment for power wringers. 1,450,891; Apr. 3.
Lemon, Alfred B., Providence, R. I. Badge. 1,450,689; Apr. 3.
Lencke, John K., Brooklyn, N. Y. Armature. 1,450,599; Apr. 3.
Lendle, August, Forest Hills, assignor to Kuttroff Pickhardt & Co., Inc., New York, N. Y. Paper made from kapok fiber. 1,450,690; Apr. 3.
Leopold, Samuel N., assignor to Morris Paper Mills, Chicago, Ill. Collapsible caddy. 1,450,690; Apr. 3.
Lépine, Charles, Torino, Italy, assignor to Pathe Cinema, Anciens Etablissements Pathe Freres, Paris, France. Apparatus for direct observation of picture films. 1,450,555; Apr. 3.
Lewis, Harry R., jr. (See Morse, A. C., and Lewis.)
Libbey-Owens Sheet Glass Company, The. (See Allen, Horace E., assignor.)
Libbey-Owens Sheet Glass Company, The. (See Gray, William, assignor.)
Lincoln, Irvin, Lansing, Mich. Resilient wheel. 1,450,671; Apr. 3.
Little, Thomas P., assignor to The Fisk Rubber Company, Chicopee Falls, Mass. Tube manufacture. 1,450,320; Apr. 3.
Locomobile Company, The. (See Roos, Delmar G., assignor.)
Lohr, Michael E., Johnstown, Pa. Mine car. 1,450,637; Apr. 3.
Lonergan, Patrick H., Boulder, Colo. Radiator cores. 1,450,746; Apr. 3.
Long, William N., Springfield, Oreg. Internal-combustion engine. 1,450,810; Apr. 3.
Longnaker, Milton S., Pleasant Hill, Ohio, assignor, by mesne assignments, to J. W. Page, Chicago, Ill. Excavating machine. Re15,571; Apr. 3.
Lovejoy, Ralph M., Meredith, N. H. Shock absorber. 1,450,601; Apr. 3.
Lowe, Edward L., Palo Alto, Calif. Burner for internal-combustion engines. 1,450,691; Apr. 3.
Lucas, Irving V., Muskogee, Okla. Vehicle jack. 1,450,504; Apr. 3.
Lucas, Stephen J., Chicago, Ill. Level attachment for carpenters' squares. 1,450,296; Apr. 3.
Lundell, Alben E., Chicago, Ill., and G. Thompson, Mount Vernon, assignors to Western Electric Company, Incorporated, New York, N. Y. Party-line revertive ringing system. 1,450,321; Apr. 3.
Lunt, George P., New York, N. Y. Drying colloids. 1,450,377; Apr. 3.
McAnally, William R., Fort Dodge, Iowa. Light reflector. 1,450,376; Apr. 3.
McDowell, Joe E., Fort Worth, Tex. Pneumatic stage pump. 1,450,505; Apr. 3.
McElhany, John W., Denver, Colo. Hand-operating extensible fish-landing net and handle. 1,450,322; Apr. 3.
McElroy, Roy H., receiver. (See McElroy, R. H., Cite and Langenkamp, assignors.)
McElroy, Roy H., J. D. Cite, and A. G. Langenkamp, assignors to R. H. McElroy, receiver for The Bahmann Iron Works Co., Dayton, Ohio. Brick and tile machine.
McElroy, William J., New York, and J. Clarke, Manhasset, North Hempstead, N. Y., assignors, by mesne assignments, to Alchemic Gold Company, Inc. Printing ink. 1,450,692; Apr. 3.
McEwan, Hugh, Pittsburgh, Pa., assignor to W. W. Nicoll, New York, N. Y. Safety exploder. 1,450,672; Apr. 3.
McGahey, Robert E., Alexandria, Va. Self-locking anglecock. 1,450,811; Apr. 3.
McGuire, James E., Camden, N. J. Safety device for tools. 1,450,323; Apr. 3.
McGuire, Lee, Paint Lick, Ky. Electrically operated vehicle signal. 1,450,214; Apr. 3.
McGuire, Michael H., Clifford, assignor of one-half to C. E. Frederickson, St. Joseph, Mich. Portable bathtub with heating appliance. 1,450,444; Apr. 3.
McKeever, William J., Cambridge, Mass. Mop. 1,450,556; Apr. 3.
McKenzie, William S., Creighton Mine, and R. Richardson, Copper Cliff, Ontario, Canada. Lighting accessory for automobiles. 1,450,324; Apr. 3.
McLean, Embury, Brooklyn, N. Y. Furnace control. 1,450,693; Apr. 3.
McNamara, Edward M., Chicago, Ill. Mop holder and wringer. 1,450,673; Apr. 3.
McNary, James E., Chicago, Ill., assignor to J. W. Weeks, Secretary of War of the United States of America. Helmet. 1,450,379; Apr. 3.
McNaughton, John. (See McNaughton, Mabel P. and J.)
McNaughton, Mabel P., and J., New York, N. Y. Mop. 1,450,445; Apr. 3.
Macdonald, Charles A., Cambridge, Mass., assignor to William S. Doig, Inc., Brooklyn, N. Y. Nailer for corrugated fasteners. 1,450,780; Apr. 3.
Mace, Arthur T., assignor to The Domestic Electric Company, Cleveland, Ohio. Driving mechanism for sewing machines. 1,450,602; Apr. 3.
Mack, William H., Oak Grove, La. Saw set. 1,450,812; Apr. 3.
Mackay, Philip A., London, England. Recovering vanadium from its ores. 1,450,507; Apr. 3.
Maclean, Robert S., Chicago, Ill. Building construction. 1,450,731; Apr. 3.
MacNeill, William J., Wauwatosa, assignor to Federal Malleable Company, West Allis, Wis. Molder's press. 1,450,862; Apr. 3.
MacPhee, Dougald, Rivers Inlet, British Columbia, Canada. Fish-cleaning machine. 1,450,508; Apr. 3.
Maegly, George B., Houston, Tex. Pump. 1,450,215; Apr. 3.
Magny, Daniel, Issoudun, France. Installation for the washing and combing of pigs' bristles. 1,450,325; Apr. 3.
Mahoney, Raymond, Philadelphia, Pa. Safety device for ladders. 1,450,694; Apr. 3.
Maitland, Harold T., Sharon Hill, assignor to Sun Oil Company, Philadelphia, Pa. Apparatus for treating oils. 1,450,326; Apr. 3.
Majectic Electric Development Company. (See Brown, E. N., and Lambert, assignors.)
Maltby, Julius, assignor to Waterbury Buckle Co., Waterbury, Conn. Strap buckle. 1,450,509; Apr. 3.
Mann, J. A. (See Reed, George E., assignor.)
Manning, Robert M., Hewitt, Okla. Stopcock. 1,450,861; Apr. 3.
Marine Specialty Manufacturing Company. (See Hansen, Joseph, assignor.)
Marks, Herbert E., Sewickley, Pa. Skylight. 1,450,537; Apr. 3.
Marlin Firearms Corporation, The. (See Swebilius, Carl G., assignor.)
Marqua, J. E., Company. (See Isaacs, B. B., and Marqua, assignors.)
Marqua, James E. (See Isaacs, B. B., and Marqua.)
Marsh, Henry S., and R. S. Cochran, Youngstown, Ohio. Method of and apparatus for recovering spent pickling solutions. 1,450,216; Apr. 3.
Marsh, Henry S., and R. S. Cochran, Youngstown, Ohio. Method of and apparatus for reclaiming spent pickling solution. 1,450,217; Apr. 3.
Marshall, Charles J., and F. R. Weaver, assignors to P. B. Yates Machine Company, Beloit, Wis. Milling-machine adjustment and quick release. 1,450,695; Apr. 3.
Marston, Howard F., Dayton, Ohio. Size-reducible box. 1,450,674; Apr. 3.
Martin, A. J., et al. (See Baker, Louis E., assignor.)
Martin, James M., Knoxville, Tenn. Pipe wrench. 1,450,297; Apr. 3.
Mason, William H., Leesburg, Ohio. Wire-fence fastener. 1,450,298; Apr. 3.
Master Carbureter Corporation. (See Summers, Caleb E., assignor.)
Masury-Young Company. (See Keene, Waite W., assignor.)
Mayer, Fred G., assignor to Starr Piano Company, Richmond, Ind. Automatic stop for phonographs. 1,450,299; Apr. 3.
Maze, Charles A. F., dit D. Maze, Paris, France. Gun. 1,450,558; Apr. 3.

Mead-Morrison Manufacturing Company. (See Snow, Frederick O., jr., assignor.)
Measuregraph Company, The. (See Turner, Douglas, assignor.)
Medart, Fred, Manufacturing Company. (See Medart, P. S., and Albach, assignors.)
Medart, Philip S., and F. Albach, assignors to Fred Medart Manufacturing Company, St. Louis, Mo. Exercising apparatus. 1,450,300; Apr. 3.
Medeiros, Emygdio S., assignor to New Bedford Tensioning Devices, Inc., New Bedford, Mass. Thread-tensioning device. 1,450,559; Apr. 3.
Meischke-Smith, William, Boldre Hill, Boldre Hants, England. Distilling bituminous matter. 1,450,327; Apr. 3.
Metropolitan Sewing Machine Corporation. (See Weis, John P., assignor.)
Mattel, John P., Dubuque, Iowa. Washboiler. 1,450,638; Apr. 3.
Metz, John J., Meadville, Pa. Train-order holder. 1,450,813; Apr. 3.
Meyer, Adolph F., St. Paul, Minn. Governor. 1,450,380; Apr. 3.
Meyer, Hubert J. (See Wells, N. C., and Meyer.)
Meyers, Hubert A., Company. (See Meyers, Hubert A., assignor.)
Micka, Henry R., Maywood, Ill. Fuel-gas mixer. 1,450,814; Apr. 3.
Midgley, Thomas, Hampden, assignor to The Fisk Rubber Company, Chicopee Falls, Mass. Jacket for preliminary cure. 1,450,328; Apr. 3.
Midgley, Thomas, Hampden, assignor to The Fisk Rubber Company, Chicopee Falls, Mass. Tension device for tire-building machines. 1,450,747; Apr. 3.
Midwest Machinery Products Co. (See Kunin, Harry, assignor.)
Mieville, Herbert C., Davenport, Iowa, assignor to Squire Products Company, Pittsburgh, Pa. Grill. 1,450,381; Apr. 3.
Miller, Charles E., assignor to Universal Arch Company, Chicago, Ill. Locomotive arch. 1,450,696; Apr. 3.
Miller, James F. (See Hurst, L. E., and Miller.)
Milwaukee Tank Works. (See Bienenstok, Edgar A., assignor.)
Miner, William H. (See Dath, Charles E., assignor.)
Miner, William H. (See Floyd, George G., assignor.)
Miner, William H. (See Haseltine, Stacy B., assignor.)
Miner, William H. (See O'Connor, John F., assignor.)
Mitchell, Arthur R., assignor to Mitchell Window Device Co., Milwaukee, Wis. Window construction. 1,450,697; Apr. 3.
Mitchell, John A. (See Schede, A. W., and Mitchell.)
Mitchell Window Device Co. (See Mitchell, Arthur R., assignor.)
Monson, George S., St. Paul, Minn. Dental impression tray. 1,450,639; Apr. 3.
Moon, Elmer C., Sheepshead Bay, N. Y. Typewriter-clamp. 1,450,183; Apr. 3.
Moore, James D., Northwilkesboro, N. C. Mechanical movement. 1,450,184; Apr. 3.
Moore, Lester L., Winder, Ga. Boll-weevil trap. 1,450,382; Apr. 3.
Morgan & Wright. (See Abbott, Adrian O., jr., assignor.)
Morgan & Wright. (See Gunn, James N., assignor.)
Morgan, Edmund C., New York, N. Y. Mine-roof-supporting method and apparatus. 1,450,329; Apr. 3.
Morgan, Edmund C., New York, N. Y. Mining apparatus. 1,450,693; Apr. 3.
Morici, Nazarene, Chicago, Ill. Carving or reproducing machine. 1,450,698; Apr. 3.
Morris Paper Mills. (See Leopold, Samuel N., assignor.)
Morrow, James A., Wichita Falls, Tex. Spring wheel. 1,450,748; Apr. 3.
Morrow, John B., Harrisburg, Pa. Pressure regulator and cut-off. 1,450,853; Apr. 3.
Morse, Alonzo C., and H. R. Lewis, jr., Shelby, Ohio. Seamless-tube drawing. 1,450,699; Apr. 3.
Mortensen, Soren H., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Dynamo-electric machine. 1,450,902; Apr. 3.
Morton, Charles D., assignor to Morton Filter Process Co., New York, N. Y. Separation and filter system and apparatus. 1,450,560; Apr. 3.
Morton Filter Process Co. (See Morton, Charles D., assignor.)
Mossberg, Frank, assignor to Mossberg Pressed Steel Corporation, Attleboro, Mass. Razor. 1,450,604; Apr. 3.
Mossberg Pressed Steel Corporation. (See Mossberg, Frank, assignor.)
Mueller, Lawrence A., Kankakee, Ill. Trap-drum support. 1,450,732; Apr. 3.
Mull, Raymond A., Benton Harbor, assignor to Holland Rod Manufacturing Company, St. Joseph, Mich. Fish rod. 1,450,700; Apr. 3.
Munro, William T. (See Edmundson, H. W., and Munro.)
Murphy, P. H., Company. (See Bonsall, Charles D., assignor.)
Murphy, Walter P. (See Gilpin, Garth G., assignor.)
Murphy, Walter P. (See Sisson, Vinton E., assignor.)
Murphy, Walter P. (See Small, Arthur E., assignor.)
Murray, Charles E., Chicago, Ill. Machine for treating bolts of cloth for clothing. 1,450,701; Apr. 3.
Myers, Charles E., Canton, Ohio. Gauge plug. 1,450,185; Apr. 3.
Myers, Hubert A., assignor to The Hubert A. Myers Company, Toledo, Ohio. Metal mold. 1,450,186; Apr. 3.
Nacke, Karl, assignor to United Metal Spinning Co., Brooklyn, N. Y. Cast arm for lighting fixtures. Des. 62,177; Apr. 3.
Nacke, Karl, assignor to United Metal Spinning Co., Brooklyn, N. Y. Husk for ball-lamp-socket cover for lighting fixtures. Des. 62,178; Apr. 3.
Namlooze Vennootschap Finanzieele Mattschapij "Driebergen." (See Hase, Rudolf, assignor.)
National Acme Company, The. (See Smith, Oscar A., assignor.)
National Airless Tire Company. (See Patton, Darrell E., assignor.)
Negbaur, Harry, New York, N. Y., assignor to E. & J. Bass, Incorporated. Ovenware and holder therefor. 1,450,330; Apr. 3.
Nelson, Coral A., Binghamton, N. Y. Headlight attachment. 1,450,862; Apr. 3.
Nelson, Hjalmer A., Detroit, Minn. Memorandum attachment for automobiles. 1,450,446; Apr. 3.
Nemecek, Stephen, Chicago, Ill. Cue tip. 1,450,605; Apr. 3.
Nenoff, Christ, Pittsburgh, Pa. Portable and collapsible shower bath. 1,450,218; Apr. 3.
Nessler, Charles, New York, N. Y. Artificial eyelashes and making same. 1,450,259; Apr. 3.
Neubert, Walter P., Pittsburgh, assignor to The Union Switch & Signal Company, Swissvale, Pa. Plunger lock with circuit controller for railway switches. 1,450,331; Apr. 3.
Neunaber, John F., and L. E. Bartels, Bethalto, Ill. Road scraper. 1,450,815; Apr. 3.
New Bedford Tensioning Devices, Inc. (See Medeiros, Emygdio S., assignor.)
New Jersey Zinc Company. (See Singmaster, J. A., and Breyer, assignors.)
Newby, William, Youngstown, Ohio. Opening sheet and tin-plate packs. 1,450,863; Apr. 3.
Newhouse, Ray C., Wauwatosa, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Fuel feeder. 1,450,903; Apr. 3.
Newman, Isidor, New York, N. Y. Closure for receptacles. 1,450,260; Apr. 3.
Newton, Robert W., Providence, R. I. Automatic sprinkler. 1,450,219; Apr. 3.
Nichols, Malcolm P., New Haven, Conn. Headlight installation for automobiles. 1,450,510; Apr. 3.
Nicole, Louis, London, England. Milling, drilling, and grinding appliance for lathes. 1,450,447; Apr. 3.
Nicoll, William W. (See McEwan, Hugh, assignor.)
Nielsen, Niels, Lincoln, Nebr. Engine-supporting stand. 1,450,511; Apr. 3.
Niesman, Charles P., Freeport, Ill. Saw-setting tool. 1,450,220; Apr. 3.
Norman, Charles E., Chicago, Ill. Pipe-supporting means. 1,450,640; Apr. 3.
Norris, Almon E., Brookline, Mass. Automobile winch. 1,450,301; Apr. 3.
Norris, Almon E., Brookline, Mass. Automobile winch. 1,450,302; Apr. 3.
O. B. Electric Vehicles, Inc. (See Bahls, Otto, assignor.)
O'Connor, John F., Chicago, Ill., assignor to W. H. Miner, Chazy, N. Y. Friction shock-absorbing mechanism. 1,450,383; Apr. 3.
Ograbisz, Stephen J., Buffalo, N. Y. Wrench. 1,450,641; Apr. 3.
Olson, Edward, Mount Alton, Pa. Knuckle joint for automobile steering mechanism. 1,450,780; Apr. 3.
Olson, Swan, Minneapolis, Minn. Push-harvester binder. 1,450,384; Apr. 3.
Ordung, Henry H., assignor of one-half to J. Wade, Laporte, Ind. Tag. 1,450,816; Apr. 3.
Otis, Spencer, Barrington, Ill. Wheel-pit drop table. 1,450,702; Apr. 3.
Ott, William D., and H. F. Griffin, Riverside, Iowa. Automobile headlight. 1,450,642; Apr. 3.
Ottinger, Leon, New York, N. Y. Latch. Re15,569; Apr. 3.
Owens, George H., Addison, N. Y. Berry-picker outfit. 1,450,221; Apr. 3.
Pache, Auguste, New York, N. Y. Means for locating trouble in ignition systems. 1,450,896; Apr. 3.
Page, John W. (See Longmaker, Milton S., assignor.)
Paine, Henry E., San Francisco, Calif. Pipe union. 1,450,606; Apr. 3.
Palm Brothers Company, The. (See Jenner, Percy, assignor.)
Parish, Le Grand, Mountainview, N. J. Locomotive fire box. 1,450,607; Apr. 3.
Parker, Charles B., Nashville, Tenn. Machine for filtering compressed air. 1,450,561; Apr. 3.
Parker, Eugene J. (See Killian, L. J., and Parker.)
Parker, Riley H., Winthrop, assignor to Gillette Safety Razor Company, Boston, Mass. File wire. 1,450,512; Apr. 3.
Parkison, Wallace M., Brooks, Ind. Brake band. 1,450,448; Apr. 3.
Parrish, Risl T. (See Gingerick, Kent S., assignor.)
Partenope, Nicholas. (See Ziloccki, Giordano, assignor.)
Pathe Cinema, Anciens Etablissements Pathe Freres. (See Lépine, Charles, assignor.)
Pattison, William, Widnes, England. Corrugating or like treatment of sheet plastic materials. 1,450,222; Apr. 3.

Patton, Darrell E., assignor to National Airless Tire Company, Los Angeles, Calif. Tire tread. Des. 62,171; Apr. 3.
Paull, Wallace H., Birmingham, assignor to The Dunlop Rubber Company, Limited, London, England. Tire tread. Des. 62,172; Apr. 3.
Pearson, Emil L., Chicago, Ill. Child's vehicle. Des. 62,173; Apr. 3.
Pearson, Miles E., and E. Tow, Sacramento, Calif.; said Pearson assignor to said Tow. Frame brace. 1,450,513; Apr. 3.
Peck, John W., jr., New York, N. Y. Projecting screen. 1,450,864; Apr. 3.
Pelc, Joseph, Cicero, Ill. Water-soluble product and making the same. 1,450,865; Apr. 3.
Pelosi, Frank, New York, N. Y. Fender for vehicles. 1,450,449; Apr. 3.
People of the United States. (See Brooks, Charles, assignor.)
People of the United States. (See Sherman, J. M., and Whittier, assignors.)
Perham, Charles F., Lynn, Mass., assignor to General Electric Company. Motion-picture projection. 1,450,514; Apr. 3.
Peters, Thomas, Peters, Fla. Preparing fruits and vegetables for shipment. 1,450,866; Apr. 3.
Petrino, Sebastian L. (See Lalle, P. A., and Fowler, assignors.)
Pfeiffer, John F., administrator. (See Dickhart, William, assignor.)
Pferrer, Martin P., et al. (See Gray, Joseph M., assignor.)
Philadelphia Textile Machinery Company, The. (See Ayres, Elwood B., assignor.)
Phillips, Lewis. (See Swindell, W. H., and Phillips.)
Pierce, George W., Cambridge, Mass., assignor to P. C. Hewitt, deceased, Ringwood Manor, N. J.; The Farmers' Loan and Trust Company, New York, N. Y., executor. Apparatus for and method of controlling electric currents. 1,450,749; Apr. 3.
Pietras, Ludwik R., Joliet, Ill. Motor-driven sled. 1,450,332; Apr. 3.
Piette, Olivier, Brussels, Belgium. Treatment of gases from gas producers. 1,450,562; Apr. 3.
Pittsburgh Transformer Company. (See Bingay, Robert V., assignor.)
Platt, Edwin F. (See Platt, Edwin H., assignor.)
Platt, Edwin H., Denver, Colo., assignor of one-half to E. F. Platt, Portland, Oreg. Power transmission for motor vehicles. 1,450,643; Apr. 3.
Plumley, Stuart. (See Anderson, J. L., and Plumley.)
Podgorsek, Leo. (See Steinbach, Arthur, assignor.)
Polhemus, Louis E., Miami, Ariz. Carbide lamp. 1,450,867; Apr. 3.
Poppe, Edward W., assignor to Kalamazoo Paper Box Company, Kalamazoo, Mich. Display box. 1,450,450; Apr. 3.
Porter, Louis E., Connellsville, Pa. Moistener. 1,450,817; Apr. 3.
Potter, Washington M., Freedom, Pa. Suspender. 1,450,303; Apr. 3.
Powell, Winfred T., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y. Trouble-locating device. 1,450,563; Apr. 3.
Pracht, Fred, Williamsville, Mo. Wire fastener for fence-posts. 1,450,644; Apr. 3.
Pressure Proof Piston Ring Company. (See Anderson, James G., assignor.)
Prince, Stewart V. V., Washington, D. C. Motor plow. 1,450,385; Apr. 3.
Putnam, George E., East Kansas City, Mo. Oil filter. 1,450,750; Apr. 3.
Quigley, John T., assignor, by mesne assignments, to Costmeter Company, Boston, Mass. Loose-leaf-index file. 1,450,304; Apr. 3.
Quigley, John T., assignor to Costmeter Company, Boston, Mass. Adjustable index. 1,450,751; Apr. 3.
Quigley, John T., assignor to Costmeter Company, Boston, Mass. Filing equipment. 1,450,752; Apr. 3.
Raber, Daniel E., Perry, Iowa. Draft regulator and chimney cleaner. 1,450,451; Apr. 3.
Raley, Elbert B., Mart, Tex. Powder-dusting attachment. 1,450,223; Apr. 3.
Randall, Samuel E., Junction City, Ark. Soldering block. 1,450,452; Apr. 3.
Randolph, Cary H., St. Louis, Mo. Elementary-music-notation device. 1,450,868; Apr. 3.
Rasche, Hugo, Princeton, Iowa. Automobile chain fastener and tightener. 1,450,453; Apr. 3.
Ratcliffe, Emily. (See Ratcliffe, Frank S., assignor.)
Ratcliffe, Frank S., deceased; L. M. Jones, administrator, assignor to E. Ratcliffe, Milwaukee, Wis. Wrench. 1,450,224; Apr. 3.
Raybestos Company, The. (See Kirschbraun, Lester, assignor.)
Reaugh Construction Company, The. (See Reaugh, Ernest W., assignor.)
Reaugh, Ernest W., assignor to The Reaugh Construction Company, Cleveland, Ohio. Sectional partition. 1,450,733; Apr. 3.
Rebstock, August J., assignor to Alvey Manufacturing Company, St. Louis, Mo. Conveyer. 1,450,225; Apr. 3.
Rebstock, August J., assignor to Alvey Manufacturing Company, St. Louis, Mo. Conveyer. 1,450,226; Apr. 3.
Rector, Harlan S., assignor to The Beckley-Ralston Co., Chicago, Ill. Tire casing. Des. 62,174; Apr. 3.
Reece, John, assignor to Evr Klean Seat Pad Co., St. Louis, Mo. Seat cover. 1,450,387; Apr. 3.
Reece, John, assignor to Evr Klean Seat Pad Co., St. Louis, Mo. Seat pad. 1,450,703; Apr. 3.
Reed, Andrew H., Fullerton, Calif. Pump construction. 1,450,333; Apr. 3.
Reed, George E., assignor of one-half to J. A. Mann, Greenville, Miss. Attachment for doors. 1,450,227; Apr. 3.
Reese, Charles C., San Francisco, J. T. Buzzo, Oakland, and R. S. Woodford, Crockett, Calif. Sugar-feeding machine. 1,450,423; Apr. 3.
Regan, Thomas J., New York, N. Y. Toilet-powder container. 1,450,386; Apr. 3.
Reid, Willard. (See Smith, Hazor J., assignor.)
Reinelt, William W., Deckerville, Mich. Carpenter's folding sawhorse. 1,450,869; Apr. 3.
Renshaw, Oscar J., Langells Valley, Oreg. Rifle turbine. 1,450,753; Apr. 3.
Reynolds, Arthur W., assignor of one-half to E. Benedict, Newtown, Conn. Power lift for tractor plows. 1,450,754. Apr. 3.
Rhoades, Alonzo E., assignor to Draper Corporation, Hopedale, Mass. Winding machine. 1,450,228; Apr. 3.
Rhodes, William A., New York, N. Y., assignor to American Telephone and Telegraph Company. Telephone signaling system. 1,450,305; Apr. 3.
Ribak, Charles F., San Francisco, Calif. Cushion tire. 1,450,818; Apr. 3.
Rice, Louis W., New York, N. Y. Bowl or the like. Des. 62,175; Apr. 3.
Richards, Barnett. (See Darnley, Percy H., assignor.)
Richardson, Robert. (See McKenzie, W. S., and Richardson.)
Richardson, William W., London, England. Mineral classifying and concentrating apparatus. 1,450,515; Apr. 3.
Richman, Charles J., et al. (See Green, Charles, assignor.)
Richman, Evert F., et al. (See Green, Charles, assignor.)
Richter, Emanual, Chicago, Ill., assignor to The Elliott-Fisher Company, New York, N. Y. Calculating machine. 1,450,516; Apr. 3.
Riddle, Edward N., Co. (See Crowell, Frank S., assignor.)
Rider, Roy R., St. Louis, Mo. Catamenial bandage. 1,450,755; Apr. 3.
Rieff, John G., London, Wis. Detachable chain hook. 1,450,388; Apr. 3.
Rieff, John G., London, Wis. Detachable chain hook. 1,450,389; Apr. 3.
Rindfish, Fred C. (See Laing, N. B., and Rindfish.)
Robertshaw, Frederick W., Pittsburgh, and G. A. Robertshaw, Greensburg, Pa. Gas range. 1,450,756; Apr. 3.
Robertshaw, George A. (See Robertshaw, Frederick W. and G. A.)
Robertson, Joseph M., et al. (See Gray, Joseph M., assignor.)
Robinson, Charles B. (See Daulton, B. H., and Robinson.)
Robinson, Claude E. (See Frick, P. S., and Robinson.)
Robinson, Edward K., Belmont, Mass. Bookbinding. 1,450,261; Apr. 3.
Robinson, John G., Fairfield, England. Furnace of locomotives. 1,450,229; Apr. 3.
Robinson, Leo S., Alameda, Calif. Segregating apparatus. 1,450,390; Apr. 3.
Rogers-Higgins Co., The. (See Higgins, James F., assignor.)
Roney, Alexander B., Chicago, Ill. Lever-controlled paddle-action flying machine. 1,450,454; Apr. 3.
Roney, Thomas F., Providence, R. I. Milk-bottle cap. 1,450,517; Apr. 3.
Rook, James H., Chicago, Ill. Wrapper for candy-box covers. 1,450,230; Apr. 3.
Roos, Delmar G., assignor, by mesne assignments, to The Locomobile Company, Bridgeport, Conn. Spring shackle construction. 1,450,306; Apr. 3.
Rosier, Royal D. (See Watkins, Joseph B., assignor.)
Ross, Mark A., Flossmoor, assignor of one-half to H. P. Bayley, Chicago, Ill. Bearing. 1,450,307; Apr. 3.
Ross, Mark A., Flossmoor, assignor of one-half to H. P. Bayley, Chicago, Ill. Bearing. 1,450,308; Apr. 3.
Ross, Mark A., Flossmoor, assignor of one-half to H. P. Bayley, Chicago, Ill. Bearing. 1,450,309; Apr. 3.
Roth, Emery, Chicago, Ill. Heat-treating method of rendering metals ductile. 1,450,734; Apr. 3.
Royle, Vernon, Paterson, N. J. Registering and squaring machine. 1,450,608; Apr. 3.
Russell, Edgar S., Sweet Home, Oreg. Automatic clutch release. 1,450,757; Apr. 3.
Ruth, David C., assignor of one-half to S. E. L. Ruth, Halstead, Kans. Separator. 1,450,645; Apr. 3.
Ruth, S. Ella L. (See Ruth, David C., assignor.)
Sadenwater, Frank, Michigan City, Ind. Baseball bat. 1,450,646; Apr. 3.
Salisbury, Robert F., New Kensington, assignor to Aluminum Company of America, Pittsburgh, Pa. Making steam-jacketed kettle outlets. 1,450,231; Apr. 3.
Sammes, Frank D., Carlinville, Ill. Ventilator. 1,450,819; Apr. 3.
Samminiatelli, Oreste, East Toledo, Ohio. Combined railway steel tie and rail fastener. 1,450,820; Apr. 3.
Sanders, James B., Basic, Va. Can opener. 1,450,894; Apr. 3.
Sanders, James E., Great Falls, Mont. Vapor stove. 1,450,870; Apr. 3.

Schauman, Karl O., San Francisco, Calif. Cable bumper. 1,450,262; Apr. 3.
Schecher, John L. (See Young, J. S., Young, and Schecher.)
Schecher, John L. (See Young, J. S., Young, and Schecher, assignors.)
Schede, Albert W., Drexel Hill, and J. A. Mitchell, Ridley Park, Pa. Wheel attachment. 1,450,904; Apr. 3.
Schede, Albert W., Drexel Hill, and J. A. Mitchell, Ridley Park, Pa. Wheel attachment. 1,450,905; Apr. 3.
Schelter, George G., Rochester, N. Y., assignor, by mesne assignments, to United Last Company, Auburn, Me. Last. Re15,572; Apr. 3.
Schiegries, Eduard, Duisburg-Meiderich, Germany. Apparatus for making open molds. 1,450,871; Apr. 3.
Schiesari, Mario, New York, N. Y. Apparatus for aerial projection. 1,450,263; Apr. 3.
Schitterer, Herman J., San Diego, Calif. Swivel hook for watch chains. 1,450,264; Apr. 3.
Schmidt, Louis A., assignor to R. Hoe and Co., New York, N. Y. Plate clamp. 1,450,609; Apr. 3.
Schoeke, Max, Manchester, England. Vehicle wheel. 1,450,610; Apr. 3.
Schroeder, John F. (See Lamm, A., and Schroeder.)
Schroeder, Rudolph W., Dayton, Ohio. Flowmeter. 1,450,611; Apr. 3.
Schultz, Frederick A., Hasbrouck Heights, N. J. Ear manipulator. 1,450,612; Apr. 3.
Schuster, Karl R., Brooklyn, N. Y. Reinforced floor construction. 1,450,187; Apr. 3.
Schutz, Charles H., Paris, France. Easel. 1,450,821; Apr. 3.
Schwab, Henry, Bicknell, Calif. Deep-well pump. 1,450,647; Apr.
Schwartz, Harry A., Defiance, Ohio. Forming metal. 1,450,648; Apr. 3.
Schwartz, Israel, Danbury, Conn. Wheel-truing gauge. 1,450,518; Apr. 3.
Schwenneke, Hans, assignor to Globe Paper Box Company, Chicago, Ill. Pasteboard box. 1,450,334; Apr. 3.
Schwier, William, assignor of one-half to F. Haubrock, Tacoma, Wash. Monorail frog. 1,450,758; Apr. 3.
Scott, Jesse, Dayton, Ohio. Corn planter. 1,450,613; Apr. 3.
Scott, John W., West Allis, Wis. Window strips. 1,450,649; Apr. 3.
Seaman, Delbert O., Des Moines, Iowa. Moving-picture machine. 1,450,455; Apr. 3.
Setlow, John C., Spokane, Wash. Submarine salvage vessel. 1,450,232; Apr. 3.
Seymour, Charles, Brantford, Ontario, Canada. Cooling apparatus for automobiles. 1,450,650; Apr. 3.
Seymour, Dudley S., assignor to Union Special Machine Company, Chicago, Ill. Feeding mechanism for sewing machines. 1,450,456; Apr. 3.
Shaffer, Glenn A. (See Cannard, W. H., and Shaffer.)
Shaft, Willis S., Faribault, Minn. File and file cabinet for letters or other papers. 1,450,614; Apr. 3.
Sharp, John H., Chicago, Ill. Travel and sales guide. 1,450,335; Apr. 3.
Sharp, John H., Chicago, Ill. Automobile protective device. 1,450,336; Apr. 3.
Shaw, Ira D., Boston, Mass. Fastener. 1,450,391; Apr. 3.
Sheal, Robert E., Cleveland, Ohio. Material-handling bridge. 1,450,735; Apr. 3.
Sheehan, William M., assignor to Commonwealth Steel Company, St. Louis, Mo. Hopper-car door. 1,450,615; Apr. 3.
Sheppard, Orlando, jr., Atlanta, Ga., assignor to Buckeye Iron & Brass Works, Dayton, Ohio. Cake former. 1,450,457; Apr. 3.
Sherman, Edward T., Minneapolis, Minn. Door latch. 1,450,188; Apr. 3.
Sherman, James M., and E. O. Whittier, Washington, D. C., dedicated, by mesne assignments, to the People of the United States. Purification of propionates by the action of bacteria. 1,450,392; Apr. 3.
Sheuman, James E., Waynesboro, Pa. Floating reamer holder. 1,450,822; Apr. 3.
Shively, Albert B., Laurel, Nebr. Hog-trough apparatus. 1,450,519; Apr. 3.
Shiverick, Myron D., Albany, assignor to Sweet & Doyle Foundry and Machine Co., Green Island, N. Y. Automobile signal. 1,450,337; Apr. 3.
Siemens & Halske Aktiengesellschaft. (See Böhme, Kurt, assignor.)
Sieper, Conrad, Krawinkelerbrucke, Germany. Hammering machine. 1,450,896; Apr. 3.
Signal Gesellschaft m. b. H. (See Hahnemann, Walter, assignor.)
Silliman, William M., Syracuse, N. Y. Lining for conduit outlet boxes. 1,450,310; Apr. 3.
Simenson, Oscar, Locust, Iowa. Wire stretcher. 1,450,458; Apr. 3.
Simonye, Frank, New York, N. Y. Washing machine. 1,450,393; Apr. 3.
Singmaster, James A., and F. G. Breyer, Palmerton, Pa., assignors to New Jersey Zinc Company, New York, N. Y. Production of zinc oxide. 1,450,704; Apr. 3.
Sisson, Vinton E., assignor to W. P. Murphy, Chicago, Ill. Corrugated-metal end for freight cars. 1,450,233; Apr. 3.
Sittig, Emil. (See Grantchstadten, A., and Sittig.)
Sklovsky, Max, assignor to Deere and Company, Moline, Ill. Apparatus for producing gaseous fuel. 1,450,338; Apr. 3.
Sleplan, Joseph, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Hot-cathode tube. 1,450,265; Apr. 3.
Slough, Frank M., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y. Telephone-exchange system. 1,450,564; Apr. 3.
Small, Arthur E., assignor to W. P. Murphy, Chicago, Ill. Combined door closer, starter, and lock. 1,450,284; Apr. 3.
Smith, A. O., Corporation. (See Smith, R. S., and Adams, assignors.)
Smith, Curtis A., New Rochelle, assignor to Robert Findlay Manufacturing Co., New York, N. Y. Hanging lamp. Des. 62,188; Apr. 3.
Smith, Curtis E., St. Joseph, Mo. Portable rotary saw. 1,450,459; Apr. 3.
Smith, Edward W., Philadelphia, Pa. Secondary or storage battery. 1,450,565; Apr. 3.
Smith, Harold E., Cleveland Heights, Ohio. Power-driven wringer mechanism. 1,450,736; Apr. 3.
Smith, Harry T., Kansas City, Mo. Vernier adjuster. 1,450,566; Apr. 3.
Smith, Hazor J., Springfield, Mass., assignor of one-half to W. Reid, Chicago, Ill. Traffic guide. 1,450,616; Apr. 3.
Smith, Henry A. W., Danville, Va. General-utility bolt. 1,450,460; Apr. 3.
Smith, James, Glasgow, Scotland. Process of purifying mineral oils. 1,450,617; Apr. 3.
Smith, Jesse A. B., Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y. Typewriting machine. 1,450,737; Apr. 3.
Smith, Oscar A., East Cleveland, assignor to The National Acme Company, Cleveland, Ohio. Feed collet and making same. 1,450,189; Apr. 3.
Smith, Reuben S., and J. L. Adams, jr., assignors to A. O. Smith Corporation, Milwaukee, Wis. Intermittingly-operating motor set. 1,450,339; Apr. 3.
Smith, Reuben S., and J. L. Adams, jr., assignors to A. O. Smith Corporation, Milwaukee, Wis. Intermittingly-operating motor system. 1,450,340; Apr. 3.
Smith, Wesley F., Bandana, Ky. Shade roller. 1,450,520; Apr. 3.
Smolk, Harry W., Cleveland, Ohio. Machine for use in manufacturing tire tubes. 1,450,235; Apr. 3.
Snow, Frederick O., jr., Winchester, assignor to Mead-Morrison Manufacturing Company, East Boston, Mass. Winch. 1,450,311; Apr. 3.
Snyder, Samuel W., assignor of one-third to J. H. Wable and one-third to W. Hummell, Hamlet, Nebr. Drawbars for towing vehicles. 1,450,750; Apr. 3.
Societe les Petits Fils de Francois de Wendel et Cie. (See Weber, Guillaume, assignors.)
Sonn, Frederick, Woodmere, N. Y. Picture-card frame. 1,450,190; Apr. 3.
Sorrell, Delos W., et al. (See Goodwin, Adolphus D., assignor.)
Sparks, Harry L., Huntsman, Nebr. Beet topper. 1,450,872; Apr. 3.
Spencer, Isaac C., Glendale, Utah. Rifle sight. 1,450,823; Apr. 3.
Sprouil, George F., Montgomery, Ala. Machine for distributing powder over growing plants. 1,450,651; Apr. 3.
Spyroseal Manufacturing Company. (See Brunnings, John H., assignor.)
Squire Products Company. (See Mieville, Herbert C., assignor.)
Stamps, Robert E. (See Greene, G. C., Tune, and Stamps.)
Standard Underground Cable Company. (See Fisher, H. W., and Davis, assignors.)
Starbard, Raymond C., Paterson, N. J. Brake for baby carriages. 1,450,873; Apr. 3.
Starr, Louis M. (See Epstein, Eli, assignor.)
Starr Piano Company. (See Mayer, Fred G., assignor.)
Steinbach, Arthur, assignor of one-half to L. Podgorsek, Chicago, Ill. Armature for dynamo-electric machines. 1,450,521; Apr. 3.
Stemmler, Edwin F., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Timber-treating apparatus. 1,450,897; Apr. 3.
Stiles, John C., St. Louis, Mo. Heel construction. 1,450,705; Apr. 3.
Stinchfield, Ray L., assignor to Eastman Kodak Company, Rochester, N. Y. Lens shade. 1,450,522; Apr. 3.
Stine, Charles M., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del. Separating isomeric trinitrotoluenes. 1,450,675; Apr. 3.
Stockade Building System, Inc., The. (See Hewlett, James M., assignor.)
Stogner, John R., and P. Adams, Lancaster, S. C. Railway-crossing signal. 1,450,824; Apr. 3.
Stolworthy, Richard M., Cincinnati, Ohio. Extension ladder. 1,450,312; Apr. 3.
Strachan, James F., et al. (See Chidlaw, David, assignor.)
Strachan, William S., et al. (See Chidlow, David, assignor.)
Straight, Halver R., Adel, Iowa. Grain elevator. 1,450,461; Apr. 3.

Stramberg-Carlson Telephone Manufacturing Company, The. (See Powell, Winifred T., assignor.)
Stromberg-Carlson Telephone Manufacturing Company, The. (See Slough, Frank M., assignor.)
Stromee, Karl O., San Bernardino, Calif. Game apparatus. 1,450,874; Apr. 3.
Stubbs, Robert C., Dallas, Tex. Method of transporting plastic material or concrete for paving and other purposes. 1,450,760; Apr. 3.
Studebaker Corporation. (See Bourgon, Joseph H., assignor.)
Stumph, Wynn W., Tulsa, Okla. Hair curler. 1,450,523; Apr. 3.
Sturm, Joseph, assignor to United Alloy Steel Corporation, Canton, Ohio. Sheet-metal shelving. 1,450,191; Apr. 3.
Stutika, John, West Pullman, Ill. Attachment for internal-combustion engines. 1,450,652; Apr. 3.
Sublette, William M., Fresno, Calif. Gasifier. 1,450,761; Apr. 3.
Summers, Caleb E., assignor to Master Carbureter Corporation, Detroit, Mich. Carburetor. 1,450,762; Apr. 3.
Sun Oil Company. (See Maitland, Harold T., assignor.)
Swain, Joseph G., Akron, Ohio. Pressed-steel wheel and making same. 1,450,618; Apr. 3.
Swann, William, assignor to C. Trawford, Limited, Walsall, England. Means for gripping wire or the like. 1,450,524; Apr. 3.
Swebilius, Carl G., assignor, by mesne assignments, to The Marlin Firearms Corporation, New Haven, Conn. Automatic gun. 1,450,653; Apr. 3.
Sweet & Doyle Foundry and Machine Co. (See Shiverick, Myron D., assignor.)
Swenson, Carl E., et al. (See Anderson, Carl L., assignor.)
Swenson, Carl E., et al. (See Faust, Levin, assignor.)
Swindell, William H., and L. Phillips, Waldo, Fla. Railway switch. 1,450,763; Apr. 3.
Taliaferro, Edward O., Philadelphia, Pa. Car unloader. 1,450,313; Apr. 3.
Talley, Berry M., Morrow, Ark. Antiskid-tire protector. 1,450,764; Apr. 3.
Tartrais, Eugène H., Maisons-Laffitte, France. Internal-combustion engine. 1,450,567; Apr. 3.
Taylor, Herman J., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis. Variable-speed gear set. 1,450,266; Apr. 3.
Taylor, Lawrence M., Philadelphia, Pa. Attachment for automobile gasoline tanks. 1,450,192; Apr. 3.
Taylor, William J. (See Bond, James W., assignor.)
Taylor-Wilson Manufacturing Company. (See Wilson, Edgar H., assignor.)
Technicolor Motion Picture Corporation. (See Wescott, William B., assignor.)
Terhune, Richard A., Fairhaven, Mass., assignor, by mesne assignments, to C. Gaschott, Corona, N. Y. Acidizing rubber waste. 1,450,462; Apr. 3.
Teselsky, Alex P., Ruso, N. Dak. Pliers. 1,450,875; Apr. 3.
Thauss, Alfred, Dentz, near Cologne, and A. Günther, Cologne, assignors to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Sulphurized compound of phenols. 1,450,463; Apr. 3.
Thomas, George, Chelsea, England. Folding push car. 1,450,193; Apr. 3.
Thomas, Horace T., Lansing, Mich. Panel adjustment for inclosed motor vehicles. 1,450,394; Apr. 3.
Thompson, Clarance W., assignor to Thompson Spring Company, Wilmington, Del. Vehicle spring. 1,450,654; Apr. 3.
Thompson, Clarance W., assignor to Thompson Spring Company, Wilmington, Del. Vehicle spring. 1,450,655; Apr. 3.
Thompson, George. (See Lundell, A. E., and Thompson.)
Thompson, Ralph E., Brookline, assignor to Gillette Safety Razor Company, Boston, Mass. Pile wire. 1,450,525; Apr. 3.
Thompson Spring Company. (See Thompson, Clarance W., assignor.)
Thomson, Elihu, Swampscott, Mass., assignor to General Electric Company. Crystal formation. 1,450,464; Apr. 3.
Tiedemann, Theo., & Sons, Inc. (See Cuthbert, Robert F., assignor.)
Timmis, Harold E., Dublin, Ireland. Coupling appliance for trailer vehicles, tilling implements, and the like. 1,450,526; Apr. 3.
Tin Decorating Company of Baltimore, The. (See Connor, Martha H., assignor.)
Topping Manufacturing Co., The. (See Leeds, Robert R., assignor.)
Tow, Edward. (See Pearson, M. E., and Tow.)
Trawford, Charles, Limited. (See Swann, William, assignor.)
Tréchot, François, Paris, France. Traction wheel with movable blades. 1,450,656; Apr. 3.
Trinca, Frederick, and H. Wolf, assignors to Ever Ready Auto Signal Co., Inc., New York, N. Y. Automobile signal. 1,450,765; Apr. 3.
Troidl, Nellie Y., Niagara Falls, N. Y. Educational appliance. 1,450,395; Apr. 3.
Trost, Harry, Troy, Ill. Piston-ring clamp. 1,450,527; Apr. 3.
Trussell, Clarence D., assignor to Trussell Manufacturing Company, Poughkeepsie, N. Y. Loose-leaf binder. 1,450,267; Apr. 3.
Trussell Manufacturing Company. (See Trussell, Clarence D., assignor.)
Tune, Thomas O. (See Greene, G. C., Tune, and Stamps.)
Turnbull, William, Peoria, Ill., assignor to The Holt Manufacturing Company, Stockton, Calif. Chain-track tractor. 1,450,465; Apr. 3.
Turnbull, William, Peoria, Ill., assignor to The Holt Manufacturing Company, Stockton, Calif. Chain-track vehicle. 1,450,466; Apr. 3.
Turner, Douglas, assignor to The Measuregraph Company, St. Louis, Mo. Machine for measuring fabrics. 1,450,268; Apr. 3.
Twitchell, Herbert E., assignor of one-half to A. Kriegonhofer, Hamilton, Ohio. Antiskid chain. 1,450,314; Apr. 3.
Underwood Typewriter Company. (See Smith, Jesse A. B., assignor.)
Union Special Machine Company. (See Seymour, Dudley S., assignor.)
Union Switch & Signal Company, The. (See Howard, Lemuel F., assignor.)
Union Switch & Signal Company, The. (See Neubert, Walter P., assignor.)
United Alloy Steel Corporation. (See Jamison, Charles R., assignor.)
United Alloy Steel Corporation. (See Sturm, Joseph, assignor.)
United Last Company. (See Schelter, George G., assignor.)
United Metal Spinning Co. (See Nacke, Karl, assignor.)
United Shoe Machinery Corporation. (See Bates, Arthur, assignor.)
United Shoe Machinery Corporation. (See Bradford, C. M., and Bunker, assignors.)
United Shoe Machinery Corporation. (See Brogan, James A., assignor.)
United Shoe Machinery Corporation. (See Hunt, Chester, assignor.)
Universal Arch Company. (See Miller, Charles E., assignor.)
Van Cleave, Charles N., Indianapolis, Ind. Coin-controlled lock. 1,450,825; Apr. 3.
Varney, Theodore, Sewickley, assignor to Aluminum Company of America, Pittsburgh, Pa. Clamp device for electric conductors. 1,450,528; Apr. 3.
Vaughan, Jay W., Chicago, Ill. Band-saw-guide. 1,450,619; Apr. 3.
Viberg, Ernest R., Montreal, Quebec, Canada, assignor to S. H. Campbell, St. Louis, Mo. Car-uncoupling device. 1,450,341; Apr. 3.
Viertels, Ephraim, New York, N. Y. Protector for shoes. 1,450,396; Apr. 3.
Voelker, Edward, St. Louis, Mo. Direction signal and parking light for vehicles. 1,450,876; Apr. 3.
Vortex Mfg. Co., The. (See Barbieri, Cesare, assignor.)
Wable, John H., et al. (See Snyder, Samuel W., assignor.)
Wade, Joseph. (See Ordung, Henry H., assignor.)
Wahlen, Gustavus A. N., Louisville, Ky. Attachment for rakes. 1,450,877; Apr. 3.
Walden-Worcester, Inc. (See Bellows, Warren S., assignor.)
Walker, Edward M., Detroit, Mich. Toy shooter, 1,450,342; Apr. 3.
Walker, Joseph L., Baton Rouge, La. Sawing machine. 1,450,657; Apr. 3.
Walker, William H., and H. Goff, Parsons, Tenn. Dirigible headlight. 1,450,194; Apr. 3.
Walser, Joseph J., Ann Arbor, Mich., and H. Fankboner, Chicago, Ill., assignors to Goss Printing Press Company. Inking mechanism. 1,450,269; Apr. 3.
Walser, Joseph J., Ann Arbor, Mich., and H. Fankboner, Chicago, Ill., assignors to Goss Printing Press Company. Inking mechanism. 1,450,270; Apr. 3.
Walten, Max, Washington, D. C. Coupling device. 1,450,826; Apr. 3.
Warnick, Michael, assignor to Warnick Oil Heater Syndicate, Los Angeles, Calif. Oil-well heater. 1,450,658; Apr. 3.
Warnick Oil Heater Syndicate. (See Warnick, Michael, assignor.)
Warren Clock Company. (See Warren, Henry E., assignor.)
Warren, Henry E., assignor to Warren Clock Company, Ashland, Mass. System for regulating frequency. 1,450,620; Apr. 3.
Watch Protector Corporation. (See Geto, Max M., assignor.)
Waterbury Buckle Co. (See Maltby, Julius, assignor.)
Watkins, Joseph B., assignor of one-half to R. D. Rosier, Willow Springs, Mo. Oil burner. 1,450,530; Apr. 3.
Weaver, Frank R. (See Marshall, C. J., and Weaver.)
Webb, Ellen R., Denver, Colo. Toy. Des. 62,176; Apr. 3.
Weber, Guillaume, Hayange, Lorraine, assignor to Societe les Petits Fils de Francois de Wendel et Cie., Paris, France. Liquid-air blast cartridge. 1,450,621; Apr. 3.
Weber, Leona M., now by degree of divorce L. M. Case, Portland, Oreg. Child's vehicle. 1,450,397; Apr. 3.
Webster, James C., Topeka, Kans. Hotel key check. 1,450,878; Apr. 3.
Weeks, John A., Secretary of War of the United States of America. (See McNary, James E., assignor.)

Welkert, Charles H. and H., Vesta, Minn. Haystacker. 1,450,271; Apr. 3.
Welkert, Henry. (See Welkert, Charles H. and H.)
Wels, John P., Nyack, N. Y., assignor of one-half to Metropolitan Sewing Machine Corporation, Dover, Del. Thread-breaking mechanism. 1,450,531; Apr. 3.
Weisel, Oscar W. (See Fisher, Raymond, assignor.)
Wells, Alfred A. (See Ellis, C., and Wells.)
Wells, Newton C., and H. J. Meyer, Los Angeles, Calif.; said Meyer assignor to said Wells. Butt gauge. 1,450,676; Apr. 3.
Wenzel, Jacob B., Bloom, Colo. Packing ring and making the same. 1,450,568; Apr. 3.
Werner, Eugene, Highland Park, Mich. Needle and needle holder. 1,450,879; Apr. 3.
Wescott, William B., Wellesley, assignor, by mesne assignments, to Technicolor Motion Picture Corporation, Boston, Mass. Cinematographic-film-feeding mechanism. 1,450,343; Apr. 3.
Wesnigk, Erwin, Berlin, Germany. Three-wheeled automobile. 1,450,622; Apr. 3.
West, Frank, East San Diego, Calif. Repairman's brake attachment for air brakes. 1,450,272; Apr. 3.
Western Electric Company. (See Lundell, A. E., and Thompson, assignors.)
Westinghouse Electric & Manufacturing Company. (See Allcutt, Chester T., assignor.)
Westinghouse Electric & Manufacturing Company. (See Foresman, Robert A., assignor.)
Westinghouse Electric and Manufacturing Company. (See Kasley, Alexander T., assignor.)
Westinghouse Electric & Manufacturing Company. (See Slepian, Joseph, assignor.)
Weyland, Hermann, Elberfeld, assignor to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Silicate cement. 1,450,467; Apr. 3.
Whitall-Tatum Company. (See Howell, Wesley E., assignor.)
White, S. S., Dental Manufacturing Company, The. (See Heck, George D., assignor.)
White, William E., Citronelle, Ala. Automobile fender attachment. 1,450,532; Apr. 3.
Whittaker, John, Wilpshire, R. Bradshaw and J. Briggs, deceased, Rishton, near Blackburn, M. Briggs, administratrix; said administratrix and said Bradshaw assignors to Whittaker Loom Company Limited, Preston, Lancaster County, England. Weft-replenishing mechanism for looms. 1,450,623; Apr. 3.
Whittaker Loom Company Limited. (See Whittaker J., Bradshaw, and Briggs, assignors.)
Whittier, Earle O. (See Sherman, J. M., and Whittier.)
Wichita Scraper Drag Company, The. (See Winters, Edward B., assignor.)
Wickersham, Elmer E., assignor to The Holt Manufacturing Company, Stockton, Calif. Tractor frame suspension. 1,450,468; Apr. 3.
Wickersham, Elmer E., assignor to The Holt Manufacturing Company, Stockton, Calif. Tractor construction. 1,450,469; Apr. 3.
Wickersham, Elmer E., assignor to The Holt Manufacturing Company, Stockton, Calif. Single-point frame suspension. 1,450,470; Apr. 3.
Wickersham, Elmer E., assignor to The Holt Manufacturing Company, Stockton, Calif. Tractor tread link. 1,450,471; Apr. 3.
Wickersham, Elmer E., assignor to The Holt Manufacturing Company, Stockton, Calif. Suspension for tractors. 1,450,472; Apr. 3.
Wilcox, William A., Tacoma, Wash. Shipping box. 1,450,273; Apr. 3.
Wilde, Eben F., assignor to The Baer & Wilde Company, Attleboro, Mass. Cuff button. 1,450,344; Apr. 3.
Wilkens, Gesine, administratrix. (See Wilkens, Herman L.)
Wilkens, Herman L., deceased, Ridgewood, N. J.; A. G. Wilkens, administratrix. Portable lavatory. 1,450,474; Apr. 3.
Williams, Albert H., assignor to Ionite Storage Battery Co., Worcester, Mass. Storage battery and producing the same. 1,450,533; Apr. 3.
Williams, Jesse A., Baltimore, Md. Ironing board. 1,450,766; Apr. 3.
Williams, Joseph C., Cleveland, Ohio. Ripsaw sticker head. 1,450,659; Apr. 3.
Williams, Robert R., Chicago, Ill., and H. L. J. Haller, Cincinnati, Ohio, assignors, by mesne assignments, to S. B. Hunt, trustee, Mount Kisco, N. Y. Apparatus for producing ketones. 1,450,569; Apr. 3.
Wilson, Edgar H., Chartiers Township, Allegheny County, assignor to Taylor-Wilson Manufacturing Company, McKees Rocks, Pa. Gas producer. 1,450,767; Apr. 3.
Wintemute, Willson E., Vancouver, British Columbia, Canada. Oar sleeve and collar. 1,450,475; Apr. 3.
Winter, Arthur, Jersey City, N. J., assignor of one-half to F. H. La Pierre. Pen. 1,450,398; Apr. 3.
Winters, Edward B., Coffeyville, assignor, by mesne assignments, to The Wichita Scraper Drag Company, Sedgwick County, Kans. Road drag and scraper. 1,450,195; Apr. 3.
Witte, Meinhard, St. Paul, Minn. Radiator. 1,450,399; Apr. 3.
Wolna, Benjamin A., South River, N. J., assignor of one-half to A. L. Johnson, New York, N. Y. Self-adjusting door latch. 1,450,624; Apr. 3.
Wolf, Henry. (See Trinca, F., and Wolf.)
Wolff, August L., Chicago, Ill. Internal-combustion engine. 1,450,400; Apr. 3.
Wood, Edwin W., Lockridge, Okla. Animal poke for restraining stock. 1,450,401; Apr. 3.
Wood, Frederick P., assignor to American Can Company, New York, N. Y. Moistureproof container body. 1,450,476; Apr. 3.
Wood, George, Seattle, Wash., assignor to A. J. Gerrard, Chicago, Ill. Box-strapping bench. 1,450,315; Apr. 3.
Wood, Sidney C., assignor to Chautauqua Hygienic Institute, Inc., Jamestown, N. Y. Bath tray. 1,450,827; Apr. 3.
Woodford, Robert S. (See Reese, C. C., Buzzo, and Woodford.)
Woodstock Typewriter Company. (See Hokanson, Otto A., assignor.)
Worthington Pump and Machinery Corporation. (See Eads, Harry B., assignor.)
Wottle, Hans, Vienna, Austria. Split belt pulley. 1,450,880; Apr. 3.
Wright, Ernest B., Upper Montclair, N. J., assignor to Hanlon & Goodman Company, New York, N. Y. Brush. 1,450,534; Apr. 3.
Wunder, Frank F., Valley Falls, Kans. Clutch holder. 1,450,316; Apr. 3.
Wylie, William H., Jennings, Kans. Portable leveling apparatus for mounted machinery. 1,450,196; Apr. 3.
Yates, P. B., Machine Company. (See Marshall, C. J., and Weaver, assignors.)
Yates, William G., Cleveland, and G. C. Fatscher, Lakewood, assignors to B. R. Deming, Cleveland, Ohio. Ironing machine. 1,450,402; Apr. 3.
Yoder, Guldin G., Boyertown, Pa. Hat holder. 1,450,535; Apr. 3.
Yont, Charles A., assignor to The Flint Electric and Manufacturing Company, Denver, Colo. Oil-circuit closer. 1,450,403; Apr. 3.
Young, Edward W. (See Young, J. S., Young, and Schecher.)
Young, Edward W., administrator. (See Young, John S.)
Young, John S., deceased, by E. W. Young, administrator, E. W. Young, and J. L. Schecher, assignors to J. L. Schecher, Los Angeles, Calif. Caster. Re15,570; Apr. 3.
Zellers, Mahlon M., Belleville, Ill. Attachment for ironing boards. 1,450,274; Apr. 3.
Zilocki, Giordano, Granton, assignor of thirty per cent to N. Partenope, West New York, N. J. Reversing mechanism for drive shafts. 1,450,536; Apr. 3.
Zukerberg, David, Newark, N. J. Bag. 1,450,570; Apr. 3.
Zwickey, Clifford J., North St. Paul, Minn. Sport car. 1,450,197; Apr. 3.

ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 3D DAY OF APRIL, 1923.

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). Includes patents, reissues, and designs.

Abrading machine. A. E. Culley. 1,450,251; Apr. 3.
Aerial projection, Apparatus for. M. Schiesari. 1,450,263; Apr. 3.
Agitators, Driving mechanism for. A. H. Alberger. 1,450,660; Apr. 3.
Air, Machine for filtering compressed. C. B. Parker. 1,450,561; Apr. 3.
Aircraft landing indicator. R. Courtois Suffit. 1,450,431; Apr. 3.
Amusement apparatus. P. A. Lalle and C. F. Fowler. 1,450,669; Apr. 3.
Amusement device. O. B. Hunter. 1,450,634; Apr. 3.
Anglecock, Self-locking. R. E. McGahey. 1,450,811; Apr. 3.
Antiskid chain. H. E. Twitchell. 1,450,314; Apr. 3.
Antiskid device. M. J. La Riviere. 1,450,779; Apr. 3.
Armature. J. K. Lencke. 1,450,599; Apr. 3.
Auger bits, Mechanism for manufacture of. B. H. Daulton and C. B. Robinson. 1,450,252; Apr. 3.
Augers, Ratchet device for. P. Hudson. 1,450,440; Apr. 3.
Automobile. R. R. Kirsch. 1,450,684; Apr. 3.
Automobile bumper. J. F. Beans. 1,450,165; Apr. 3.
Automobile chain fastener and tightener. H. Rasche. 1,450,453; Apr. 3.
Automobile cooling apparatus. C. Seymour. 1,450,650; Apr. 3.
Automobile fender attachment. W. E. White. 1,450,532; Apr. 3.
Automobile memorandum attachment. H. A. Nelson. 1,450,446; Apr. 3.
Automobile protective device. J. H. Sharp. 1,450,336; Apr. 3.
Automobile signal. M. D. Shiverick. 1,450,337; Apr. 3.
Automobile signal. F. Trinca and H. Wolf. 1,450,765; Apr. 3.
Automobile steering mechanism, Knuckle joint for. E. Olson. 1,450,780; Apr. 3.
Automobile, Three-wheeled. E. Wesnigk. 1,450,622; Apr. 3.
Automobile winch. A. E. Norris. 1,450,301–2; Apr. 3.
Automobile windshields, Attachment shield for. H. H. Ilich. 1,450,551; Apr. 3.
Automobiles, Headlight installation for. M. P. Nickols. 1,450,510; Apr. 3.
Automobiles, Lighting accessory for. W. S. McKenzie and R. Richardson. 1,450,324; Apr. 3.
Automobiles, Transmission lock for. A. B. Lang. 1,450,212; Apr. 3.
Automobiles, Visor for use with. G. L. Lamb. 1,450,809; Apr. 3.
Bacon-stringing machine. J. Dvorak. 1,450,667; Apr. 3.
Badge. A. B. Lemon. 1,450,689; Apr. 3.
Badge, button, and the like holder. C. F. Gaunt. 1,450,721; Apr. 3.
Bag. D. Zukerberg. 1,450,570; Apr. 3.
Bait, Artificial. W. Q. Hummell. 1,450,777; Apr. 3.
Bat, Baseball. F. Sadenwater. 1,450,646; Apr. 3.
Bath, Portable and collapsible shower. C. Nenoff. 1,450,218; Apr. 3.
Bath tray. S. C. Wood. 1,450,827; Apr. 3.
Bathtub with heating appliance, Portable. M. H. McGuire. 1,450,444; Apr. 3.
Battery: *See*—
Secondary or storage battery. — Storage battery.
Battery and producing the same, Storage. A. H. Williams. 1,450,533; Apr. 3.
Bearing. M. A. Ross. 1,450,307–9; Apr. 3.
Bed. T. H. Griffith. 1,450,497; Apr. 3.
Beet topper. H. L. Sparks. 1,450,872; Apr. 3.
Bench, Box-strapping. G. Wood. 1,450,315; Apr. 3.
Berry-picker outfit. G. H. Owens. 1,450,221; Apr. 3.
Bifocal, Making a fused. L. W. Bugbee. 1,450,711; Apr. 3.
Billiard-cue-tip chalker. E. Hill. 1,450,741; Apr. 3.
Binder, Loose-leaf. C. D. Trussell. 1,450,267; Apr. 3.
Binder, Push-harvester. S. Olson. 1,450,384; Apr. 3.
Bituminous matter, Distilling. W. Meischke-Smith. 1,450,327; Apr. 3.
Blanket or similar article. F. A. Andrews. Des. 62,161–2; Apr. 3.
Block: *See*—
Building block. — Soldering block.
Concrete stair block.
Bloomers. W. A. Goldsmith. 1,450,437; Apr. 3.
Board: *See*—
Composition board. — Ironing board.
Drying board. — Window board.
Board and engine brace, Instrument. W. Bethke. 1,450,791; Apr. 3.
Boards, Attachment for ironing. M. M. Zellers. 1,450,274; Apr. 3.
Boll-weevil trap. L. L. Moore. 1,450,382; Apr. 3.
Bolt: *See*—
Utility bolt.
Bookbinding. E. K. Robinson. 1,450,261; Apr. 3.
Bottle cap, Milk. T. F. Roney. 1,450,517; Apr. 3.
Bowl or the like. L. W. Rice. Des. 62,175; Apr. 3.
Box: *See*—
Display box. — Pasteboard box.
Fire box. — Reducible size box.
Garment box. — Shipping box.
Box covers, Wrapping for candy. J. H. Rook. 1,450,230; Apr. 3.
Boxes and elements thereof, Making. C. Holly. 1,450,681; Apr. 3.
Brace: *See*—
Frame brace.
Bracket: *See*—
Scaffold bracket.
Brake: *See*—
Carriage brake. — Hand brake.
Brake band. W. M. Parkison. 1,450,448; Apr. 3.
Brakes, Repairman's brake attachment for air. F. West. 1,450,272; Apr. 3.
Braking apparatus, Fluid-pressure. J. W. Cross. 1,450,432; Apr. 3.
Bread, Making. D. Chidlow. 1,450,483; Apr. 3.
Brick and tile machine. R. H. McElroy, J. D. Cite, and A. G. Langenkamp. 1,450,306; Apr. 3.
Bridge, Material-handling. R. E. Sheal. 1,450,735; Apr. 3.
Bridge or crane for lifting, carrying, or sustaining loads, Divisible and adjustable. F. E. M. Diard. 1,450,492; Apr. 3.
Bristles, Installation for the washing and combing of pigs. D. Magny. 1,450,325; Apr. 3.
Brush. E. B. Wright. 1,450,534; Apr. 3.
Brush holder, Shaving-. M. Greenburg. Des. 62,166; Apr. 3.
Bucket protector. E. L. Horton. 1,450,632; Apr. 3.
Buckle, Strap. J. Maltby. 1,450,509; Apr. 3.
Buffer for pickers. C. W. Holbrook. 1,450,726; Apr. 3.
Building block. J. Barnes. 1,450,784; Apr. 3.
Building construction. R. S. Maclean. 1,450,731; Apr. 3.
Building unit. H. Belerbach. 1,450,240; Apr. 3.
Burner: *See*—
Incense burner. — Sulphur burner.
Oil burner.
Burner. J. F. Higgins. 1,450,631; Apr. 3.
Butt gauge. N. C. Wells and H. J. Meyer. 1,450,676; Apr. 3.
Button, Cuff. E. F. Wilde. 1,450,344; Apr. 3.
Cabinet. J. Becker. 1,450,575; Apr. 3.
Cabinet construction. C. R. Jamison. 1,450,180; Apr. 3.
Cable-building machine. H. W. Fisher and N. C. Davis. 1,450,584; Apr. 3.
Cable bumper. K. O. Schauman. 1,450,262; Apr. 3.
Caddy, Collapsible. S. N. Leopold. 1,450,690; Apr. 3.
Cake former. O. Sheppard, jr. 1,450,457; Apr. 3.
Calculating machine. M. G. de Simone. 1,450,718; Apr. 3.
Calculating machine. E. Richter. 1,450,516; Apr. 3.
Camera, Motion-picture. E. W. Davis. 1,450,433; Apr. 3.
Can: *See*—
Friction-top can.
Can machinery, Seaming head for. H. L. Guenther. 1,450,418; Apr. 3.
Can opener. J. B. Sanders. 1,450,894; Apr. 3.
Can sealing machines, Cap sterilizer and can centering plate for. A. N. Cramer. 1,450,356; Apr. 3.
Candlestick and flower vase, Combined. M. H. Connor. 1,450,429; Apr. 3.
Car-door fastener. J. E. Bialock. 1,450,242; Apr. 3.
Car door, Grain-. J. E. Drake. 1,450,842; Apr. 3.
Car door, Hopper-. W. M. Sheehan. 1,450,615; Apr. 3.
Car, Folding push. G. Thomas. 1,450,193; Apr. 3.
Car, Hand. O. B. Gaudin. 1,450,846; Apr. 3.

Car, Mine. M. E. Lohr. 1,450,637; Apr. 3.
Car roof. C. D. Bonsall. 1,450,243; Apr. 3.
Car, Sport. C. J. Zwickey. 1,450,197; Apr. 3.
Car-uncoupling device. E. R. Viberg. 1,450,341; Apr. 3.
Car unloader. E. O. Taliaferro. 1,450,313; Apr. 3.
Cars, Corrugated-metal end for freight. V. E. Sisson. 1,450,233; Apr. 3.
Cars, Coupling for railway. M. K. Carr. 1,450,248; Apr. 3.
Cars, Sheet-metal end for railway. G. G. Gilpin. 1,450,255; Apr. 3.
Carburetor. J. M. Flannery. 1,450,628; Apr. 3.
Carburetor. C. E. Summers. 1,450,762; Apr. 3.
Carriage brake, Baby-. R. C. Starbard. 1,450,873; Apr. 3.
Cartridge, Explosive. S. Decker. 1,450,666; Apr. 3.
Cartridge, Liquid-air blast. G. Weber. 1,450,621; Apr. 3.
Carving or reproducing machine. N. Morici. 1,450,698; Apr. 3.
Caster. J. S. Young. Re15,570; Apr. 3.
Castings, Production of hollow metal. F. Jombart. 1,450,532; Apr. 3.
Catalyzers and manufacturing the same, Nickeliferous. A. Granichstadten and E. Sittig. 1,450,174; Apr. 3.
Catamenial bandage. R. R. Rider. 1,450,755; Apr. 3.
Cathode tube, Hot-. J. Slepian. 1,450,265; Apr. 3.
Cellulose-ether solvent and composition. S. J. Carroll. 1,450,714–6; Apr. 3.
Cement, Silicate. H. Weyland. 1,450,467; Apr. 3.
Cementing dumper. B. Cousins. 1,450,485; Apr. 3.
Chain hook, Detachable-. J. G. Rieff. 1,450,388–9; Apr. 3.
Chains and the like, Latch device for skid. J. T. Barber. 1,450,199; Apr. 3.
Churn. D. Ayers and H. D. Fossett. 1,450,238; Apr. 3.
Cinematographic-film feeding mechanism. W. B. Wescott. 1,450,343; Apr. 3.
Circuits, Balancing arrangement for multiplex carrier. L. Espenschied. 1,450,254; Apr. 3.
Circuits, Protection of alternating-current-distributing. R. V. Bingay. 1,450,423; Apr. 3.
Clamp: *See*—
Piston-ring clamp. Typewriter clamp.
Plate clamp.
Classifying and concentrating apparatus, Mineral. W. W. Richardson. 1,450,515; Apr. 3.
Cleaner: *See*—
Comb cleaner.
Clipping machine. C. W. Harvey. 1,450,490; Apr. 3.
Closure. A. H. Johnson. 1,450,857; Apr. 3.
Cloth for clothing, Machine for treating bolts of. C. E. Murray. 1,450,701; Apr. 3.
Clutch. J. W. Crowley, Jr. 1,450,202; Apr. 3.
Clutch. W. B. Gross. 1,450,804; Apr. 3.
Clutch holder. F. F. Wunder. 1,450,316; Apr. 3.
Clutch, Hydraulic. E. S. Greifenstatt. 1,450,679; Apr. 3.
Clutch, Pneumatic. C. E. G. Johnson. 1,450,441; Apr. 3.
Clutch release, Automatic. E. S. Russell. 1,450,757; Apr. 3.
Coal coking. S. R. Illingworth. 1,450,888; Apr. 3.
Coal in heating boilers, Means for insuring complete combustion of. R. W. Burckhardt. 1,450,201; Apr. 3.
Coin-controlled lock. M. Cohen. 1,450,355; Apr. 3.
Coin controlled lock. C. N. Van Cleave. 1,450,825; Apr. 3.
Colloids, Drying. G. P. Lunt. 1,450,377; Apr. 3.
Comb cleaner. A. J. Bennett. 1,450,576; Apr. 3.
Composition board. H. C. Dorn. 1,450,582; Apr. 3.
Concrete stair block. A. Anderson. 1,450,404; Apr. 3.
Conduit outlet boxes, Lining for. W. M. Silliman. 1,450,310; Apr. 3.
Conveyer. A. J. Rebstock. 1,450,225–6; Apr. 3.
Conveyers, Transfer mechanism for. W. H. Clay. 1,450,354; Apr. 3.
Cooking vessel. H. Kunin. 1,450,687; Apr. 3.
Corrugated fastener, Nailer for. C. A. Macdonald. 1,450,730; Apr. 3.
Cotton gins, Lint-cleaning attachment for. J. W. Guynes. 1,450,592; Apr. 3.
Coupling. A. E. Crozier. 1,450,665; Apr. 3.
Coupling device. M. Walton. 1,450,826; Apr. 3.
Coupling yoke. W. F. Grun. 1,450,591; Apr. 3.
Cow-tail holder. J. Haering. 1,450,774; Apr. 3.
Cradle. W. Lacki. 1,450,535; Apr. 3.
Cream lifter. L. S. Bender. 1,450,789; Apr. 3.
Crystal formation. E. Thomson. 1,450,464; Apr. 3.
Cue tip. S. Nemecek. 1,450,605; Apr. 3.
Cup: *See*—
Grease cup.
Curtain holder. N. J. Bishop. 1,450,539; Apr. 3.
Cutter: *See*—
Lace cutter.
Cycle stand and brush holder. A. Guazzoni. 1,450,680; Apr. 3.
Dehydrating apparatus. S. M. Dick. 1,450,840; Apr. 3.
Dental device for spreading tissues. J. A. Heidbrink. 1,450,419; Apr. 3.
Dental impression tray. G. S. Monson. 1,450,639; Apr. 3.
Desk stand base. E. A. Bohlman. 1,450,169; Apr. 3.
Dipper, Ice-cream. W. G. Heimerdinger. 1,450,886; Apr. 3.
Dish and manufacture, Sundae. C. Barbieri. 1,450,832; Apr. 3.
Display box. F. E. Allworth. 1,450,477; Apr. 3.
Display box. E. W. Poppe. 1,450,450; Apr. 3.
Door closer, starter, and lock, Combined. A. E. Small. 1,450,234; Apr. 3.
Door, grain. J. R. Billings, jr. 1,450,702; Apr. 3.
Door latch. E. T. Sherman. 1,450,188; Apr. 3.
Doors, Attachment for. G. E. Reed. 1,450,227; Apr. 3.
Doors, Carrier for disappearing. R. R. Leeds. 1,450,729; Apr. 3.
Draft equalizer. R. E. Anderson. 1,450,781; Apr. 3.
Draft regulator and chimney cleaner. D. E. Raber. 1,450,451; Apr. 3.
Drag and scraper, Road. E. B. Winters. 1,450,195; Apr. 3.
Drill bit and collar therefor. J. P. Flournoy, jr. 1,450,845; Apr. 3.
Drilling apparatus, Rock-. J. and R. G. Hanson. 1,450,208; Apr. 3.
Drilling operations, Draw work for standard and rotary. J. M. Kellerman. 1,450,743; Apr. 3.
Drilling rigs, Backout device for. W. L. Childs. 1,450,249; Apr. 3.
Driving and driven elements, Reverse-movement control for. C. P. Cirac. 1,450,409; Apr. 3.
Drying board, Skin-. E. B. Ayres. 1,450,782; Apr. 3.
Ear manipulator. F. A. Schultz. 1,450,612; Apr. 3.
Easel. C. H. Schutz. 1,450,821; Apr. 3.
Educational appliance. N. Y. Troidl. 1,450,395; Apr. 3.
Egg tray. F. E. Hilt. 1,450,368; Apr. 3.
Electric coil. P. Gilinson. 1,450,362; Apr. 3.
Electric conductors, Clamp device for. T. Varney. 1,450,528; Apr. 3.
Electric currents, Apparatus for and method of controlling. G. W. Pierce. 1,450,749; Apr. 3.
Electric discharge device, Vacuum. H. W. Edmundson and W. T. Munro. 1,450,413; Apr. 3.
Electric machine, Dynam-. S. H. Mortensen. 1,450,902; Apr. 3.
Electric machines, Armature for dynamo-. A. Steinbach. 1,450,521; Apr. 3.
Electrodes, Apparatus for moving furnace. W. Dyessen. 1,450,668; Apr. 3.
Element, Suspending. A. Hopkins. 1,450,176; Apr. 3.
Elevator: *See*—
Grain elevator.
Emulsion and making same, Bituminous. L. Kirschbraun. 1,450,685; Apr. 3.
End gate. J. M. Gray. 1,450,364; Apr. 3.
Engine: *See*—
Internal-combustion engine.
Engine, method and means for feeding same, Internal-combustion. D. Cole. 1,450,250; Apr. 3.
Engine piston, Internal-combustion. H. J. Houpert. 1,450,177; Apr. 3.
Engine-supporting stand. N. Nielsen. 1,450,511; Apr. 3.
Engines, Attachment for internal-combustion. J. Stutika. 1,450,652; Apr. 3.
Engines, Burner for internal-combustion. E. L. Lowe. 1,450,691; Apr. 3.
Engines, Mixer for gas. G. R. Hudson. 1,450,550; Apr. 3.
Excavating machine. M. S. Longnaker. Re15,571; Apr. 3.
Exercising apparatus. P. S. Medart and F. Albach. 1,450,300; Apr. 3.
Exhibitor, Changeable. M. A. Grip. 1,450,850; Apr. 3.
Exploder, Safety. H. McEwan. 1,450,672; Apr. 3.
Eyelashes and making same, Artificial. C. Nessler. 1,450,259; Apr. 3.
Fabric and manufacturing same, Decorative. W. E. Hazeltine. 1,450,367; Apr. 3.
Fastener. I. D. Shaw. 1,450,891; Apr. 3.
Fastening device. T. Ferry. 1,450,583; Apr. 3.
Fastening-inserting machine. A. Bates. 1,450,164; Apr. 3.
Feed collet and making same. O. A. Smith. 1,450,189; Apr. 3.
Feeder, Automatic. J. Brodner. 1,450,710; Apr. 3.
Feeder, Collapsible poultry. M. R. Jacobus and W. F. Burditt, jr. 1,450,258; Apr. 3.
Feeder, Poultry. W. E. Honsinger. 1,450,175; Apr. 3.
Fenceposts, Wire fastener for. F. Pracht. 1,450,644; Apr. 3.
Fender: *See*—
Plow fender. Vehicle fender.
File and file cabinet for letters or other papers. W. S. Shaft. 1,450,614; Apr. 3.
File, Loose-leaf-index. J. T. Quigley. 1,450,304; Apr. 3.
Filing equipment. J. T. Quigley. 1,450,752; Apr. 3.
Film-repair tool. R. C. Dohe. 1,450,795; Apr. 3.
Filter, Oil. G. E. Putnam. 1,450,750; Apr. 3.
Filter, Sanitary self-cleaning. P. S. Frick and C. E. Robinson. 1,450,770; Apr. 3.
Fire box, Locomotive. L. Parish. 1,450,607; Apr. 3.
Fire escape, Window. J. F. Gaken. 1,450,207; Apr. 3.
Firearm. E. D. Henry. 1,450,596; Apr. 3.
Firearm of the breakdown type, Single-barrel. E. F. Fines. 1,450,496; Apr. 3.
Fish-cleaning machine. D. MacPhee. 1,450,506; Apr. 3.
Fishhook. W. Filipowski. 1,450,798; Apr. 3.
Fish-landing net and handle, Hand-operating extensible. J. W. McElhany. 1,450,322; Apr. 3.
Fish rod. R. A. Mull. 1,450,700; Apr. 3.
Fishing reels, Tension oil cap for. F. M. Case. 1,450,738; Apr. 3.
Fishing tool. W. Casey. 1,450,541; Apr. 3.
Flash light. C. W. Harvey. 1,450,500; Apr. 3.
Flash light apparatus, Door construction for. E. L. Johnson. 1,450,502; Apr. 3.

Floor construction, Reenforced. K. R. Schuster. 1,450,187; Apr. 3.
Flowerpot, Self-watering. W. W. Hudson. 1,450,633; Apr. 3.
Flowmeter. R. W. Schroeder. 1,450,611; Apr. 3.
Fluid-controlling device, Elastic-. A. L. Browne. 1,450,245; Apr. 3.
Fluid-pressure system. W. E. Irish. 1,450,372; Apr. 3.
Fly-eliminating screen. J. E. Jones. 1,450,374; Apr. 3.
Flying machine, Lever controlled paddle-action. A. B. Roney. 1,450,454; Apr. 3.
Flytrap. J. W. Hildreth. 1,450,855; Apr. 3.
Frame: *See*—
Picture-card frame. Washing-machine frame.
Frame brace. M. E. Pearson and E. Tow. 1,450,513; Apr. 3.
Frame suspension, Single-point. E. E. Wickersham. 1,450,470; Apr. 3.
Friction-top can. G. A. Leighton. 1,450,422; Apr. 3.
Fruit-peeling machine. M. O. Johnson. 1,450,295; Apr. 3.
Fruits and vegetables for shipment, Preparing. T. J. Peters. 1,450,866; Apr. 3.
Fuel, Apparatus for producing gaseous. M. Sklovsky. 1,450,338; Apr. 3.
Fuel feeder. R. C. Newhouse. 1,450,903; Apr. 3.
Furnace: *See*—
Locomotive furnace. Steam-generator furnace.
Roasting furnace.
Furnace control. E. McLean. 1,450,693; Apr. 3.
Furnaces, Method and device for the heating of material in electric. E. A. A. Grönwall. 1,450,543; Apr. 3.
Furniture attachment. J. M. Biggs. 1,450,662; Apr. 3.
Fuses, Indicator for electric. F. C. La Mar. 1,450,670; Apr. 3.
Game apparatus. K. O. Stromée. 1,450,874; Apr. 3.
Game trap. J. Hardaway. 1,450,775; Apr. 3.
Garment box. R. F. Cuthbert. 1,450,171; Apr. 3.
Garment-form supporter. T. C. Freshour and B. M. Jennings. 1,450,416; Apr. 3.
Gas mixer, Fuel-. H. R. Micka. 1,450,814; Apr. 3.
Gas producer. E. H. Wilson. 1,450,767; Apr. 3.
Gases from gas producers, Treatment of. O. Piette. 1,450,562; Apr. 3.
Gasifier. W. M. Sublette. 1,450,761; Apr. 3.
Gate: *See*—
End gate.
Gate. O. L. Cox. 1,450,486; Apr. 3.
Gate-fastening device. J. Harris. 1,450,630; Apr. 3.
Gauge: *See*—
Butt gauge. Wheel-truing gauge.
Gear, Gradual-change. C. E. Henriod. 1,450,596; Apr. 3.
Gear, Progressive-change-speed. C. E. Henriod. 1,450,594; Apr. 3.
Gear set, Variable-speed. H. J. Taylor. 1,450,266; Apr. 3.
Gearing, Differential. J. A. Hazelton. 1,450,210; Apr. 3.
Generator: *See*—
Steam generator.
Glass-drawing apparatus. W. Gray. 1,450,590; Apr. 3.
Glass globe, Prismatic. W. A. Dorey. Des. 62,187; Apr. 3.
Glass, Leer conveyer for sheet. H. E. Allen. 1,450,571; Apr. 3.
Glassware, Holder for illuminating. H. C. Adam. Des. 62,179–83; Apr. 3.
Governor. A. F. Meyer. 1,450,380; Apr. 3.
Grain elevator. H. R. Straight. 1,450,461; Apr. 3.
Grease cup, Hard-. F. C. Grant. 1,450,773; Apr. 3.
Grill. H. C. Mieville. 1,450,381; Apr. 3.
Guitar. F. F. Gerl. Des. 62,165; Apr. 3.
Gun. C. A. F. Maze, dit D. Maze. 1,450,558; Apr. 3.
Gun, Automatic. C. G. Swebilius. 1,450,653; Apr. 3.
Hair curler. W. W. Stumph. 1,450,523; Apr. 3.
Hair roll or puff. M. C. Damon. 1,450,491; Apr. 3.
Hair-waving comb. C. Laufe. 1,450,860; Apr. 3.
Hairpin. H. R. Baylis. 1,450,785; Apr. 3.
Hairpin. W. S. Bechtold. 1,450,239; Apr. 3.
Hammer. C. Green. 1,450,849; Apr. 3.
Hammer, Adjustable multiple disk and shredding. E. H. Frickey. 1,450,173; Apr. 3.
Hammering machine. C. Sieper. 1,450,895; Apr. 3.
Hand brake. S. B. Haseltine. 1,450,366; Apr. 3.
Hat holder. G. G. Yoder. 1,450,535; Apr. 3.
Hats, Crease-retaining device for. J. Korn. 1,450,181; Apr. 3.
Haystacker. C. H. and H. Weikert. 1,450,271; Apr. 3.
Headlight. D. L. Davis. 1,450,581; Apr. 3.
Headlight attachment. C. A. Nelson. 1,450,862; Apr. 3.
Headlight, Automobile. W. D. Ott and H. F. Griffin. 1,450,642; Apr. 3.
Headlight, Dirigible. W. H. Walker and H. Goff. 1,450,194; Apr. 3.
Heater: *See*—
Well heater.
Heating and cooling device, Combined. G. Graff and W. A. Kennedy. 1,450,589; Apr. 3.
Heating appliance, Steam-. P. Bergeon. 1,450,833; Apr. 3.
Heating element and making same, Electrical resistance. F. Hodson. 1,450,725; Apr. 3.
Heel construction. J. C. Stiles. 1,450,705; Apr. 3.
Helmet. J. E. McNary. 1,450,379; Apr. 3.
Hens, Attachment for. C. E. Carpenter. 1,450,247; Apr. 3.
Hog-trough apparatus. A. B. Shively. 1,450,519; Apr. 3.
Hoisting machine. H. C. Beckwith. 1,450,882; Apr. 3.
Hub cap. J. H. Bourgon. Des. 62,163; Apr. 3.
Ice chute and run, Self-centering. G. Holtz and C. Gress. 1,450,887; Apr. 3.
Identification device. A. B. Hennech. 1,450,854; Apr. 3.
Ignition switch. W. Kaisling. 1,450,728; Apr. 3.
Ignition systems, Means for locating trouble in. A. Pache. 1,450,896; Apr. 3.
Impact-producing implement. E. Epstein. 1,450,435; Apr. 3.
Incense burner. J. O. Bentley. 1,450,790; Apr. 3.
Index, Adjustable. J. T. Quigley. 1,450,751; Apr. 3.
Indicator: *See*—
Aircraft landing indicator.
Indicator. D. C. Cox. 1,450,410; Apr. 3.
Ink, Printing. W. J. McElroy and J. Clarke. 1,450,692; Inking mechanism. J. J. Walser and H. Fankboner. 1,450,269–70; Apr. 3.
Insect and worm catcher. L. E. Baker. 1,450,538; Apr. 3.
Internal-combustion engine. A. N. Frisbie. 1,450,801; Apr. 3.
Internal-combustion engine. W. N. Long. 1,450,810; Apr. 3.
Internal-combustion engine. E. H. Tartrais. 1,450,567; Apr. 3.
Internal-combustion engine. A. L. Wolff. 1,450,400; Apr. 3.

Vending device. W. D. Anderson. 1,450,829–30; Apr. 3.
Vending machine. R. Cusick. 1,450,839; Apr. 3.
Ventilation system. W. B. Glisson. 1,450,771; Apr. 3.
Ventilator. F. D. Sammes. 1,450,819; Apr. 3.
Vernier adjuster. H. T. Smith. 1,450,566; Apr. 3.
Vessel, Submarine salvage. J. C. Setlow. 1,450,232; Apr. 3.
Vulcanizer. D. G. Chandler. 1,450,794; Apr. 3.
Waffle and hot-cake iron. E. N. Brown and A. M. Lambert. 1,450,277; Apr. 3.
Wall structure. J. M. Hewlett. 1,450,724; Apr. 3.
Washboiler. J. P. Mettel. 1,450,638; Apr. 3.
Washer. W. S. Alexander. 1,450,625; Apr. 3.
Washing machine. F. Simonye. 1,450,393; Apr. 3.
Washing-machine frame. W. H. Huenergardt. 1,450,808; Apr. 3.
Watch chains, Swivel hook for. H. J. Schitterer. 1,450,264; Apr. 3.
Watch protector. M. M. Geto. 1,450,848; Apr. 3.
Water-heating system. T. H. Drynan. 1,450,796; Apr. 3.
Water-soluble product and making the same. J. Pelc. 1,450,865; Apr. 3.
Welding tool. J. Jerry. 1,450,294; Apr. 3.
Well heater, Oil. M. Warnick. 1,450,658; Apr. 2.
Wheel: *See*—
Resilient wheel. Tractor wheel.
Spring wheel. Vehicle wheel.
Wheel and making same, Pressed-steel. J. G. Swain. 1,450,618; Apr. 3.
Wheel attachment. A. W. Schede and J. A. Mitchell. 1,450,904–5; Apr. 3.
Wheel-pit drop table. S. Otis. 1,450,702; Apr. 3.
Wheel-truing gauge. I. Schwartz. 1,450,318; Apr. 3.
Winch. F. O. Snow, jr. 1,450,311; Apr. 3.
Window board. E. A. Adams. 1,450,337; Apr. 3.
Window construction. A. R. Mitchell. 1,450,697; Apr. 3.
Winding machine. A. E. Rhoades. 1,450,228; Apr. 3.
Window-seating attachment. S. Chapman. 1,450,353; Apr. 3.
Window, Sliding and reversing. O. B. Dreusike. 1,450,281; Apr. 3.
Window strip. J. W. Scott. 1,450,649; Apr. 3.
Wire-fence fastener. W. H. Mason. 1,450,298; Apr. 3.
Wire or the like, Means for gripping. W. Swann. 1,450,524; Apr. 3.
Wire, Pile. R. H. Parker. 1,450,512; Apr. 3.
Wire, Pile. R. E. Thompson. 1,450,525; Apr. 3.
Wire stretcher. O. Simenson. 1,450,458; Apr. 3.
Wireless amplifier. C. T. Allcutt. 1,450,275; Apr. 3.
Wrench: *See*—
Pipe wrench.
Wrench. S. J. Ograbisz. 1,450,641; Apr. 3.
Wrench. F. S. Ratcliffe. 1,450,224; Apr. 3.
Wringer mechanism, Power-driven. H. E. Smith. 1,450,736; Apr. 3.
Wringers, Feeding attachment for power. E. L. Leimberger and A. Brasher. 1,450,891; Apr. 3.
X-ray photography, Sensitized-film holder for. J. A. Heldbrink. 1,450,420; Apr. 3.
Yarn and thread guide. F. W. Easton. 1,450,205; Apr. 3.
Yarn holder. L. Blair. 1,450,835; Apr. 3.
Yoke, Drawbar. F. H. Bender. 1,450,167; Apr. 3.
Yokes, Manufacturing draft-rigging. G. G. Floyd. 1,450,361; Apr. 3.
Zinc oxide, Production of. J. A. Singmaster and F. G. Breyer. 1,450,704; Apr. 3.

CLASSIFICATION OF PATENTS

ISSUED APRIL 3, 1923.

NOTE.—First number—class, second number—subclass, third number—patent number.

1— 9: 1,450,730
20: 1,450,164
2— 108: 1,450,181
117: 1,450,379
122: 1,450,497
144: 1,450,683
4— 2: 1,450,827
17: 1,450,844
28: 1,450,218
35: 1,450,629
40: 1,450,806
5— 48: 1,450,204
57: 1,450,635
98: 1,450,497
256: 1,450,686
9— 26: 1,450,475
10— 124: 1,450,211
12— 186: R. 15,572
146: 1,450,244
15— 25: 1,450,542
119: 1,450,445
1,450,673
146: 1,450,438
160: 1,450,680
168: 1,450,534
229: 1,450,556
16— 21: R. 15,570
17— 10: 1,450,508
14: 1,450,667
18— 17: 1,450,481
18: 1,450,794
38: 1,450,328
42: 1,450,256
43: 1,450,320
48.4: 1,450,739
52: 1,450,462
19— 59: 1,450,592
66: 1,450,325
20— 4: 1,450,733
19: 1,450,729
